H. B. Snyder, Former Editor and Publisher, of Gary, Ind.

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MADDEN. Mr. Speaker, Gary, the Calumet region, and the State of Indiana lost one of its pioneer leaders in the passing of H. B. Snyder, former editor and publisher of the Gary, Ind., Post-Tribune. He along with his brother, the late J. Ralph Snyder, were one of the few remaining pioneers who helped organize, develop, and establish the city of Gary and the Calumet region as the No. 1 metropolitan industrial area in the Middlewest.

H. B. Snyder as the editor and guiding genius of the Gary Post-Tribune has been an outstanding leader in city, county, State, and National affairs for almost half a century. He possessed the faculty of keeping pace with modern progress in domestic and national issues. He was one of the outstanding supporters and advocates of Woodrow Wilson's League of Nations after World War I and the refusal of our Nation to enter the League of Nations was a great disappointment to him.

I often heard him remark that had our Government in the early 1920's joined the League of Nations with all the other member countries, World War II could have been averted. This was before the power of international communism had secured a foothold. Under our leadership the League of Nations could have been a success and prevented the building and expansion of the Hitler, Mussolini, and Japanese war potentials.

H. B. Snyder served on various local, State, and National commissions and committees in behalf of our country's welfare.

Over the years he has been the leader in movements and programs to promote good racial relations among the cosmopolitan and various nationalities of the Calumet region. Greatly through the efforts of his newspaper this large industrial area has been free from racial strife and upheavals which recently scourged similar metropolitan areas throughout the Nation.

The following is an editorial by Dale E. Belles, Jr., editor and associate publisher of the Gary Post-Tribune:

HENRY BURGESS SNYDER—A MAN AND HIS PRINCIPLES

A good newspaperman records history. A pioneer makes it. Henry Burgess Snyder was both. He did both.

Gary was but four years old when he reached it in 1910. From that time on he played a major role in its development, and in the development of the area around it.

Two World wars and a nationwide depression interrupted or altered its growth, but in times of such crises he helped direct local opinion in the avenues where he thought it should go. Then as the crises ended he turned his attention back to the problems involved in developing a greater Gary and a greater Northwest Indiana.

The Post-Tribune, though he and his family sold their interests in it last August, remains his principal monument. He did not found it. The Gary Post had been in operation for a few months when H. B. Snyder and his brother, J. Ralph Snyder, bought it.

The going wasn't always easy, a fact with most growth businesses. There is a story of the teen years that when "H.B." was Gary's Democratic postmaster, he occasionally had to wait till he got his government paycheck to help meet the paper's then small payroll. But the team of "H.B. and Ralph" persisted, got the Post on its feet, and by 1921 were able to buy out the competitive Gary Tribune and form The Post-Tribune which they developed into the areawide institution it became. The team carried on into the late '50s until first illness and then death removed J. Ralph from the scene.

During the years of the "team" operation, H.B. devoted himself to the editorial and news side, leaving business affairs primarily as Ralph's concern. It was in his editor's chair that he showed his bigness.

Republicans of the '20s denounced him as too Democratic. Democrats of the '30s and beyond called him too Republican. The accusations in each case stemmed from H. B. Snyder's sincere belief that a newspaper owed it to its readers to serve as a watchdog on public officials, and so it was those who were "in"—and so subject to criticism—who found him partisan.

Coupled with his insistence on reportorial investigation was an equal insistence on fairness. He remained willing to confer with those whom his paper criticized or exposed, and to make amends on the few occasions he considered them due.

As a newsman he resented any effort to withhold news. The only exceptions he made were in the case of stories which might do injury to individuals or their survivors without serving any public purpose. Relentless investigation he approved and encouraged. Sensationalism he did not.

Concerned as he was primarily with Gary and with Northwest Indiana, he nevertheless held to the belief that a local newspaper had a duty to give leadership on national issues. He openly advocated American involvement in World War II against Hitler and Mussolini at a time when the pacifistic America First movement still was at its height. He was one of the first in the nation to urge Dwight D. Eisenhower's nomination for President. He later felt it a duty to criticize that same President Eisenhower when he considered his leadership ineffective.

There were those who may have considered H. B. Snyder aloof, and that included for a time some of his staff. These latter, and many others in the community, learned in time that what sometimes seemed aloofness was actually a self-effacing shyness. Despite it he was willing to take civic lead when he considered that necessary.

His willingness—at the request of a mayor whom he had opposed—to take over leadership of the then new Urban League at a time when World War II first made racial problems a real point of tension was a prime example.

So were the key roles he played in reorganizations pressed on the Gary Public Schools and on the Gary Chamber of Commerce at times when such action appeared necessary in the public interest. Such roles were not always pleasant. Duty, though, outweighed his personal desires when its call was urgent.

He eagerly cooperated with businessmen he believed were pressing specific or general plans in the public interest, but he would challenge those elements of the business community he thought were wrong. He believed in labor's right to press legitimate demands, but fought back at attempted labor domination.

For more than a half century he stayed at his desk. In his last few years, he delegated the editorship and general managership of The Post-Tribune to younger hands, but even then he came daily to his office, willing to consult, but playing the tough role of leaving ultimate decisions to another.

Neither Gary nor Northwest Indiana has yet become all that he dreamed they should, but neither would have progressed as far as it has either without his dreams or without his encouragement to the dreams of others.

The big majority of The Post-Tribune family who served under his direction consider such service to have been an honor and an opportunity.

The Post-Tribune considers it an opportunity to seek to develop and expand the monument he established in the general paths of integrity and public service which were the guidelines of Henry Burgess Snyder.

Completion of the George Washington Memorial Parkway in Prince Georges County, Md.

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MACHEN. Mr. Speaker, today I am offering again my bill to authorize the George Washington Memorial Parkway from the Capital Beltway to Fort Washington along the compromise shoreline route in Prince Georges County, Md.

My bill contains specific authority for the acquisition of parkland and right-of-way for this scenic route along the Potomac River. Entirely consistent with the original Capper-Cramton Act of 1930, the purpose for this George Washington Memorial Parkway is the preservation of the Potomac River shoreline in its natural state—nothing more, nothing less.

Each year that we delay in acquiring this parkland the higher and higher go the stakes. Land values in Prince Georges County along the river and even behind the shoreline have skyrocketed. There is no doubt in my mind that if the 90th Congress does not make good the promise of the Capper-Cramton Act of 1930 as far as Prince Georges County is concerned, we may as well hold funeral services for the parkway in my home county. Then we can bury it once and forever in the growing pile of conservation projects which were the victims of selfish land speculators and a handful of people who are blind to the overriding public benefit to be derived by all by preservation of scenic beauty.

Last year was a year of frustration for all officials—elected and appointed—and for those conservation-minded people in Prince Georges County who were battling for this long-sought and highly desirable conservation project. We saw a handful of people oppose the will of the majority with the help of an expensive lobbyist as they strangled the appropriation request for $2.9 million in committee and in the Maryland General Assembly.

This year we are going to make an even greater effort to see that this project becomes a reality. We are going to achieve our goal despite the selfish opposition and despite expensive lobbyists and the pressure and influence they try to bring against this parkway project. How long can a handful of people continue to deprive our county and all the metropolitan and suburban area residents of this scenic memorial to our first President? I expect that we shall know the final answer within the next 2 years, and if I have anything to say about it, the overriding public benefit will finally emerge the victor.

Space Shots

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, a Washington Post editorial of December 2, 1966, reviews our spending in the national space program and recounts the history of our Nation when in 1957 it was losing the technological race. As the editorial so aptly points out, now that we have restored our competitive position internationally, it is important that we continue to provide the support to our national space effort so that we will never allow the conditions of that time to occur again. This brief editorial summarizes well the decisions that are before us today.

The editorial follows:

SPACE SHOTS

Shooting at the space program is about as intense as the fire directed at the British retreat from Lexington by American Minutemen. Senator Robert Kennedy recently observed that slum dwellers "aren't dumb" and know our society "is spending $7 billion to send men to the moon." Less courageous officials are sniping at the program from behind bureaucratic hedgerows.

What an uproar there was in 1957 when Sputnik showed us we were second in space! The Eisenhower Administration was roundly condemned. Congressmen and Senators clamored for a stepped-up space program and promised all the money needed. President Kennedy, in his 1960 campaign, described our failures in space as "the greatest blow we had in the 1950s." He said repeatedly: "I am not satisfied to be second in space."

Well, we no longer are second in space. And the critics of the Johnson Administration now are not satisfied to be first in space—unless it can be done on the cheap.

First place in space does not come in the economy-size package. It is expensive—$7 billion to reach the moon, 400,000 people working in 20,000 companies. We know the direct results. But what of the less immediate results? Dr. Martin Schwarzchild of Princeton pointed out in 1965 that "the great scientific discoveries are always the ones you cannot predict at all." As a result of the space program we are not only going to be first on the moon and first in space. We are going to be first in a thousand fields of science, education and industry. The space effort has induced a ferment and excitement in American life like that caused by the discovery of the New World in the Europe of the Fifteenth century.

Can the program be cut? Certainly. But as Dr. Schwarzchild warned: "When you stop the present momentum, the first thing that will happen is not that we save money on the moon project but that all the impetus of improving education in this country is going down. It is the valuable parts that slack down to zero the first . . ."

This country does not have to choose between a space program that will keep it in first place in space and a poverty program that will keep it first among the countries of the world in national exertion for the disadvantaged. It can be and ought to be first in both.

Adam Clayton Powell

EXTENSION OF REMARKS
OF
HON. DONALD M. FRASER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. FRASER. Mr. Speaker, following the Democratic caucus action against the Congressman from New York on Monday, I received a number of queries from news media in my district. And I have received a considerable number of letters and telegrams expressing opinions on the action.

In response to these queries and communications, I prepared the following statement, which I request be included in the Record:

Today in the Democratic caucus of the House of Representatives, I voted with the majority to strip Congressman Adam Clayton Powell of his committee chairmanship.

I did so without malice. As chairman of the House Education and Labor Committee, Mr. Powell has been instrumental in the passage of a great deal of forward-looking legislation. I respect his ability as a congressman and his accomplishments as chairman.

But the record clearly shows that Mr. Powell has misused his authority. He has misspent public funds.

Some persons have charged that the action against Mr. Powell was motivated by racial prejudice. Speaking for myself and the majority of my colleagues, I can say that this is simply not true.

Whenever misdeeds such as these are brought to light, I think it is the responsibility of Congress to take positive action. It is our duty, whenever possible, to raise the ethical standards of Congress. Today the Democratic caucus did what it needed to do.

The Late Christian Herter

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, the entire Nation knew Christian Herter as a man dedicated to public service, the welfare of the Nation, and peace for the world. It can be only with the deepest grief that we mourn his passing and with the fondest memories that we recall his life among us.

The citizens of Massachusetts grew to know him well and respect him greatly as speaker of the Massachusetts House of Representatives, as U.S. Congressman, and as Governor. It was with especial interest and the uttermost pride that they watched his actions in the international sphere, culminating in his position as Secretary of State under President Eisenhower and then as U.S. trade negotiator at Geneva under Presidents Kennedy and Johnson.

This deep feeling is evidence no better than in the recent editorial in the Boston Globe, and I submit it now, with unanimous consent, for publication in the Congressional Record:

[From the Boston (Mass.) Globe, Jan. 2, 1967]

CHRISTIAN ARCHIBALD HERTER: 1895–1966

President Johnson's statement of eulogy saluted Christian Herter as a "dedicated patriot." That is what the nation and the outside world correctly thought of him. But he was much more to his North Shore neighbors, his former Beacon Hill colleagues of either party, or the voters of Massachusetts who made him a winner every time he sought their votes.

These Bay Staters who knew him better are more apt to speak of his modesty, his courtly manner, his trustworthy eyes, his shy smile of immense charm.

President Eisenhower, whose nomination in 1952 the then U.S. Rep. Herter helped engineer, has said that "when you look at him you know you are looking at an honest man."

But many learned Mr. Herter's disarming exterior mien masked an inner toughness. This toughness was evident to only a personal few during the last 25 years as he added career upon career in spite of great physical discomfort.

This same toughness, tempered by patience, characterized tedious negotiations with his Soviet counterparts at the height of the Cold War, especially the successful 1959 negotiations to keep encircled West Berlin free.

The same toughness was known, appreciated and respected within the state Republican Party to which he contributed great leadership, first as Speaker of the House of Representatives (1939–42), then as a U.S. congressman (1942–1952), and, lastly, as governor (1953–1957).

At this point in Mr. Herter's crowded career, his adopted state lost him to his first love, diplomacy.

In this field his interest spanned 50 years and his "wise counsel" served Presidents from the days of Woodrow Wilson's peace mission to Paris in 1919 to his last assignment as U.S. trade negotiator in Geneva for Presidents Kennedy and Johnson.

No doubt his appointment in 1959 to be Gen. Eisenhower's Secretary of State was the real climax to his life's interests in America's full participation in a shrinking world's affairs. But his trade negotiator role was no less important.

Three months ago he called the four-year tariff negotiations "frustrating," but was still confident this (his last) mission would bring "real and lasting benefit to the trade of the United States."

This optimism reflected his own advice to the nation in May of 1959. Speaking of the problems of divided Germany, the nuclear arms race, and his deep hopes for big power progress toward disarmament, he told a radio-television audience: "We Americans are inclined to be impatient of delays in solving international problems. We must learn new patience" . . . as we make slow progress toward the ultimate goal of international stability.

In remembering Mr. Herter's half century of public service, we also pay tribute and extend our sympathy to the elegant, lovely Mrs. Herter who, at home or abroad, always was seen by his side during all of those whole crowded, eventful years.

Vietnam Report

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. WOLFF. Mr. Speaker, I include in the Appendix a copy of my report to the constituents of the Third Congressional District.

A few days prior to Christmas, I returned to my home following a 25-day tour of the Far East. This factfinding tour, at my own expense, included 5 days in Saigon and the provinces of South Vietnam. This was my 18th trip to the Far East and my fourth to Vietnam since I was first elected to this House.

I could speak of the war itself today; I could speak of the sufferings of the South Vietnamese civilians; I could speak of the human misery and faltering American programs there, but I feel that there is an additional development that also calls for the immediate attention of this Congress.

On Monday, December 12, 1966, I went "shopping" in Saigon's black market. On prior trips, I saw itinerant peddlers surreptitiously dealing in illegal trade, but now I saw store after store and street stalls openly displaying their wares. On many items I saw what appears to be our commissary markings. This disgraceful operation exists at a complete loss to the American taxpayers. I have purchased U.S. Government issue pens for 25 cents apiece; GI tee shirts, with their original Government code numbers intact, sell for 50 cents; there are Eveready batteries, soap, razor blades, toothpaste, clothing, insecticides, canned foods, and a host of other items all from American civilian or military stores, there.

Our commodity import program in South Vietnam amounted to $400 million last year and $600 million is proposed for the coming year. While our Government can and does control these imports to and through the docking facilities, control is then lost and the whole program defeated. This program is designed to stabilize prices and currency and is failing. I maintain we should carefully scrutinize any further appropriation to this program until proper and close control is a fact.

I have information of a $60,000 CARE shipment of toothpaste earmarked for distribution to the Vietnamese people being stolen and diverted. Other shipments totaling a quarter of a million dollars of CARE consignments have disappeared. The entire situation is shocking and disgraceful. Corruption festers in Saigon like an open sore. While Americans die in battle, profiteers on the black market acquire fortunes at the expense of the American taxpayer.

I call for a congressional investigation of this horrendous situation. The military and civilian authorities in Saigon, although well aware of this disgrace, seem unable or unwilling to cope with it. Surely this Nation is not so affluent that its taxpayers can underwrite this illegal and immoral traffic, this diversion of goods into a black market that affords the lowest of the low an opportunity to reap huge profits at our expense. I do not know where the profits eventually wind up, but I believe it is our duty to find out where and to bring this operation to an immediate halt.

The time has long passed for the mouthing of pious platitudes. This shocking situation merits righteous indignation and the immediate action of this Congress. If our programs are administered so haphazardly that this condition can freely exist in Saigon, it is high time that we step in and take proper remedial action.

As the 90th Congress gets underway, I find that the problems, opportunities, and tasks that lie before this Nation and our community are even more challenging than the past 2 years.

Uppermost is the urgent need to reevaluate this Nation's efforts to bring a just and honorable peace to Vietnam. I have recently returned from a 4-week tour of this troubled part of the world. I have spoken with the people in the villages, the heads of state, our men in the field, and even enemy defectors and prisoners. While I have listened to many so-called experts, the right solution to this dilemma is still elusive and one that will require new imaginative and "Solomon-like" wisdom in its approach. I join with you this new year in praying for divine guidance in finding the right answers.

Almost as ominous in its threat to this Nation as well as the world itself is the ever-growing problems of health and well-being of our fellow man. Hunger still stalks many parts of the world. Famine and disease in many nations remain as the seedbed of discontent. Unless we are prepared to approach these common enemies of man with a massive effort, these seeds will sprout again and again.

As urgent as the need to feed man is the need to solve the threat of pollution to the air we breathe and the water we drink. Pollution of these natural resources has already reached an alarming stage. Immediate measures to correct and prevent further contamination is imperative. There is no reason why a nation that can take closeup pictures of the moon's surface can't focus some of its attention to the curing of such killers as cancer and heart disease. Mindful of the monumental gains in social legislation enacted by the 89th Congress, we must now take even greater strides to insure that these programs are properly implemented.

I am opposed to increased taxes, for I do not believe this is necessary at the present time to curtail inflation. Economies must be made, but not at the expense of essential programs. The fat, the water, and nonessentials must be deleted from Federal expenditures so we may have meaningful programs to care for our present and future needs.

The continuing war on poverty, aid to the aged, the need to educate our young, the guarantee of equality of opportunities for all of our citzenry regardless of race, creed, or color, the vexing mass transportation problems of our community and the vigilance in protecting and conserving our natural resources must be equally pursued with vigor.

Mr. Fred Tarbox Elected President of North Essex Council of Boy Scouts of America

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, I ask unanimous consent to submit in the CONGRESSIONAL RECORD the acceptance speech of Mr. Fred Tarbox, of Andover, Mass., on his election to the office of president of the North Essex Council of the Boy Scouts of America, Lawrence, Mass. It is outstanding in its clarity, its relevance, and its sincerity. It calls to mind the invaluable work the Boy Scouts are doing to imbue in today's youth the sense of pride in self and country; it also points out the awareness and perception by one man of the problems facing our Nation's youth, his concern and understanding, and his positive ideas and forward action.

Further words on my part only serve to repeat the ideas and principles embodied in this speech and diminish the impact of Mr. Tarbox's presentation which should be an example and inspiration to adults and youth alike.

The speech follows:

ACCEPTANCE SPEECH OF MR. FRED TARBOX

To President Hamel, to all the officers, to our Scout Executive Robert Smith and to all of you—the core of Scouting. How proud I am to be affiliated with this great organization. B.S.A. I am happy to be here tonight because I am with the best. To your retiring President, a man I've known of for some years, a great citizen and Scouter I say how pleased I am to be associated with his group. Ed you are a real Scouter—may I express my best to you for all you've done for Scouting. To all others here assembled I give you my best wishes for your future in Scouting.

I accept this distinguished honor of being elected President of the North Essex Council B.S.A.—and in doing so I recognize my weaknesses as a "Scouter" and my lack of knowledge of the Scouting program. However, I have had the pleasure of being associated with the Scout organization for the past nine years at the grass roots level in Troop 77 where I've had the privilege of seeing the results of what this great program does for boys—and as a proud father what it has done for my son Bill. I have seen the activities of this great council—with its many devoted volunteer leaders, working and giving unceasingly of their spare hours to build character, teach honesty, inspire reverence, make first rate citizens and in total develop boys into men. This organization must have leadership and this organization has had leadership. What little I can offer will only be directed toward the good work and performance that has always been part of the North Essex Council.

My feelings toward scouting are patterned after all those here assembled. We can look for a better world through this opportunity of working with our boys. However, you can't do it alone, or without assistance my labors would be in vain. We need the assistance of this great community and most important help from the parents—we will work forward toward this needed cooperation. Let us think a moment of this world today with its trials and tribulations. Consider the problems and short comings.

All of us, I am sure, have felt occasional misgivings about some of the problems and scenes that appear increasingly in our every day life. We are appalled when growing violence and crime in our country is condoned and excused—when our public places of learning have a member say "God is dead" or that effects of L.S.D. condition the mind for a new religion.

It is difficult for us to understand when the finest system of government yet developed by man is twisted into a device to serve the private and personal interests of a few self seekers and special interest groups. We are shocked when we observe an increasing breakdown in moral fibre in every segment of our society, particularly in our youth. Can anyone here think of a better way to condition the minds and bodies of these young people than through the Boy Scout movement?

Today the individual seems to be running from responsibility at every turn and the interpretations of our laws encourage it. There are times when it is difficult not to wonder what is wrong with us? Are we out of step with the world? But then a few hours with these boys, reconditions your mind and when the call is to "circle up," and the sound of the bugle for days end—at the twilight hour, you again have a sense of refreshment and really believe that goodness can prevail.

When I speak of the world today I am really generalizing. It's the world we move in, not the healthy attitude of Boy Scouting. I don't like to sound like an old fashioned moralist talking from somewhere in our Mid-Victorian past. But like it or not, I think I'm beginning to feel like one. I seem to remember growing up in a time when such words as honesty, integrity, honor, responsibility, dedication, morality and patriotism meant something different from, "what's in it for me, and what are you going to give me next." It seems to me that when many of you and I were going to school there were ideas and ideals which were held up to us as a kind of a torch which would guide us along the way to becoming decent and productive citizens of our communities. Now I sometimes think that this torch which was given to us, burns with a very tiny flame indeed, in comparison with the fires that are raging around us on all sides. These definitions of honesty, morality, integrity etc. are the same today as yesterday. The good things we learn in scouting can rekindle this flame and warm our lives. I think its about time that we who have experienced life, who have had good home training and the benefits of a sound moral training stand up and tell people what we believe and why.

The dress and habits of our youth are guided by our policies in the home and in the school. There is no substitute for discipline and scouting disciplines. Our society needs people who are adaptable to change but only the right change. As technological advances appear, we need individuals with the basic education and training that will allow them to learn and advance with the times. But most important our people and I speak of our youh must also have a sense of responsibility and a dedication to their job and a way of life, as well as a desire to excel. Here we are hitting at the core of our responsibility and here is where scouting takes its place. We should and must train these boys thoroughly and make them recognize that success isn't money—success is the satisfaction of knowing the job is well done. A dynamic industrial system calls for men who are anxious to compete. In return, it offers great rewards in the feeling of satisfaction that can only come from performing useful work in an outstanding way.

I suggest that each of us, be on the alert for the young people who show signs of talent for making contributions to our society. And here I may interject one observation of mine—a young mind is good and spirited until it's spoiled—each and everyone of us has the responsibility to aid the young mind and Boy Scouting is one of the best places to start.

As we encourage that flame, we will protect it and feed it. We will encourage that young person to develop good habits—help him discover his individual talents—show him the joy of accomplishing a job well done—teach him the joys of healthy competition for his rewards—broaden his horizons and stretch his ambitions. As before if you and I accomplish this with one youngster—with two or three—we will continue to have the tremendous pleasure of watching tiny flames increase in size until they become torches that will provide the needed light in a world that agains seems to be approaching darkness. Join with us in Troop 77 watch these fellows perform we're to old to be molded but we can mold and we can win.

May I bear witness to that great semblance of words the Scout Oath——

"On my honor I will do my best to do my duty to God and my Country and to obey the Scout Law. To help other people at all times. To keep myself physically strong, mentally awake and morally straight."

And that last phrase is the one that always gets me. I could forever and a day hear it repeated. Where the choice of words came from I know not. Did the author stumble on this choice of words? Was he the recipient of a flash of insight at this point? Was he prompted by some painful experience which had borne down on him? I do not know. But I do know he made a very fortunate choice of words. If this oath had read *to become* physically strong, mentally awake and morally straight we would still have applauded it. If it read *to be* physically strong, mentally awake, and morally straight it would have still been a wonderful goal. But it doesn't say "become" or "be"—it says "keep myself." These words show a remarkable understanding of how one does, or is, or achieves those things which following the Oath, "to keep myself physicaly strong, mentally awake and morally straight"—And with this inspiring oath I dedicate myself to promoting my allegiance to God and country, to encouraging greater appreciation of religious ideals, to instilling honor, loyalty and service to the great Scout movement.

In conclusion I give my promise that I'll assist the Council with all my heart and soul. We will continue to work towards its success as in the past. I believe in the same precepts as all of you—our wishes are the same—and with your great professional leader Executive Bob Smith and his staff the council is now and will continue to be in first place.

Labor Union Monopolies

EXTENSION OF REMARKS

OF

HON. DAVE MARTIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MARTIN. Mr. Speaker, today, in the opening of the 90th Congress I have introduced my bill, H.R. 333, designed to eliminate labor union monopolies. I have introduced this bill in the past three Congresses.

This bill would make the labor unions subject to antitrust laws of this country and it also embodies amendments to the Sherman, Clayton, Norris-La Guardia, and National Labor Management Relations Acts.

Over the years, this country has suffered severe economic setbacks and hardships on the public as well as industry as a result of these large-scale strikes, and failures of the negotiating parties to get together, mainly because of the size of the representation. I am sure all of the Members here today recall the difficulty under which this country was forced to operate as a result of the airline strike last summer. Here again is an example of one union tying up the major airlines and working a tremendous hardship on the public and the economy of this country.

Under my bill, bargaining between the parties would have to be conducted by a single employer and representatives of the employer's employees, or as provided in some cases, group bargaining where not more than 25 percent of the industry is involved in the negotiation. Also, the featherbedding demands by unions could never become a labor issue since such restrictive practices are prohibited under my bill.

In brief, my bill would still allow strikes, but would restore union power to the local labor unions and take it out of the hands of the international unions. It would not interfere with any legitimate labor objectives, but only eliminate those activities not in the public interest. Industrywide bargaining would be eliminated. It would be illegal for two unions to confer with one another in regard to the settlement of wage disputes and likewise, it would be illegal for the management of two companies to confer with one another in regard to a settlement. You have to treat both sides fairly.

This bill would not interfere with any legitimate union activity nor destroy unions or their welfare and pension programs. It would only put an end to those abuses we have been facing daily in our Nation; it will maintain collective bargaining without granting further authority to the executive branch of the Government to dictate the terms of a labor contract through such weapons as compulsory arbitration and seizure, which, in my opinion, leads this Nation down a dangerous path of socialism.

The heads of the international labor unions whose monopolistic powers would be checked by the passage of this bill, are the only ones objecting to its passage. For this reason, I consider it a good bill and will do the job it is intended to do.

I sincerely hope that some affirmative action will be taken on this bill in the 90th Congress and allow labor and management to meet on even terms for the best interest of the public.

Averell Harriman—Public Servant

EXTENSION OF REMARKS
OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. MOORHEAD. Mr. Speaker, a great citizen of our great Nation recently celebrated his 75th birthday. Most of those years have been devoted to the performance of unparalleled service to his country. I join my fellow Americans in saluting Averell Harriman on this occasion. Under leave to extend my remarks, I include an editorial from the Washington Post of November 15, 1966, at this point in the Record:

It is impossible to think of W. Averell Harriman as 75 years old today until one looks at the record of his public service. Then one wonders how any man could have crowded so much useful and dramatic activity into so short a life. He has managed to combine longevity with youthfulness, wisdom with exuberance and good fortune with an extraordinary sense of public responsibility.

When he was a mere stripling, Averell Harriman inherited $40 million, including a large chunk of the Union Pacific Railroad for which he worked, industriously and imaginatively for 30 years after his graduation from Yale. He skillfully enlarged this modest patrimony, branching out into banking, shipping and hotel-keeping.

Although a Republican by birth, breeding and environment, Harriman was lured into the Democratic Party and into politics by an enthusiasm for Al Smith. Franklin Roosevelt gave him his first Government job—as administrative officer in New York for the National Recovery Administration—and leaned on him for a vast variety of increasingly important assignments, including management of the Lend-Lease mission in London during World War II and a three-year term as Ambassador to the Soviet Union.

Averell Harriman has served the American people since then under Presidents Truman, Kennedy and Johnson—as Ambassador to Great Britain, as administrator of the Marshall Plan, as Secretary of Commerce, as roving emissary, trouble-shooter in innumerable uncomfortable spots and confidential counselor. In 1954, he went into politics on his own, captured the Governorship of New York, ran the state with characteristic vigor and, in 1956, made a creditable, if unsuccessful, try for the Democratic presidential nomination.

Averell Harriman has brought to his multitudinous responsibilities above all else a quality of Yankee shrewdness and realism—an invaluable astringent. Perhaps more clearly than anyone else he recognized the character and conditions of the cold war with the Russians under Stalin. And just as realistically, he sized up the implacable nature of the Communist regime in China. There is a flinty quality about the man. Happily, he remains in harness today, too young for retirement, too valuable for release, too energetic for disuse. His countrymen owe him thanks as well as warm congratulations.

The World Today

EXTENSION OF REMARKS
OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, in 1958 there retired from the Army, after 42 years of outstanding service, a man whose dedication to God, to nation, and to the ideals and principles of freedom will long be remembered.

Lt. Gen. Tom Hickey returned to his home in South Boston, Mass., having behind him a remarkable record. Working his way up through the ranks from buck private to lieutenant general, he saw action in three wars, commanded the 82d Airborne Division in Korea, and served on the Joint Chiefs of Staff. A recipient of many decorations both from the military for his bravery under fire, and a deeply and sincerely religious man who holds the medals of Knight Commander, Order of St. Gregory and the Knight of the Grand Cross, he was a highly respected and deeply loved commander.

His speech to the Holy Name Society, Army War College, Carlisle Barracks, Pa., in September 1966 is both a reflection of this man, and an unforgettable example of the principles of love and deep belief on which our Nation was founded and on which it depends. Under unanimous consent, I submit it in the Congressional Record on this first day of the 90th Congress:

The World Today

(Holy Name Society, Army War College, Carlisle Barracks, Pa., September 11, 1966)

I

It is always a happy occasion for me to be able to be with a group of individuals engaged in the same voctaion that is mine, and, which I practiced for almost forty-five years of active military service. There may be some who might object to the use of the word "vocation" as applied to a profession which has brought so much pain, misery and bloodshed into the world. But, I use the word deliberately, because it has too often been used in a restricted sense.

A vocation is a call from God to do something for Him. It is an invitation from our Creator to a particular task and state in life wherein we work out our own salvation with the aid of the graces He sends us. Just as there is a difference in material gifts, there is also a difference in spiritual gifts. Certainly, the gift of a vocation to the priesthood is higher than that of a layman. But, that does not mean that the layman's vocation is any less a call from God. It is well for us—members of the laity—to dwell on this fundamental fact, as we meditate on the problems in this material world. We are a religious nation. We do have spiritual values that must be preserved.

II

We can look around us and see that many of our people are unhappy, in the midst of material plenty, as they survey the turbulent situation in the nation today—economic bickering, political doubletalk and contradictions, social and legal derelictions and the most important pressure at the moment—our military deployment in Vietnam. They are uncertain and unsure as they watch secularism from within, and, atheism from without, attempt to erode our moral and spiritual strength and substance, that has been our heritage.

The contamination in our environment has caused some of our people to capitulate to materialistic blandishments. They have been infected with the notion that we should get rid of our traditional moral code, based on eternal truths, and, replace it with a new approach to propriety which has been labelled the "new morality." This new fangled, but, old fashioned error would destroy the influence of supernatural religion on the individual and community life. We are groping in an alien fog of religious indifferentism, whose murky shadows are building up an invisible wall of separation between what we believe and what we do.

III

The changing and confusing circumstances that continually crop up to confront us, are certainly stimulating the emotions of our people. Some of the mental torture and the demands made upon our conscience is due to the sophistry and forecasting oratory that originates in our nation's capital. The diversity of opinion which these circumstances have created is an indicator that our people will no longer allow their apathy and indifference to give silent approval to political incompetency or intellectual dishonesty. Our skepticism and our questioning curiosity is heightened every time we hear the same hackneyed phrases reissued as "new," "original," and "imaginative" proposals for compromise, containment or peaceful coexistence, as the solution for the then current crisis.

All of these exercises in expediency come to us via our communication media, in a flow of redundant rhetoric that, too often emphasizes. Too little thought has been given, to the too large amount of words that engulf us without saying anything new.

IV

Honesty is the cement that holds our society together. It is the quality in man that makes him want to do what is right and proper. A lack of honesty between those who lead, and, those who have placed them in positions of leadership, induces a breakdown in communications between the two main segments of our society.

There is another quality in man that aids him in avoiding dishonesty, and warns him against improper inertia. It is that shameful feeling that comes over the average individual when he commits or participates in an improper or dishonest act—or, has failed to meet his right and proper obligations.

Both of these qualities are in short supply in the nation today. Both segments of our society must rid themselves of their complacency and assist in re-establishing a competency and a confidence in the handling of public affairs. This nation is people—moral people, individuals and family groups—living in community, under the same authority, and, united together for the purpose of procuring the common good. And—because we are moral people—when we do rid ourselves of our complacency, we will meet the problems of our environment by carefully weighing the different interpretations of the raw facts, in a desire for careful analysis; rather than with a desire for controversy. We will attempt to make our decision based on reason and logic, rather than by contentious dispute and discord that leads to arrogance, narrowmindedness and bigotry.

The Christian principles which we profess and practice must continue to be the basis for our political and religious decisions. We must never allow mental gymnastics that defy reason and logic to humanize the divine; to naturalize the supernatural. We are a religious people. We dare not compromise our religious belief. Therefore, we cannot compromise with atheistic, materialistic Communism.

V

Communism is the afflictive evil which has kept this world in turmoil for the past half century. Our Holy Father, Pope Paul—last May—again warned the world of the evils of Marxism. He emphasized the false concepts this ideology places on man, history and the world. He admonished us that the atheism which Marxism professes and practices is a blindness that man and society will have to pay for with the gravest consequences; that the materialism which derives from these false concepts destroys man spirituality and his transcendent hopes. This was the same clear, concise condemnation of Communism that has been given to the world by every Roman Pontiff since Leo XIII. Unfortunately, it is also a capsule history of the world since Communism came into power, and, the free world began to yield and give ground under the pressure of the menace of Marxist materialism.

VI

Neither those who lead, nor those who have placed them in positions of leadership seem to want to believe the facts of history. We continue to measure Communism in accordance with our own sense of values. Communism came into power, in an inferior position compared to those they had set out to destroy. They were militarily, politically, and economically inferior. So, their strategy for survival had to be based on the application of a continual pressure of aggressive acts of violence against their enemies, while waiting for the day they hoped the balance of power would turn in their favor.

Each successive act of aggressive violence was accompanied by a false plea for peace, and a reduction of tensions throughout the world. This deliberate contradiction between what a Communist says and what he does, is also an integral part of the constant pressure he has designed to destroy our moral and spiritual strength and substance. How successful this policy of constant pressure of violent acts has been is attested to by the fact that they have made this past half century one of the bloodiest in the history of mankind.

We are—and, we have been, since 1917—engaged in combat on a broad front, exposed to a constant pressure from the entire spectrum of Communist weaponry—psychological, cultural, economic, political and military force by proxy; in attempts to gain by negotiation, what they could not obtain by direct action. Yet, we will not—apparently—accept the facts of life; that Communist doctrine recognizes war as the normal posture of its people until its goal of world domination has been reached. In this world today, Communism and conflict are synonomous.

VII

Each one of you before me this morning has knowledge of Clausewicz' treatise, "On War." You will remember his definition of war: "an act of violence intended to compel our enemy to fulfill our will." Lenin and his disciples also studied Clausewicz. They quickly realized the simplicity and the totality of his definition of war. They recognized that violence could be accomplished by slavery and subversion—and, by subtle savagery—without any recourse to formal military action. And, they accepted and applied the Clausewicz doctrine: That violence is the means and submission of the enemy to their will is the object of war; that war, as an act of violence, is unrestrained by any law except that of expediency; that in war, the errors which spring from a spirit of benevolence are the worst; and that, to introduce into the philosophy of war, a spirit of moderation, is an absurdity. This is the basic doctrine of war, as applied by the Communist evil in the world today.

VIII

Our failure to comprehend the inherent nature and spirit of Communism strategy and actions is the reason we have not understood the seemingly illogical, changing and confusing pattern of Communist moves and countermoves throughout the world. Our people are not aware that Communism has made unconventional war conventional.

We know that a Communist is dogmatic about the denial of God; that he hates religion because he believes it to be a dishonest delusion; that he scoffs at our rigid moral code; that he has made the State omnipotent; and, that he considers man to be only a higher form of animal, an instrumentality of the State which is his master and proprietor. We know this doctrine to be false; but, false as we know it to be—it is passionately believed by millions who have surrendered their souls to the merchants of materialism. These religious dropouts have lost their belief in a supernatural order, and, the duty of each one of us to submit to it. So, because of this fundamental error there is no starting point for accord or agreement between us. Communism, because of its hatred for the existing order, must conquer the world or destroy it. Its doctrine allows no other course.

Yet we have refused to recognize their angry purpose when we deal with them. We have refused to recognize their dedication to their cause, as they exhibit their skill in exploiting our ignorance and inertia, our indifference and our irresolution. We have refused to recognize their determination to reach their goal when they select the battle sites for combat; when they change these battle sites at will; when they select the tactics and the strategy for each engagement; when they limit, lessen and lengthen the extent and scope of each encounter; when they choose and apply the proper mental or physical, overt or covert, military, paramilitary or nonmilitary weaponry, best suited to keep us off balance, as they move toward their goal.

IX

Religion is giving to God the honor and the glory due Him. After God, we owe a reverence and respect for our country. It is as citizens of this glorious land that we have been allowed to develop our talents, to work out our material welfare, and, to contribute to the common good. This nation came into being by an act of religious faith which announced that all men had been endowed by their Creator with certain inalienable rights. When Jefferson wrote that statement into our Declaration of Independence, he called it a "self evident truth," meaning, of course, that it was a first principle, and, needed no proof. He made it clear, in writing that document, that he was not attempting to find new principles, but, to "place before mankind the common sense of the subject."

The principles which Jefferson propounded had been taught years before by St. Augustine and St. Thomas Aquinas. They had been specified by St. Robert Bellarmine. They had been retained as a belief by those who left the Church during the Reformation; by their descendents who landed at Jamestown and Plymouth Rock; and by *their* descendents who fought at Lexington and Concord.

These principles continue to be valid today, because, they remain first principles that are based on the laws of nature and of Nature's God. One does not have to be a theologian to know that if the problems confronting the nation and the world today—particularly in the fields of social justice and international peace—are not solved by the dictates of religion, and, the moral code derived from our religious belief, they will be solved by the pragmatism and the utilitarianism of the secularist and the atheist, utilizing the tenets of the "new morality" being peddled today.

X

What this nation needs today—more than anything else—is a display of national courage and humility as we reassess our purpose and our goal. We must go back and put first things first! Faith in a Supreme Being; belief in the dignity of man; a virtuous concept of a moral life; confidence in our fellow man to govern himself in a world dominated by justice and charity—these are the ideals that our doctrine tells us comprise our history and our heritage. Take the phrase "our Creator" out of our birth certificate, and, there is no guarantee left for our "inalienable rights"! Delete or dilute our religious principles and our way of life is doomed. Obliterate our religious principles as the motivation behind our decisions in every action of our daily environment, and you have destroyed the strength of our resistance.

Nothing in this world is free. The price of freedom is high. The preservation of our Christian way of life is worth any price we may have to pay to preserve it. But, we must be prepared to make sacrifices. We must be prepared to contribute the zeal and the fervor of the early Christians, as we apply these virtues to every action of our environment, by precept and example. History tells us that no nation has ever been conquered from without until it has first become rotten from within. You and I know that discipline is a spiritual quality that raises man to his highest attributes. A nation, like an army, that is not disciplined—that has allowed its religious intensity to become weakened, and its moral code to become watery—that nation is sick. And, it will remain sick until an enemy opposing it proves that it is dead.

Your assignment here indicates you have been selected for high level leadership in the US Army. You must never forget that the Army is people, and, you have been entrusted with the most priceless commodity in the nation—its youth. Each one of us will, one day, be called to an accounting for the spiritual souls that have been entrusted to our care.

Our reply to the "God is dead" crowd is: If there is no God, there is no soul; if there is no soul, there is no conscience; if there is no conscience, there is no moral responsibility; and, if there is no moral responsibility, there is nothing in this world to keep a man, a group, or a nation from doing anything it wants to do—and thinks it "can get away with"!

Bill To Amend the Internal Revenue Code

EXTENSION OF REMARKS

OF

HON. DAVE MARTIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MARTIN. Mr. Speaker, today I have the privilege of reintroducing a bill which I introduced late in the 89th Congress. I hope very much that my colleagues will follow me and support this bill to amend the Internal Revenue Code to allow our educators to deduct educational expenses incurred by them for perfecting their teaching ability.

Last year, the Internal Revenue Service attempted to rescind their practice of allowing these deductions, but as of now, they have revised their proposed rulings. I do not think, however, that their revisions will help encourage our educators one bit, and I believe that our teachers and educators should be allowed full benefits for their labors and in securing additional education.

I hope this 90th Congress will act early to remedy this situation and encourage the educators of this country to follow their profession.

Federal District Court in Hyattsville, Md.

EXTENSION OF REMARKS
OF
HON. HERVEY G. MACHEN
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. MACHEN. Mr. Speaker, today I am reintroducing my measure to authorize the judges of the Federal district court in Baltimore, Md., to sit in the Maryland suburbs of Washington, D.C., at Hyattsville. An identical measure will be offered in the Senate by Senator BREWSTER, of Maryland.

Introduction of this bill was the result of a meeting January 6, 1967, I attended in the office of Senator BREWSTER with representatives of the bar associations of the District of Columbia, Prince Georges and Montgomery Counties. It was the unanimous feeling that we should seek enactment of this bill and specify Hyattsville as the location for the additional court location.

There is wide support among members of the three bar associations for the Federal district court to sit in Hyattsville, in addition to Baltimore. We feel very strongly that there is enough legal business generated in the Maryland suburban counties to amply justify the enactment of this legislation.

Mr. Speaker, last November I sent a questionnaire to all members of the Prince Georges County, Montgomery County, and District of Columbia Bar Associations, asking them to write me about their individual positions of the question of an additional place for the Federal district court to sit.

Listed below are the questions I asked the bar members to answer, and a compilation of the responses I received. I find the results extremely encouraging:

SUBURBAN MARYLAND FEDERAL DISTRICT COURT QUESTIONS

1. Are you in favor of establishment of a Federal District Court in the nearby Maryland suburbs?

2. Have you had occasion to appear in Federal District Court in Baltimore? If so, how many times in 1966? In 1965?

3. Have you referred any cases to lawyers in Baltimore to represent in Federal District Court there? If so, how many in 1966? In 1965?

4. If you have any criticism about having to travel to Baltimore to appear in Federal District Court, what is it?

5. Have you any additional comments regarding this issue?

RESULTS OF INFORMAL POLL

Total responses: 250.
Affirmative: 213.
Negative: 16.
Neutral: 21.
From the District of Columbia: 153.
From Prince George's County: 33.
From Montgomery County: 63.
From the Eastern Shore: 1.
Of the affirmative:
Number of cases in Baltimore Federal District Court—1966: 372; 1965: 383.
Number of referrals to Baltimore lawyers—1966: 114; 1965: 132.
Specific Recommendations for Location of Court: Frederick 1, Langley Park 1, Takoma Park 2, Hagerstown 1, Rockville 6, expand District Court 1, College Park 1, Hyattsville 3, Upper Marlboro 2, Silver Spring 6, Prince George's Plaza Federal Building 1.

After We Land on the Moon—What?

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, Mr. John A. Osmundsen has recently examined where our national space program stands today and what our international position is currently in space. With the major decisions facing this next Congress on maintaining the vitality and strength of our national space effort both for its peaceful benefits and its contribution to national security, I commend Mr. Osmundsen's article to your reading:

AFTER WE LAND ON THE MOON—WHAT?

"We expect to explore the moon, not just visit it or photograph it," President Lyndon B. Johnson declared not long ago. "We plan to explore and chart the planets as well. We shall expand our earth laboratories into space laboratories and expand our national strength into the space dimension."

That we are going to do all those things is indisputable. Like Everest, those challenges exist to be met. *When* and *in what order* we shall meet them is another question, and a great many scientists, engineers, space officials, congressmen and the President himself are trying hard to find the answer right now.

For—despite President Johnson's ringing phrases about our space ambitions—the country has set no major goals in space beyond the Apollo Project for landing two Americans on the moon in this decade.

The problem is not a lack of attractive, practical goals that we might achieve by developing the space capabilities we already have. Quite the contrary, there are so many intriguing options that space authorities cannot to decide which to pick up first.

Ultimately, of course, it is not their decision but President Johnson's. He will make an important move toward setting the country's course in space next month when he decides how much money space will get out of the 1968 budget that he will send to Congress in January. The President's decision will doubtless be shaped as much by the pressures of the war in Vietnam and the demands of his Great Society programs as by the need he sees for keeping up the momentum of the space effort, or at least for protecting the broad technological launching pad we have built for space exploration.

Our swift, spectacular pace in space inspires confidence and optimism. Look at what we have done already: Unmanned space probes have sent back closeup pictures of the moon, Mars and Venus. And our manned space flights have gone so well that some observers predict that we may be able to land two men on the moon as early as April or June of 1968.

The same observers warn, however, against optimism about our position in the space race. They point out that there is no fat whatever in the Apollo Project that could absorb a serious blow to its midsection. For example, the destruction of a vital test facility might make a manned landing on the moon by 1970 impossible. Nor can we relax, they say, if beating the Russians is important to us. Despite a lapse of more than a year between manned Soviet space flights, the Russians have achieved many feats essential to a manned lunar mission, and achieved them first.

They were first to soft-land a picture-taking package on the moon. They have flown three ment in a spaceship; we have not. They were the first to achieve an approximate rendezvous between two manned spaceships. And they did that in 1962.

Finally, recent intelligence reports indicate that the Russians are working on a rocket that may be a third again as powerful as the biggest one we have under development. This should erase any doubts that some American space experts have had about whether the Soviets are really shooting for the moon.

All of these factors figured significantly in the planning of five possible space programs that the National Aeronautics and Space Administration outlined earlier this year to the House Committee on Science and Astronautics.

One program would emphasize economic benefits from space, such as improved global weather forecasting and communications, and satellite surveys of the earth's natural resources. The other programs would focus on lunar exploration and science, planetary exploration and science, boosting national prestige with a slambang plan for winning space preeminence by putting men on Mars in the early 1980's, and, finally, a so-called "balanced" approach.

The balanced pitch, which NASA seems to favor, calls for moving at less than maximum speed toward objectives in space around the earth, on the moon and then outward to the near planets. Goals would include orbiting a manned space platform around the earth in 1972, building a station on the moon in 1975, flying astronauts past Mars and Venus in the late 1970's and landing them on Mars by the mid-1980's.

How much would it cost to do those things? It is hard to say precisely, but three possible budgetary approaches to our space effort over the next 10 to 15 years offer a kind of catalogue of things we might want to buy in space during that period.

We are now spending about $5 billion a year on civilian space activities. If we maintain that level of spending, we can continue to move toward a manned lunar landing by 1970 and may also be able to carry on our Voyager program of unmanned flights past Mars.

In addition, we might be able to start making limited use of Apollo hardware for activities unrelated to the moon project. One such "Apollo Applications" proposals calls for outfitting an Apollo capsule with a special telescope that astronomer-astronauts could use to observe and photograph the sun and stars from orbital vantage points above our earth's murky atmosphere. Another post-Apollo plan provides for using the orbiting spent stage of a moon rocket as a kind of satellite gym in which astronauts would have room to move around and work for much longer periods of weightlessness than is possible with existing equipment.

Under the second budgetary approach, for a half-billion dollars more, we could do all those things and throw in a few more Apollo Applications projects near the earth.

The third budgetary approach raises the yearly space ante another half-billion, to $6 billion. That much would provide everything covered in the first two budgets and, beyond that, let NASA buy for the future, on a sort of layaway plan, certain long lead-time items, such as rocket engines that take

2 to 3 years to produce. Buying those things in advance would save much time and money if the nation decided later to set a major new national goal in space, such as a manned flyby of Mars in the late 1970's.

High-level arguments over whether such a new goal should be established now have caused confusion in today's space planning.

Among those who oppose setting any new goals at this time are Donald F. Hornig, chairman of the President's Science Advisory Committee; NASA Deputy Administrator Robert C. Seamans, Jr.; and Democratic Sens. William Proxmire of Wisconsin, J. William Fulbright of Arkansas and Paul Douglas of Illinois.

Dr. Seaman's objections are characteristic. He feels that we cannot commit the space program to anything like a manned mission to Mars when we do not know for sure that man can endure the 350 to 900 days of weightlessness that the round trip would impose.

Champions of a new national goal include Rep. Olin E. Teague (Dem., Texas), Wernher von Braun, who directs NASA's Marshall Space Flight Center in Huntsville, Ala., and—at least by implication—George E. Mueller, associate administrator of NASA's Manned Space Flight activity.

Dr. Mueller said recently that the country's space program has lost much of the urgency it got from the Soviet launching of Sputnik I in 1957 and is also losing the internal focus it received from the establishment of the moon goal in 1961.

Besides inspiring the American public, Project Apollo's objective of a manned lunar landing by 1970 gave coherence to the entire space program. It provided workers with a specific target to shoot at, a deadline for hitting it and a schedule by which to measure progress.

The chances are that the President won't set a major new goal in the 1968 budget and that space funds will be cut. If the slice isn't too big, the moon program won't suffer badly. But it will be hard for NASA to buy now for any new space goal that we set later.

In any case, NASA will probably have to wait another year at least for more specific orders about what to do after getting to the moon—unless, of course, the Russians get there meanwhile.

JOHN A. OSMUNDSEN.

Shorten the Campaign

EXTENSION OF REMARKS
OF

HON. JOHN S. MONAGAN

OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. MONAGAN. Mr. Speaker, today I have introduced an amendment to the Presidential Election Campaign Fund Act of 1966 which was passed in the waning moments of the 89th Congress as part of the so-called Christmas tree bill. My amendment would add a new limitation to the distribution of money from the fund set up by this act. Under this proposal no money would be distributed to political parties if their candidate for President or Vice President were nominated more than 60 days before the day established for the selection of the electors of President and Vice President.

My amendment would reduce significantly the length of presidential campaigns—an objective I have continually sought to achieve since I first came to Congress in 1959. It has been my experience that support for shorter campaigns is at its peak shortly after a presidential election, but such support and interest rapidly dissipate as the memory of the grueling campaign fades. Consequently, the bills I have introduced in every Congress since 1960 have failed of passage. It is my hope that in an effort to improve and refine the controversial Presidential Campaign Fund Act in an off year I shall succeed in focusing public attention on our anachronistic campaign practices which constitute an expensive, boring, unnecessary, and provoking imposition upon the public and an exhausting and shattering experience for the principal candidates. In so doing I hope to achieve by indirection what I have failed to accomplish directly for these many years—shortening the length of our vaudeville-circuit type of presidential campaign.

I have notified Senator LONG of Louisiana, Democrat, the author of the Presidential Election Campaign Fund Act, of my proposed amendment and have requested consideration be given my proposal for parallel Senate action. I hope prompt consideration is accorded my amendment.

Paul Peek Served Well

EXTENSION OF REMARKS
OF

HON. HAROLD T. JOHNSON

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. JOHNSON of California. Mr. Speaker, a few days ago California lost by retirement one of the outstanding supreme court justices ever to sit on the bench. Associate Justice Paul Peek, who now has retired, truly will rank among the greatest public servants in the history of the golden State of California. Justice Peek was a man of many talents. He served his State as a member of the assembly; he served the assembly as its speaker; he was secretary of State, and, subsequently, rose to the highest court of our State.

Justice Peek, who I am proud to identify as a good friend, was honored recently in an editorial published by the Sacramento Bee.

Under leave to extend my remarks in the RECORD I will have this article included at this point:

PAUL PEEK SERVED WELL

It is unfortunate that Paul Peek of Sacramento has found it necessary because of health reasons to retire prematurely from his position as an associate justice of the State Supreme Court.

Peek has served the court, and the citizens of the state, with outstanding ability and dedication. His contribution to the high court has helped make it one of the most progressive and respected state courts in the land.

He was named to the Supreme Court by Gov. Edmund G. Brown in 1962 in recognition of his brilliant service as a member of the 3rd District Court of Appeal in Sacramento for 20 years. Previously, he was secretary of state and a member of the State Assembly, where he was elected speaker.

Gov. Brown, in accepting Peek's resignation from the Supreme Court, had this to say:

"Justice Peek has rendered most distinguished service to the people of California in his long judicial career. His passion for justice, his wisdom and his keen knowledge of the law will be keenly missed on the Supreme Court."

Peek deserves the gratitude of all the citizens of the state. The Bee wishes him a grand life of retirement.

Rhodesia Is a Moral Issue

EXTENSION OF REMARKS
OF

HON. DONALD M. FRASER

OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. FRASER. In recent weeks, Mr. Speaker, important actions have been taken by the United Nations against the rebel Ian Smith regime of Rhodesia. The United States, as a permanent member of the U.N. Security Council, has concurred in the decision to apply sanctions against the regime.

Our Nation's concurrence has come under attack from many quarters in the United States. Some criticisms have originated, as might be expected, with rightwing organizations or with racist groups who believe in subjugation of the majority of Rhodesian citizens by the white minority of 6 percent.

But more disturbing, Mr. Speaker, have been the attacks on the U.S. position by rational, intelligent citizens and newspapers. These attacks, in my opinion, stem from the failure to understand the implications of the Smith regime or the misinterpretation of the events that have developed in Rhodesia since the unilateral declaration of independence in November 1965.

The clearest and most consistently raised voice in defense of the U.S. position has been that of our Ambassador to the United Nations, Arthur J. Goldberg. One of his most persuasive statements appeared in the Washington Post of Sunday, January 8. Following is the statement:

RHODESIA IS A MORAL ISSUE

On Dec. 11 you published a letter from the former Secretary of State Dean Acheson criticizing United Nations action on Southern Rhodesia, which received wide publicity and which was endorsed editorially by The Washington Post. With all deference to the distinguished Secretary, I must say that I respectfully dissent from his conclusions both as a matter of law and a matter of policy.

In essence, Mr. Acheson argued that the United Nations has no jurisdiction to deal with the present situation in Rhodesia, which he considers is entirely an internal matter.

I consider the imposition of mandatory sanctions against Southern Rhodesia by the United Nations as an extremely important matter and one on which the American people deserve all the facts. Therefore, I should like to give a relatively full explanation taken by the United Nations and by our own government was both legal and wise.

NO CHARTER VIOLATION

First, it is argued that action on this issue by the U.N. involves a violation of Article 2, Paragraph 7 of the Charter which reads:

"Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII."

The fallacy of this argument can be seen when the facts involved in the Southern Rhodesia situation are tested against the language of the Charter itself:

Rhodesia is not a "state" and has not been recognized as such by a single government or international organization.

The situation in Rhodesia is not "domestic," since it involves the international responsibility of the United Kingdom under the Charter relating to non-self-governing territories.

The action of the Security Council does not constitute "intervention," since the Council has acted at the request and with the concurrence of the legitimate sovereign, the United Kingdom.

Article 2, Paragraph 7, by its own terms, does not apply to the application of enforcement measures such as the mandatory economic sanctions imposed by the Council in this case.

MINORITY RULE

Second, it is sometimes said that the United Nations action represents a denial of the principle of self-determination. The simple answer to this argument is that the Smith regime is not asserting the right of self-determination for all the Rhodesian people but merely the right of 6 per cent of the Rhodesian people who are white to rule over 94 per cent who are black. The refusal of the United Kingdom to recognize the illegal seizure of power by a minority group based on racial grounds, far from being a denial of self-determination, is an attempt to implement that objective for the Rhodesian people as a whole.

Third, it is argued that the Rhodesian situation poses no threat to international peace justifying the application of mandatory sanctions. To this I must point out that it is the explicit prerogative of the Security Council under Article 39 of the United Nations Charter to make a finding that there is a threat to international peace and security. In the case of Rhodesia, the Security Council has reviewed the facts of the case and made precisely such a determination. In doing so, the Council naturally bases its decision both on the existing situation and on its best estimate of what is likely to happen in the future. Clearly, there are great risks of violence already involved in the suppression of the fundamental rights of 94 per cent of the population in Southern Rhodesia, and the danger to peace will obviously grow if some remedy is not found.

Fourth, it is sometimes argued that sanctions cannot be applied against Rhodesia since the threat to peace originates from other African states. This argument overlooks the fundamental fact that the threat to peace inherent in the Rhodesian situation lies in Rhodesia itself.

OVERLOOKED ELEMENTS

Finally, it is argued that the application of mandatory sanctions to Rhodesia constitutes a dangerous and unacceptable precedent for similar U.N. action wherever violation of human rights may occur.

This argument overlooks a number of elements which are quite unique in the Rhodesian situation. Here we have witnessed an illegal seizure of power by a small minority on racial grounds bent on perpetuating the subjugation of the vast majority. Moreover, in this situation the sovereign authority with international responsibility for the territory has asked the United Nations to take measures which will permit the restoration of the full rights of the people of this territory under the Charter.

Law in the United Nations, as in our own society, is often developed on a case-by-case basis. We should analyze each action of U.N. political organs with due regard for the facts of each case and be careful of hasty generalizations.

Moreover, each of the Permanent Members of the Security Council has the power to prevent the use of enforcement measures in other situations where it may deem them to be inappropriate.

Aside from the legality of the action against Southern Rhodesia taken by the United Nations, the policy and moral reasons for doing so are compelling. It is important to think about this question carefully because there has been much criticism from both sides—from those who urge that the Smith regime in Rhodesia be brought down by the use of force and from those who counsel a complete hands-off policy. Why, then, do we feel the Rhodesian crisis is so important that we take such a strong stand on it?

THE MORAL ISSUE

In the first place, one of the most basic issues involved is a moral one, that is, to restore the constitutional authority in order that all of the people of Rhodesia may join in determining their national future. Our country, founded on the proposition that all men are created equal—and currently engaged in a vigorous Nationwide program to make that equality real for our own Negro citizens—cannot honorably adopt a double standard on what is happening in Rhodesia. In addition, as a founder of the United Nations and a principal architect of the U.N. Charter, we have a special obligation to see that the Charter's provisions concerning human rights and self-determination are upheld. These provisions are not merely exhortations—they are solemn treaty obligations.

From a political standpoint, we have a practical interest in maintaining friendly relations with the newly independent countries of Africa for whom this Rhodesian issue is of the highest importance. Moreover, the success of a rebellion aimed at creating a new white minority state in southern Africa would inevitably harden the lines of political conflict and would tend to stir interracial violence on that continent. A failure to resolve the Rhodesian crisis with justice to the African majority would inevitably strengthen the hand of extremism, violence, and racism in the heart of Africa. Such a prospect is not in the interest of African development and progress nor of world peace and security—nor is it in the interest of the United States.

For all these reasons the United States, in dealing with the Rhodesian question, intends to remain true to its best traditions—knowing that in so doing we also most effectively uphold our national interests. We shall continue to proceed step by step, weighing both the legality and the wisdom of each step as we go in the light of the situation and of the United Nations Charter.

Midstate and North Loup Projects

EXTENSION OF REMARKS

OF

HON. DAVE MARTIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MARTIN. Mr. Speaker, today I have the great honor of introducing two bills for the authorization of both the midstate and north loup projects in my great State of Nebraska. I believe most of my colleagues have realized my great interest in both of these projects as well as reclamation in general. These two projects have received very good local support in the State and community they will serve. Not only will they be of value, conservationwise, but will serve the entire agricultural economy of the State of Nebraska and the country.

I sincerely hope that these projects can secure the necessary authorization in this fine new Congress. Both of the projects have undergone extensive review and study, and their feasibility figures are among the best of any projects in the country at this time. Not only are they feasible, but their repayment figure is extremely high. I have long worked for fiscal responsibility and economy in our Government, and would not support these projects if they did not fit this criteria.

So, Mr. Speaker, and colleagues, I ask your support for these two projects in this Congress.

Successful Salinas Vocational Work Study Program

EXTENSION OF REMARKS

OF

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TALCOTT. Mr. Speaker, we hear much these days of programs to improve the lot of school dropouts and others in our society who for one reason or another are not equipped to compete effectively from an economic standpoint.

Regrettably, such efforts have shown all too few signs of success.

The ultimate answer to the dropout problem, purely and simply, must be to eliminate it—by keeping our young sufficiently interested in, and challenged by, their schooling.

A program being conducted by the Salinas Union High School District, Salinas, Calif., suggests that one means of maintaining student interest in educational pursuits is to integrate their studies with practical work experience opportunities offered by private business firms in the community.

Not every community or school district has such a competent and dedicated program director as Gordon Ray, of Salinas, but the work experience program he administers could be emulated by other school districts with immeasurable benefits.

Staff Writer Eric Brazil, of the Salinas Californian, described the vocational work experience program of Salinas High School at some length in an article appearing in the November 28, 1966, edition of the newspaper as follows:

SPECIAL ASSIGNMENT: SUHS DISTRICT WORK EXPERIENCE PROGRAM GROWS IN POPULARITY

(By Eric Brazil, Californian Staff Writer)

The course which is growing fastest in popularity with students in the Salinas Union High School District is work

It is as if the district built a better mousetrap. Vocational Work Experience began as a 22-student pilot program last February, and it now has an enrollment of more than 180.

Student demand to enroll in the course, which uses Salinas' entire commercial community as its classroom, presently exceeds the supply of jobs for it.

Vocational Work Experience is but one facet, albeit the largest one, of the district's increasingly comprehensive work experience education program.

OTHER FACETS

That program includes the Vocational Education Act (25 students) and neighborhood Youth Corps (65 students) projects, both of which receive federal financial assistance, as well as work training (35 students), a 100 per cent private enterprise project for training mentally retarded youngsters.

Gordon Ray coordinates the district's work experience from a tiny office in the music wing at Salinas High School. But he doesn't warm the office chair much. He is a man on the go.

Ray has been selling the program hard, and the business community, as well as the students, seem to be buying it. One hundred sixty employers are participating in the work experience program, and more are coming in.

Vocational Work Experience is open to junior and senior students over 15. Students work three to five hours a day at a minimum wage of $1.30 an hour. They receive five academic credits for each bloc of 180 hours of work.

Trainee jobs fall into a variety of fields, but the clerical and sales fields predominate.

Students are referred to the work experience program by vocational counselors at each of the district's three high schools. And some of them just find out about the program on their own and inquire about it at Ray's office.

"TYPICAL" TRAINEE

Ray finds that the typical student enrolling in work experience "has not had a great deal of academic success," despite average school attendance. And "he's searching for some way to achieve status. He thinks that if we can find the right job for him, he'll achieve success."

Ray attempts to fit students into jobs that will put them on the road to their ultimate vocational goals.

One particularly good fit has North Salinas High School junior Paul Lewis learning the electronic technician's trade at Kane & Zech Television and Appliances on Main Street.

Young Lewis plans to be an electronics technician after he graduates from high school and finishes military service. Right now he finds himself busy as the proverbial bird dog checking out TV sets and phonographs, making service calls, deliveries, etc. And he finds the whole work experience "a lot of fun."

"THEY'RE DOING FINE"

Lewis' boss, Fred Kassing, who also supervises another young work experience trainee, Paul Molinari, says that "as far as I'm concerned, they're doing fine . . . They haven't missed a day of work yet." Kassing believes that by the end of their high school training period the two boys will be well on their way toward becoming first-rate technicians.

Harry Wardwell, a principal in Kane & Zech, says he is "real tickled" with the program so far. One of the really serious problems facing the television and appliance business today is an acute shortage of qualified technicians, he says. And the work experience program is helping its firm to grow its own, so to speak.

"The two boys between them are almost filling the job for one person—a man I couldn't find," he says.

Ray views the job as "a classroom away from school teaching material we can't duplicate at school. And the employer is the instructor in this class."

How, for example, could the schools go about duplicating a doctor's office classroom? Couldn't be done. Therefore, Miss Georgia Flamos, a Salinas High School senior who has "always wanted to work in a doctor's office," is a work experience trainee in the office of optometrist Dr. Tracey O. Beagle. She is the receptionist now, and Dr. Beagle is planning to train her as a nurse's assistant.

FEW FLUNK OUT

Of all the work experience trainees Ray has placed in jobs so far, only four—count 'em—four have flunked out on the job. (Two of those have since been given a second chance on other jobs.) Ray says that "we haven't had a single youngster drop school since we started this program," although the preprogram dropout potential among the trainees was quite high.

The J. C. Penney Co. employs three work experience trainees at its Valley Center store, and assistant manager Joe Montgomery is one of the program's big boosters. (In fact he is a member of the high school district's 16-man work experience education lay advisory committee.) "We think this program is excellent. As a matter of fact, we'd like to see it expanded," Montgomery says.

TEACHING ATTITUDE

"We're happy to be the classroom if the kids really want to learn. But we won't have any truck with a kid who doesn't really want to put his heart into it," Montgomery says. "Our first responsibility to these kids—even before we teach them any kind of skill—is to teach them responsibility and a good attitude toward holding a job."

Ray believes that the full potential of the work experience program has not yet been attained. If the jobs materialize, "there could easily be 500 kids in the program next year," he says.

Besides, he says, "I feel that 90 percent of the kids in high school need some kind of work experience, whether it's in our program or a job they find on their own."

She Could Be Lowell's Most Traveled Woman

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, I submit for the CONGRESSIONAL RECORD the recent article in the Lowell Sun on Miss Florence Archibald, of Lowell, Mass., in note of her energy, her curiosity, and her desire and ability to share her experiences and knowledge with others.

The cooperation born out of understanding between nations cannot be by governments alone. Lasting cooperation must be based on understanding and communication between the peoples of a nation. In view of this, every individual becomes an ambassador of the United States, conveying our image abroad, gaining an understanding of other peoples, establishing a rapport, and transmitting this information back.

Miss Archibald's travels and activities can only be a credit to her city of Lowell, her State, and her country. Our praise is due her, our thanks, and our best wishes for many more miles of adventure.

The article follows:

[From the Lowell (Mass.) Sun, Oct. 29, 1966]

SHE COULD BE LOWELL'S MOST TRAVELED WOMAN

(By Melvin Hayden)

LOWELL.—Miss Florence Archibald, an ageless ex-schoolmarm who is retired only in the sense of being free from day-to-day routine, has the unqualified distinction of being Lowell's "most traveled woman." Since 1924 when she took her first trip—a journey to Labrador—she has literally gone to the four corners of the earth, visiting all six continents and a countless number of countries.

The former Lowell elementary school teacher, who parlayed a love for geography into an action-filled life of travel and adventure, last taught schol in 1952. She lives alone at 112 Fremont St., high-atop the city she served so faithfully for over 40 years; the city that she says has always beckoned her home from distant ports of call.

Miss Archibald wanted to teach as early as she can remember from her childhood in Grafton, her birthplace. However, during high school age she took the woman's prerogative and changed to a business course. She later reversed that decision, her "natural call to teaching" leading her to Lowell and the state teacher's college here. Following graduation, she went on to earn her master's degree in education at Bridgewater State.

The vivacious, blue-eyed, ex-teacher's interests are widespread and her friends and acquaintances are legion. She is currently a member of nine different clubs and still appears frequently as a speaker before many groups. During these "informal talks," as she prefers to call her speaking engagements, she often dons an appropriate native costume from the large collection she has gathered on her trips.

She's an avid collector. In addition to the costumes, she has thousands of post cards from throughout the world, diaries and photographs from all her trips, eight scrapbooks and a truly impressive collection of more than 800 dolls brought home from each of the places she has visited here and abroad.

The dolls all authentically costumed in native dress were made in each of the countries they represent. There are dolls from Guatemala, Japan, France, Poland, Russia, China and from any other country you'd care to mention. Some represent historic figures, others are dressed befitingly for all occasions. And, in her American collection, there are dolls collected with cereal box tops, Raggedy Anns and dolls from colonial Virginia made from dried corn cobs and chunks of apple.

In 1929 Miss Archibald made her first of many trips to Europe visiting eight countries on a schedule a cousin termed "a gymnastic stunt." Since that time she has twice gone around the world; in 1959 on a tour of the Northern Hemisphere and in 1960 south of the Equator.

During her 1959 world tour she included West Africa and the Mediterranean touching such romantically-fabled ports as Dakar, Casablanca, Alexandria, Istanbul, Athens, Venice, Naples, Barcelona, Cadiz and Lisbon. While in Africa she made a 5,000-mile camera safari.

A trip to South America was made in 1939. Leaving New York by boat to Buenos Aires, via Havana, with stops in Montevideo, Rio de Janeiro, Trinidad and San Juan.

Most of her voyages have been by boat, but she's flown by jet to Russia, a second trip to that country in 1961, and has returned home to Lowell many times by air. Miss Archibald vividly recalls hearing ex-Premier

Khrushchev speak in public during her second visit in 1962.

Although she's made scores of friends during her travels she now finds herself "too busy" to correspond with all of them. She is, however, a prolific writer and keeps a record of every letter she writes.

Miss Archibald's "not saying" what her future travel plans are. There are few places in the world she hasn't seen. But knowing her desire "not to sit around and rust since retirement" it wouldn't be too surprising to get a post card one day soon from some far off land that has again stirred this lively lady's soul of adventure.

Rubber Footwear Bill

EXTENSION OF REMARKS

OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MONAGAN. Mr. Speaker, today I have reintroduced my bill to reverse the Treasury Department's action of February 1966 adopting new and lower guidelines for the tariff evaluation of rubber-soled footwear.

During the past year I have sought administrative and legislative remedies to this action which is economically injurious to the rubber-soled footwear industry. As chairman of an ad hoc congressional committee set up by Speaker McCormack in response to the revision of the ASP guidelines, I have met with Treasury Department and Tariff Commission officials, I have written to the President and I have testified before Tariff Commission hearings and investigations. Thus far my efforts have not met with success.

At the present time the President has before him the results of a Tariff Commission hearing which was conducted in September 1966 and at which I testified. The purpose of this hearing was to determine the economic impact on the domestic rubber footwear industry of the conversion of the American selling price basis of evaluation and the reduction of these newly converted rates of up to 50 percent.

In December 1966 I wrote President Johnson in regard to the decision he will make on the basis of these hearings. I urged the President's support to prevent any further reduction of tariffs on low-wage foreign imports of rubber-soled canvas footwear. Also I notified members of the ad hoc congressional committee of my letter to the President and I am grateful for the support I have received from them.

The economic well-being of the rubber footwear industry is of concern to me, for thousands of workers in my district are dependent upon it for their livelihoods. Above and beyond this, I am concerned with preventing unilateral tariff concessions by the United States which are violative of the spirit and the intent of the Trade Expansion Act of 1962.

I believe domestic industry should be protected from the unfair competition of low-wage foreign imports. I invite my colleagues who are of like mind to file bills similar to mine and ask support of my bill which will reverse an administrative action which unilaterally reduced the tariff on imported rubber footwear by 35 percent.

Tribute to Hon. Victor L. Anfuso

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. WOLFF. Mr. Speaker, I was deeply saddened at the sudden passing of one of our most beloved and admired former colleagues, the Honorable Victor L. Anfuso, of New York. Although I was not privileged to serve in the Congress with this distinguished Member, his contributions to this august body and to the committees on which he so ably served are matters of record. I am sure all of us who knew Victor join me in expressing deepest heartfelt sympathy to his wife, Frances, as well as their children.

Under leave to extend my remarks, I wish to include the following editorial which appeared in the New York Times on December 20, 1966:

[From the New York Times, Dec. 30, 1966]

JUSTICE VICTOR L. ANFUSO DEAD—SERVED FIVE TERMS IN CONGRESS—AGRICULTURE SPECIALIST FROM BROOKLYN WAS ELECTED IN 1962 TO STATE SUPREME COURT

State Supreme Court Justice Victor L. Anfuso, an Italian immigrant who shined the shoes of some of the people he later represented in Congress, died of a heart attack late Wednesday night. He was 61 years old and lived at 25 Clark Street in Brooklyn.

Justice Anfuso, who served in the House of Representatives for five terms before his election to the Supreme Court in 1962, became ill while attending a private meeting at the Warwick Hotel.

The police of the West 54th Street station administered oxygen, but Justice Anfuso was pronounced dead about 35 minutes after he was stricken at 11:15 P.M.

Justice Anfuso, a baldish, heavyset man with a thin black mustache, was a Democrat who had been backed by the Liberal party in each of his Congressional campaigns.

VICTIM OF REDISTRICTING

In 1962, when the State Legislature's Congressional redistricting law combined most of his Eighth District with the 14th District, he agreed to step down in favor of another Democrat, John J. Rooney. But he left the House with a heavy heart.

"I'll always be a Congressman," he told a friend recently.

Even while no longer in the Congress, he continued to appear at civic and social functions in his old constituency. For both old friends and new he always had a supply of ballpoint pens inscribed: "A gift from your Congressman, Victor L. Anfuso."

As a Congressman, he always made it a point to be available to his constituents from the Greenpoint, Williamsburg and Ridgewood sections of Brooklyn. Although he always stressed in his political speeches that he considered himself the spokesman of all the citizens in his district—Jews, Italians and Poles—his popularity among the large Italian electorate made him unbeatable during his campaigns for Congress.

Mr. Anfuso was first elected to Congress in 1950, when he upset Representative Joseph L. Pfeifer in what had been a safely Republican district. He served on the House Post Office and Civil Service Committees and was instrumental in obtaining a salary increase for postal workers in 1951.

But his first stint in the House was short-lived. He was forced to withdraw after serving only one term because a reapportionment of Congress eliminated his Brooklyn district in 1952.

A LIBERAL VOTING RECORD

In one of his first acts as Mayor, Robert F. Wagner named him a magistrate in 1953. Mr. Anfuso served on the bench for less than a year, however, resigning to run again for Congress. He defeated Eugene L. Renne, a Republican, and captured the Eighth Congressional District seat that he was to occupy for three more terms. During his tenure, Mr. Anfuso voted regularly along liberal Democratic lines.

In 1955, this Congressman from a district criss-crossed by sprawling factories, freight terminals, lumber yards and low-rent public housing, was appointed as a member of the House Agriculture Committee—a post usually reserved for members from agricultural communities.

Mr. Anfuso was eager about the appointment, however, because he believed that farmers and city consumers knew too little about one another. At his instigation, a consumers study subcommittee was set up in 1957 to study the high cost of living and seek ways to prevent further rises.

While in Congress, he also served on the Committee on Science and Astronautics and on the Committee on Merchant Marine and Fisheries. He was chairman of the subcommittee on International Cooperation and Security and was a Congressional adviser to the United States Representative on the United Nations Committee on Peaceful Uses of Outer Space.

STUDIED FOOD SURPLUSES

Mr. Anfuso was also a member of delegations to North Atlantic Treaty Organization parliamentary conferences in Paris and served as a member of the United States delegation to the United Nations' Food and Agriculture Organization Conference in Rome in 1956. The following year he was sent on a special mission by the House Agriculture Committee to study stockpiling and disposal of American food surpluses in Europe and the Middle East.

He was one of the first members of Congress to say that he thought that Fidel Castro was under Communist influence. He advocated an open foreign policy so that the world could know where the United States stood and thus make no miscalculation leading to war. He was an opponent of colonialism and favored improved United States relations with Latin America.

Victor L'Episcopo Anfuso was born on March 10, 1905, in Gagliano Castelferrato, Sicily, the youngest of five children. When he was 9, his father, a shoemaker, died, and the family immigrated to the United States. The Anfusos found an apartment above a saloon at Flushing Avenue and Morrell Street in Williamsburg. Mr. Anfuso was to live in this neighborhood for most of his life and to represent it in Congress.

Young Victor began to shine shoes to help his family make ends meet, but he was soon stopped by a truant officer. "The officer explained that here kids have to go to school," Mr. Anfuso recalled many years later. "So I worked after school."

Despite the long hours he devoted to earning money, young Victor was graduated from Commercial High School with the highest average in his class. He then peddled fruit and vegetables from a pushcart and was a salesman in his brother's furniture store while attending Brooklyn Law School at night.

Rejected by the draft in World War II, he was specially trained by the Office of Strategic Services and sent on a mission to Italy for which he later received the Distinguished Service Medal of the Veterans Association. After the war, he served as special assistant commissioner of immigration and naturalization for the Justice Department.

Surviving are his widow, the former Frances Stallone; three sons, Francis, Joseph and Victor L., Jr., and two daughters, Miss Diana Aufuso and Mrs. Marianina Vaughan.

A funeral service will be held on Saturday at 10 A.M. at St. Joseph's Roman Catholic Patron Church, 185 Suydam Street, Brooklyn.

Lowell Priest Staggered by Peru Poverty

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, I submit for publication in the CONGRESSIONAL RECORD the Boston Herald article of December 30, 1966, on the experiences and impressions of Rev. William Pearsall of Lowell, Mass., at present pastor of the parish of Cristo Rey in Peru under the auspices of the Society of St. James the Apostle.

Foreign aid alone cannot solve the problems of people in poverty-stricken areas of developing countries. The guidance, both spiritual and social, which is being undertaken by people such as Father Pearsall is part of the vital effort of private groups and individuals to establish a rapport with other nations and to work for progress and social welfare, a prerequisite for any meaningful political or economic stability. These efforts should be encouraged and expanded, particularly in the Southern Hemisphere.

Both Father Pearsall's own admirable efforts and the significance of the problems he faces are cause enough to bring this to the forefront for our recognition and attention.

The article follows:

LOWELL PRIEST STAGGERED BY PERU POVERTY

(By Jim Morse)

This is the eighteenth article in a series on the activities of the Society of St. James the Apostle in South America.

CHIMBOTE, PERU.—"I couldn't understand it," recalled the Rev. William Pearsall of Lowell. "The night I arrived in Chimbote a year ago I attended a church processional. The people carried a candle in one hand and a stick in the other. I'd never seen anything like it before.

"I asked one of the other priests what the sticks were for, and that's when I found out what this place is like. 'The sticks,' I was told, 'are to use in beating off the dogs.' "

WORST BARRIADAS

Fr. Pearsall is the pastor of the parish of Cristo Rey (Christ the King), which is made up of the worst barriadas in this isolated seaport city north of Lima.

"The poverty of my parish staggers the imagination," he says. "There are some people who are actually starving. We do all we can, but it isn't enough. The dogs travel in packs at night, and when they're hungry, they go mad. The sticks are necessary.

"If there isn't enough food for the people, there certainly isn't enough for the dogs. They get the left-overs, but there is seldom anything to leave over."

Fr. Pearsall's parents are Mr. and Mrs. William Pearsall of 179 Baldwin St., Lowell. A brother, Paul, lives in Dracut, Mass., and his sister, Elizabeth, is Mrs. Raymond Kinch of Somerville, N.J.

A husky, ruggedly-built man, Fr. Pearsall came to Peru eight years ago after serving at St. Joseph's parish in Wakefield and St. John Chrysostom parish in West Roxbury.

"I spent six years in the Andes working with the Indians," he says, "and this assignment in Chimbote is far different. There was poverty in the mountains, of course, but there was also fresh air and room to move around. Here the people—thousands of them—are packed into these dirty, filthy barriadas, with whole families living in one miserable little room.

LOOKING BACK

"Looking back over the weeks and months, I can see progress. But we won't be able to accomplish our goal for years to come. There's too much to do . . . to many changes to make . . . too much for these people to learn in a short time.

"But the point is, we are making progress. We are helping. There are 12,000 people living in my parish. I'm out here all alone. One man can't change things overnight. But changes for the better are being made.

"I have a medical clinic, and a doctor comes out twice a week and a dentist once a week. And we distribute surplus food—mostly flour and powdered milk—sent to us from the States."

Fr. Pearsall considers his assignment as a personal challenge.

"The cards are stacked against these people," he explains. "Without our help, they are destined to be among life's losers. They move down here from the Andes at the rate of about 50 a week looking for jobs and a chance to send their children to school. And most of them end up in one of the barriadas within my parish.

"They throw up a straw hut in about two hours, and that's their home. Then begins the daily battle of survival against hunger and disease. The people aren't trained in their religion. It's hard to convince them that they should attend Mass every Sunday. They don't have the hope that a strong faith helps to provide."

One of the barriadas in Fr. Pearsall's parish is called the Villa Maria (House of Mary). As he walked the sandy streets wearing a short-sleeved white shirt open at the neck, children and adults yelled, "Padre" as they saw him approaching and hastened to shake his hand, pat him on the back, and tell him their problems.

"They all have problems," he said. I wish we could do more. But I hate to think what would happen if we weren't here to do anything at all."

Lindsay Hoben

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. KASTENMEIER. Mr. Speaker, one of the Nation's outstanding newspapermen, Lindsay Hoben, passed away January 8, 1967. Only recently retired as editor of the Milwaukee Journal and vice president of the Journal Co., Mr. Hoben had been associated with that paper since 1926. A pronounced liberal, Mr. Hoben guided the Journal's editorial policy in the best of Wisconsin's progressive tradition. An internationalist, Lindsay Hoben was a strong advocate of the United Nations.

I call to the attenton of my colleagues an editorial which appeared in today's edition of the Washington Post commenting on the fine career and meaningful contributions of Lindsay Hoben.

LINDSAY HOBEN

Lindsay Hoben, who died last Sunday in Milwaukee, spent his journalistic career on *The Milwaukee Journal*, retiring as its editor on January 1. That career was a tribute to his own abilities and a commentary on the traditions of the great newspaper that he led. He was one of a group of news and editorial executives from which the Milwaukee paper has drawn its leadership for years.

To find the genius and talent attuned to the paper's traditions of independence and objectivity it has seldom had to go beyond the limits of its own news and editorial rooms. Generally, it has found no other school in which newspaper talent as well suited to the *Journal's* requirements could be found.

Hoben's 40-year career on the *Journal* saw profound changes in the world, in America and in the region which the *Journal* has served. The paper and its editors moved with the times and changed policies, methods and equipment to keep up with them, but its principles have remained constant. The posture of stern and unbending independence well suited Hoben's own character and impulse. In the integrity of the *Journal*, Hoben and the newspaper's four other great editors, have a fitting memorial. No professional newspaperman could wish for a better one.

Red Challenge on the High Seas

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. BOGGS. Mr. Speaker, I should like to commend to the attention of our colleagues the following article by Helen Delich Bentley, which appeared in the Baltimore Sun of Sunday, January 1, 1967.

It is an excellent presentation of the critical situation facing our merchant marine and points up the need for a strong merchant marine policy:

RED CHALLENGE ON THE HIGH SEAS: RUSSIA'S CRASH SHIPBUILDING PROGRAM THREATENS AMERICA'S SUPREMACY

(By Helen Delich Bentley)

Recently the Russians issued a four-paragraph release announcing the signing of a contract with Poland for 45 "sea vessels" totaling 554,000 deadweight tons. No ballyhoo accompanied the announcement because the Soviet Union has become accustomed to massive ship contracts in its pursuit to capture the ocean trade routes of the world.

That one contract is equal to the total construction of merchant-type vessels in the United States. On December 1, the United States had 45 merchant vessels totaling 648,387 tons on order. Even adding this country's oceanographic, survey and research vessels, plus the cutters and towboats, the total would be raised only to 80 with a 773,000 tonnage—still far less than the contracted 600 Soviet ships with a tonnage of some 7,000,000.

Maritime authorities in the West concede that the Soviet Union is succeeding in achieving her goal and soon will have a merchant fleet large enough to wage successfully a military hot war or an economic cold war.

RUSSIA MOVING UP

Only last month, *Jane's Fighting Ships*, the accepted authority on maritime affairs, warned in its 1966–1967 report that the Soviet Union has moved up behind the United States as the world's second naval power and is pressing Japan for fifth place in the merchant marine field.

Jane's cites the leaders as: Britain, 21,530,264 tons; the United States, 21,527,349; Liberia, 17,539,562; Norway, 15,641,498; Japan, 11,971,157, and the Soviet Union, 9,500,000.

However, *Jane's* does not state that a large portion of the United States' tonnage figures consists of reserve fleet ships which will never sail again. In fact of the 1,308 vessels considered attached to the reserve fleet, 509 are scheduled for scrap.

By 1969, the Russians likely will have 2,500 merchant ships and the United States only 650—unless there is a drastic change in policy.

WARNING TO CONGRESS

In August the House of Representatives was warned that without a policy change to halt the deterioration of the American Merchant Marine, this country in the near future may have to depend on Russian merchant vessels to haul raw materials to America.

It is not as far-fetched as it sounds when one analyzes how the Soviet Union is starting the growth of its merchant shipbuilding. Right now, for example, it has 606 ships under construction compared to 45 for the United States.

As the largest trading nation of the world, the United States should be concerned about the movement of its goods to and from foreign markets, but little attention has been devoted to this by Washington. On the other hand, this factor dominates Russian thinking.

As the year ended, the Soviet Union had sufficient tonnage to transport 75 per cent of its foreign commerce. This compares to the 7.7 per cent figure of the foreign commerce of the United States being transported aboard American-flag bottoms.

In August a House Merchant Marine subcommittee warned that Russia's program is to gain "total superiority on the sea, not only in the merchant marine field," but also in fishing, oceanography, and the Navy.

The subcommittee concluded that "the entire Soviet maritime policy already has gone a long way toward achieving supremacy at sea and unless effectively challenged by the free world, can be expected to achieve this strategic objective well before the end of the century."

That is the third congressional warning in four years that the Soviet Union is planning to dominate the sealanes of the world, but experts think Americans have failed to heed the danger lying behind the threats.

Victor Bakayev, the Soviet Minister of the Merchant Marine, recently reported that Russian ships now call at 600 ports in 91 countries, only 13 of which are Communist. Fifty-one of the nations are underdeveloped and 27 capitalistic.

All evidence points to the fact that the maritime policy of the U.S.S.R. is committed to development, maintenance and expansion of a strong merchant marine, capable of accelerating Russian world domination. Primary considerations for this maritime growth are: A determination to have its freight-carrying capacity in overseas trade to keep up with its economic growth to earn needed foreign exchange; to dispense with the use of foreign tonnage; to control the freight rates and to solidify and expand its foreign alliances.

Some of the Western world steamship leaders have expressed concern in recent months as they have observed how the Communists have slowly been taking control of a certain segment of the charter market, hinting at rate-setting, and holding clubs over the heads of the Free World shipowners. The latter is fearful of not complying with the Soviet demands because they might be squeezed out of business by the manipulated market.

Particular significance should be focused on the fact that the emergence of the Soviet Union as a major maritime power is no accident. Indications point to a carefully laid-out plan by the Soviet Union to extend its merchant marine control into all oceans of the world since World War II and especially since the Korean conflict.

SOVIET 5-YEAR PLAN

In 1946, the Soviet merchant fleet consisted of 488 ships, aggregating 1,851,675 deadweight tons. Two-fifths of that tonnage consisted of lend-lease vessels. Immediately the Russians began building up their shipyards and Navy, assigning merchant ship construction to foreign yards. However, the Soviet merchant fleet was so old that it had dwindled to 432 vessels of 1,797,000 deadweight tons by the time the Korean war began.

But by 1953, it was evident that the Soviets had changed their whole approach and had a plan under way to revitalize their merchant marine.

The first maritime five-year plan was in effect. By 1958, that plan had boosted the Russian tonnage by 30 per cent from 2,000,000 to 3,600,000 tons. Obviously pleased, the Russians plunged right into a seven-year program to accelerate the increase.

Instead of doubling their merchant fleet as the leaders had hoped, the Soviets did even better—boosting it by 175 per cent in the seven years. And so in 1965, another five-year plan for sea transportation development was worked out for the 1966–1970 period by the ministry and accepted by the Council of Ministers.

According to an article in Izvestia last October, Bakayev said. ". . . Several years ago, the merchant marine operated at a loss, amounting to many millions of rubles a year. Funds and again funds were needed to buy equipment, spare parts and other items for the fleet, ports and ship repairing plants, to pay for loans to the Gosbank, wages and many other numerous needs. It became necessary to dig deeper and deeper into the Government pocket.

MERCHANT FLEET

"It became evident, however, rapidly developing foreign trade needed a multiple increase of sea transportation—but how to do it profitably? The administration of sea transportation was reorganized. The management of the fleet, ports, ship repairing plants, other enterprises and local organizations of sea transportation was concentrated in united, composite economic subdivisions, steamship lines, which were given great authority to solve all problems of the activity of their subordinated subdivisions. It was decided that the ministry would not interfere with the daily economic lives of the steamship lines."

The Soviet Union's merchant fleet already exceeds that of the United States in numbers, although its total tonnage is less.

In July, 1965, it was said that the Russian total was 1,227 merchant ships, of 8,500,000 deadweight tons, compared to the United States privately owned fleet of 882 totaling 13,507,000 deadweight tons.

If the projected 10,000,000 tons are added to the U.S.S.R. fleet by 1971, Soviet superiority over the United States in the merchant ship field will be substantial.

The major difference is that the impressive shipbuilding program the Soviet launched more than a decade ago has never diminished. In fact, it has accelerated, while the United States has not had a major shipbuilding program since World War II.

More startling figures along these lines are:

United States shipyards began 1966 with 41 merchant ships on order. At that time, the Soviets had 464 merchant ships over 1,000 gross tons on order. By September, 1966, the figure had been increased to 51 for the United States and 561 for the Russians. And by November 30, the Russians had jumped to 606 and the United States to 41.

In 1965, the Soviet fleet received 129 ships totaling 1,200,000 deadweight tons, while only 16 vessels of 234,550 deadweight tons were delivered to the United States fleet.

Of the 1,754 ships (46,745,685 deadweight tons) under construction or on order throughout the world on January 31, 1966, Russia had nearly 25 per cent of the number and 10 per cent of the tonnage—442 totaling 4,212,302 tons.

The United States wasn't even included in the listing of the top nations in a leading British trade journal.

COMPARATIVE OUTLAY

In 1965, the U.S.S.R. spent more than $600,000,000 for new ship construction, while the United States spent less than $150,000,000. Even worse, this year, the United States is spending about $16,000,000, while the Russians are approaching the billion-dollar figure.

Because all Russian shipyards are filled to capacity with naval construction plus some of its own merchantmen—and those of some Greek shipowners—the Soviet Union has given contracts to yards throughout the Communist and free world.

Not only is the Russian merchant fleet overtaking that of the United States in size, but more significant is the fact that 80 per cent of the Soviet shipping fleet is less than ten years old while more than 80 per cent of the American merchant marine is more than 20 years old—with twenty years being considered the economic life of a ship. In other words, operating Russian ships not only outnumber the United States already by several hundred, but are at least a generation younger.

Those who have studied the rapid growth of the Russian mercantile fleet cite that country as using its strengthened maritime position to further its political objectives.

"The Soviets recognize that the merchant marine is a major instrument of power," the House subcommittee declared.

"The 1,200 ships of the Soviet merchant fleet deliver military supplies ranging from missiles and patrol boats, to hand grenades and machineguns. They deliver fuel for industry and for tanks. They deliver trucks and roadbuilding equipment to develop inland transportation networks. They deliver prefabricated factories, tractors and combines. Soviet ships carry military troops and scientific and industrial advisers to far continents. Ofttimes they return with students.

INCREASE IN TRADE

"Soviet passenger liners also are being used to collect the hard currency of wealthy European and Canadian tourists."

Bakayev, who can be described as a "czar" because of his complete control of the merchant marine, justifies the rapid growth by pointing out that from 1955 to 1965, the turnover of Soviet foreign trade increased 2.7 times, while the tonnage of the Soviet fleet increased 2.5 times.

The Russians are well aware of the propaganda value of having their flag flying from as many ships in as many foreign ports as possible. When the Soviets help a country like the United Arab Republic build the Aswan High Dam, they ship all of the 200,000 tons of equipment and building materials to that nation aboard Soviet-emblazoned merchant ships so there is no doubt in the minds of the Arabs as to the source of the cargoes.

The prime recipient of Soviet cargoes of international assistance are essentially Ghana, Nigeria, Congo, Liberia, Sierra Leone, and Guinea—all of which depend also on the Soviet fishing fleets for their fish. To these and many other countries, Soviet tankers and freighters deliver petroleum, cement, steel prefabricated factories, textiles, tractors, combines, and other farm equipment, trucks, cars, bulldozers, lumber, and books—to build dams, highways, harbors, manufacturing plants, farms, timber mills, skyscrapers and libraries.

There is never any doubt who is supplying this assistance to these backward nations because of the always-present Soviet flag. What a different attitude from that in the United States where there is constant chafing to have air cargoes move on Panamanian, Liberian, or flags of other foreign countries—any but American?

The crash shipbuilding program permits the U.S.S.R. to use more and more of its own ships to transport the international assistance cargoes, as well as the military items to satellites. In recent years, the Soviet Union used its own merchant ships to deliver arms—ranging from bombs to patrol boats—to North Vietnam, Cuba, Egypt, Syria, India and several nations in Latin America and Africa.

BARGAINING POWER

As the Russian fleet expands and is able to dominate the sealanes to a large extent, it is believed that the fleets of some other nations will be squeezed out. As their fleets vanish or are unable to compete with Soviet freight rates, the Russians would be in a position to force that country or those countries to seek the services of Communist-block shipping. The danger of such dependency would be that the Communists could withhold ocean freight services from any nation out of favor with Soviet policies or could jack the rates up to make them prohibitive.

An example of how the Soviets will be able to manipulate the markets occurred in 1961, when the Soviets sold oil to new nations at prices between 10 and 20 per cent below world market prices, undercutting Western suppliers in traditional markets.

Proof of the careful planning and calculation behind the maritime growth of Russia over a long-range period is the fact that they are training more than 200,000 officers and men at the Leningrad Institute of Transportation, the Odessa Maritime Academy and in many other maritime schools within Russia, all, of course, operated by the Russian Government.

And the U.S.S.R. is developing every technology possible towards improving the ships and their construction. The Soviets are said to be operating the world's first remote-controlled vessel, the Inzhener A. Pustoshkin, between Russian river ports without a crew.

All of their vast armada coming off the shipways will be automated, as is the freight flow and the selection of ships for scheduled voyages.

It can be said that as the Red flag envelops the seven seas, the Soviets use that flag and those ships to the best possible advantage—better than any other maritime-oriented nation, including and particularly, the United States.

Dedication of Dickey Chapelle Memorial Dispensary

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mrs. BOLTON. Mr. Speaker, it gives me real joy to call attention to any woman who has made a special contribution to the lives of others or in any way has made us proud to be a woman. So today I would like to extend my remarks to include a statement made by Lt. Gen. Lewis W. Walt, commanding general of the 3d Marine Air Facility, at the dedication of the Dickey Chapelle Memorial Dispensary in Vietnam on November 4, 1966:

> A year ago today, not far from here, the world lost a dedicated and professional combat correspondent—and American fighting men lost a true friend.
>
> For more than twenty years, Dickey Chapelle could be found where the action was: Iwo Jima, Lebanon, Hungary, Cube, Quemoy, India, Laos, the Dominican Republic, and finally South Viet Nam.
>
> Mr. Jim Lucas has spoken this morning about Dickey Chapelle from his correspondent's point of view. She was a professional from any point of view—highly respected by her contemporaries, her readers, and by the men whom she accompanied into battle. The front lines were her beat.
>
> It is difficult to say just when the mutual romance and respect between this reporter from Milwaukee and the American fighting man began. Perhaps it was aboard a hospital ship off Okinawa or on the black beaches of Iwo Jima. But wherever it had its start, it compelled her to travel the world over to be with our fighting men and to tell the story of what they were doing.
>
> She wore baggy utilities—a jauntly set jungle hat—and a perpetual smile. She was half the size of the Marines she followed into combat, until she spoke; then suddenly she grew in stature, speaking with the authority of a combat veteran—which, of course, she was.
>
> When this frail looking woman showed up on the front lines, tough veterans would shudder. Who was going to take care of her they wondered.
>
> "Forget that I'm a woman," she would say. "I'll lug my own stuff and ask no favors." And she was true to her word. She asked no quarter, and would have been offended had it been offered.
>
> As General Krulak noted shortly after her death, "The Marines are a fraternity, and if a woman can belong to a fraternity, Dickey Chapelle managed to do it."
>
> Never complaining, determined always to carry her share of the load, ever enthusiastic, she had the ability to convey the reality of war to film and paper in a degree seldom matched. She had a deep-seated feeling for people and events. She showed no fear and had a total disregard for her personal safety.
>
> For twenty years her life was one of being with the fighting men and telling their story to the world.
>
> It is most fitting that we here today dedicate this dispensary to her memory—the memory of a woman who loved people and hated the violence which causes hurt and pain and misery.
>
> For this facility is, by its very nature, dedicated to overcoming the physical ravages of war and disease and pestilence.
>
> Today marks a beginning—for this building is only the central portion of a dispensary that will eventually grow to encompass a 44-bed facility.
>
> Built by the 9th Engineer Battalion, the dispensary will serve our Vietnamese friends, staffed by both Vietnamese and American medical personnel. It has been made possible by funds which have been provided through CARE and donated by friends of Dickey Chapelle.
>
> Anyone who met Dickey Chapelle could not forget her. Her willingness to involve herself with the crises of our time showed a rare spirit. As a result, thousands of Americans at home lived closer to our men in Viet Nam and came to know the struggle for dignity and freedom of the Vietnamese people.
>
> She had dinner at my quarters the day before she was killed. Several of my officers and myself had a wonderful evening listening to her tell of her many experiences with our Marines. As she left my quarters that evening, she mentioned she was going out on patrol the next day. I told her to keep her head down and not to take chances. She said, "When the time comes for me to go, I want it to be on a patrol with Marines." And that's the way it was.
>
> And so we dedicate this building to the memory of Dickey Chapelle—combat correspondent, patriot, and humanitarian.

The Middle Ground in Dealing With the Vietnam War

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MOORHEAD. Mr. Speaker, we have no more painful and difficult a problem before us than the war in South Vietnam.

On the one hand, it is clear that an all-out military victory in the classical sense is impossible and, on the other hand, unconditional and immediate withdrawal of our forces from Vietnam is unthinkable.

As the 90th Congress convenes, we must find a middle ground for our thinking about an ultimate solution to the costly conflict in Vietnam.

Mr. Walter Lippmann, in a column that appeared in the January 3, 1967, Washington Post, has suggested such a middle ground.

Mr. Lippman says that there is hope only in a negotiated compromise, but warns that a compromise cannot be negotiated so long as the President is placed in the false dilemma of victory or defeat, win or no win, go up or get out.

Under leave to extend my remarks, I include Mr. Lippmann's column in the RECORD at this point:

ON GOING IT ALONE

(By Walter Lippmann)

> The outlook for the new year could be brighter if in talking about the war we could get rid of the idea that the country is confronted with the sharp choice between winning or losing the war, between unconditional and immediate withdrawal and the unconditional surrender of the enemy. These absolute choices are easy to talk about. But

they represent a failure to think at all. They hide the real problem and make it unmanageable.

The real problem is to find some middle ground between a South Vietnam which must remain indefinitely under American occupation and a South Vietnam under the direct domination of North Vietnam. There is no hope that the activists in the North and in the South of Vietnam can ever agree to the permanence of the American military presence in South Vietnam. The North Vietnamese, on the other hand, can have no hope that the United States will withdraw its forces and throw the regime in South Vietnam to its enemies. There is hope only in a negotiated compromise.

The compromise can, however, not be negotiated so long as the President is placed in the false dilemma of victory or defeat, win or no-win, go up or get out, withdrawal or knock-them-out. To be asked to choose between these absolute and extreme policies is to have to choose the impossible, the unreal—among various forms of nonsense.

There is on one extreme the notion that the American forces can be forced to withdraw, either because they are defeated in battle or because the American people grow weary of the battle. M. Jean Sainteny, who has known Ho Chi Minh longer and has seen him more recently than any Westerner, says that North Vietnam may be suffering from the illusion that American forces in Indochina, though stronger than the French forces were in the Fifties, will follow the same course down to defeat. If Ho Chi Minh thinks this, he is entertaining a very dangerous illusion. The American military power cannot be defeated by any Asian army that can be mobilized and equipped. The American army can stay in South Vietnam until it is deliberately withdrawn under a negotiated settlement.

But while the Americans cannot be defeated, it does not follow that they can win. Those who are able to wreck a house completely and effectively are not often the same men who can build a new house. The extremist hawks are well represented by the Chairman of the House Armed Services Committee, Mr. Mendel Rivers who wants us "to flatten Hanoi and let world opinion go fly a kite." If men like him prevail—and unfortunately they have been increasingly on the ascendant since 1965—we shall be in worse trouble than we are in now.

The Mendel Rivers view, which is the theory of the Air Force, is important because the President, though protesting and resisting, has again and again yielded to it. We can afford no illusions about the consequences of taking this absolute course. If the country presents itself as uniquely and unilaterally entitled to use unlimited military force in Vietnam, it will isolate itself among the nations of the world.

Chairman Rivers thinks that all that this will mean is that the other nations will make speeches and write editorials and march in demonstrations. He knows little of the world. Once the strongest military power on earth has identified itself as willing and ready to use unlimited force for its own ends, there begins, as we see in history, the formation of a coalition to contain its militancy. That is where things have been pointing since 1965: that is where they will go if we think that we can use our weapons and ignore world opinion.

The self-righteous use of military power will be just as dangerous to the United States as it has proved to be before in the history of nations. The out and out militarist power will unite other nations against it. The tough guys among us who cannot find words scornful enough to express their contempt for those who ask for a decent respect to the opinions of mankind, are foolish and ignorant men. They know no history and they know little of the world they are talking about. If they have their way we too, like the militarists of the past, shall find that fear of our power and distrust of purposes will bring about an alignment of the nations against us.

Compulsory Unionism

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I should like to include in the RECORD a copy of my address delivered to the students of the law school of Duke University on December 14, 1966, on the subject of compulsory unionism. The speech follows:

Is the right to hold a job a privilege of citizenship? Does the individual citizen have the right under the Constitution to choose his own occupation, trade or profession? Under the Constitution can a man's right to earn a living be limited by a requirement that he join a labor union or pay dues to a labor union? Does the range of constitutionally protected civil rights include the right to work?

These are questions that were raised in both the Senate and the House in the last session of Congress in connection with the effort to repeal section 14(b) of the Taft-Hartley Act, the section which reserves to the states the power to enact Right to Work laws.

Although Congress turned back the effort to repeal section 14(b) it left these larger questions unanswered. But they cannot remain unanswered much longer. Compulsory union membership obviously denies certain individual liberties, and time is long overdue for a judicial determination of the Constitutionality of this denial.

Before getting into these questions, let us first take a brief look at the historical development of the right to work issue.

It comes as a surprise to many people that for the first 150 years of our country's existence there was no such thing as federal labor law. Not until 1926 when Congress passed the Railway Labor Act did the federal government take any direct action toward regulating labor or employment relations.

Prior to that the only expression of a federal labor policy occurred in 1914 when Congress enacted the Clayton Act amendments to the Sherman antitrust law. Written into the Clayton Act was a clause to the effect that "nothing in the antitrust laws shall be construed to forbid the existence and operation of labor organizations * * * nor shall such organizations or the members thereof be held to be illegal combinations or conspiracies in restraint of trade under the antitrust laws." This provision was included in the Clayton Act because the Supreme Court decision in the Danbury Hatters' case (Loewe v. Lawlor, 204 U.S. 274 (1908)) construed a labor union boycott of an employer's products as unlawful under the Sherman Antitrust Act.

The Railway Labor Act came about because of the great number of disputes in the Railroad industry after World War I which disrupted transportation of goods in interstate commerce. Its purpose was to provide a procedure for settlement of such disputes and to prevent rail carriers from interfering with efforts of their employees to form and join labor unions. The central policy of the Railway Labor Act was expressed in the statement in section 2, Fourth, that:

"Employees shall have the right to organize and bargain collectively through representatives of their own choosing." (45 USC, sec. 152, Fourth)

Nothing was said in the Act about the right of employees to *refrain* from joining or forming labor unions, and within a short time the Railroad Brotherhoods became worried about the possibility that workers could be coerced by the carriers into joining company dominated and controlled unions. As a result the unions requested that Congress amend the Railway Act to include a prohibition on any form of compulsory unionism agreements. In accordance with this request Congress in 1934 amended section 2, Fourth, to read:

"It shall be unlawful for any carrier to interfere in any way with the organization of its employees, * * * or to influence or coerce employees in an effort to induce them to join or remain or not to join or remain members of any labor organization, or to deduct from the wages of employees any dues, fees, assessments or other contributions payable to labor organizations."

It is thus an historic, if somewhat ironic, fact that organized labor itself was the first to insist upon incorporation of the right to work principle in a federal labor statute. The Railway Brotherhoods later reversed themselves, however, as will be seen in a few moments.

Until the year 1935 workers in industries other than the Railroad industry had no federal law to protect their organizing activities or their efforts to obtain collective bargaining rights from their employers. All this was changed with the enactment in 1935 of the Wagner Act, officially known as the National Labor Relations Act, which was the first comprehensive federal labor statute. It was at this point that the right to work controversy had its beginnings.

This new statute was frankly designed to encourage the formation of labor unions and to strengthen their bargaining position with employers. The Act made it unlawful for an employer to interfere with organizational activities of employees or to refuse to bargain with a union representing employees. One of its most important features was the provision that a union chosen by a majority of employees in a bargaining unit had the exclusive right to represent all workers, union and non-union alike, in the bargaining unit. Coupled with this was the provision in section 8(3) which permitted union agreements requiring all workers in the unit to belong to the union and pay union dues.

Armed with this extraordinary privilege of exclusive representation, and the concurrent right to demand agreements requiring all employees to join the union and pay union dues as a condition of employment, labor launched intensive organizing drives which skyrocketed their membership from a level of approximately two million in 1935 to an estimated high of seventeen million in the next 10 years, and swelled their treasuries with a ten-fold increase in dues payments, initiation fees and other types of assessments. How many of the newly acquired "members" were forced into the unions under compulsory union shop and closed shop contracts is impossible to determine, but conservative estimates place the figure at three million. If this is a correct estimate it means that dues and fees paid by these three million unwilling captives would be in the range of two hundred million dollars a year.

Emboldened by their success the unions began pushing their demand for compulsory unionism harder and harder and, as might be expected, these efforts did not go unnoticed by the American public, particularly those members of the public who were unwillingly forced to pay union dues. In response to the public reaction a number of states, beginning in 1944, adopted laws prohibiting compulsory unionism. The first such law was adopted as an amendment to the Florida Constitution in 1944 (Florida Constitution, Article I, section 12). Other states quickly followed suit and there are now 19 states with Right to Work laws on their books.[1] Most such laws are very concise and simple in their language. North Carolina, for example, has a statute which reads:

"The right to live includes the right to work. The exercise of the right to work must be protected and maintained free from undue restraints and coercion. It is hereby declared to be the public policy of North Carolina that the right of persons to work shall not be denied or abridged on account of membership or non-membership in any labor union or labor organization or association." (Section 95–78, General Statutes of North Carolina).

Eleven of these state right to work laws were in force at the time Congress adopted the Taft-Hartley Act amendments to the National Labor Relations Act in 1947, and in order to eliminate any doubt as to the effect the federal law would have upon such state laws Congress wrote into the Taft-Hartley Act the now famous section 14(b), which expressly provides that nothing in the National Labor Relations Act "shall be construed as authorizing the execution or application of agreements requiring membership in a labor organization as a condition of employment in any State or Territory in which such execution or application is prohibited by State or Territorial law."

Efforts of labor lobbyists to get this section repealed have been repeatedly rejected by Congress in every session since 1947. Even the 89th Congress, with overwhelming majorities of liberals in both houses, refused to repeal 14(b). The obvious reason for this is that the American public is not willing to accept the idea of compulsory unionism, and every opinion poll taken in recent years shows that practically all segments of the public, including rank and file union members, are opposed to the idea of forcing a man to join a union or pay dues to a union in order to keep his job. There are, however, 31 states in which compulsory union shop agreements are fully enforceable. Also, compulsory union shop agreements are enforceable in the railroad and airlines industries in all 50 states because the Rail Brotherhoods were successful in 1951 in pushing through Congress an amendment to the Railway Labor Act (section 2, Eleventh) which nullified the union shop ban previously written into the Act in 1934 at the request of the Railroad unions.

This brings us to the point of today's discussion, namely, whether compulsory unionism infringes any of the individual civil rights guaranteed by the Bill of Rights of the United States Constitution. More specifically does: (1) compulsory unionism so deprive a man the right to make his own choice in joining or declining to join a particular group as to violate his freedom of association guaranteed by the First amendment; or (2) does the use of compulsory union membership dues for the furtherance of political and ideological causes violate his freedom of speech guaranteed by the First amendment; or (3) does forced membership in or support for a particular group violate his privacy as guaranteed in the Ninth amendment; or (4) does forced extraction of membership dues and fees deprive him of property without due process of law? These are all questions that are being raised by serious Constitutional scholars, and it is quite timely to take a close look at them.

However, let us first dispose of the main argument made by union spokesmen in defense of compulsory unionism, the so-called "Free Rider" argument. The premise of this argument is that since a union chosen by a majority of employees in a bargaining unit is required under the National Labor Relations Act to bargain for all employees, union and non-union alike, in the unit, it is only fair that each employee in the unit be required to pay his share of the costs of collective bargaining.

While this argument may have a superficial plausibility it can be readily refuted by pointing out, first, that the requirement for bargaining for all employees in the unit was not thrust upon the unions. On the contrary, they zealously sought to have this requirement written into the law because it gives them the special status of exclusive representation. Secondly, the "free rider" argument would be valid only if the dues money was used by the union exclusively for collective bargaining. The fact is, however, that only a small fraction goes toward the costs of collective bargaining, and the major portion of it is used for a multitude of purposes not related to collective bargaining such as lobbying, political contributions, and promoting various ideological and sociological causes. This is where the problem of forced payment of union dues becomes most acute. For example, some large unions such as the United Automobile Workers contribute very heavily to the support of the NAACP, the Student Nonviolent Coordinating Committee, Students For a Democratic Society and other groups agitating for causes ranging from Negro rights to the Filthy Speech Movement at the University of California. Suppose a member of the union does not favor such an expenditure of his dues money. Perhaps he doesn't agree with the objectives of the NAACP and SNCC; what can he do about it? The answer is that he can do nothing immediately about it because if he refuses to pay his union dues he will be fired from his job. The question, then, is whether this forced support of social causes and political candidates, infringes his constitutional freedoms guaranteed under the Bill of Rights.

The Supreme Court has on a number of occasions declared that an individual's right to hold a job is a constitutionally protected right. This was first decided in the case of *Cummings* v. *Missouri*, 71 U.S. 277 (1866) in which the Supreme Court invalidated a provision in the Missouri Constitution under which a Catholic priest was fined for performing his religious functions without taking a prescribed oath. The court held that the state could not impose such a restriction because:

"The theory upon which our political institutions rest is, that all men have certain inalienable rights—that among these are life, liberty and the pursuit of happiness; and that in the pursuit of happiness all avocations, all honors, all positions, are alike open to everyone, and that in the protection of these rights all are equal before the law."

In many decisions following the *Cummings* case, the court struck down state imposed restrictions on the occupations of Chinese laundrymen, railroad men, teachers, and Japanese fishermen. In 1915, the right to work was declared to be plain and self-evident principle of American Constitutional Law by Justice Charles Evans Hughes in Truax v. Raich, 239 U.S. 33, holding that a state may not deny to foreign born residents the ordinary means of earning a livelihood. As therein stated:

"It requires no argument to show that the right to work for a living in the common occupations of the community is of the very essence of the personal freedom and opportunity that it was the purpose of the [Fourteenth] amendment to secure."

The Supreme Court of Florida expressed the principle very well in *Carpenters District Council* v. *Miami Chapter, Associated General Contractors*, 55 So. 2d 794 (Fla. 1952) in which the court stated:

"The right to work is equivalent to the right to eat and the right to eat and provide raimant for his dependents is man's most dominant urge. In a free country like ours such a right should not depend on one's race, color, the lodge, craft, church or other organizations to which be belongs. Such a requirement is contrary to the spirit of our institutions, the basis on which our democracy was founded and every impulse of the forefathers who gave it existence. I can think of nothing more out of harmony with true Americanism. Membership in one's lodge, craft or church may be a means of enlarging spiritual, cultural and physical assets but to make his bread depend on craft or church membership would be the worst species of anti-Americanism."

The American Civil Liberties Union similarly supported the right to work principle in an *amicus curiae* brief filed in *Wilson* v. *Loew's, Inc.*, 26 CCH Lab. Cases at ¶68,600 (1954), a case challenging the action of a group of movie studios in blacklisting the famed "Hollywood Ten" writers who had refused to answer questions of a congressional committee as to their Communist party connections. In that brief, the ACLU pointed out that:

"The right to work is a human right, a personal right, a constitutional right; and the opportunity to earn a living cannot be unjustly withheld from a man without doing violence to the constitutional guarantees protecting his life, liberty, property and assuring him equal protection of the law."

Since there thus seems to be wide agreement that the right to hold a job in the occupation of one's choice is within the range of the protections intended by the Bill of Rights, let us examine how compulsory union membership deprives a worker of his constitutional rights.

First, it is an infringement upon his freedom of association which the First Amendment seeks to protect. Freedom of association, it has been held, is a composite right derived from freedom of speech, freedom of assembly and the freedom to petition enumerated in the First Amendment. To the extent that compulsory unionism requires a worker to make a choice between joining the union or losing his job he is thus limited in his freedom of association. The right not to join a union is a necessary corollary of the right to join, for without a right not to join there can be no such thing as a right to join. Freedom rests on choice and where choice is denied freedom does not exist. In its decision in *Board of Education* v. *Barnette*, 519 U.S. 624 (1943) the Supreme Court recognized that there are affirmative and negative sides to constitutional liberties in upholding the right of members of a religious sect to refuse to join in the oath of allegiance to the flag. The court specifically pointed out that freedom of speech carries with it a freedom to remain silent, and that it makes no difference that the majority of the people favor the particular restriction or limitation. "The very purpose of the Bill of Rights," the court said, "was to withdraw certain subjects from the vicissitudes of political controversy, to place them beyond the reach of majorities and officials and establish them as legal principles to be applied by the courts. One's right to life, liberty and property, to free speech, a free press, freedom of worship and assembly, and other fundamental rights may not be submitted to vote; they depend on the outcome of no elections." This would seem to dispose of the union argument that when a majority of the workers in a bargaining unit vote for a compulsory union shop the minority must accept the results of the "democratic" process.

In *Santa Fe Railroad* v. *Brown*, 80 Kansas 312, 102 Pac. 459 (1909) the Supreme Court of Kansas said:

---

[1] Alabama, Arizona, Arkansas, Florida, Georgia, Iowa, Kansas, Mississippi, Nebraska, Nevada, North Carolina, North Dakota, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia and Wyoming.

> "It would seem that the liberty to remain silent is correlative with the freedom to speak. If one must speak, he cannot be said freely to speak."

The Supreme Court of Maine in *Pappas* v. *Stacy*, 116 A. 2d 497 (1955) held that picketing by three restaurant employees who were union members for the purpose of forcing the employer to make the other 27 non-union employees join the union infringed the freedom of association of the non-union employees. As stated by the court:

> "Freedom to associate of necessity means as well freedom not to associate."

Labor union have themselves relied very heavily on the principle of freedom of association to protect their right to engage in organizing activities and to resist state laws which placed limitations upon such organizing activities. For example, in *Thomas* v. *Collins*, 323 U.S. 516 (1945), the Supreme Court reversed the conviction of R. J. Thomas, an organizer for the United Automobile Workers, for failure to comply with a Texas statute which required the licensing of union organizers. In arguing Thomas' case, the union lawyers contended that this licensing requirement infringed the freedom of association guaranteed under the First Amendment. The Supreme Court agreed in the following language:

> "It was not by accident or coincidence that the rights to freedom in speech and press were coupled in a single guaranty with the rights of the people peaceably to assemble and to petition for redress of grievances. All these, though not identical, are inseparable. They are cognate rights, and therefore are united in the First Article's assurance."

* * * * *

> "There is some modicum of freedom of thought, speech and assembly which all citizens of the Republic may exercise throughout its length and breadth, which no State, nor all together, nor the Nation itself, can prohibit, restrain or impede."

Having thus recognized the right to organize workers into unions as part of the protected freedom of association under the First Amendment, it must follow that the right not to join a union is a necessary corollary of the right to join, for without a right not to join there can be no such thing as a right to join. Freedom rests on choice, and where choice is denied freedom is destroyed as well.

Through compulsory unionism, the worker is also deprived of his freedom of action and of speech. It is well known to everyone that American unions have for many years been active in politics and have played a very important role in election campaigns of members of Congress, of state legislators, state officials, and local city and county officials. The union chiefs make no apologies for this. They assert that it is their right to make sure that those elected to public office are sympathetic towards the aims and purposes of labor unions. Large armies of union staff personnel are assigned to work in political campaigns at the precinct level, in getting out the vote for union-endorsed candidates, and in publishing union newspapers and other publications devoted to promoting favored candidates. And union funds derived from membership dues and fees are liberally distributed to such candidates.

Where does this leave the individual worker who is required to pay his dues and fees into the union as a necessary condition to holding his job? Is he not thus compelled to contribute money to election campaigns for candidates he opposes, and support with his dues dollar causes and ideologies with which he himself may have no sympathy? And, if so, what is the effect upon his constitutionally protected liberties? These questions were presented to the United States Supreme Court in ***Railway Employees Dept.* v. *Hanson***, 351 U.S. 225 (1956), and *International Association of Machinists* v. *Street*, 367 U.S. 740 (1961) but in each of these cases the court ducked the constitutional issues. In *Hanson* the court took the position that the record did not disclose sufficient information respecting the use of union dues money for political purposes, but in rendering judgment for the unions stated that if in a later case "the exaction of dues, initiation fees, or assessments is used as a cover for forcing ideological conformity or other action in contravention of the First Amendment, this judgment will not prejudice the decision in that case."

The *Street* case which came before the court a few years later did clearly show that the union dues were used for enforcing political and ideological conformity. This case had originated in Georgia and came up from the Georgia Supreme Court (215 Ga. 27, 108 S.E. 2nd 796 (1959) on a finding that:

> "(5) The funds so exacted from plaintiffs and the class they represent by the labor union defendants have been, and are being, used in substantial amounts by the latter to support the political campaigns of candidates for the offices of President and Vice President of the United States, and for the Senate and House of Representatives of the United States, opposed by plaintiffs and the class they represent, and also to support by direct and indirect financial contributions the political campaigns of candidates for State and local public offices, opposed by plaintiffs and the class they represent. The said funds are so used both by each of the labor union defendants collectively and in concert among themselves and with other organizations not parties to this action through associations, leagues, or committees formed for that purpose. (6) Those funds have been and are being used in subtantial amounts to propagate political and economic doctrines, concepts and ideologies and to promote legislative programs opposed by plaintiffs and the class they represent. Those funds have also been and are being used in substantial amounts to impose upon plaintiffs and the class they represent, as well as upon the general public, conformity to those doctrines, concepts, ideologies and programs."

In spite of these specific findings the Supreme Court, in a series of five split decisions refused to rule on the constitutional questions presented and concluded only that use of union dues money for these purposes was contrary to the intent of Congress in passing the Railway Labor Act. The appropriate remedy, the court held, would be to leave it to the union to refund to the protesting employees such portion of their dues as represented the proportionate amount the union used for political purposes. On this basis the case was sent back to the Georgia courts, which then proceeded to direct the defendant unions to produce their books and records in order that a determination might be made as to the amounts spent on political action. The unions violently resisted such order, and after four years of additional legal maneuvers proposed that as an alternative to producing their books they would refund all dues previously paid by plaintiffs and would relieve plaintiffs of all future obligations to pay dues under the compulsory union shop agreements. Plaintiffs, weary of the expense and effort of more than eleven years of litigation, accepted this proposal and a stipulation was entered on December 19, 1964 dismissing the case.

Justices Black and Douglas vigorously protested the fact that the court refused to face the constitutional questions presented in *Street*. In a sharp dissent Justice Black stated:

> "There can be no doubt that the federally sanctioned union-shop contract here, as it actually works, takes a part of the earnings of some men and turns it over to others, who spend a substantial part of the funds so received in efforts to thwart the political, economic and ideological hopes of those whose money has been forced from them under authority of law. This injects federal compulsion into the political and ideological processes, a result which I have supposed everyone would agree the First Amendment was particularly intended to prevent and it makes no difference if, as is urged, political and legislative activities are helpful adjuncts of collective bargaining. Doubtless employers could make the same arguments in favor of compulsory contributions to an association of employers for use in political and economic programs calculated to help collective bargaining on their side. But the argument is equally unappealing whoever makes it. The stark fact is that this Act of Congress is being used as a means to exact money from these employees to help get votes to win elections for parties and candidates and to support doctrine they are against. If this is constitutional the First Amednment is not the charter of political and religious liberty its sponsors believed it to be."

Justice Douglas, not known for his hostility to organized labor, writing a separate opinion in the same case had the following to say:

> "The collection of dues for paying the costs of collective bargaining of which each member is a beneficiary is one thing. If, however, dues are used, or assessments are made, to promote or oppose birth control, to repeal or increase the taxes on cosmetics, to promote or oppose the admission of Red China into the United Nations, and the like, then the group compels an individual to support with his money causes beyond what gave rise to the need for group action. . . . I think the same must be said when union dues or assessments are used to elect a Governor, a Congressman, a Senator, or a President. It may be said that the election of a Franklin D. Roosevelt rather than a Calvin Coolidge might be the best possible way to serve the cause of collective bargaining. But even such a selective use of union funds for political purposes subordinates the individual's First Amendment rights to the views of the majority. I do not see how that can be done, even though the objector retains his rights to campaign, to speak, to vote as he chooses. For when union funds are used for that purpose, the individual is required to finance political projects against which he may be in rebellion."

Justice Black prophesied in his dissent that:

> "The constitutional question raised in this case . . . is bound to come back here soon with a record so meticulously perfect that the court cannot escape deciding it."

If such a case were presented to today's court, there is reason to believe that the majority would find compulsory unionism in any of its forms contrary to the express and implied constitutional guarantees of individual liberty. The recent trend of the court's decisions in civil rights cases has so vastly expanded the safeguards of the First, Fifth, and Fourteenth Amendments that it is almost inconceivable that the court could now fail to include the right to work within their protection.

Of particular interest in this connection is the recent discovery of the Ninth Amendment as a reservoir of individual rights not expressly or impliedly covered elsewhere in the Constitution. This short and heretofore obscure amendment reads, "the enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people." In a very recent decision of the Supreme Court, *Griswold* v. *Connecticut* 381 U.S. 479 (1965), three of the judges, including the Chief Justice, found that this clause protects a wide range of individual rights not expressly mentioned in the first eight amendments. Justice Goldberg, writing for himself, the Chief Justice and Mr. Justice Brennan, stated that:

"The concept of liberty protects those personal rights that are fundamental, and is not confined to the specific terms of the Bill of Rights. . . . The language and history of the Ninth Amendment reveals that the Framers of the Constitution believed that there are additional fundamental rights protected from governmental infringement, which exist along side those fundamental rights specifically mentioned in the first eight constitutional amendments."

The *Griswold* case involved a challenge to the constitutionality of a Connecticut statute which made dissemination of birth control devices a criminal offense. Two officers of the Planned Parenthood League of Connecticut were convicted in a state court under this statute, and their conviction was affirmed by the Supreme Court of Errors of Connecticut. *State* v. *Griswold*, 151 Conn. 544, 200 A. 2d 479 (1964). On appeal, the Supreme Court of the United States reversed the conviction on the ground that the statute infringed the "penumbral" protection of individual privacy contained in the Bill of Rights. The majority opinion, after citing a number of cases dealing with the protected freedom of association, stated:

"The foregoing cases suggest that specific guarantees in the Bill of Rights have penumbras, formed by emanations from those guarantees that help give them life and substance. The right of association contained in penumbra of the First Amendment is one, as we have seen. . . . The Fifth Amendment in its Self-Incrimination Clause enables the citizen to create a zone of privacy which the government may not force him to surrender to his detriment. The Ninth Amendment provides that the enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

Expanding on this application of the Ninth Amendment, as a residue of rights not otherwise referred to, the separate opinion written by Justice Goldberg stated:

"In determining which rights are fundamental, judges are not left at large to decide cases in light of their personal and private notions. Rather, they must look to the traditions and collective conscience of our people to determine whether a principle is so rooted there as to be ranked as fundamental. The inquiry is whether a right involved is of such a character that it cannot be denied without violating those fundamental principles of liberty and justice which lie at the base of all of our civil and political institutions."

This language of Justice Goldberg is strikingly applicable to the right to work. There can be little question that the right of a man to work to earn a living for himself and support his family is so deeply rooted in "the traditions and collective conscience of our people . . . as to be ranked as fundamental."

Can it not be argued, however, that the Constitution is intended only to protect the citizen against *government* action affecting such rights, and that labor unions in enforcing union shop agreements are acting purely in a private capacity? Can it not be said that while such union conduct may result in an actionable tort it is not prohibited by the Constitution because it is neither an act of the state nor the federal government, nor of any other governmental entity? As stated in *Teague* v. *Brotherhood of Locomotive Firemen*, 127 F. 2d 53 (6th Cir, 1942):

"Private parties acting upon their own initiative and expressing their own will, however else they may offend and their acts give rise to justiciable controversies, do not thereby offend the guarantees of the Constitution."

Surely if one private citizen by coercion or restraint prevents another private citizen from exercising his freedom of speech or any other constitutionally protected right, there is no basis for invoking the Constitution as against the tortfeasor. Does not this apply as well to labor union efforts to enforce compulsory membership?

The answer is No. The authority which unions have to enforce compulsory unionism derives from a legislative act of the federal government, the National Labor Relations Act, which expressly authorizes union shop agreements. Moreover, the entire scheme of regulation contained in the National Labor Relations Act is directed toward encouragement of unionization and collective bargaining, and by giving unions the extraordinary status of exclusive bargaining representative, this Act has created and perpetuated the conditions under which unions may enforce compulsory unionism. As stated by the Supreme Court in *American Communications Association* v. *Douds*:

"When authority derives in part from Government's thumb on the scales, the exercise of that power by private persons becomes closely akin in some respects to its exercise by Government itself."

In the *Hanson* case referred to above the Supreme Court stated:

"If private rights are being invaded it is by force of an agreement made pursuant to federal law which expressly declares that state law is superseded. In other words, the federal statute is the source of power and authority by which any private rights are lost or sacrificed. The enactment of the federal statute authorizing union shop agreements is the governmental action on which the Constitution operates, though it takes a private agreement to invoke the federal sanction."

Although the Supreme Court in the *Hanson* case was dealing only with the union shop provisions of the Railway Labor Act, similar reasoning can be applied to the union shop provisions of the National Labor Relations Act. It is equally true that a union shop agreement entered into pursuant to section 8(a)(3) of the National Labor Relations Act has "the imprimatur of the federal law upon it." Moreover, the exclusive bargaining status which unions are given under the Act is the principal source of their power to demand and enforce union shop contracts. The value of this "exclusive" status to unions was well summarized by Professor Archibald Cox of the Harvard Law School when testifying before the Senate Labor Subcommittee in 1959. As expressed by Professor Cox:

"Labor unions enjoy their present power by virtue of Federal statutes, chiefly the National Labor Relations Act. Other voluntary associations are different in two respects: (1) they lack the statutory power of a union designated as a bargaining representative; (2) no other voluntary association has as much power over an individual's livelihood and opportunities or over the rules governing his daily life. The union bulks much larger in the life of a worker than a corporation in the affairs of a stockholder."

A direct solution to the problem would be for Congress to repeal the language of the National Labor Relations Act (the proviso to section 8(a)(3) and the Railway Labor Act (section 2, Eleventh) and thereby restore the principle of voluntary unionism as a principle feature of federal labor policy. Since the labor committees of both Houses are still dominated by those who owe their elections to strong union support and heavy union financing, they are not likely to report any bills unfavorable to the unions. An alternative would be for more states to adopt right to work laws, but this is a slow and agonizing process which the unions will delay and divert in every way possible.

The answer thus seems to lie with the Supreme Court, and the possibility that next time around it will not refuse to face the Constitutional issues presented by compulsory unionism as it has on previous occasions.

Resolution To Reestablish House Select Committee on Standards and Conduct

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. BENNETT. Mr. Speaker, today I am introducing legislation to reestablish the House Select Committee on Standards and Conduct, which was created on October 19, 1966, for the 89th Congress.

The report of the committee on this subject included the following:

DISCUSSION

1. The committee reports herewith as chapter III of this report a list of existing statutes relative to the conduct of Members of the House and officers and employees thereof which might be pertinent to the committee's function.

2. The committee has accumulated a large volume of material on the subject of standards and conduct of Government officials, but has found that in the limited period of the life of the committee in the 89th Congress it is impossible prudently to recommend changes in existing provisions of law or to suggest new ones at this time. In the opinion of the committee such recommendations should be made after the full membership of the House is available for comments, recommendations, and hearings.

RECOMMENDATIONS

1. The committee should be continued as a select committee in the 90th Congress.

2. Proposed legislation introduced in the 90th Congress in the field of standards and conduct of House Members, officers, and employees should be assigned to this committee for recommendations to the House thereon.

3. Members of the House of Representatives should be furnished copies of this report and be asked for suggested changes in existing statutes.

4. Legislation approving the continuation of the committee in the 90th Congress is forwarded herewith.

The resolution for the 90th Congress which follows, has been approved by the committee. I believe the country wants the House to have such a committee, and it is needed. I have been directed by the committee to invite Members of the House to comment on the report and the resolution creating the committee in the 90th Congress.

A Resolution Creating a Select Committee on Standards and Conduct

Resolved, That (a) there is hereby established a select committee of the House of Representatives to be known as the Select Committee on Standards and Conduct (hereafter in this resolution referred to as the "Select Committee"). The Select Committee shall be composed of twelve Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Six members of the Select Committee shall be selected from Members of the majority party and six shall be selected from Members of the minority party.

(b) Vacancies in the membership of the Select Committee shall not affect the authority of the remaining members to execute the functions of the Select Committee, and shall be filled in the same manner in which the original appointments were made.

(c) A majority of the members of the Select Committee shall constitute a quorum for the transaction of business, except that the Select Committee may fix a lesser number as a quorum for the purpose of taking sworn testimony. The Select Committee shall adopt rules of procedure not inconsistent with the rules of the House governing standing committees of the House.

SEC. 2. (a) The Select Committee is authorized—

(1) to recommend to the House, by report or resolution, such additional rules or regulations as the Select Committee shall determine to be necessary or desirable to insure proper standards of conduct by Members of the House, and by officers or employees of the House, in the performance of their duties and the discharge of their responsibilities; and

(2) to report violations, by a majority vote of the Select Committee, of any law to the proper Federal and State authorities.

(b) The Select Committee shall have power to make an investigation of any violation, by a Member, officer, or employee of the House, of standards of conduct established by the House of Representatives by law or resolution, including those standards provided in title 18, United States Code, and in the Concurrent Resolution passed July 11, 1958 (72 Stat. B12). Such an investigation may be made only upon receipt by the Select Committee of a complaint, in writing and under oath, made by or submitted to a Member of the House and transmitted to the Select Committee by such Member. No investigation may be made with reference to any complaint of a violation occurring prior to the establishment of the standards of conduct involved. After such investigation the Select Committee may recommend to the House appropriate resolutions of censure for its consideration and action thereon.

SEC. 3. For the purpose of carrying out this resolution the Select Committee or any subcommittee thereof is authorized to sit and act during the present Congress at such times and places within the United States, whether or not the House is in session, has recessed, or adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, papers, records, correspondence, and documents, as it deems necessary. Subpenas may be issued under the signature of the chairman of the Select Committee or any member designated by him, and may be served by any person designated by such chairman or member. The chairman of the Select Committee or any member thereof may administer oaths to witnesses.

SEC. 4. As used in this resolution—

(1) the term "officer or employee of the House" means any person whose compensation is disbursed by the Clerk of the House; and

(2) the term "Member of the House of Representatives" includes the Resident Commissioner from Puerto Rico.

New York Harbor—Gateway to Our Country

EXTENSION OF REMARKS

OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. GILBERT. Mr. Speaker, with permission I wish to call to the attention of my colleagues in the House an address by the Honorable Francis J. Barry, chairman of the Harbor and Shipping Committee of the New York Chamber of Commerce, at a recent meeting of the Joint Committee for the Promotion of the Port of New York.

The joint committee has been cooperating with the Port of New York Authority since 1963 in an effort to rid New York's waterfront of harbor drift and debris, ugly, decaying structures and unsightly dilapidated properties. Mr. Barry has reminded us in his address of the need for Federal assistance to accomplish this important task. I wholeheartedly support the proposal. New York Harbor is the gateway to our country for thousands of annual foreign visitors. Our Federal Government should take an active role in making the harbor both safe and attractive for industrial, commercial, transportation and recreational uses.

Mr. Speaker, I wish to call attention to the fact that Mr. Barry, in his speech, presented a number of photographs which very poignantly depict the draft, rotting piers and other debris in New York Harbor.

Mr. Barry's remarks follows:

REMARKS BY FRANCIS J. BARRY, CHAIRMAN, HARBOR AND SHIPPING COMMITTEE, NEW YORK CHAMBER OF COMMERCE, BEFORE A MEETING SPONSORED BY THE JOINT COMMITTEE FOR PROMOTION OF THE PORT OF NEW YORK, NOVEMBER 30, 1966

As New Yorkers and New Jerseyans, I think it fair to say that none of us has ever become so blase or so sophisticated as to take for granted the awesomeness of New York's skyline, the magnificence of our sweeping harbor and the excitement of harbor and waterfront activities. New York is both an international port and an international city which attracts millions of American and foreign visitors and travelers each year. The bays, rivers and estuaries that make up this great New York-New Jersey harbor provide resources for industry, commerce, transportation and recreation, of importance to the nation as a whole, as well as the citizens of the great maritime region.

I am sorry to say that we have not treated these resources as richly as they have treated us. We have allowed our splendor to be marred by great ugliness. Although we admit it with great reluctance, a simple and short tour around the harbor forces us to concede that America's greatest seaport has in its midst far too many run-down piers, dilapidated waterfront properties and structures, and rotting, sunken hulks. (Slides to be shown at this point.)

This condition of our waterfront is a product of what might be euphemistically referred to as the "American economy of waste." We in this country have been so blessed with a superabundance of natural resources that waterfront facilities and watercraft which have outlasted their usefulness have been simply abandoned and left to rot. As the earlier day farmer, who wore out the soil in one field and then moved on to the field next door, we have failed to realize that great natural resources must be preserved and conserved if we are to meet our obligations to the future.

Many years ago, the farmer realized his folly and, with the help of the Federal Government, set out to reclaim vast areas which had been worked fallow. I believe that we too have finally learned and that we will now grasp the opportunity to reclaim our precious waterfront from the junkyard condition that is so widespread.

Beyond considerations of beauty and use of important resources is the question of safety. Debris from these abandoned wrecks and derelict piers breaks off with almost every change of the tide and increasingly finds its way into the channels of the Port. This has developed into a serious hazard to navigation. Propeller, rudder and hull damage to ferry boats and tugboats plying the Port's waters on a frequent basis has been particularly severe. More recently, the damage, hazard and deterrent to pleasure boat operators caused by this injurious drift matter in the channels has been a cause of increasing concern and a threat to the safety of life and limb. The total cost of the damage to pleasure and harbor craft caused by this drift amounts to about $8 million a year.

The harbor drift problem in the Port of New York has long been with us. By 1930, the problem was specifically recognized by Congress, when it authorized the U.S. Army Corps of Engineers to undertake a program of collecting floating harbor drift by a specially designed vessel. From this, the gathered refuse was transferred to a "burn barge" for incineration. This program, while valuable, does not attack the source of the problem, yet it costs our Government about half a million dollars each year.

In addition, the Congress has authorized the Corps to police our waterfront to detect and prevent, and in certain instances, prosecute those who deliberately contribute to the problem of illegal deposits in New York Harbor. This approach can cope primarily with the problem as it is caused by waterfront construction work, where the source is specifically identified and definite evidence can be obtained on actual violations. The program, however, cannot deal effectively with the widespread problem of abandoned craft and structures, or those in a serious state of disrepair, which, on a day-to-day basis, constitute the major cause of harbor debris that finds its way into harbor waters unnoticed and unidentifiable as to source.

Thus, for beauty, for safety and to stimulate waterfront reclamation, the New York Chamber of Commerce joined forces with The Port of New York Authority to initiate a Port-wide effort to have the U.S. Army Engineers investigate the problem of damage-causing drift and debris in New York Harbor. This program was successfully launched in 1963 with the enthusiastic help of the four Senators and 17 members of the House from New York and New Jersey and the wholehearted support of the two States, and virtually every municipality, chamber of commerce, and civic and trade association in the Port District.

In essence, we have suggested that the Corps of Engineers be empowered to change the focus of their current drift removal program. Thus, it was visualized that the Army, instead of merely picking up flotsam and debris that had found its way into the Port's navigable waters, would be able to attack and remove the sources of this hazard—the miles of derelict, rotting and abandoned piers and boats and barges that line our waterfront.

In that year, Congress authorized the Army Engineers to undertake a study of the feasibility of establishing such a Federal program on a continuing basis, and appropriated $95,000 to carry out this investigation. The focus was to correct the current situation and recommend legislation to prevent this from occurring again.

The Office of the New York District Engineer formally commenced its study of New York Harbor Waterfront Cleanup and Debris Control with a public hearing on March 5, 1964, held in the Great Hall of the New York Chamber of Commerce. The public hearing was well attended by representatives of practically every area and interest of the harbor. There was unanimous agreement among all who testified on the need for a federally-financed program to clean up the Port's blighted waterfront.

The Army Engineers have been intensely involved in this study since that time. We understand that the report is nearing completion by the staff of the New York District Engineer. However, because of its complexities, precedent-setting nature, and national implications, the draft report will have to be given intensive review by numerous echelons of the Department of the Army, a requirement which will delay its being made public. We had hoped that the report would be made public by the end of this year and ready for Congressional authorization in 1967. We have recently learned, however, that the Corps has been further delayed and that results will not be announced until next spring at the earliest. Consequently, it is unlikely that Congressional authorization will be possible until 1968, with initial appropriations to commence the work not forthcoming until at least a year later.

Although delayed, I believe that we are on the threshold of one of the most exciting and regionally important "urban-renewal"—or "Port renewal"—type opportunities ever offered to the New York-New Jersey Harbor and its waterfront. If the Corps' report is favorable, as we have every hope that it will be, we will have before us a program which promises our Port District the rejuvenation and beautification of our waterfront for industrial, residential, commercial, transportation and recreational uses, a program which simply cannot be accomplished without the know-how of the Army Engineers, and the financial resources of the Federal Government. We realize that the opportunity will not be without challenges and local responsibilities in the form of local cooperation.

The first order of business will be to urge the Army Engineers to conclude their report at the earliest possible date. The next steps will be the obtaining of prompt Congressional authorization followed by sizeable appropriations with which to get the program of the Corps started. Undoubtedly, close working relationships will have to be established with our Port District waterfront communities to urge their prompt and complete fulfillment of their financial and legal requirements for local cooperation.

We have a long and complicated task before us, but with your help, and that of our two States, the City of New York and other Port communities, The Port of New York Authority and marine, trade and civil associations, we believe the New York-New Jersey Harbor will continue not only as the greatest and most important in the United States, but we can make it the finest, cleanest and most attractive.

A Fitting Memorial

EXTENSION OF REMARKS

OF

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. STEIGER of Wisconsin. Mr. Speaker, with the passing of Lindsay Hoben of the Milwaukee Journal, Wisconsin has lost more than a great citizen and a great leader. Wisconsin has lost 40 years of distinguished experience on her largest newspaper. Wisconsin will miss one of its leading citizens.

The Washington Post on its editorial page this morning described the Milwaukee Journal as a fitting memorial of Hoben's journalistic career. Mr. Speaker, I submit for the Record that editorial:

LINDSAY HOBEN

Lindsay Hoben, who died last Sunday in Milwaukee, spent his journalistic career on *The Milwaukee Journal*, retiring as its editor on January 1. That career was a tribute to his own abilities and a commentary on the traditions of the great newspaper that he led. He was one of a group of news and editorial executives from which the Milwaukee paper has drawn its leadership for years.

To find the genius and talent attuned to the paper's traditions of independence and objectivity it has seldom had to go beyond the limits of its own news and editorial rooms. Generally, it has found no other school in which newspaper talent as well suited to the *Journal's* requirements could be found.

Hoben's 40-year career on the *Journal* saw profound changes in the world, in America and in the region which the *Journal* has served. The paper and its editors moved with the times and changed policies, methods and equipment to keep up with them, but its principles have remained constant. The posture of stern and unbending independence well suited Hoben's own character and impulse. In the integrity of the *Journal*, Hoben and the newspaper's four other great editors, have a fitting memorial. No professional newspaperman could wish for a better one.

Congress Needs ADP

EXTENSION OF REMARKS

OF

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. McCLORY. Mr. Speaker, with the convening of this 90th Congress, we slip another notch behind the executive branch in our ability to cope effectively with the complexities of modern government. Every Member of this body is familiar with the much-publicized information explosion which confronts us daily. Congressmen see it in its most unappetizing form—paperwork. Information comes to us in reports, books, periodicals, specifications, letters, memoranda, all of which must be screened, digested and filed for future reference.

This is information on current legislation, future legislation, national issues, local issues, world problems—almost anything and everything imaginable. And perhaps the most discouraging thing of all is that much of it is useful information—most of which we cannot use. It is not that we do not want to use it; the problem is that we do not have the capability for using it.

On the other hand, the executive branch has long recognized the utility of an automatic data processing—ADP—capability for solving its own information handling problems. The number of electronic computers and punch card units in the departments and agencies of Government has risen from 90 in 1956 to a projected 2,252 for fiscal 1967. The total expenditure for ADP equipment and services in the executive branch for fiscal 1967 is estimated to be $1,292 million—an increase of $100 million from fiscal 1966.

Yet despite the vast information handling capability which now exists in the executive branch—and the impressive capability which is also found in the business community—Congress continues to plod its way through the 20th century without the advantage of these management techniques. A management study of Arthur D. Little, Inc., reveals that "the use of high-speed computers to facilitate the work of Congress and its committees is almost nonexistent." The Little report goes on to state that the very nature of Congress' work "calls for flexible manipulation of massive data into many different arrangements for many different purposes. Only with large-scale computers can this be done thoroughly and economically."

At a time when we are concerned with the inroads being made by the executive into the prerogatives of the legislative branch, we clearly have done little to equip ourselves to meet our own space age responsibilities.

To give Congress the kind of timely, accurate, complete and relevant information which it must have to render the decisions required of it, I introduced a measure late in the second session of the 89th Congress to authorize the Legislative Reference Service to make use of automatic data processing equipment and techniques in the performance of its functions in support of the Congress. This was the first such bill, applying ADP techniques directly to the work of the Congress, introduced in either the House or the Senate. Today, I reintroduce that bill, and I am pleased to be joined in this effort by my distinguished colleagues, Mr. Erlenborn, Mr. Kupferman, Mr. McDade, Mr. Moorhead, and Mr. Morton.

The basic intention of the bill introduced here today is to provide the Congress with an identified capability, based on automatic data processing devices and procedures, to retrieve selected information that is of priority value to the Members and committees. By amending the Legislative Reorganization Act of 1946, specific responsibility to establish and maintain such a capability may be assigned to the Librarian of Congress. The Legislative Reference Service traditionally has provided invaluable support to the Congress in all types of research. It is the arm of the Congress that is capable of furnishing independent, professional research and counseling support upon demand.

Although flexibility in the delineation of the congressional support facility is reflected in the wording of the measure introduced, certain exemplary applications wherein automatic data processing can benefit the Congress in the immediate future include the following:

First. Federal budgetary data. A recommendation of the Joint Committee on the Organization of Congress treats the desirability of providing access to agency budget data. Emphasis is placed on the use of automatic data processing capabilities and modern program evaluation techniques. The feasibility of handling this data in machineable form has been proven; now the nontechnical considerations need to be worked out. Certainly the Congress would welcome all possible technological assistance in dealing with this type of data. Also, the congressional budgetary review process, as influenced by the decision of the President to extend the planning-programing-budgeting system throughout the executive branch, might well be aided by the use of ADP-oriented systems.

Second. Legislative history of bills. Also featured as a recommendation by the Joint Committee on the Organization of Congress; this item requires the collection, formating, and maintenance on a current basis of key information related to each public bill or bills under consideration. Included in this legislative history would be similar relevant proposals previously introduced or considered. The ability to respond to congressional demands for information concerning legislation identical or similar in nature, in either chamber, also might be provided. It is recognized that additional staff effort on the part of the Legislative Reference Service would be required, but the benefits to be derived fully warrant such a step.

Third. Digest of public general bills and selected references. This document, well known and much used by the Members of Congress, is issued biweekly throughout the session by the Legislative Reference Service and features useful synoptic information on bills and resolutions introduced in the Congress. By utilizing automatic data processing, the time between the introduction of the bill by its sponsor and its appearance in this document could be decreased significantly. In addition, the machineable data base containing the synopses and key index descriptors would be available at all times to help answer congressional requests on an ad hoc basis. It is anticipated that since certain elements of information for this item and the legislative history of bills would be the same, an integrated file on magnetic tape would be possible. The value of ADP in indexing, storing, and retrieving this vital information which is needed by the decisionmaker time and again cannot be overstated.

Fourth. Repository of data in machine-readable form. The establishment and maintenance of selected data ranging from fiscal, as described earlier, to legal—for example, the United States Code—to economic statistics in machine-able form for use by the Congress could be very useful. Procedures for acquiring and in some cases converting the data, largely held by other Federal organizations, would have to be defined. And of course, criteria governing types of data require and accessibility controls also would be required.

I have enumerated only four possible priority areas in which automatic data processing could be utilized in assisting the Congressman in performing the myriad tasks of his office. However, the definition of Congress' needs for support—both collective and individual—do not end with the examples which I discussed earlier. Applications involving the use of ADP are many: current information on issues up for vote, postvote analytical information, an automated index of congressional documents, lobbyist activity information, histories of committee action, information of Federal contract awards, and on and on.

The ultimate effect of providing Congress with a computer-oriented information system cannot be foretold completely by any expert or soothsayer, but there is no doubt in my mind that the creation of such a facility will have a measurable beneficial effect upon this body. Automatic data processing is an instrument helpful in the storage and processing of information that is useful to the Members of this body. The prerogative as to how it is used, where and when it is applied—in other words the judgmental decisionmaking function that is the essence of our existence—these remain with the Members of the Congress.

It has been said that the future of the United States resides in the efficacy of its decisionmakers, whose judgments are rendered with perspective and knowledge. Let us take that first, critical step forward by providing ourselves with the capability that is possible through the great achievements of American creativity and industry.

His People Back Home Applaud Hon. Harold D. Cooley's Service to Humanity

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. POAGE. Mr. Speaker, with the permission of the House, I place in the Appendix of the RECORD on this first day of the 90th Congress one of the finest tributes ever paid to a man in public life by the people he loved and served.

This man is Hon. Harold D. Cooley, who for 32 years represented in this House what is now the Fourth Congressional District of North Carolina.

The tribute is paid by the people of his home county of Nash, as splendidly voiced by the county board of commissioners.

Mr. Speaker, I long have felt that the greatest opportunity that could come to me, to serve my fellow man, would be to succeed to the chairmanship of the House Committee on Agriculture. In many ways this is the greatest committee in the Congress, for its mission in the past and its challenge in the future is foremost to bring equity and justice to the farm families of America whose contribution to our Nation is the greatest by far and whose rewards in our free enterprise system historically have been the smallest.

But, Mr. Speaker, I did not want to succeed to this chairmanship, in the way this responsibility now comes to me. I deplore the departure of Harold D. Cooley from this Congress. I love him as a brother. I esteem him as one of the great men of our time. I am certain that I speak for every man and woman who has known him in this body when I beseech a close association in the works he and we shall do in the years ahead, and wish for him good health and happiness forever.

There follows the resolution adopted on January 3, 1967, by the Nash County, N.C., Board of Commissioners, as published in the Rocky Mount, N.C., Evening Telegram, on January 4:

NASH COUNTY BOARD'S RESOLUTION APPLAUDS HAROLD D. COOLEY

NASHVILLE.—A resolution expressing gratitude to Harold D. Cooley, a 32-year veteran in Congress, was adopted by the Nash County Board of Commissioners Tuesday during the monthly meeting.

Board member Fred Harris of Nashville presented the resolution which expressed everlasting gratitude to Cooley for the "magnificent contributions" which he made to people everywhere during his years in Congress.

Cooley was defeated in the November election by Rocky Mount businessman and Republican Jim Gardner.

The following resolution was adopted by the Nash County Commissioners:

"To the citizens of Nash County, North Carolina, United States of America and the world:

"Whereas Honorable Harold D. Cooley was elected by the people of the Fourth Congressional District on July 7, 1934, to the Congress of the United States; and that he became the first Member in 104 years from North Carolina of the powerful House Committee on Agriculture; that at the time he became a Member of the Congress, agriculture throughout the Nation was the victim of the great Depression; that many farm families had experienced foreclosure of the mortgage on their homes and millions of people were walking the streets of America hungry and without jobs; that a large segment of our population was ill-housed, ill-fed and ill-clothed; that the prices which farmers were receiving for their commodities were wholly inadequate to meet the living expenses of the people involved; that Honorable Harold D. Cooley fully sensed and appreciated the plight of our people and immediately joined with President Franklin D. Roosevelt and other leaders in Congress in trying to discover ways and means to relieve the tragic conditions of the farmer, and the working man; that in this hour of great need, Honorable Harold D. Cooley represented us with distinction and honor; that his efforts on behalf of the farmers cannot be estimated in dollars alone; that happiness, health and spiritual advancement have all inured to the benefit of our people in larger measure because of better and higher living standards resulting directly from increased income to farmers under the Democratic Farm Program; that Honorable Harold D. Cooley grew up with this Program and has nurtured and helped to improve it.

"And whereas Honorable Harold D. Cooley has exemplified the qualities of integrity, character and devotion to duty; that he has made known his views and opinions on many subjects; that he was a statesman, a man of positive action after as well as before the election; that on many occasions he has demonstrated great moral courage; that he has informed himself on public affairs far beyond the scope of agriculture; that he acquainted himself not only with the requirement of the hour but with the demands of the future; that he visited other parts of the earth to inform himself of how other people lived; how our foreign aid program was being administered abroad and above all to learn first hand how our tax dollars were being used to lessen world tension, whether they were being spent wisely for the benefit of mankind and in accordance with the noble purposes in the hearts of the American people which prompted and fostered the principle of rendering aid to the oppressed and war ravaged people in foreign lands.

"And whereas Honorable Harold D. Cooley sincerely believes that the United States Government should protect every citizen at home and abroad and that any government that will not defend its defenders and protect its protectors is a disgrace to the map of the world.

"And whereas Honorable Harold D. Cooley believes in the separation of Church and State and is opposed to the forced mixing of the races in the public schools of our State.

"And whereas Honorable Harold D. Cooley, in his thirty-two years in Congress, ably represented the people of his District his State, the Nation and the World and in his representation manifested the grandest combination of heart, conscience and brain.

"And whereas the people of our County, Congressional District, State, Nation, and the World should be grateful to Honorable Harold D. Cooley for the splendid services which he has rendered and that this consensus should be officially recorded.

"And whereas the Board of County Commissioners of Nash County wish to take this opportunity to express our sincere appreciation to Honorable Harold D. Cooley for the significant contributions which he has made to mankind.

"And whereas the Board of County Commissioners firmly believe that when we cease to honor great men, we cease to build great men and, therefore, deem it appropriate that, we, the undersigned Commissioners should make known to the World, our appreciation for the services rendered by Honorable Harold D. Cooley.

"Therefore, be it resolved:

"That the Board of County Commissioners of Nash County, in regular meeting, assembled on Tuesday, January 3, 1967, do express to Honorable Harold D. Cooley our everlasting gratitude for the magnificent contributions which he has made in his generation and in these troubled times to the welfare of the farmers, the working man, the businessman, management, members of the Armed Forces and people everywhere of both high and low estate."

National Gallery of Art Calendar

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Record, I include the following calendar of events at the National Gallery of Art:

National Gallery of Art—Calendar of Events, January 1967

Collections: Paintings and sculpture from the Andrew Mellon, Samuel H. Kress, Widener, and Chester Dale Collections, American primitive paintings from the Collection of Edgar William and Bernice Chrysler Garbisch, with gifts from other donors, are on the main floor. Kress Renaissance Bronzes and Widener Decorative Arts are on the ground floor.

Special Loan: Sixty-eight French paintings from the private collection of Mr. and Mrs. Paul Mellon are exhibited in Galleries 69 through 72.

New Reproductions: *11" x 14" Color Reproductions:* Jan Steen, *The Dancing Couple;* Edward Hicks, *The Cornell Farm;* Nicolas de Largillière, *Elizabeth Throckmorton;* Neroccio de'Landi, *Portrait of a Lady;* Veronese, *Rebecca at the Well;* Sargent, *Street in Venice;* Braque, *Still Life: Le Jour;* Guardi, *Erminia and the Shepherds.* 25¢ each. Mail orders under $1.00, add 25¢ handling charge.

Radio Picture of the Week: *A History of Western Painting* will be the subject of the third Radio Picture of the Week series to be broadcast over Station WGMS during the intermissions of the Sunday evening concerts. Twenty National Gallery paintings, ranging from the era of Duccio to that of Picasso, will be discussed in chronological sequence from February 5 through June 18. By ordering color reproductions, suitable for framing, listeners can follow the course at home. The reproductions, on 11" x 14" heavy paper, come with printed résumés of the broadcasts in a portfolio cover.

To subscribe send your name and address to Radio Picture of the Week, National Gallery of Art, Washington, D.C. 20565. Orders are taken only for the complete set of twenty. $5.50 postpaid; checks payable to N.G.A. Publications Fund.

Film: *The American Vision* will be shown in the auditorium on Saturdays at 2:15 p.m.

The Gallery will be closed New Year's Day. For the remainder of the month, the Gallery will be open on weekdays from 10 a.m. to 5 p.m. and on Sundays from 2 p.m. to 10 p.m. The cafeteria is open on weekdays from 11 a.m. to 4 p.m. and on Sundays from 4 p.m. to 7 p.m.

For tours, lectures, and concerts, see inside pages.

MONDAY, JANUARY 2, THROUGH SUNDAY, JANUARY 8

*Painting of the Week: Botticelli. The Adoration of the Magi (Andrew Mellon Collection), Gallery 7, Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the Week: Medieval and Early Renaissance Sculpture. Rotunda, Tuesday through Saturday, 1:00; Sunday, 2:30.

Tour: Introduction to the Collection. Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday Lecture: Mathematics in Art. Guest Speaker: Duncan R. Stuart, Professor of Design, North Carolina State University, Raleigh. Lecture Hall, 4:00.

Sunday Concert: National Gallery Orchestra. Richard Bales, Conductor. East Garden Court, 8:00.

MONDAY, JANUARY 9, THROUGH SUNDAY, JANUARY 15

*Painting of the Week: Vermeer. A Woman Weighing Gold (Widener Collection), Gallery 44, Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the Week: Late Renaissance and Baroque Sculpture. Rotunda, Tuesday through Saturday 1:00; Sunday, 2:30.

Tour: Introduction to the Collection. Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday Lecture: Biology in Art. *Guest Speaker*: David G. Barry, Associate Director, Commission on Undergraduate Education in the Biological Sciences, Washington, D.C. Lecture Hall, 4:00.

Sunday Concert: Thomas McIntosh, *Pianist*. East Garden Court, 8:00.

Inquiries concerning the Gallery's education services should be addressed to the Educational Office, 737-4215, extension 272.

All concerts, with intermission talks by members of the National Gallery Staff, are broadcast by Station WGMS-AM (570) and FM (103.5).

MONDAY, JANUARY 16, THROUGH SUNDAY, JANUARY 22

*Painting of the Week: Petrus Christus. The Nativity (Andrew Mellon Collection), Gallery 39, Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the Week: Rococo Sculpture. Rotunda, Tuesday through Saturday, 1:00; Sunday, 2:30.

Tour: Introduction to the Collection. Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday Lecture: Children's Drawings as a Measure of Intellectual Maturity. Guest Speaker: Dale Harris, Professor of Psychology, Pennsylvania State University, University Park. Lecture Hall, 4:00.

Sunday Concert: The Montgomery Ensemble with Evelyn Swarthout, Pianist. East Garden Court, 8:00.

MONDAY, JANUARY 23, THROUGH SUNDAY, JANUARY 29

*Painting of the Week: Eakins. *The Biglen Brothers Racing* (Gift of Mr. and Mrs. Cornelius Vanderbilt Whitney), Gallery 67, Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the Week: *Nineteenth-Century Sculpture.* Rotunda, Tuesday through Saturday, 1:00; Sunday, 2:30.

Tour: *Introduction to the Collection.* Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday Lecture: *The Development of English Rococo in Interiors and Furniture.* Guest speaker: Helena Hayward, lecturer, Victoria and Albert Museum, London. Lecture Hall 4:00.

Sunday Concert: Sequeira Costa, Pianist. East Garden Court, 8:00.

---

*11" x 14" reproductions with texts for sale this week—15¢ each. (If mailed, $1.00 for 4; orders under $1.00, 25¢ each, plus 25¢ handling charge.)

Hopes for 1967

EXTENSION OF REMARKS

OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. QUILLEN. Mr. Speaker, I feel that it is appropriate at this time to insert in the Record two editorials which appeared on the 1st of January in east Tennessee newspapers, reviewing 1966 and voicing their hopes for 1967.

I am sure that all of us here echo the aspirations of the Bristol Herald Courier—

> That 1967 can be a year which gives renewed strength to all of us, to all our institutions and to all our programs of growth and progress.

And we all join in the New Year's resolution of the Knoxville News-Sentinel—

> That we go straight down the line to clean up this mess (Viet Nam) honorably and effectively, that we will behave as Americans always have behaved in crucial times—straightforwardly, sensibly and wholly in the best interest of our Country and the men who fight in its behalf across the seas.

Mr. Speaker, under unanimous consent, include these two editorials in their entirety at this point in the Record:

[From the Bristol (Tenn.-Va.) Herald Courier]

What Must Be Done?

A new year traditionally brings with it new problems requiring new solutions. In this respect 1967 undoubtedly will be equal to its predecessors.

But it has become increasingly evident that 1967 also must be a year in which solutions are sought, if not found, for the problems of 1966 and 1965 and 1964, and even before that. For these prior years have spawned a welter of "solutions" which are now either problems in themselves or creators of residual problems begging for answers.

The war in Vietnam is one example. The "war on poverty" is another. Urban renewal, here at home is yet another.

All have several things in common. They are costly in terms of manpower and money. All have been advanced as "solutions." All have been factors in increased inflation which is still another problem. And all promise to burden the citizens of the nation still further in this new year of 1967.

There are no hard and fast answers which apply equally to each area of concern. But there are some guidelines which fit one as well as another.

If nothing else happens in 1967, we hope our representatives in Washington, at every level, and our officials at home will at least consider the simple thought that there are some things which have to be done and others which, while desirable, are not completely necessary.

The coming year ought to be a year in which we do those things we must do, setting aside others which can make it more difficult to do the necessary.

The war in Vietnam must be pressed, certainly. It is working a serious drain on the nation's resources; it is claiming the lives of thousands of young Americans; it is bogging the nation down and, in the bogging, decreasing the nation's ability to fulfill its countless other obligations at home and abroad. The sooner it ends, with victory and honor, the sooner we can get on to other matters.

To do this, however, will require sacrifices in other areas of endeavor.

Can we, for instance, continue to spend billions in unproductive areas of the "war on poverty" while waging the war in Vietnam? We think not.

Is it advisable to take on new burdens at home, in the creation of desirable but not absolutely necessary programs, while paying our part of the greater burden of the nation? We suspect not.

Certainly the programs which are now underway, such as Urban Renewal, cannot be halted. But they can be contained. And it is to this end that both Bristols should work in the year ahead.

This new year must be one of putting first things first, of separating the necessary from the desirable. If more and more is piled atop the heap already burdening the American people, the breaking point will be even closer than it is today.

Hopefully, those who are in a position to make the decisions which have to be made will turn away from visions, at least for a while, and be more attentive to reality. If they do, then 1967 can be a year which gives renewed strength to all of us, to all our institutions and to all our programs of growth and progress.

[From the Knoxville (Tenn.) News-Sentinel]

A Year Gone: Another Here

Zip! Zip!

That year 1965 (oops, 1966) sure took off in a hurry.

The more years there are in a lifetime the faster they seem to pass. But not as fast for those who are here to read this editorial as for some of our best young Americans who never got to see the year out.

The overriding fact of 1966 was the war in Vietnam, a pall that hung over the whole American people.

In the year more than 5000 Americans died in Vietnam, and many more thousands were wounded, a few captured.

This may be only a beginning. For however the fortunes of that dismal war may turn, the only real promise it holds is that it will be prolonged.

What matters it then, by comparison, that both the U.S. and Russia scored notable advances in space, that President Charles de Gaulle evicted NATO from France, that the stock market went up and down and mostly down, or that U Thant said he would quit the UN and then didn't—to mention a few of the news highlights of 1966?

What matters it then, by comparison, that the Green Bay Packers won the National Football League championship and the Baltimore Orioles were first in the baseball world, or that Cassius Clay held on to his title as the top nose-buster? A few more "big deals" of the year.

Despite the economic boom, despite the Great Society and all its trappings, despite all the good things that came to so many Americans comfortably at home, by any honorable standard it was an unhappy year, a war year. Nearly 400,000 of our most desirable citizens were slogging in the mud, sweating in the monsoon, flying on deadly missions, pushing through the jungle—and some dying in a far-off land.

The chronology of 1966, for all its other events, can be summed up in a word—Vietnam.

The outlook for 1967? Vietnam.

We offer a New Year's resolution.

Be it resolved by all Americans, together and each by each, that in 1967 we shall conduct ourselves so that our fighters in Vietnam will be as proud of us as we are of them, that we will strive to support and encourage them, that we will work to discourage draft dodging and Vietnik picketing, that we will not forget the atrocities of the Viet Cong and the Hanoi guerillas, the better to keep our perspective, that we will demand of our leaders that they go straight down the line to clean up this mess, honorably and effectively, that we will behave as Americans always have behaved in crucial times—straight-forwardly, sensibly and wholly in the best interests of our country and the men who fight for its behalf across the seas.

It may not be the happiest of years. But if we turn to the job, in earnest and all conscience as we have before, it will be a happier world in the end.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H–112, House wing, where orders will be received for subscriptions to the Record at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133. p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective departments or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Francis R. Valeo.
Sergeant at Arms—Robert G. Dunphy.
Chief Clerk—Darrell St. Claire.
Secretary for the Majority—J. S. Kimmitt.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Anderson (chairman), Russell, Magnuson, Symington, Stennis, Young of Ohio, Dodd, Cannon, Holland, Mondale, Byrd of Virginia, Mrs. Smith, Messrs. Hickenlooper, Curtis, Jordan of Idaho, and Aiken.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Holland, Eastland, Talmadge, Jordan of North Carolina, McGovern, Montoya, Mondale, ———, ———, Aiken, Young of North Dakota, Cooper, Boggs, and Miller.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Ellender, Hill, McClellan, Magnuson, Holland, Stennis, Pastore, Monroney, Bible, Byrd of West Virginia, McGee, Mansfield, Bartlett, Proxmire, Yarborough, ———, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Kuchel, Hruska, Allott, Cotton, Case, and ———.

Committee on Armed Services

Messrs. Russell (chairman), Stennis, Symington, Jackson, Ervin, Cannon, Byrd of West Virginia, Young of Ohio, Inouye, McIntyre, Brewster, Byrd of Virginia, Mrs. Smith, Messrs. Thurmond, Miller, Tower, and ———.

Committee on Banking and Currency

Messrs. ——— (chairman), Sparkman, Proxmire, Williams of New Jersey, Muskie, Long of Missouri, McIntyre, Mondale, ———, ———, Bennett, Tower, Thurmond, and Hickenlooper.

Committee on Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Lausche, Bartlett, Hartke, Hart, Cannon, Brewster, Long of Louisiana, ———, ———, Cotton, Morton, Scott, Prouty, Pearson, and Dominick.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, McIntyre, Kennedy of New York, Tydings, Prouty, and Dominick.

Committee on Finance

Messrs. Long of Louisiana (chairman), Smathers, Anderson, Gore, Talmadge, McCarthy, Hartke, Fulbright, Ribicoff, Metcalf, ———, Williams of Delaware, Carlson, Bennett, Curtis, Morton, and Dirksen.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Sparkman, Mansfield, Morse, Gore, Lausche, Church, Symington, Dodd, Clark, Pell, McCarthy, McGee, Hickenlooper, Aiken, Carlson, Williams of Delaware, Mundt, and Case.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Gruening, Muskie, Ribicoff, Harris, Kennedy of New York, Metcalf, Montoya, Mundt, Curtis, Javits, and ———.

Committee on Interior and Insular Affairs

Messrs. Jackson (chairman), Anderson, Bible, Church, Gruening, Moss, Burdick, Hayden, McGovern, Nelson, Metcalf, Kuchel, Allott, Jordan of Idaho, Fannin, and ———

Committee on the Judiciary

Messrs. Eastland (chairman), McClellan, Ervin, Dodd, Hart, Long of Missouri, Kennedy of Massachusetts, Bayh, Burdick, Tydings, Smathers, Dirksen, Hruska, Fong, Scott, and Javits.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Pell, Kennedy of Massachusetts, Nelson, Kennedy of New York, Javits, Prouty, Dominick, Murphy, Fannin, and Griffin.

Committee on Post Office and Civil Service

Messrs. Monroney (chairman), Yarborough, Randolph, McGee, Brewster, Hartke, Burdick, ———, Carlson, Fong, Boggs, and ———.

Committee on Public Works

Messrs. Randolph (chairman), Young of Ohio, Muskie, Gruening, Moss, Jordan of North Carolina, Inouye, Bayh, Montoya, Harris, Tydings, Cooper, Fong, Boggs, Pearson, Murphy, and Griffin.

Committee on Rules and Administration

Messrs. Jordan of North Carolina (chairman), Hayden, Cannon, Pell, Clark, Byrd of West Virginia, Curtis, Cooper, and Scott.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D.C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.

Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Stewart, of Ohio, 5136 Palisade Lane.
Mr. Justice White, of Colorado, 2209 Hampshire Rd., McLean, Va.
Mr. Justice Fortas, of Tennessee, 3210 R St.

OFFICERS OF THE SUPREME COURT

Clerk—John F. Davis, 4704 River Rd.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Michael Rodak, 6311 Joslyn Pl., Cheverly, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Henry Putzel, Jr., 3703 33d St.
Librarian—H. C. Hallam, Jr., 113 Normandy Dr., Silver Spring, Md.

UNITED STATES JUDICIAL CIRCUITS
JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia judicial circuit: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Fortas. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice White. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice White. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Survival of the Jewish Community in the U.S.S.R.

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, January 11, 1967

Mr. JAVITS. Mr. President, concern throughout the world continues about the survival of the Jewish community in the Soviet Union, the second largest Jewish community in the world.

Recently the Toronto Globe and Mail published an article written by a distinguished Canadian rabbi, Dr. Abraham L. Feinberg, who has traveled behind both the Iron Curtain and the Bamboo Curtain, and who writes knowingly of the situation faced by more than 3 million Jews in the U.S.S.R. I ask unanimous consent that the text of Rabbi Feinberg's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL THE JEW SURVIVE IN THE SOVIET UNION?

(By Abraham L. Feinberg)

Israel's recent reprisal attack on a Jordanian village, which drew severe censure in the United Nations Security Council, was triggered by the Soviet Union's veto of a council resolution mildly reproving Syria for terrorism along Israel's borders. In sheer frustration, and in self-defense, Israel decided to act.

The Russian veto did not raise any eyebrows. The Russians regard the entire Arab world as a potential protectorate—to arm, support and encourage in its dream of Israel's extinction. Cold war mathematics can scarcely hesitate to choose between tiny Israel and the vast resources of its enemies, nor are the United States and Britain unmindful of the disparity.

POWER GAME

The cold war not only has lined up the Soviet Union against Israel in the international power game, it has blocked the Soviet Union's progress toward equitable treatment of Jews at home. In the 50th year of the Soviet revolution, the measure of success and failure is the condition of the Soviet Union's Jewry, the second-largest in the world.

The Soviet Union's new rulers have eliminated the evil stench of the czars. Does that categorical assertion apply to anti-Semitism? The complex nature of this query became clear to me during a visit to Moscow.

On an early fall evening in Moscow, my wife and I left the massive Hotel Ukraine by cab for the one synagogue still holding services in a city of 400,000 Jews. It was the festival known as Simhat Torah (Rejoicing over the Laws), which gives thanks to God for His gift of the Law and the Covenant. What we saw and heard that evening and the next morning revealed nothing new about the purported revelation to the Jewish people on Mount Sinai centuries ago; it did show us what is happening to the Jewish people in the Soviet Union.

We never reached the synagogue; an area of several blocks had been roped off in front of it and within that compound were 15,000 singing, dancing and praying Jews. We knew Simhat Torah had supplanted the New Year, Day of Atonement and the Passover Feast of Freedom as the most popular expression of Jewish religion in the Soviet Union, but we did not expect this.

The crowd sang in Hebrew and Yiddish—transmitted, evidently, by unremitting effort from parent to child; it danced the hera, brought from Israel, Communists claimed, by disillusioned Jews who had returned home; others whispered about Jewish youth groups and private family leaders. The thickly strewn knots of young people has assembled at considerable risk, trusting that the darkness would protect them from the informers who attend religious gatherings.

The 15,000, however, were not there for religion alone. Their feet skipped and their voices rang, not only for the gift of Torah at Sinai, but for the gift of life at Stalingrad and Leningrad and Moscow, to whose gates the panzer divisions of Hitler had penetrated. Nearly all the older men and women had fought in the Second World War, many were amputees, and they were deeply aware that the Jews of Moscow are alive, not as a result of their own efforts, but because of the tenacious army of the Soviet Union.

At a postwar Jewish dinner in Montreal to raise money for a Stalingrad hospital, Ilya Ehrenburg, dean of Russian literature, said that thanks were due the soldiers and citizens of Stalingrad. "Without them, you would not be here."

Ehrenburg voiced the gratitude of all Soviet Jews. Instead of being moldering bones in a mass grave, they are alive (and a problem) because of the Red Army. And any look at Russian Jewry must begin with that fact.

Heading that army was Josef Stalin. After the war, he became obsessed about an invasion from the West, again mounted from Germany. All Russians fear German militarism. In Stalin that suspicion may have been nourished by memories as far back as Allied counter-revolutionary intervention in 1918—and it became a bloody sword with which he murdered, among others, many thousands of alien, intellectual, cosmopolitan Jews. Undoubtedly, the older adults that autumn evening in Moscow still had nightmares about the nocturnal knock on the door which meant death. But they may also have recalled that Stalin saved many Jews after the Nazi invasion of Poland by giving them priority on rail transportation to the East.

SOUL IS DYING

The next morning, my wife and I went to the synagogue for Simhat Torah day worship. It was easily accessible; there was no vast throng of celebrants. And then I learned that while the Jewish body is alive—its soul is dying. In the settlement to which the Jews of Russia were confined by successive czars for centuries, the Jewish spirit built out of slavery a bastion of piety and learning for Jewry throughout the world. In the emancipated Communist state and the freedom and equality it promises, that spirit is fettered, intimidated and inert. Clearly, Stalin's soldiers saved Jews as people, as a people can they be saved at all? What Nicholas I, who tried to Christianize his Jewish subjects by force, failed to achieve, the Kremlin, bent on its Russification, may accomplish by slow, steady strangulation. Unlike my parents, who emigrated to the United States in 1882 in the first wave of a flood that brought millions to the West, Russian Jewry cannot flee.

When I reminded Alexander Kouznetsov, Deputy Minister of Culture, during a Moscow interview that Russian anti-Semitism should be mitigated by the elimination of the Crucifixion story from atheistic teaching, he countered that the deicide charge against the Jews was only a device contrived by capitalist exploiters to drug the proletariat, "who will not be fooled by such tricks when Jews belong to the productive worker class."

It is the monolithic structure of the materialist-scientific state, revealed in Mr. Kouznetsov's final words that is crushing to the spiritual life of Soviet Jews. To me, this conclusion brings not anger, but grief. I have affectionate admiration for the Russian people.

WORLD SECURITY

Co-existence on the basis of mutual understanding and common aims with the Soviet Government is so essential for world security that I would crusade for it although every trace of Jewish identity in the Soviet Union were obliterated. The omnipresent seminal fact which aggravates the Jewish condition, furthermore, is the tensions, deprivations and confusions engendered by the cold war; at every turn one encounters fear—of the outsider, the internationalist, the cosmopolite, the alien, the individualist: in short, the Jew. Thus the general sickness aggravates the special Jewish sickness I first detected in the Moscow synagogue on Simhat Torah day.

It was a trumatic experience. Our dress and our arrival by cab announced that we were newcomers. At the mention of Canada we were tearfully embraced and ushered with almost painful ceremony to a slightly raised place of honor in front, near the altar, where two members of the Israeli Embassy staff were already seated with a teen-age boy, the only person present under middle age. "They are afraid of the black list," was the prevailing explanation, although some traced youth's absence to lack of interest. (Both reasons, I later learned, had a measure of truth.)

The sanctuary had been slightly refurbished after years of disuse during the Stalin era but still showed signs of decay. There were no prayer shawls; the hitherto crippling absence of prayer books had been somewhat relieved; the several hundred drably dressed worshippers begged instead for luhet (Hebrew calendars) so that they might know the dates of holy days and the memorial anniversaries.

Virtually all Jews in the Soviet Union are anxious about the future, with the notable exception of old Communist comrades, such as one woman who had left England in her teens to join Lenin. The degree is proportionate to age; the young have less concern about the extinction of Jewish identity and faith, more about jobs, university admission and housing. A few intellectuals deem themselves to be caught between the upper and nether millstones of a governmental contradiction. One stone presses Jews into Russians, in cold war passion for solidarity, squeezing out every vestige of Jewish culture and religion; the other prevents assimilation by racial attacks that keep them apart. Jewishness cannot comfort and strengthen them because its dignified cultivation is proscribed. They have no place to turn.

Synagogue frequenters—a minuscule segment—are keenly sensitive to the threatened demise of Judaism. Allowing for their emotional intensity and a possible hangover of dread from the days before the anti-Stalin thaw, I elicited the following from cautious chats.

Since 1926, when the last Conference of Rabbis took place, no co-ordinating centre or organizational structure has been allowed, locally or nationally, even announcements of synagogue services apparently being dependent on the grapevine. This has been so despite the unqualified principle of religious equality which was written into the fundamental law of the Soviet Union from the birth of the Communist regime. Such fragmentation of Judaism weakens its resistance to the anti-religion campaign.

For example, Soviet Judaism has not published a Hebrew Bible since the Nineteen Twenties; in contrast, the Russian Orthodox Church printed 50,000 copies of its scripture in 1957, the Baptists 10,000 in 1958, the Moslems 9,000 in 1958 and more a year later.

A lengthy Soviet report to the United Nations lists every major religion as having formal affiliations abroad—except Judaism. Last year, a Soviet representative at a UN seminar first denied and then admitted the individual's right to associate with international bodies of the same ethnic or religious affiliation; this may open a way for Jews to seek brethren abroad.

The discriminatory nature of these infringements on Jewish rites becomes clear in the light of a government decree of June, 1944, which listed the Jewish religious community among the dozen faiths receiving formal status, and an official order dated April 18, 1929, entitling religious denominations to set up centers for the administration of their affairs.

CONVERSED IN YIDDISH

In the Moscow synagogue I conversed in Yiddish, the Germanic tongue that has been the means of communication for the European and Western Jewish masses from approximately the Thirteenth Century—but I would not wager on the longevity of such oral communication and common worship. Hebrew, the language of Bible and prayer book, has been proscribed as reactionary and a tool of Zionism. Yiddish withers as its roots are severed.

Assimilation of minorities to environment is undoubtedly accelerated in cities. In 1926, 70 per cent of Soviet Jews claimed Yiddish as their mother tongue; by 1959 only 18 per cent did so. It is probable, as one Jewish sociologist explained, that many Jews confounded native language with language spoken in a questionnaire, and thus opted for Russian because they speak it at work and on the street and even in the home. These people probably enjoy Yiddish books and plays in addition to Russian literature. That, however, does not diminish the normality of the loss in the Yiddish "vote."

The fact is that Russian, the official language of the most influential, keystone republic, is the medium of science and technology; it occupies in the Soviet Union the dominant position of English in the world. Any young Soviet citizen seeking a prestige career would make fluency in the Russian language his first objective. Statistics show that, whereas Jewry contributes a fourth of its numerical proportion to the roster of elected officials, its participation in science far outstrips any other nationality.

FREE DEVELOPMENT

Only a week after they seized power on Nov. 15, 1917, the Communists formally declared that all nationalities and ethnic groups on Russian territory have the right to free development. The first constitution in 1918 stigmatized any limitation on this right as contrary to fundamental law; the second one in 1924 was followed by the restatement of this principle of equal nationality rights in the constitutions of the respective republics which stipulated that citizens may use their native tongue freely, even in public affairs, and that national minorities have the right to receive education in their native tongue. The 1936 constitution omitted reference to public affairs, but reaffirmed the right to native language instruction in the schools; in 1962, the Soviet Union ratified a UNESCO convention obligating it to recognize national minority rights in schools. A law adopted by the Russian Republic, of which Moscow is the capital, authorized parents to decide the language of teaching for their children; in 1956 the Russian Deputy Minister of Education wrote that Soviet law requires the organization of a class in a native tongue on the request of 10 parents.

What is the reality? Uzbeks, Gypsies, Georgians and Mongol tribes all are encouraged to preserve obscure, primitive subcultures; occasionally they are even subsidized to manufacture a culture. The cumulative literature and learning of the historic Jew—one of the oldest and richest civilizations on earth—is being throttled by governmental indifference and intimidation, perhaps because the bearers of that legacy are a dynamic, spirited, self-conscious people not inclined to iron-fisted conformity. There is not a single Yiddish school or class in the Soviet Union; schools destroyed by Nazis in the western republics have not been reopened; even Jewish schools established in the supposedly Jewish region of Birobidjan are closed.

Not schools alone, but the entire network of Jewish cultural institutions which existed before the war, is gone, the extensive Yiddish publishing structure is shattered, the once world-renowned Moscow Jewish Theatre is a ghostly memory. The Jewish cultural scene has been a wasteland wherein comic relief was provided by a travelling troupe of singers and a tri-weekly paper in Birobidjan with 1,000 circulation.

In any case, the ultimate Russification of Soviet Jewry, which I believe the Government has vowed to achieve, is inevitable. The degree of that absorption and the viability of Jewishness will depend on the extent to which the stubbornness, pride and resilience of the Jewish people can co-exist with an overriding colossus bent on shoring up solidarity in the face of a global East-West or Russo-Chinese conflict.

Patriots are people who judge other countries by the things they do and their own country by its constitution. The Russian Government is not the first to lay heavy hands on its formalized principles or origin and purpose—as any Bear Island Indian or Birmingham Negro can attest. Anti-Semitism has been a lurking leukemia in the blood-stream of Eastern Europe for centuries. The proletariat's dictatorship does not give him reason or compassion, least of all in the throes of revolutionary struggle.

Neither Stalin nor Nikita Khrushchev could have purged Russia of anti-Semitism. They did not try. Both of them were themselves governed by the inexorable mandate of security and solidarity in a polarized world. The Talmud advises that the Jews are really in peril when all humanity is in peril.

What about refuge in Israel? So far, only a few oldsters have been released to rejoin their families. The Mosiac cry, "Let my people go," is naive. Talks with Russian leaders convince me that the demand for unrestricted Jewish emigration to Israel merely irritates and hardens the Government. How can the Kremlin be expected to send 1,000,000 able-bodied men to a country allied with the West and therefore a possible enemy? Such generosity would surely not help the Russians court the favor of Cairo and the vast Arab world.

ONE CLEAR PATH

The Soviet contention that Jews don't want to go to Israel, however, is hypocrisy. There is one clear path to the truth: let the Jews decide, freely and without intimidation, for themselves.

Such a poll might disappoint both sides—the Russians because so many older Jews want to go to Israel and the Jews because so many young people want to stay. Debate is a waste of time: Soviet Jewry will have the opportunity to make a choice when an East-West concordat replaces the cold war. As long as the shadow of ultimate confrontation with the United States hangs over the Russians, they will be subject to the national paranoia which breeds anti-Semitism.

Today, the roadblock is Vietnam. An end to that savagery would bring more prompt and effective relief for Soviet Jewry than cold war extremism.

In the Interest of Accuracy

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD an excellent editorial appearing in the Ameircan Rifleman, a publication of the National Rifle Association of America, an association of loyal and law-abiding citizens, criticizing an inaccurate and biased article appearing in the Reader's Digest attacking the rights of honest citizens and sportsmen to lawfully possess and enjoy the use of firearms for legitimate sporting purposes. The article is as follows:

IN THE INTEREST OF ACCURACY—PLEASE LET US SAY WHAT'S WRONG WITH THE READER'S DIGEST ARTICLE CRITICIZING THE NRA AND GUN OWNERSHIP

1. The Approach: The Reader's Digest, U.S. circulation 17,000,000, never checked assertions in this article with the National Rifle Association nor, as far as we can find, with any qualified spokesman for firearms ownership and use. The article is a Reader's Digest "original," not culled from another magazine. That means the Reader's Digest either initiated or commissioned its writing and is fully responsible. The article, "We Need a Firearms Control Law—Now!" is preceded by a red-letter warning, "The toll of death by shooting is mounting steadily."

2. The Psychic Preparation: NRA members (and many others) wondered about a curious paragraph in the December Reader's Digest, Page 10, attributed to The Irish Times, a Dublin daily newspaper of 35,309 circulation. This paper expressed the opinion that "The U.S.A. definitely needs new gun laws." To back up that advice, it then quoted at least three warped or misleading statements from an American anti-gun book.

3. The Author: On any controversial subject, a fair-minded magazine might be expected to select an impartial writer. The Reader's Digest article was written by perhaps the most biased newspaper editorialist in the nation, Alan Barth, of The Washington Post. Barth has assailed the NRA and legitimate gun ownership day after day in unrestrained terms. He called a moderate firearms control bill "completely bogus" and filled with "subterfuge." Another example: After 5 killings with a firearm at Mesa, Ariz., Nov. 12, he editorialized, "Knives or bludgeons could never have taken so great a toll of life"—this only 4 months after 8 Chicago nurses were fatally stabbed.

4. Innuendo: The very first paragraph of the article refers to "The Minutemen who won American independence." Most school children know that the original Minutemen, serving heroically but briefly as local militia, did not win American independence. So why drag the name in here? To imply a link between gun ownership and a small extremist group now known as the Minutemen, whom the NRA publicly disavowed years ago and whom the author, in a Washington Post editorial Nov. 1, 1966, termed "banditry"?

5. Inaccuracy: The second paragraph says more than 100,000 U.S. civilians "were shot" and 17,000 died. Actually 9,500 shot themselves in suicides. The article makes it sound as if they were murdered. Furthermore, firearms figured in fewer than half of all suicides (U.S. Bureau of Vital Statistics), and only 17% of aggravated assaults. (FBI Uniform Crime Reports.) Felony murders with firearms—committed in the course of other crimes—amounted to only 7.8% of all killings.

6. Misrepresentation: Firearms accidents are "commonplace." (Page 18) Firearms accidents accounted for only 2% of all fatal accidents in the U.S. in 1965. ("Accident Facts," 1966 edition, National Safety Council.) The rate decreased 15% in the decade 1955–65, due partly to NRA safety programs.

7. Concealment: Discussing killings by a "demented University of Texas student," the article (Page 20) avoids mentioning that the major firearms bills before Congress last session could not have prevented this tragedy or some others like it; or that the student violated existing Federal law by having a sawed-off shotgun—and the law didn't stop him.

8. Dubious Statements: Contrary to the statement (Page 24) that gun bills by Senator Dodd of Connecticut and others "would cause serious inconvenience only to felons, juveniles, habitual drunkards, drug addicts and the mentally ill," published reports from at least two large States with new gun control laws say law-abiding citizens have been inconvenienced but that it is almost impossible to screen the mentally ill and other ineligibles. [Moreover, the Dodd bill is termed only "a beginning" by Senator Edward Kennedy of Massachusetts. (89th Congress, Senate Report 1866, Oct. 19, 1966, P. 97.) This, taken with assertions of Dodd Bill supporters such as the Reader's Digest author that individual Americans have no constitutional right to arms, seems to some to herald a movement to prohibit all private ownership of firearms.]

9. Distortion: The NRA (Page 24) "has managed to imbue many of its readers with the quite mistaken notion that efforts at effective regulation conflict with the Second Amendment to the U.S. Constitution." In truth, the NRA helped to pass two existing Federal firearms statutes and some of the estimated 20,000 State and local laws which can be invoked against misuse of firearms in their respective areas. The NRA last year favored Federal measures to curb mail-order sale of pistols, all sale and possession of "destructive devices" such as antitank guns, rockets and bazookas, and to strengthen State firearm controls through Federal support. It did not favor any legislative program which would "begin" with the Dodd Bill and go—where?

10. Evasion: The articles' discussion of the constitutional right to bear arms (Page 24) fails to say that if the Second Amendment does not give individuals the right to arms, then under the Tenth Amendment that phase of firearms regulation rests with the States and "the people." Fully half of the State constitutions expressly declare that individual citizens—apart from militia—may keep arms for their own defense.

Question: Why this article in Reader's Digest now?

Answer: Apparently it is perfectly timed to influence the Congress and State legislatures (47 of the 50 meeting 1967) to pass strong antigun laws.

The timing makes this article the biggest blast in a barrage from such publications as McCall's, Good Housekeeping, Ebony, Life, Harper's, Coronet, New York Times Sunday Magazine, Together (Methodist), Presbyterian Life, The National Police Gazette, Medical Economics and Canadian periodicals. Many have appeared under the bylines of Carl Bakal, Stanley S. Jacobs, Nathan Dreskin. Most have contained misleading statements. These appear to be based on Bakal's book, sarcastically entitled "The Right to Bear Arms." (Bakal doesn't think it exists.)

Chapter Seven of this book is headed "The NRA: Vigilante on The Potomac." Under the heading is this statement, attributed to a New York Times irnterview with J. Edgar Hoover, Director of the FBI: "I think strong laws should be passed restricting the sale of guns, but when you try, you run head-on into collision with the National Rifle Association."

This statement attributed to Mr. Hoover has been spread from coast to coast and trumpeted over radio and television. The NRA asked Mr. Hoover whether he was correctly quoted. He wrote back, Dec. 9, 1966:

"In response to your inquiry, the statement attributed to me is not correct.'

Mr. Hoover said he was talking about licensing, not restricting the sale of guns.

Question: What can you do about all this?

Answer: The Reader's Digest article ends by inviting readers to buy reprints "to pass them on to friends." If you wish, order some. Then request an equal number of reprints of this page. Clip or staple them on top of The Reader's Digest reprint. Send them not only to your friends but to your clergyman, your physician, your public officials, and anyone else who believes in keeping the facts straight.

For Reader's Digest reprints, address Reprint Editor, The Reader's Digest, Pleasantville, N.Y. 10570. These cost: 10—50¢; 50—$2; 100—$3.50; 500—$12.50, and 1000—$18.

For American Rifleman reprints of this page, address Accuracy Department, The National Rifle Association, 1600 Rhode Island Ave., N.W., Washington, D.C. 20036. These are free of charge, and welcome.

West Virginia Steel Industry Aids State's Economy—Weirton Steel Co. Undertaking Extensive Modernization Program—Antipollution Controls Being Installed

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11, 1967

Mr. RANDOLPH. Mr. President, demands for steel are ever increasing and the Nation's steel mills fulfill that demand. In 1966, the steel industry produced 134 million tons. This represented an increase in output of 3 million tons over 1965 and 7.4 million tons over 1964. This is an impressive record for the steel industry, so important to the American economy.

West Virginia has five steel companies which contribute greatly to the economy and well-being of the area which they serve and which are vital to the community.

Weirton Steel Division of National Steel Corp., located on Weirton, has 12,500 employees, 12,100 of them in West Virginia. Producing 3.3 million ingot tons of steel in 1966, the company's payroll amounted to $120 million that year. Weirton Steel Co. also shipped 2.5 million tons of finished products to customers during the past 12 months.

Wheeling Steel Corp. in Wheeling has steelmaking facilities and principal finishing mills in Ohio. The corporation has approximately 15,000 employees, 3,500 of them in West Virginia, and produced 2 million ingot tons of steel in 1965. Employment costs were $126 million and the sales of the corporation surpassed $270 million.

Connors Steel Division of H. K. Porter Co., located in Huntington, has two electric furnaces which produce 150,000 tons annually. The division has 998 employees and an annual payroll exceeding $6.5 million. The value of its products is $20 million per year.

Follansbee Steel Corp. and Parkersburg Steel Corp., both owned by the Louis Berkman interests, are not basic steel producers. Follansbee produces stampings and hot dip coated steel and employs 105 persons. It ships approximately 8,000 tons annually. The Parkersburg plant has 100 employees and ships about 8,000 tons a year of stove pipe and steel kitchenware.

The steel industry, with vast research programs, is directed toward new ways to improve the steel products reaching the consumer.

An extensive modernization program has been undertaken by the Weirton Steel Co. It involves the multimillion-dollar "mill of the future," now under construction. This will include two basic 300-ton oxygen furnaces, vacuum degassing facilities, and the first large-scale continuous casting operation in any American steel mill.

The latest antipollution devices will be a part of the new Weirton mill. As chairman of the Senate Public Works Committee, which has jurisdiction over air and water pollution control legislation, it is personally gratifying to me to know that the steel industry is aware of and working toward pollution abatement.

Mr. President, an editorial appeared in the November 26, 1966, issue of the Huntington, W. Va., Advertiser concerning research being conducted by the steel industry. I ask unanimous consent to have it inserted in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Research Spurs Production of Steel in American Mills

Despite the increase of imports from 6.4 million net tons in 1964 to 10.4 million in 1965, the healthy American steel industry moved forward last year to a new high record of production.

The nation's mills turned out 131,462,000 tons of various products. This was an increase of 3.5 per cent over the 127 million tons of the previous year.

One of the effective means of meeting increased foreign competition was the development of improvements in making and shaping of steel to give it greater attractions to fabricators.

For can manufacturers steel mills have turned to lighter plate that makes possible the production of more containers from each ton and reduces the weight on retailers' shelves.

Lighter but stronger structural shapes for the construction of buildings reduce the numbers of support necessary.

Broader ranges of products, closer control of quality and assurance of prompt and adequate supply also have helped enable domestic mills to hold their markets.

For still further improvements for the benefit of manufacturers and the American public the Iron and Steel Institute sponsored during the year 140 research projects.

These studies in universities and research centers of the United States and Canada sought not only improved products and better production methods but basic information that could benefit the entire national economy as well as the steel industry.

The effects during the single year were evident in the improved products and in the 30,000 increase in steel's work force to 584,000.

Wages and salaries reached $4,700,000,000, the highest in steelmaking history.

The industry further added to the prosperity of the nation's economy during the year by spending a record $1,800,000,000 for additions, improvements, and acquisitions.

This constant process of probing for improvements and expanding to meet new needs illustrates the methods under way throughout the range of business and industry that give the United States economic preeminence throughout the world.

Huntington has seen the results of it in the growth of the Alloy Products Division of International Nickel Co. and other basic industries of the region.

The economic development of the region could also be greatly accelerated by the enterprise of qualified young people in using basic products such as steel, nickel, plastics and aluminum in the fabrication of numerous products for which there would be a ready market.

Presidential "E" Award to Baltimore Copper Paint Co., of Baltimore

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. GARMATZ. Mr. Speaker, our flourishing economy has made it possible for our citizens to spend more time in recreational activities, and when these are active ones, this is greatly to be desired. As a resident of a State which has excellent boating facilities, I have been agreeably surprised at the tremendous increase in boating activities on the Chesapeake Bay and its tributaries and I understand, throughout the country. This has, of course, resulted in a greatly increased volume of boatbuilding, especially pleasure boats—power and sail. The mass production of these boats had made them available to a wide cross section of our population and also has awakened an interest in foreign markets.

In line with increased boatbuilding, a firm in my district, the Baltimore Copper Paint Co., has contributed greatly to the industry by supplying all types of coatings for commercial vessels and the manufacture and merchandising of paints for the pleasure and fishing boat industries.

By its initiative and ingenuity, the company has become a supplier, not only to a large segment of the domestic boatbuilding industry, but also to a large foreign market and is consistently increasing its exports.

This enterprise has won for the company the Presidential "E" Award, and a few weeks ago it was my privilege to represent the Secretary of Commerce in presenting the award. My remarks at that time, commenting further on the outstanding achievements of the Baltimore Copper Paint Co., follow:

Presentation of Department of Commerce "E" Award to the Baltimore Copper Paint Co., Baltimore, Md., December 17, 1966

It is indeed a pleasure to be permitted to be with you today to represent the Secretary of Commerce in presenting the "E" citation to the Baltimore Cooper Paint Company.

As chairman of the Merchant Marine and Fisheries Committee of the House of Representatives, all matters pertaining to vessels from the largest sea-going passenger and freight vessels to the various size pleasure boats, are naturally of considerable interest to my committee. It is, therefore, extremely gratifying to know that a Baltimore company is supplying one of the very important needs of the shipbuilding industry, not only in our own country but practically world-wide.

By its resourcefulness and ingenuity, the company has not only met the foreign competition, but has succeeded in distributing its products in almost every corner of the globe where vessels of any size are built or used.

The company is supplying the largest marine paint manufacturer in Norway; an Italian company, with import connections with Italian shipping, and the largest independently-owned marine paint company in the United Kingdom.

Through extensive market research, liberal credit terms, judicious licensing arrangements, quality products, and prompt and efficient delivery, the company has consistently increased exports of its marine coating.

The tremendous success achieved reflects great credit on management and employees, and the American free enterprise system, and should be emulated by other domestic concerns.

With the award from the Department of Commerce, I would like to extend my personal hearty congratulations on this achievement and to express the hope that this success will be continued and increased.

Final Address by Gov. William W. Scranton to Pennsylvania General Assembly

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11, 1967

Mr. SCOTT. Mr. President, on January 3, 1967, the Governor of my Commonwealth of Pennsylvania, Hon. William W. Scranton, delivered his final address to Pennsylvania's General Assembly. It is an eloquent and moving recital of the great progress we have made in Pennsylvania under the leadership of his administration and of the road which still lies before us. I ask unanimous consent that the address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

Final Message of Hon. William W. Scranton, Governor of Pennsylvania, to the General Assembly Tuesday, January 3, 1967

Mr. Lieutenant Governor, Mr. Speaker, Ladies and Gentlemen of the General Assembly, Citizens of Pennsylvania:

We come together at the beginning of a new year—and soon a new Administration.

Much has changed in Pennsylvania during the past four years—and the change has been overwhelmingly for the better.

More than 500,000 more workers have jobs today in our State than were at work four years ago. Unemployment has been hitting new record monthly lows, month after month; in October a new all-time record low of 2.5 per cent. There are 105,000 more students in our colleges and universities. The population of our mental hospitals has fallen by 6.5 per cent. Farm income has increased $89 million. Campers and sportsmen have available 34,000 more acres of woodland in State Parks than were at their disposal in 1962. A show of the paintings of Andrew Wyeth in Philadelphia this fall drew 174,000 people.

The story of the new Pennsylvania is told in the improved prospect for individuals all over our Commonwealth:

—A laborer in Allegheny County who was thinking about moving to California four years ago now has a steady job with a metal products company and has placed a down payment on a house in Penn Hills.

—A mother in Scranton who feared the breakup of her family now feels secure in the knowledge that two of her sons have found jobs within driving distance of home, a third is attending Law School in Philadelphia and plans to practice in Lackawanna County, and her daughter is engaged to an engineer who came to the Anthracite Region from Massachusetts to work in a PIDA financed plant.

—A young man who was arrested for petty larceny in 1962 after graduating from a mid-state high school the previous spring has completed three years service in the Army and last fall entered the University of Pittsburgh with a State scholarship.

—A Philadelphia lawyer whose only ambition in 1962 was to make enough money to retire to the Bahamas has become involved in the drive to secure a new Constitution for Pennsylvania and will remain in his native State at least until this objective is accomplished.

—A filling station operator in the Poconos has invested in a ski lift and now is part owner of a thriving tourist attraction.

These are a few of the faces of Pennsylvania in 1967.

Let me make two things unmistakably clear—the improved quality of life in our State is not wholly due to actions taken within Pennsylvania, and our progress is not solely nor even primarily due to the influence of government.

We have benefitted from the generally high level of prosperity in our Country—but it is indisputable that our economy has grown more rapidly than the general national economy—and unemployment in Pennsylvania has fallen from a point far above the national level to a point far below it.

Most important of all, Pennsylvania's economy today combines stability with a capacity for dynamic growth.

This is due in large part to those qualities in Pennsylvania which have for many generations been ours—the rich and fertile countryside of the Lehigh and Lebanon and Cumberland Valleys and the Lancaster Plain . . . the natural beauty of the Poconos and the Northern Tier and the Laurel Highlands . . . the cultural and economic importance of Philadelphia . . . the industrial complexes that have taken root in Pittsburgh and the Southwestern counties and the Anthracite Region and Altoona and Johnstown and the Shenango Valley and Erie . . . the network of railroads that early took advantage of Pennsylvania's unique location . . . and, most of all, the people of Pennsylvania, drawn from the four corners of the world, and brought together to create a new breed: industrious, hospitable, ingenious, cheerful.

These qualities have been ours since beyond the memory of the oldest citizen living among us. But yet—in the grim years following the end of World War II—the combination had somehow ceased to work. Our State was losing population, economic vitality, and the confidence of its people.

The reversal of this downward trend is an achievement in which all of us—legislators and members of the executive branch, Republicans and Democrats—all who have made some contribution to State Government during the past four years—can take considerable pride.

For we have succeeded in harnessing the natural energies which were already here—in restoring the confidence of our people in Pennsylvania as a good place to live and work—in impressing the Nation and indeed the world of our seriousness when we said: Let's make Pennsylvania first!

Consider only the most striking of the accomplishments:

—The first College scholarship and loan programs in Pennsylvania history, making available $32 million to students in the current fiscal year alone.

—The State's contribution to the support of public schools increased by more than 50 per cent, and a new subsidy formula enacted which this year will increase the State's aid to schools by an additonal $100 million, with special attention to the needs of urban school districts.

—The Nation's first Department of Community Affairs.

—Relief rolls reduced by 100,000 through Project Independence, while the State's contribution to those truly in need rose 24 per cent.

—A conservation program—which has become the model for the Nation—including Project 70, strip mine regulation, clean streams and coal mine subsidence legislation, and first approval of the new Conservation and Restoration Fund.

—Pennsycare, one of the first State medical aid programs set up under new Federal legislation, accounting for part of the 91 per cent increase in State expenditures for medical assistance for the elderly and needy.

—Geriatrics Centers established to care for aging citizens who must be hospitalized, and the State's contribution to aid for the elderly increased by more than 1,000 per cent.

—Expenditures for industrial development increased by 500 per cent, accounting for many of the 3,000 plants that have located or expanded in Pennsylvania during the past four years.

—Pennsylvania's first mass transportation program, contributing $13 million to the support of railroad and bus lines for commuters in Philadelphia and Pittsburgh.

—The percentage of State employes covered by Civil Service more than doubled, and two pay raises given to State employes.

—Reform of the Unemployment Compensation program, converting a deficit in the fund of $67 million to a surplus of $535 million, making possible increased benefits for workers.

—Lifetime benefits for the victims of miners' asthma.

—Effort for highway construction increased by 40 per cent, and the most ambitious highway building program ever undertaken by any State in the United States launched.

The most liberal eminent domain law in the United States for farmers, homeowners and small businessmen.

Support for State Colleges increased more than 200 per cent and State-related status granted to Temple and the University of Pittsburgh, making possible reductions in student tuition at those two institutions.

The Community College program begun, with seven Community Colleges already in operation.

School teachers' salaries raised twice for the first time during a single Administration.

And all of this achieved within the limits of four balanced budgets—three surpluses—and another surplus, the fourth consecutive, already projected for next June.

These are but a few of the accomplishments of State Government in Pennsylvania during the past four years.

They have been carried out on the principle that government exists to lead and to serve the people—but not to dominate their lives or coerce their spirits.

Our every effort has been directed toward the enlargement of freedom—freedom to work, freedom to learn, freedom to travel, freedom to enjoy the benefits of culture and of our beautiful countryside.

Our success is written in the hearts and minds of a vigorous people.

These efforts in Pennsylvania have come at a crucial point in the development of State Government in the entire United States. Since 1960, the Federal Government has undertaken a series of domestic programs of enormous cost and scope. Many of these programs have been in response to genuine and legitimate needs among our people—but experience to date has shown that they cannot be efficiently administered on a completely centralized basis.

The United States is simply too big and too complex a Country to be run from the top down. Some pattern of decentralization is needed—for effective distribution of effort as well as for preservation of freedoms. The States provide such a pattern. Their administrative structures and their holds on the loyalty of their citizens give them an initial advantage over any conceivable alternative pattern.

But they are not without disadvantages. Their revenue resources are severely limited. Their constitutions are in many cases outmoded. They have been subjected to the ravages of intense partisan warfare. They have often failed to meet the needs of their urban areas. They do not in all cases correspond closely to natural economic and metropolitan regions. Worst of all, there has in recent years been a growing tendency among the people themselves to regard the States as unresponsive units of government.

Now there is a disposition in the Country to give the States one last chance. Some kind of effective regional government—placed between the Federal and local levels—is clearly needed. The States are the logical answer—if they can do the job.

I would say that the States have a few years to measure up—probably no more than a decade. If they have not by then set their own houses in order, they will surely be superseded by some form of "metro-government" or Federal administrative units or regional departments—and then the States, as one leading Senator has said, will be of interest to nobody except Rand-McNally.

We have done much in Pennsylvania during the past four years to demonstrate that the States are capable of giving the service to the people that will be needed in the final third of the twentieth century. Similar progress has been achieved, of recent date, in States like New York, Michigan, and North Carolina, Colorado, Oregon, and others.

Our new Governor has concerned himself deeply with these problems and these opportunities. He has already proposed a revenue sharing program with the Federal Government, which, if enacted, would do much to cure the revenue shortage for the States. During the fall campaign, he presented a program for Pennsylvania which when put into effect, will give us a thoroughly modern and people-oriented State Government.

You and Governor Shafer, working together, can give the people of Pennsylvania the kind of State Government which they want and so richly deserve.

Executive and Administrative Government is beginning to capitalize on today's opportunity for progress. And now—a matter with which you are intimately concerned:

During the past four years I have made little effort to influence or interfere with the structure of the legislative branch of State Government. I have felt that this was your responsibility, and that I should not intrude upon it.

It has now become evident, however, that besides administrative progress, one of the indispensable ingredients to a general strengthening of State Government is improvement of the legislative branch. Since we have been close partners for these four years—and since you have often been generous with suggestions for improvement of the executive branch—I hope you will accept some observations and suggestions that I have formed on the legislative branch.

Let me say first that my experience in working with the leaders and members of the Pennsylvania Legislature has been a very happy one. You have realized the needs of our time, and you have responded with passage of the vital programs mentioned earlier.

When courage was needed during the past four years, a majority of your members have always been willing to run political risks and have stood up for what was right.

Frankly, the membership of the Legislature has improved in quality over the past two or three decades. More and more, legislators, are coming to regard their duties as a fulltime job. They should. That's what the job is now—fulltime.

No single factor has contributed more to this improvement than the increase in legislators' pay. Increased compensation has made a legislative career more attractive, and has made it possible for many legislators to be relatively independent and to devote more time to their work in Harrisburg.

I also heartily approve plans that are now underway to provide legislators with increased office space and enlarged staff. The days when a legislator could perform his duties with no more than the top of a suitcase on which to write his letters are gone. Modern government is a complex operation. Responsible legislators require expert assistance to solve its problems.

Increased pay and improved facilities will not by themselves, however, provide us with a completely efficient and effective General Assembly.

Members of the Legislature must discipline themselves and their party caucuses to provide the kind of service that the public increasingly demands.

There is, I believe, an excess of partisanship in the Legislature. We have just weathered two years in which the two parties have indulged in sniping back and forth motivated by a struggle for petty political advantage. There are of course differences between our two great parties, and these differences should be debated openly and fully. But they do not require a resort to tactics that would bring shame to the cheeks of most school children.

Special interests still wield too much power, too. Lobbyists perform the worthwhile and legitimate function of bringing the problems of economic groups to the attention of legislators. But when the interests of these groups gain supremacy over the general public interest, legislators are not giving fair service to either their constituents or the Commonwealth. We need rigorous laws for the reporting of expenditures by lobbyists, the financial holdings of legislators and executive personnel—and political campaign financing, too.

Finally, the Legislature should, in my opinion, change its traditional mode of operation. Why? Because it is outmoded and impractical in modern government. The practice of coming to Harrisburg for a day or two at the beginning of the week, calling frequent recesses, stretching out the session, and finally acting on most important matters in a frantic rush in the last few days before adjournment simply does not make for orderly and responsible government today.

The best practice would be to buckle down at the beginning of the session, meet regularly, conduct business, and then adjourn. The legislator's work, however, should not be finished with the end of the session. Committees should continue to function, and a system should be set up, as is done in New York State, whereby bills could be filed during the off months. In this way, all bills could be carefully researched and examined, and pertinent facts made available to the legislators at the beginning of a businesslike session.

If I speak bluntly to you on these matters, it is only because I am concerned, first of all, about the whole future of State Government, and, second, about the health of the legislative branch within the State structure.

Nothing I have said should obscure the deep affection and respect I hold for you as individuals, nor from my conviction that the Legislature has responded with distinction to the challenges of the past four years.

Together, we have laid the foundations on which a better and nobler Pennsylvania may rise.

We have not solved all the problems of our State. But we have done much. We have made genuine progress in education, in conservation, in transportation, in care of the aged, in public welfare generally, in help to our cities, in reform of State Government, and a score of other fields.

The road has not always been smooth—the path has often not been easy. You have sat in the early morning hours—you have seen the sun rise on the turmoil of legislative debate. You have faced the needs of our modern Commonwealth in the private chamber of your own conscience.

You have done well—and you will do more.

The best years for Pennsylvania lie before us.

Make the most of them!

The people of Pennsylvania depend on you.

WILLIAM W. SCRANTON.

Walter E. Washington: The New Chairman of the New York City Housing Authority

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MULTER. Mr. Speaker, last November the District of Columbia lost one of its most able officials when Walter E. Washington, the director of the National Capitol Housing Authority, accepted the position of chairman of the New York City Housing Authority.

The following editorials and news article appeared in the Washington papers at that time:

[From the Washington Post, Nov. 22, 1966]

A GREAT LOSS

This city does not have gifted public officials to spare. The departure of Walter Washington, the director of the National Capital Housing Authority, is a civic misfortune that deserves attention. In most cities the local public housing agency is the stodgiest of bureaucracies (there is no conservatism quite so stifling as the last generation's social reforms). But Mr. Washington has proved himself a brilliant experimenter, forceful and yet responsive to the people whom he serves. Of all the city's senior administrators, he was the first to comprehend and use the new ideas of the poverty programs.

Mr. Washington is going, significantly, to New York City, where Mayor Lindsay is vigorously recruiting the most imaginative urban administrators in the country. There has been a steady drift of unusually able men from the Federal agencies to New York. They are going to work for Mayor Lindsay because he has succeeded in giving an air of excitement and opportunity to City Hall.

Here in Washington, where every administrator has a dozen superiors contending for control of him, the case is notoriously otherwise. The worst of the confusion here is owed to the congressional chairmen's interference in the city's daily business. In the absence of self-government, this city will never enjoy a surge of energy like New York's. But it lies within the authority of the President to simplify and strengthen the processes of government here. There is no defect of the city's public life that ought to concern Mr. Johnson and his advisers more deeply than its difficulty in attracting first-rate public servants.

[From the Washington (D.C.) Evening Star, Nov. 28, 1966]

DISTRICT'S LOSS

Mayor John Lindsay has had substantial success in raids on a variety of federal agencies for topflight personnel to bolster the city government of New York. His greatest coup, however, and surely for this city, its greatest loss, is the enticement of Walter E. Washington to take over New York's vast, sprawling city housing authority.

As head of the National Capital Housing Authority, Washington has been a tower of strength. Not satisfied with the traditional forms and concepts of public housing, he is responsible for innovations here which other cities are just beginning to copy.” He has seen his job as dealing with people, not with buildings.

And, apart from housing, a keen awareness of the city's social problems has made his voice a positive, constructive force in a wide variety of community affairs. On lists of possibilities in recent years for other high municipal posts, Washington's name has always been near the top. He would have made, in our opinion, an excellent District Commissioner. And the fact that two vacancies will occur on the board next year make his departure all the more lamentable on that score.

For a housing man who welcomes challenges, the New York position, involving a public-housing population roughly 10 times the magnitude of the District's, was of course difficult to reject. Mayor Lindsay, moreover, has managed from all reports to instill among his top aides a mood of excitement and challenge.

But for all of that, Walter Washington's roots are in the District. His interests are in the Nation's Capital. He has a personal stake in much of the movement which also is beginning to stir here. The time may yet come, went the right spot opens up, that we will be able to woo him back.

[From the Washington Post, Nov. 27, 1966]

CITYSCAPE TOASTS WALTER WASHINGTON—WELL, AT LEAST NEW YORK NEEDS HIM EVEN MORE

(By Wolf Von Eckardt)

It was the worst news Luticia Lucas had heard in the 11 years she had been cleaning the third floor executive offices of the National Capital Housing Authority: Director Walter E. Washington had been nabbed by Mayor John V. Lindsay to take over New York City's Gargantuan housing effort.

"Why, I'll just go with him!" she exclaimed, dropping her mop in dismay.

It was bad, though not altogether unexpected, news for this entire city.

And the worst of it is not that we are losing what Mrs. Lucas and everyone else, from the occupants of the White House to the tenants of our public housing projects, will readily call "a friend," "a great guy" and popular "community leader."

Nor is it that we are losing one of the country's most effective generals in the arduous campaign against our slum. Nor even that we will miss in Walter Washington perhaps our most effective bridge between the Capital City and the Other City—between the Federal power structure living its somewhat remote life in Georgetown and the suburbs while worrying about the city's world image, and the voteless and almost voice-less ninth largest city with its huge number of Negroes who are largely ill-housed, poorly serviced and badly educated and worry about jobs and rats.

The worst of the news is that this city, despite its growing awareness of this dichotomy, did not find it possible to offer Walter Washington the recognition and position of leadership he deserves—the results of which the city needs.

Washington, in his early 50's a bit stocky but lean, a bit reserved at first but easily relaxed when he senses that you sincerely share his concerns and enthusiasms, always meticulously dressed and always impeccably polite, cuts a fine figure of a man.

If he is indeed "a great guy," it is the last thing he would try to impress you with. Unlike most "great guy" politicians he is neither folksy nor formidable.

And if they'll be wondering up in New York why he talks like they do, its because, though born in Georgia, he was raised in Jamestown, N.Y. And if he talks a bit like a lawyer, with a good deal of sociologese mixed into his syntax, its because he studied law, political science and sociology at Howard University. That's what brought him to Washington. He's a member of the bar and was admitted to practice before the Supreme Court.

Like most good generals, Walter Washington came up from the ranks in the small, devoted and so often confused army of the "housers," the professional slum fighters. He joined in 1941, when the city's public housing agency was still known as the Alley Dwelling Authority, largely launched and worried along by Eleanor Roosevelt.

We should never belittle those early skirmishes for "decent, safe and sanitary" housing, though there was relatively little of it and what there was now seems woefully drab. The little band of housers did their best. And if their expectations of early victory seem pathetic in retrospect, it was because no one had realized the full dimensions of the problem.

It was not until 20 years later, until Walter Washington had worked his way up to acting director and then director of the National Capital Housing Authority, that we began to see the enemy in all his fearful might.

The enemies, we might say, for Washington was confronted not only by the growing slum ghetto, but by growing hostility against public-housing, which was often more despised then even the slums themselves.

The city tore into the slums with a huge freeway program, with urban renewal, with new schools and other improvements. But when it came to housing the people thus displaced, nobody wanted them next door. And there wasn't a site in town which wasn't next door to some hysterically hostile civic association.

Now, this is why I call Walter Washington a general, though no one could be further from being a militarist. Realizing the utter futility of a continued "decent, safe and sanitary" frontal attack, he employed new strategies. He made his forward thrust at the problems of the slums not merely by providing housing, but by also helping the people to be housed to become good neighbors.

He secured his flanks for this thrust from hostile sniping and official indifference by creating confidence and good will for the public housing program in the community, both among its officials and among real estate boards and the anxious women in the civic associations.

Washington is forever inventive in the means he employs to gain these ends.

"Anything that's new, that's coming, I'm the first one after it," he has said.

Robert C. Weaver, the Housing and Urban Development Secretary, said of him: "Walter is one of our most outstanding local guys because of the amazing degree of his flexibility and his receptivity to creative ideas."

Whether Washington was the first to invent all of the many social programs in his public housing projects, many of which were made possible by the Ford Foundation and have now been adopted by the poverty warriors, is almost irrelevant. He was usually the first to employ them and try them out—the day care centers, job counseling and financial advice, credit unions, tenant organizations and all the rest.

Success? How do you measure success in a situation where the problems keep growing faster than your yardsticks. The police, at any rate, will tell you that in Washington's public housing projects vandalism is only a nuisance and crime minimal.

Perhaps we will never be able to measure the influence of environment on social behavior with a sliderule to satisfy any bureaucratically calibrated cost-benefit formula. Who would venture a cost-benefit analysis of the word "great" in our aspiration for a "great society." All we can say, it seems, is that a good place to live ought to look like a good place to live—and if it does, life in that place also comes closer to a good life.

Walter Washington has employed the best architects in this area to bring their skill and enthusiasm to the design of public housing projects. And what matters is not that so many of them have won architectural awards, but that many of their buildings have become the pride of their neighborhoods and no one can fairly say any longer that public housing projects depress neighborhood values. They uplift them. That's more benefit for less cost than the sliderulers of the Government Accounting Office can grasp.

It takes time to build projects and more time until their little sticks mature into trees and they are no longer projects but living communities. And it doesn't help the neighborhoods when trees are big and green but the houses are rotting.

Walter Washington, among many other novel approaches, helped pioneer a program which encourages private builders to fix up the houses and sell them to the public housing authority. It is called "turnkey" and may, indeed, turn the key to the rehabilitation of the decaying inner city.

Literally, "rehabilitation" means "to make livable again" and if that key is big enough and if the bankers and realtors and citizens groups and bureaucrats help turn it, it could, in the span of months, open more needed homes at less cost than new projects would yield us in decades.

But in the end, it does not depend on the cold statistics of costs and benefits whether or not any of these programs are vigorously undertaken. It depends on trust and confidence in the men who propose them. And this is probably Walter Washington's greatest achievement in this city. He has managed to win the trust and confidence of his tenants, of the people in the city and of its sprawling officialdom.

They have come to agree with what he said when this last troubled summer he opened one of his "field days" in one of his projects—a day of hot dogs, and street dancing and other festivities.

"There are two ways open to communities," he said. "This way and the Watts way."

And they respect him because he exemplifies a truth he utered as president of the Le Droit Civic Association, ten years ago and before anyone heard of Martin Luther King.

"Men, if they fight for rights," he said, "must be ready to shoulder these rights when they appear."

As elsewhere, most of our innumerable city departments, commissions and agencies are just learning to talk to each other about common problems. But as one of his aides said, "no official in this city would even think about doing anything that might affect low income housing even indirectly without calling Walter Washington first."

They called him day and night and not only about housing. Not long ago a young girl had saved some money earned at a summer job. She thought she would spend it for beautification, but where and how? She got Walter Washington on the phone. "This is Lynda Bird Johnson," she said.

Washington has spent much time leading tours of members of the First Lady's Committee for a More Beautiful Capital and other VIPS. Insights he provided to problems probably contributed more to Mrs. Johnson's program than can be measured in dollars or azalea bushes.

But it was before most of the bushes were planted that Walter Washington received the United States Civil Service Career Award for "excellence in efficiency and effectiveness in the Federal service . . . and superb leadership in directing his agency's activities."

When Mrs. Lucas dropped her mop in the midst of a gathering of Housing Authority officials the other night, she momentarily dispelled the tense gloom with a burst of warm hilarity. Walter Washington stood behind his overloaded desk, absent-mindedly shuffling through some papers. When he saw the cleaning woman he reached out his hand.

"How's your sick son, Mrs. Lucas," he said.

There is consolation in the fact that in New York there are even more hard-working women with sick sons and more ill-housed people for Walter Washington to stretch out his hand to.

Walter Washington was director of the National Capitol Housing Authority for more than 5 years. Beginning with the agency in 1941 as a junior housing assistant he rose through the ranks to become the head of the agency, and in 1965 received the U.S. Civil Service Career Service Award, the highest award given to career Federal employees.

A native of Dawson, Ga., Mr. Washington grew up in Jamestown, N.Y. He received his A.B. from Howard University in 1938 and an LL.B. from the Howard University Law School in 1948.

New York City is indeed fortunate to obtain the services of this fine administrator and public servant.

It is with pleasure that I commend to the attention of our colleagues the following remarks by Chairman Washington at a Public Housing Day Ceremony in New York on December 2, 1966:

REMARKS BY WALTER E. WASHINGTON, CHAIRMAN, NEW YORK CITY HOUSING AUTHORITY, AT PUBLIC HOUSING DAY DEDICATION CEREMONY

On occasions such as this, a scale model or a rendering of a proposed new housing development is often shown. For my first public event, as Chairman of the New York City Housing Authority, I preferred to invite a tenant, the Pavia family, who moved into our Wyckoff Gardens in Brooklyn, two days ago.

They are important to me.

They are people.

And people will be my main concern.

When a tenant moves into one of our developments, it symbolizes the mission of our agency. Some would say that it symbolizes the end result of our goal.

This is not so.

It is only the beginning.

A decent apartment is the foundation on which a family of low income builds a better life.

Fresh air and sunshine, playgrounds, trees and grass, community centers, social services, companionship for the elderly, day centers for working mothers and health centers are but a few of the facilities and services provided by the Authority.

Mayor Lindsay's proclamation is a clarion call to greater effort. It should not be overlooked by friends of public housing.

The situation today calls for a rededication of purpose and a redoubling of effort. Mayor Lindsay's proclamation is indeed clear and timely.

Ours is a just and noble cause. Public housing means better housing and better housing means a better life.

Much has been done in New York City in the field of public housing, but much remains to be done.

To do the job, Mayor Lindsay has recruited a team, headed by the dynamic Jason Nathan, that is determined to provide more and better housing for those who need it most.

I have come to New York to join this housing crusade.

Policy Statement of American Israel Public Affairs Committee

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11, 1967

Mr. JAVITS. Mr. President, as Syrian incursions along the Israeli border resume, as the Yemeni war heats up again, as subversion of Arab nations friendly to the free world is intensified, and as the moment of British withdrawal from its bases in the region approaches, the attention of Americans is increasingly directed toward the Middle East, where world peace is seriously threatened.

In a strategic portion of the world, progress toward modernization and democracy is thwarted by warfare, political terrorism, and political insecurity, providing troubled waters which furnish excellent fishing grounds for adventures like that of the U.S.S.R. in escalating the arms race by supplying arms to the United Arab Republic, Syria, and other Arab States.

In this connection, the policy statement adopted at the Tri-State Regional Conference of the American Israel Public Affairs Committee in New York on December 18, 1966, is of particular moment. It is a temperate statement, containing some well-founded recommendations for American policy in a continually troubled area of the world.

Mr. President, I ask unanimous consent that the policy statement be printed in the Appendix of the RECORD.

There being no objection, the policy statement was ordered to be printed in the RECORD, as follows:

POLICY STATEMENT ADOPTED AT THE TRI-STATE REGIONAL CONFERENCE OF THE AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE, ROOSEVELT HOTEL, NEW YORK, DECEMBER 18, 1966

1. We recommend that our Government now seek cooperation of the Soviet Union to bring about a relaxation of tensions in the area, specifically by an agreement to reduce the flow of arms and to create a climate which will foster direct negotiations between the Arab states and Israel. Pending such an agreement, we urge our Government to ensure maintenance of the arms balance in the region.

2. We urge a Congressional inquiry to study and recommend legislative and administrative measures to curb the efforts of the Arab states to boycott American business interests.

3. We reaffirm the conviction that the only logical solution of the Arab refugee problem is resettlement in Arab lands. We submit that the United Nations should censure continuing efforts by Arab leaders to mobilize the refugees into an army to wage war against Israel. It is intolerable that UNRWA funds, contributed for refugee relief and rehabilitation, should be diverted to subsidize the Palestine Liberation Army, which is organized for the destruction of Israel.

4. We support continued economic aid for Israel and the Arab states, stressing assistance which will develop agriculture, water resources and the employment and settlement of refugees.

5. We believe that all outstanding issues between Israel and the Arab states can be swiftly resolved by direct negotiations and we urge our Government, in concert with other great powers, to summon the Arab states to the peace table with Israel. There in no effective alternative.

Farmers and Ranchers Not the Cause of High Beef Prices

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, rising food costs have resulted in a sharp reaction from consumers and at times there appears to be a misunderstanding as to who is benefiting from rising costs. Certainly the beef producer is not the cause of increased meat prices and he is not benefiting from the higher retail prices being charged. Mr. Ben H. Carpenter, president of the Texas and Southwestern Cattle Raisers Association, recently made a speech on this subject. I believe that the Members will find Mr. Carpenter's statement factual and interesting and will conclude from reading it that the beef producer is not only not causing the high retail meat prices, he is producing his product below cost and is actually losing ground. The text of Mr. Carpenter's statement follows:

COMMENTS BY BEN H. CARPENTER, PRESIDENT, TEXAS AND SOUTHWESTERN CATTLE RAISERS ASSOCIATION, AT ITS BOARD OF DIRECTORS MEETING, JUNE 18, 1966, WICHITA FALLS, TEX.

I am sure you are aware of the wave of publicity that has recently been sweeping the nation regarding food prices. Meat prices have been singled out as a major contributor to higher consumer costs and inflation. Spokesmen for government bureaus and agencies have contributed to a rash of inaccurate statements and inadequate comparisons in newspaper stories throughout the nation referring to so-called high costs of meat.

Even the President of the United States was widely quoted as urging housewives to purchase only the lower priced cuts of meat in order to hold down the food bill and combat inflation. Typical of some of the headlines recently seen are these, "Meat's the Black Sheep of Food Costs, Budget Brigade Finds" and "Rocketing Food Costs May Beat Man to the Moon."

In spite of the fact that readily available government statistics refute the statements that recently improved beef prices are major contributors to the current inflationary trends in the country, these articles and comments have implied that the farmers and ranchers of the nation should be condemned by the consuming public.

A recent report on food costs and farm prices released last week by the House Committee on Agriculture reveals some most interesting statistics that refute completely the popular contention that agricultural prices in general, and those in meats in particular, are major contributors to inflation. Let's examine some of these facts and figures contained in this report which made comparisons over the period of the past 18 years.

Prices received by farmers and ranchers in 1965 were 10% lower than those received 18 years ago, while prices paid at retail by consumers for food increased 33% in these same 18 years.

While retail food prices have risen relatively steadily over the past 18 years, none of the increase in retail prices accrues to the farmer and rancher. In fact, prices received by farmers and ranchers in 1965 were 10% less than in 1947 and 13% less than in 1952. Retail food prices, however, in 1965 were 11% higher than in 1952 and 33% higher than in 1947.

The net income of farmers and ranchers declined by 18% from 1947 to 1965 even though the volume of farm produced foods sold to consumers had increased by 44% during that same period of time.

Compare this to the fact that salaries and wages to employees in all manufacturing industries increased by 113% from 1947 to 1965.

A part of the 33% increase in overall food prices paid at retail by consumers over the past 18 years has resulted from the development of new food products, new techniques of processing and packaging, and changes in family food buying habits.

In 1947, most housewives selected their beef from a refrigerated, glass case and the grocer weighed and wrapped it on the spot. Now they find several pieces of the same cut of beef neatly placed on the individual trays, transparently wrapped, weighed and priced, in advance.

Brightly lighted, air conditioned stores with wide aisles and attractively displayed products processed with new techniques are what the food shopper expects and demands. These demands from the consumer, not the producer, account for much of the increase of food prices.

However, a statistical study by the Economic Research Service of the U.S. Department of Agriculture indicates that the average household paid 17% more and farmers and ranchers received 7% less in 1965 for the same kinds and quantities of foods purchased in 1947, 18 years ago.

With regard to specific food items the report reveals that, in the 18 year period studied, the farm price of wheat has dropped 3% while the retail price of cereals and bakery products has increased 47%.

When city families purchase bread and prepared cereal products, they pay mostly for processing, packaging, and distributing the products; very little goes to the farmer for raw materials. For example, there is only 2.6c worth of farm-produced corn in a 29c package of corn flakes. The one pound loaf of bread that sold at retail for an average price of 20.9c in 1965 contained wheat having a farm value of 2.7c.

In 1965, the farm price of dairy products was 6% below 1947 and the retail price of dairy products during the same period increased by 19%.

During the 18 year period from 1947 to 1965 retail prices of meat products increased by 16%. The farm value of meat products in 1965 was 5% less than the farm value in 1947. Much attention has been focused on the fact that prices paid to farmers and ranchers for animals producing meat products have increased substantially since 1956. However, there has been a tendency to overlook the fact that the farm value of meat products in 1956 had fallen 29% below 1947 prices. Current prices of beef cattle, while substantially higher than the low point reached in 1956, are still considerably below the price levels 15 years ago in 1951.

While the general economy of the nation was prosperous and advancing, the beef cattle industry suffered a serious price depression during the five years of 1952 through 1957 and again during the last part of 1963, 1964, and into the early part of 1965. The cattlemen of the nation operated during those periods taking severe losses as they were squeezed between higher costs of production and lower prices for their cattle. The recent price improvement in beef cattle does not represent a full recovery and the profit balance is still very delicate.

The evidence is very conclusive that prices received by the farmer and rancher have not contributed whatsoever to the increases in food prices paid by consumers. A comparison of the 10% decline in prices received by them during the last 18 year period with other economic trends is most interesting.

The report reveals that rail freight rates on farm products increased 45% during the same period. Prices of such services as rent, property insurance, property maintenance, and telephone services increased an average of 69% during the same period and unit prices of new plant and equipment were up 55%. Salaries and wages of employees in manufacturing industries increased during the same period by 113%.

In the nine years since 1957 prices paid by farmers and ranchers for clothing has increased 15%, for motor vehicles 17%, for farm machinery 22%, for ad valorem and miscellaneous taxes 65%, and interest payable on farm real estate debt 132%.

Therefore, if viewed in the correct perspective the prices paid by consumers for food products cannot be singled out as a major contributor to inflation. U.S. consumers have available the highest quality food products in the world, and the important fact is that they can obtain this food by working less time than persons living anywhere else on earth.

During 1965, American consumers spent 19% of their take-home income for food. Twenty years earlier this figure was 26%. Pay for one hours factory labor today will buy 2.4 pounds of round steak, whereas, in 1942 it would buy only 2 pounds, and in 1932 1.5 pounds. One hours factory labor today will buy 3.2 pounds of bacon, whereas, in 1942 2.2 pounds and in 1932 1.8 pounds. Pay for one hours factory labor today buys 12.5 loaves of bread, whereas, in 1942 only 9.8 loaves, and in 1932 6.3 loaves.

In the light of these facts one may wonder why certain government bureaucrats and politicians single out the farmers and ranchers of the nation to be the scape-goats upon whom inflation is blamed. Why is it that agriculture seems to continue to be the easiest target on which to blame the inflationary spiral that has been existing for the last 15 or 20 years, even though there are no real facts or evidence to support this contention? The answer probably lies in the fact that a lesser percentage of the people of the nation are directly involved in agricultural production, and therefore, agriculture is losing its political significance.

As the country's population has grown during the last few decades a situation has developed in which an extremely small percentage of the people of the country are familiar with the actual conditions existing in agriculture. For example, in 1950, although 64 percent of the country's population was urban and 36% was rural, only 42% of the rural population was actually involved on a farm or ranch, in other words only 16% of the total was involved in agricultural production.

Ten years later, in 1960, 69.9% of the U.S. population was urban, 22.6% was rural-nonfarm, and only 7.5% was actually involved on a farm or ranch. This trend has continued in the 1960's.

In this atmosphere a great deal of misleading and erroneous information has appeared in newspapers and other publications throughout the country, much of which is harmful to the farmers and ranchers of the nation.

For example, many consumers and taxpayers generally are led to believe that the total annual appropriations to the Department of Agriculture are subsidies. The report released by the House Committee on Agriculture last week reveals that actually nonfarmers participate in a larger share of the Department's expenditures than farmers themselves, and that about two-thirds of Department of Agriculture expenditures, in the 1967 budget, are for services which are of primary benefit to the general public. Most housewives and urban consumers are unfamiliar with the fact that the cattle industry itself has vigorously opposed price supports and subsidies for beef cattle and has done so successfully thus far, in spite of the efforts of federal administrators in the past to apply them.

The American cattle producer has confidence in the free enterprise system which has made this nation so significantly different from the other nations of the world. He doesn't want any price subsidies from the American taxpayer, but he does expect a fair and profitable price for the beef cattle he produces. However, he doesn't expect federal agencies, whose purpose it is to safeguard his interests as an American Citizen, to instead take actions, such as was witnessed earlier this year to drive down the price of beef, when it is still substantially below price levels of fifteen years ago.

Above all, the cattle producer doesn't deserve to be falsely accused of contributing to inflation. The real major cause of inflation is the federal government itself, as currently being administered. The real culprits of the inflationary spiral of the present and of the future are gigantic federal programs like the unnecessary and unneeded medicare program recently authorized, titles 18 and 19 of which it is now estimated will cost more than a billion dollars a year in the state of New York alone, federal programs of accelerated unemployment compensation, and federal programs designed to blanket the country with built-in wage increases. Giant federal programs of this type pump literally billions of dollars into the economy, yet they do not create to any degree new permanent plant capacity which can add to the total productive output of the nation, and therefore they only create taxspenders instead of taxpayers.

This is the area in which restrictions should be urged to combat inflation, instead of government officials urging the American housewife to restrict her purchases of meat at a time when the average price of beef cattle is only 85% of parity.

Interstate 70 Advances in West Virginia With Opening of Wheeling Hill Tunnels—Highway Improvement Program in West Virginia Moving Forward

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11, 1967

Mr. RANDOLPH. Mr. President, the opening of the Wheeling Hill Tunnels on Interstate 70 in Wheeling, W. Va., represents a major step in the highway improvement program in West Virginia.

The total construction cost, including engineering and right-of-way, amounted to approximately $7.1 million and thereby became the most costly single construction project ever offered to contract by the State road commission.

On Monday, December 12, 1966, I attended the opening ceremony of the Wheeling Tunnels, along with Gov. Hulett C. Smith, Representative Arch A. Moore, and State Road Commissioner Burl A. Sawyers and many interested and distinguished guests from Wheeling.

Mr. President, I ask unanimous consent to have an editorial which appeared in the Wheeling News-Register inserted in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record as follows:

[From the Wheeling News-Register, Dec. 12, 1966]

HISTORIC DAY FOR WHEELING

The historic opening of the Wheeling Hill Tunnels on Interstate 70 today marks a most happy occasion for our community and the surrounding area.

A good feeling comes from just knowing that we have lived to see this memorable accomplishment that in the not too long ago existed only as a fanciful dream of the idle dreamer. We suppose that most of us around here are guilty of harboring a trace of the "show me" attitude. There were doubters who never believed the Fort Henry Bridge would be built and others who felt the same way about the tunnels through Wheeling Hill. But there they are today, leveling a hill for the traveler and proving the words of Poet William Blake who wrote, "Great things are done when men and mountains meet."

While we must wait for a while to see the completion of Interstate 70 through Wheeling, the tunnels are a major achievement. As the new expressways span out over our area, they are compressing space, narrowing the gap between businessmen and his market and tying the whole region together.

Today, it is said, you're on the map if you're on the highway. Modern roads in the heart of marketing America are like giant magnets attracting commerce and industry, travelers and tourists. Wheeling can consider itself fortunate in having been selected as one of the cities through which a modern, new east-west expressway will traverse. A series of up-to-date highway impact studies by the U.S. Bureau of Public Roads presents important findings on how new highways create wealth.

The studies conclude that the mobility which so characterizes the economic system in the United States today would not have been possible without modern highway development. The highway impact studies report that highways assist in developing new and vacant land, improving production efficiency because of better access to markets, aid the decentralization of industry, and improve the public image of many firms by giving them more attractive and more widely visible plant sites.

Highways are also found to have increased the practical area of labor supply from about six miles in the streetcar era to about 30 miles today. Studies report the conditions are often ripe for industrial development, but need an outside agent to trigger action. In instance after instance during the postwar years, highways were found to be that agent.

A survey of management decision-makers in 4,100 plants across the country revealed where industries are moving and why. Each plant executive was asked to indicate the five factors that had been most important in the selection of the site for his particular plant.

The dominant factors in plant site considerations were found to be highways, labor, land and markets. According to frequency of mention, the factors lined up like this: Proximity to good highways 71.9 per cent; abundant labor supply 62.1 per cent; availability of suitable land 61.6 per cent and proximity to markets 58.8 per cent.

Of course Wheeling cannot rest with the idea that there is nothing more to be done roadwise once we get the interstate routes and State Route 2 completed. It is time for community leaders to begin studying seriously the proposals contained in the thoroughfare plan, a part of the overall city-county comprehensive plan for development. The planners warn that Stage One proposals should be paced so as to be operative within as short a period of time as possible after completion of I–70. There are in all 15 road and street improvements contained in the Stage One projection of the thoroughfare plan, including the long-discussed Northern Parkway.

Since most of our major road improvements must depend upon the actions of the State Road Commission, plenty of spadework must be done now. Local priorities must be established and then fitted into a priority schedule of the State Road Commission. Planners recommend that commitments be secured on the basis of needs for road improvements in Ohio County for the next ten years and then reviewed on a regular basis with the state to assure that adequate progress is being made.

While we bask today in the light of our good fortune occasioned by the opening of the new Wheeling Hill tunnels, we must not forget there is plenty of labor ahead in completing a modern, adequate highway network for the community.

In Memorium: Lindsay Hoben, Outstanding American Editor

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. ZABLOCKI. Mr. Speaker, the people of my home community, Milwaukee, and the State of Wisconsin have been saddened by the death last Sunday of Mr. Lindsay Hoben, who retired as editor of the Milwaukee Journal only a week ago.

Mr. Hoben was an outstanding American editor. Dedicated to the life of a journalist and devoted to the craft of careful, concise writing, he exemplified profesional integrity and responsibility.

In large part because of his influence, the Journal—always known for its outstanding regional coverage—expanded its efforts at covering domestic and foreign events.

A widely traveled man with worldwide interests, Mr. Hoben was instrumental in bringing to the people of our community and our State coverage of national and international news which is equaled by few American newspapers either in quantity or quality.

Mr. Speaker, today a memorial service will be held in the auditorium of the Journal's radio city by his colleagues and associates. It is my intention at some future date to bring to the attention of my colleagues the eulogy which will be delivered by Mr. Paul Ringler as part of the services. Under leave granted I am inserting at this point an editorial from the Milwaukee Journal on the occasion of his retirement and his obituary as it appeared in the New York Times of January 9:

[From the New York Times, Jan. 9, 1966]

LINDSAY HOBEN, 64, WISCONSIN EDITOR—MILWAUKEE JOURNAL OFFICIAL DIES A WEEK AFTER RETIRING

MILWAUKEE, January 8.—Lindsay Hoben, who retired only last week as editor of The Milwaukee Journal and vice president of The Journal Company, died of cancer today. He was 64 years old.

Mr. Hoben joined The Milwaukee Journal in 1926, as a church reporter, and before becoming editor in 1961, he served as a general assignment reporter, radio news commentator, and editorial writer. In 1949 he became chief editorial writer.

A pronounced internationalist, he continued and strengthened The Journal's outward look in foreign affairs. He urged frequent and varied contacts with the Soviet Union, but also warned of the dangers of Communism. He was present at the founding of the United Nations, and he was always a strong advocate of it.

It was during his tenure as chief editorial writer that The Journal, which already had a liberal reputation, fiercely opposed the tactics of Wisconsin's Junior senator, Joseph R. McCarthy.

Mr. Hoben, who once traveled by tramp steamer to Hong Kong, advised the six other editorial writers to learn the world's problems first hand. He sent them on many trips in this country and abroad.

CAUTIONED EDITORIAL WRITERS

Urging his writers to furnish the facts and support them with sound, persuasive arguments, he once wrote: "The editorial writer is not the Anointed of God. He is not solely endowed with supernatural wisdom. He is not the exclusive custodian of the truth. And he must avoid giving the impression that he thinks he is."

Mr. Hoben was a quiet, business-like man with a trim mustache, who closely resembled Thomas E. Dewey.

He took a special interest in the Journal's English usage and he was chairman of the newspaper's style committee for many years. As editor, he would frequenly walk into the newsroom from his corner office to point out an error in grammar, punctuation or spelling.

Mr. Hoben was born July 6, 1902, in Milwaukee, the son of a Baptist minister, who later became president of Kalamazoo (Mich.) College. He was graduated from Carleton College, Northfield, Minn., and worked briefly as a salesman and chemist before joining The Journal.

He traveled much of the world from 1927 to 1931 as a roving reporter. He was one of the first American newspaper men to tour extensively in the Soviet Union.

MET WIFE IN SOVIET

It was there, in 1929, that he met Margaret Pollitzer, advisory director of the Walden School in New York, who was also touring the country. They were married the following year.

Besides his wife, he is survived by a daughter, Mrs. Polly Greenberg, program coordinator for the Child Development Group of Mississippi, part of the Federal Head Start program; a son, Allen on the faculty of the University of Rochester, Rochester, N.Y.; two brothers, Edmond and John, and a sister, Mrs. Richard D. Brown of Milwaukee.

[From the Milwaukee (Wis.) Journal, Jan. 3, 1967]

LINDSAY HOBEN RETIRES

A fine editor is a rare man for even a big, important newspaper to find. In Lindsay Hoben, whose retirement was announced Sunday, The Milwaukee Journal had one who was both a fine editor and a rare man separately.

Unusually devoted to his family, he had much the same feeling toward his newspaper and his practically lifelong career with it. He once declined a flattering job offer from another nationally prominent paper with these words:

The Milwaukee Journal is the only newspaper with which I have ever been connected. It is a very personal matter with me, pretty much like an intimate family relationship. I never have felt that it was a newspaper or a job, but my newspaper and my job, a sort of living thing in which I had a part."

His journalism career turned spectacular when, still a "cub" in his twenties, he became The Journal's man on the go around the world. He poked daringly into the remoteness of Russia and China as well as the capitals of Europe. His grounding in world affairs, which he kept renewed, was an enrichment of all his later work.

When The Journal decided to publish a separate Sunday editorial section in 1934, Mr. Hoben was put in charge of formulating the concept and editing the product. Thence he moved into editorial writing, the editorial editorship, then editor of the paper from January, 1961.

Associates and friends found in him a man of many fine facets happily mixed. Appreciated perhaps above all was his instinctive kindly interest in people—all sorts of people.

He sought eagerly the sociability of other interesting minds, especially younger ones. In this he preferred to enjoy the listener's role more than the expounder's, a particularly endearing quality. A colleague of many years has described Lindsay Hoben as the very rare man for whom he could have at the same time both a real admiration and a deep fondness.

As the editor of The Journal Mr. Hoben was more leader than boss; he was guide and arbiter; his influence was more pervasive than obtrusive. While his strong sense of fairness, and his compassion, made him anxious that news should not needlessly hurt people, he also had courage to insist on prinitng what had to be printed, and his staff knew he would back them in this.

If one contribution to the character of The Journal has the distinctive Hoben label on it, this would be his influence to make it a newspaper with a national outlook and a worldwide view, but with no loss of its intimacy with the local and state community. Also, not least, he was a principal creator and the long time monitor of Journal rules on style of writing and usage, a work that he especially relished, which is widely respected in the newspaper business.

The extent to which Mr. Hoben became widely and justly famed within his profession is attested by his leadership activities in the National Conference of Editorial Writers, American Society of Newspaper Editors, International Press Institute, on Pulitzer prize juries and Nieman fellowship selection boards . Literally around the world, fellow journalists became his devoted admirers.

We here record not only the affectionate salute of colleagues and friends, but also a loss to the city and state communities that Lindsay Hoben did much to serve and uplift for 41 years.

Adult Education Association Resolution on Human Dignity

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11, 1967

Mr. JAVITS. Mr. President, the Adult Education Association of the U.S.A. and the National Association for Public School Adult Educators, at their 1966 national conferences held in Chicago this past November, adopted a resolution reaffirming the support of both organizations for a vigorous effort to protect the rights of all individuals in American society and to win for all individuals full participation in American life.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the text of the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON HUMAN DIGNITY

The resolution that appears below was passed by the Adult Education Association of the U.S.A. and the National Association for Public School Adult Educators at their 1966 national conferences held in Chicago in mid-November. The resolution reaffirms the support of both organizations for a vigorous effort to protect the rights of all individuals in American society and to win for all individuals full participation in American life.

Be it resolved that:

It is the shared conviction of the national conference of the Adult Education Association, USA and National Association of Public School Adult Educators that: the adult education movement in the United States of America, in this historic moment of national movement toward the realization in life and in our communities of our national goal of a free, equal and democratic society, should:

1) Devote major attention to the fact of racial equality in our country, with special attention to the needs of the Negro, the Spanish-Speaker, and our brothers and sisters of American-Indian and Oriental ancestry, laying emphasis on the spiritual, legal, economic, political and communal consequences of hatred and fear among any part or group of our society.

2) That this special attention include public statements by your leaders of our association, vigorous lobbying for better law and better practice, vigilance within our own institutions in the construction and operation of program-planning and program-managing staffs to ensure fair representation of all ethnic, religious and regional interests, careful emphasis in our educational programs upon the historical and ideological basis of our national doctrine of racial, religious and regional equality, and a continuing effort in all that we do to practice better ourselves what we ourselves preach.

3) That we recognize and move vigorously with courage and patience to confront and overcome the resistance to practical working equality in the details of our national life, at work, at play, in the class room and conference room, a resistance (sometimes called "backlash") in itself a tribute to the approaching realization of real equality, and that we combat this not only in the dominant majority groups in our society but also among the long-disadvantaged minority groups within our culture.

4) That we accept these responsibilities as citizens, as professionals, as neighbors, and as concerned men and women, depending upon such faith in the American dream of a democracy under law, with equal rights for all, as we have learned from our fathers and mothers, our teachers and our children.

Statement by Representative Theodore R. Kupferman To Eliminate the House Committee on Un-American Activities

. SPEECH

OF

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. KUPFERMAN. Mr. Speaker, I today announce my support of a resolution to amend the rules of the House eliminating the House Committee on Un-American Activities as a standing committee and transferring any functions which it might possess vital to our internal security to the Committee on the Judiciary.

I do not believe that this committee performs any function useful to the Congress or to the country.

The so-called hearings staged by this committee this past summer were a fiasco. I agree with the senior Senator from the State of Illinois, Hon. EVERETT MCKINLEY DIRKSEN, who on August 20 stated that "This spectacle can do the Congress no good." It did no good for the country either, I might add.

The only legislation offered by the committee during my short time in the House since I took the oath on February 23, 1966, as the Congressman from the 17th District, New York, was the ill-conceived H. R. 12047, to amend the Internal Security Act of 1950—also known as the Pool bill—which I found necessary to oppose as, among other things, an exercise in futility and frustration. My statement on this is at page 25181 of the CONGRESSIONAL RECORD of October 12, 1966.

We can find better ways to spend the taxpayer's money than to continue this committee.

Whatever functions encompassed by the committee that need continuing can be performed by the Judiciary Committee in a quasi-judicial atmosphere without sensationalism.

Harrison E. Salisbury Reports From Hanoi—I

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, Harrison E. Salisbury, the Pulitzer Prize-winning assistant managing editor of the New York Times, has been reporting from Hanoi, North Vietnam. His reports, which have been commented upon throughout the world, are one of the most important reporting assignments in the history of journalism. According to these on-the-spot reports by a reputable U.S. journalist, the bombing of North Vietnam has caused civilian casualties but has not appreciably affected North Vietnam's war effort. The Salisbury reports raise most serious questions about the policy of bombing North Vietnam and must be studied by all who are involved in that policy.

Since most of the reports were published while Congress was out of session, I intend to bring them to the attention of my colleagues. The first report follows:

[From the New York Times, Dec. 26, 1966]

VISITOR TO HANOI INSPECTS DAMAGE ATTRIBUTED TO AMERICAN RAIDS

The writer of the following dispatch, reprinted from yesterday's late editions, is an assistant managing editor of The New York Times, who reached Hanoi Friday.

(By Harrison E. Salisbury)

HANOI, North Vietnam, Dec. 24.—Late in the afternoon of this drizzly Christmas Eve the bicycle throngs on the roads leading into Hanoi increased.

Riding sidesaddle behind husbands were hundreds of slender young Hanoi wives returning to the city from evacuation to spend Christmas with their families. Hundreds of mothers had small children perched on the backs of bicycles—children being returned to the city for reunions during the Christmas cease-fire.

In Hanoi's Catholic churches mass was celebrated, and here and there in the small foreign quarter there were more elaborate holiday observances. Five Canadian members of the International Control Commission had a fat Christmas goose brought in specially for them from Vientiane, Laos, on the I.C.C. flight into Hanoi yesterday.

VISITORS HAVE A PARTY

And in Hanoi's rambling, old high-ceilinged Thongnhat (Reunification) Hotel (formerly the Metropole), there was a special Christmas party for a handful of foreign visitors who chanced to be here.

But this random evidence of Christmas spirit did not convey the mood of North Vietnam's capital, at least not as it seemed to an unexpected observer from the United States.

The mood of Hanoi seemed much more that of a wartime city going about its business briskly, energetically, purposefully. Streets are lined with cylindrical one-man air-raid shelters set in the ground at 10-foot intervals.

The shelters are formed of prestressed concrete with concrete lids left ajar for quick occupancy—and they are reported to have been occupied quite a bit in recent days with the sudden burst of United States air raids. There is damage, attributed by officials here to the raids, as close as 200 yards from this hotel.

Hanoi was laid out by French architects with broad boulevards over which arch leafy trees, and with squares, public gardens and pleasant lakes. Today it seems a bit like a mixture of the Moscow and Algiers of World War II. There are khaki and uniforms everywhere and hardly a truck moves without its green boughs of camouflage. Even pretty girls camouflage their bicycles and conical straw hats.

MANY COMB WRECKAGE

Christmas Eve found residents in several parts of Hanoi still picking over the wreckage of homes said to have been damaged in the United States raids of Dec. 13 and 14. United States officials have contended that no attacks in built-up or residential Hanoi have been authorized or carried out. They have also suggested that Hanoi residential damage in the two raids could have been caused by defensive surface-to-air missiles that misfired or fell short.

[Although American authorities have said that they were satisfied no bombs fell inside Hanoi and that only military targets were attacked, the State Department said Thursday that "the possibility of an accident" could not be ruled out. A spokesman said that if the bombing had caused civilian injury or damage, the United States regretted it.]

This correspondent is no ballistics specialist, but inspection of several damaged sites and talks with witnesses make it clear that Hanoi residents certainly believe they were bombed by United States planes, that they certainly observed United States planes overhead and that damage certainly occurred right in the center of town.

LARGE, SPRAWLING CITY

Hanoi is a very large, sprawling city. The city proper has a population of 600,000, and the surrounding metropolitan area brings the total to 1,100,000.

The built-up, densely populated urban area extends for a substantial distance in all directions beyond the heavy-lined city boundaries shown on a map issued by the State Department and published in the New York Times of Dec. 17.

For instance, the Yenvien rail yard, which was listed as one of the targets in the raids Dec. 14 and 15, is in a built-up area that continues south west to the Red River with no visible breaks in residential quarters. Much the same is true of the Vandien truck park south of the city, which was another listed target.

Oil tanks between Yenvien and Gialam, listed as another target, are in a similarly populated region. It is unlikely that any bombing attack on such targets could be carried out without civilian damage and casualties.

The location of two of the damaged areas inspected today suggests that the western approaches to the Paul Doumer Bridge may have been the targets.

Both damaged areas lie in the Hoankiem quarter of Hanoi. Other administrative quarters of the city are Badinh, Haiba and Dongda. All have suffered some damage.

The first area inspected was Pho Nguyen Thiap Street, about a three-minute drive from the hotel and 100 yards from the central market. Thirteen houses were destroyed—one-story brick and stucco structures for the most part. The Phuc Lan Buddhist pagoda in the same street was badly damaged.

SAYS BOMB EXPLODED

Five persons were reported killed and 11 injured, and 39 families were said to be homeless.

Tuan Ngoc Trac, a medical assistant who lived at 46 Pho Nguyen Thiap Street, said he was just going to the clinic where he works when an air alert sounded, indicating planes 25 kilometers (about 15 miles) from Hanoi. He had stepped to the street with his medical bag in his hand when he heard a plane and flung himself to the ground.

He said that the next instant a bomb exploded just over a row of houses, collapsing nine on the other side of the street. Tuan Ngoc Trac displayed an American leaflet, which he said he had found in the street, warning Hanoi residents not to remain in the vicinity of military objectives.

The North Vietnamese say that almost simultaneously—also about 3 P.M. Dec. 13—about 300 thatch and brick homes and huts along the Red River embankment, possibly a quarter of a mile from Pho Nguyen Thiep Street and equally distant from the Thongnhat Hotel, were hit. The principal damage was again done by a burst just above the houses, but there were also three ground craters caused either by rocket bursts or small bombs.

This area, 200 by 70 yards, was leveled by blast and fire. Four persons were reported killed and 10 injured, most of the residents having been at work or in a large, well-constructed shelter.

HOUSE IS INSPECTED

Another damage site inspected was in the Badinh quarter, which is Hanoi's diplomatic section. There, on Khuc Hao Street, lies the rear of the very large Chinese Embassy compound, backing on the Rumanian Embassy. Minor damage was done to the roofs of the Chinese and Rumanian Embassies by what was said to have looked like rocket fire. Both embassies produced fragments, which they said had come from United States rocket bursts.

Also examined was a house on Hue Lane in the Haiba quarter. It was reported hit Dec. 2, with the death of one person and the wounding of seven others, including two children.

Contrary to the impression given by United States communiqués, on-the-spot inspection indicates that American bombing has been inflicting considerable civilian casualties in Hanoi and its environs for some time past.

The North Vietnamese cite as an instance the village of Phuxa, a market gardening suburb possibly four miles from the city center. The village of 24 houses was reported attacked at 12:17 P.M. Aug. 13 by a United States pilot trying to bomb a Red River dike. The village was destroyed and 24 people were killed and 23 wounded. The pilot was shot down.

A crater 25 feet deep was reported blasted in the dike, but it was said to have been filled within three hours. The village has now been completely rebuilt, and has a small museum of the mementos of the attack. In this museum is the casing of a United States fragmentation bomb, which bears the legend, "Loaded 7/66." A month after that date it was said to have fallen on Phuxa village, releasing 300 iron spheres, each about the size of a baseball and each loaded with 300 steel pellets about the size and shape of bicycle bearings. Those missiles are reported to have caused most of the Phuxa casualties.

It is the reality of such casualties and such apparent byproducts of the United States bombing policy that lend an atmosphere of grimness and foreboding to Hanoi's Christmas cease-fire. It is fair to say that, based on evidence of their own eyes, Hanoi residents do not find much credibility in United States bombing communiqués.

Slanting the News

EXTENSION OF REMARKS

OF

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. SCHADEBERG. Mr. Speaker, while the editorial I am requesting to be included in the RECORD carries a past date, it is of sufficient import to share with my colleagues. It speaks of matters that are of intense interest to every citizen of this land. It is refreshing to know that there are those, whose responsibility it is to keep the public informed, who can cut through the fog of contradictions and get at the facts as they are. I congratulate the editor of one of Wisconsin's great newspapers, the Janesville Gazette, for his clear understanding and concise comments.

[From the Janesville (Wis.) Daily Gazette, Dec. 28, 1966]

SLANTING THE NEWS

The author of "Advise and Consent," Allen Drury, has a new book out in which one of the central figures is identified only as The Greatest Newspaper That Absolutely Ever Was. There is no doubt whatever that Drury refers to the New York Times.

The New York Times now has its own staff correspondent in Hanoi. Harrison Salisbury, an assistant managing editor who first gained notice as a Moscow correspondent back in the days when American newsmen in the Russian capital were as scarce as stockbrokers, was recently granted a visa and flown into North Vietnam from an undisclosed base in Cambodia.

Since the Communist ideal relative to freedom of the press is that the press should say precisely what it's instructed to, it seems a valid assumption that Salisbury would not have been allowed to report from Hanoi unless the Ho Chi Minh government had fair assurance it would be beneficial to the Red cause. And what is being transmitted under Salisbury's by-line should be satisfying beyond Ho's wildest dreams.

In essence: stop the bombing of North Vietnam.

Under the guise of factual reporting, the dispatches are so slanted as to evoke murmurs of envy in the editorial offices of The Daily Worker. Mostly taking the word of North Vietnamese officials, the stories filed so far make the direct charge that U.S. airplanes have been "systematically" attacking civilian population centers for the past year and a half.

Slyly, sympathy is drummed up for the Vietnamese Communists: the woman mayor of the city of Namdinh is described as "petite"; in Namdinh, Salisbury writes, not saying how he obtained the figures, 12,464 homes have been destroyed, 89 persons killed and 405 wounded by Air Force and Navy fliers. Yet, he states, the only installation which could conceivably be regarded as a legitimate target is a textile plant "whose most dangerous output from a military point of view would presumably be cloth for uniforms." It's been hit 19 times, he says.

In a dispatch datelined Hanoi, the Times correspondent again turns on the water. References to "slender young Hanoi wives" returning to the city to "spend Christmas with their families," "hundreds of mothers and small children perched on the backs of bicycles," the "mood of Hanoi . . . a city going about its business brisky, energetically, purposefully," "pretty girls camouflage their bicycles and conical straw hats. Why in the name of Goebbels anyone in the middle of a large city should bother to camouflage a hat against air bombardment is something that requires further contemplation.

Because of the assumed prestige of the New York Times and the fact that its syndicated news service is picked up by several other papers, some of which ought to know better, the Pentagon has been forced to issue a statement admitting—as though everyone over the age of six didn't already know it—that in the pursuit of military objectives bomber pilots occasionally, either accidentally or inadvertently, hit something else; that the North Vietnamese deliberately disperse their supplies of fuel and ammunition throughout populated areas, hoping they'll be spared.

This forced admission will, of course, be utilized to the fullest by the Communist and pro-Communist press around the world.

We had hoped that the New York Times, with its large and influential circulation, had learned a lesson in Cuba. With similar techniques it was instrumental in picturing Fidel Castro as a patriotic reformer struggling against the evil Batista dictatorship and thereby blunting the efforts of more perceptive observers who saw what was taking place.

Evidently The Greatest Newspaper That Absolutely Ever Was is still engaged in directing our foreign policy, not forthrightly in its opinion columns, but with front page editorialization of the most blatant kind.

We, too, are sorry for the noncombatants, old people and middle-age people as well as children, who are blown to bits during an air raid.

But we're even sorrier for the American kids who are riddled by enemy machine-gun fire in a crummy jungle halfway around the world while Great Thinkers back home demand that the aggressor's supply bases be left untouched.

The Merits of Old-Fashioned Discipline

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. NELSEN. Mr. Speaker, Alan C. McIntosh, in a recent editorial in his Rock County Star Herald, took a look at a couple student demonstrations and decided "Razor straps were good character builders." I include his editorial at this point in my remarks.

IT'S SAFER IN SAIGON THAN IN OUR "HALLS OF IVY"

Too bad the old fashioned straight edge razor went out of style. Razor straps were good character builders.

Time will never dim the memory of the razor strap that hung in the bathroom on the second floor of the Park River, N.D. Presbyterian parsonage . . . or the frightful taste of yellow laundry soap used to wash out mouths that had said naughty words.

We have college campus demonstrations that could benefit greatly from a razor strap or a bar of laundry soap.

Hard to believe but true—a top military man is safer in Saigon than on an American college campus.

Twice in a week two of our highest military officials have had their lives jeopardized. Not by Saigon bombs or mobs but by American students.

Secretary of Defense McNamara had to be ignominiously sneaked to safety thru an underground steam tunnel at Harvard. General Earle G. Wheeler, Joint Chief of Staff chairman, was the target for angry demonstrators who tried to get at him when he spoke at Pembroke College, Providence, Rhode Island.

These disturbances didn't "just happen." It was far more than right of dissent and expression of views.

Men are fighting and dying in a dirty, ugly, bloody war so that young punks can have the privilege of calling the head of the Joint Chief of Staff a "war criminal."

Their actions convinces us that Darwin's theory is entirely right . . . we did come from apes . . . and the class of 1967 seems to be going "ape" again.

These are the punks who scream for freedom of speech—for themselves—but howl down anyone who tries to voice a different opinion.

These are the punks that demand freedom of assembly—so that they can launch mob action.

A razor strap course in character building early in life would have been a wonderful treatment.

A sad commentary but true—twice in a week it has been proven true that if you are a top military man you are safer in Saigon than in our "Halls of Ivy."

Reforming the Draft

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. RYAN. Mr. Speaker, the President in his state of the Union message mentioned that the National Commission on the Draft will shortly report its findings. There seems to be no doubt that the selective service law will be revised in one way or another. In the fall edition of the Public Interest, Prof. Eli Ginzberg of Columbia University published an article in which he suggests the establishment of a lottery to remove the inequities of the present draft system. Professor Ginzberg, a highly regarded economist, who is an expert on manpower, has written a cogent article which deserves our attention as we prepare for the expected debate on the draft. It follows:

[From the Public Interest, fall 1966]

Reforming the Draft—The Case for a Lottery

(By Eli Ginzberg)

The problem of the draft has surfaced. The President, Congress, and the public now know that the process by which we procure our military manpower is defective. The mounting casualties in Vietnam have unquestionably helped focus attention on this issue: the fact that a high school graduate is 50 percent more likely than a college man to serve in the Army may be glossed over in times of peace, but will not go unnoticed once the number of wounded and dead begins to mount. The Act under which young men are drafted is entitled the Universal Military Training and Service Act of 1951, as amended. Today, this concept of "universality" is defined by the fact that only 46 percent of all men reaching 26 have served in the military.

The coincidence of military escalation in Vietnam and the jump in the number of young men reaching eighteen—reflecting the rise in the birth rate after World War II—have precipiated the debate that successive Administrations and Congresses have assiduously sought to avoid. Since, under existing arrangements, the Pentagon obtains without difficulty the number and quality of manpower it needs, and since the colleges are assured of the student flow which they need to operate optimally, it is understandable that policymakers have avoided disturbing the status quo. But they can avoid doing so no longer.

It is relatively easy to identify what is wrong with the draft as it presently operates. It favors those who have the financial and intellectual resources required for college attendance; until recently, it encouraged young men to marry in order to be deferred; until the recent expansion of the Armed Services from 2.7 million to 3 million, older men were more likely to be drafted than young men—a double disadvantage since men's lives are more likely to be disrupted at an older age and the military prefer younger men. A less obvious but still clear debit has been the influence of the draft in encouraging many students to enroll in college or graduate school for no reason other than to avoid the draft. Above all, it violates the concept of universality and has helped to make a mockery out of the democratic principle that the responsibility to bear arms rests equitably upon all males.

This list of shortcomings can be enlarged by noting that many presumably eligible men are rejected from military service; the accident of where a man is registered plays an important part in whether or not, and when, he is called up; and there has been no uniformity in the criteria which local boards follow in granting deferments.

THE MERITS OF SELECTIVE SERVICE

Nevertheless, there are strengths in this system which help explain why the American people were willing to accept it for more than a decade.

First of all, the draft has been a highly flexible instrument. During the year when the Korean buildup reached its height, 587,000 men were drafted; a decade later, the annual intake had dropped to 60,000; during a recent twelve months (July 1, 1965—June 30, 1966) 335,000 men were drafted.

Secondly, the draft has contributed markedly to enabling the Air Force, the Navy, and the Marine Corps to rely overwhelmingly on enlistees. Many men "volunteer" for these services because they know that otherwise they will be drafted. According to a special study of the Department of Defense, 38 percent of the regular enlistees "volunteered" for this reason, as did 41 percent of the officers and 71 percent of Reserve and National Guard enlistees. To the extent that the Armed Services gain from having their requirements met by enlistees—they serve longer and they are likely to have better morale than draftees—to that extent much of the credit belongs to the draft.

Finally, the draft has been operated so as to inhibit an inflow of large numbers of men who could not be readily absorbed into a military organization, whether because of lack of aptitude or because of other shortcomings. Not all of the selectivity in "selective service" has been unreasonable.

General Hershey would call attention to some additional benefits. He believes in citizen responsibility for the operations of the Selective Service System. He sees great merit in a system whereby call-ups and deferments are made by informed persons who live in the same communities as the registrants. The inventory of draft eligibles, maintained by the Selective Service System, is a major support of our mobilization base. In addition, General Hershey would note the remarkable freedom from bribery and other forms of chicanery which characterizes the Selective Service System.

There can be no doubt, then, that the draft has many assets as well as some liabilities. Since no system is perfect, why should we not leave it alone? Besides, there have been recent improvements. Since August, 1965, marriage has not been a ground for deferment, though it still often works out that way; the Armed Services have revised their criteria for selection and now accept certain men whom they formerly would have rejected; Congress has recently passed a new GI bill which is at least one step towards greater equity; and the Armed Services' requirements are such that they now induct men shortly after their twentieth birthday. What more can one system do?

THE DEMOGRAPHIC IMPERATIVE

If the demographic picture were to remain unchanged; *if* the strength of the Armed Services were to remain at the present ceiling of 3 million; *if* the Department of Defense were to cease its efforts to substitute civilian for military personnel—then there would indeed be a strong case for preserving selective service. However, we face a certain and continuing rise in the number of eighteen-year-olds to a level of over 2.1 million in 1974, which will represent more than a doubling of the number available during the early 1950's and a 40 percent increase over 1964. At pre-Vietnam force levels this would mean that, in 1974, only 1 out of every 3 young men reaching twenty-six would have served in the military; and even at the current force level the number would be only slightly more than 2 in 5. And such a surplus of eligible manpower would again threaten to force up the age of induction: our selective service system, operating to catch men before they reach the escape age of twenty-six, takes older men first. The Armed Forces would receive the wrong type of manpower; therefore, before long the present system will have to be changed because the Department of Defense itself will demand a change.

Before discussing desirable changes in the draft, we should explore the alternatives to the draft. Possibly we can get on without it; possibly not. A small number of people, including General Hershey, continue to favor the institution of universal military training, which was the proposal of the War Department at the end of World War II, but which was ceremoniously buried despite strong support from the Compton Commission and the advocacy of General Marshall. Such a proposal would mean that every young man capable of military service at the age of eighteen would undergo four to six months of military training, and from this total group the Armed Services would obtain—by enlistment or some form of compulsion—the numbers required to meet their needs. But UMT would meet only part of the equity problem—it is unlikely that there would be enough enlistments to obviate the need for a selective draft; it would be inefficient—the short training would not be of much value; and it would be very costly—perhaps as much as $2 to $3 billion every year.

Another proposal aimed at better matching the large numbers available for service and the limited needs of the Armed Services is to reduce the required length of service for draftees to below the present two-year minimum. However, even with two years of service for draftees the Army gets limited use out of many men, since so much time must be devoted to processing, training, and traveling. The small gains which would be made in equity by drafting larger numbers for a shorter period of time would be more than counterbalanced by large losses in efficiency and economy.

Can we eliminate the draft completely and have the Armed Services rely solely on volunteers? The Department of Defense has recently estimated that even after taking into account the larger pool of eighteen-year-olds who will be available in the early 1970's, the maximum all-volunteer force that could be maintained would be 2 million at the present 4 percent level of unemployment, and 2.2 million if a 5.5 unemployment rate were postulated. This would leave a significant deficit even if force levels returned to their pre-Vietnam figures. An even more serious problem would be how the Armed Services could attract the specialists who play an even larger role in the successful operation of modern military organizations. For example, how could the Armed Services induce 3,000 physicians to volunteer for active duty?

Despite the contentions of some economists, such as Milton Friedman, it is doubtful that the American people would approve of an additional annual expenditure of between $4 and $17 billion dollars for our Armed Forces; this is the sum which the Department of Defense calculates would be necessary to recruit and support an all-volunteer force at the pre-Vietnam level. These sizable additional expenditures have taken into account offsetting savings in training costs and in reduced turnover that a career force would make possible.

A further objection to an all-volunteer force is that it would be exceedingly difficult to man the active reserves. Moreover, the costs of responding to a sudden increase in requirements, such as during the buildup in Vietnam, could be horrendous if we had to rely on monetary incentives to attract quickly several hundred thousand additional men.

A third approach would be to develop, under universal "military" training, a system of civilian assignments which would be considered the equivalent of a term of duty in the Armed Services. Currently, two years in the Peace Corps is treated in this way by most draft boards. Can we designate a large number of such positions—teaching or social work in depressed rural and urban areas, scientific or technical work in specified fields, civilian jobs in U.S. overseas operations other than the Peace Corps? The list of high priority useful jobs can be readily enlarged.

However, there are many objections to this proposal, too. Among the most important are the clear advantages that this would give to young people from middle and upper income homes who attend or graduate from college. In addition, the problem which would result from paying these young people at the prevailing rate of civilian wages would be enormous—as would be the problem which would result from paying them less! Furthermore, the availability of alternatives to military duty might have a serious effect on the inflow of trained manpower into the Armed Services; any other assumption would not be realistic. Finally, our liberal-democratic traditions view with strong distaste the kind of large scale and permanent governmental direction of civilian labor that such a program would entail.

These arguments against the suspension or abolition of the draft hold for now and for the proximate future. If the fighting in Vietnam were to come to a halt; if no other front were to become active; if the size of the Armed Forces could be reduced from the present three million to closer to two million; if energetic efforts were made to replace several hundred thousand men in uniform (in clerical positions, in base maintenance, in hospitals) with civilians; if the reserve structure could be further reduced—then in fact it might be worthwhile to see whether the conditions of military service could be improved to a point where the Armed Services might obtain the military manpower they need solely through enlistments. But this is clearly something for the distant future, not for tomorrow.

THE LOTTERY AS A WORKABLE ALTERNATIVE

The real challenge is to design an alternative that will result in a more universal sharing of the risk of service while providing the Armed Services, at a reasonable cost, with the numbers and quality of manpower they require. In my opinion, a lottery can substantially meet the test for equity. If all young men are not needed by the Armed Services, a lottery is the fairest method of determining on whom the obligation should fall. However, even a lottery should not mandate the induction of all those selected at one specific age, such as nineteen. It is clearly advantageous for the Armed Services if certain young men complete college or even go further in their education before they are called upon to serve. Those who receive a deferment to continue their education, however, must take their chances when they complete their schooling. They would enter the lottery at that point. A rough estimate suggests that since more than 70 percent of all young men complete high school, and since half go on to junior or four-year college, approximately one-third would enter the lottery at an age older than nineteen.

The key element of a national lottery for military service is an annual list of all young men liable for military service. The requirements of the Armed Services would determine the proportion of the group to be called. Those not called in any one year could make their plans reasonably assured that they would not be called at all, except in an emergency. Such a system could be put in effect just as soon as the international situation begins to stabilize. Unless the Vietnam war accelerates far beyond our worst fears, the number of young men available for service will grow steadily larger than the number required.

General Hershey is fundamentally opposed to the lottery. He argues that it has not worked satisfactorily in the past and that it would be unsatisfactory again. He states that the American people would object if such fundamental decisions as who should serve and who should be deferred were to hang on the turn of a wheel. He believes that reliance on the decisions of local citizens is much to be preferred.

Now, it is quite true that no system can be perfect and that the most carefully constructed lottery will have its faults. Thus, if the requirements of the Armed Services fluctuate, the risk for men entering the lottery in one year instead of another will not be the same. This kind of multiple chanciness can be nerve-wracking for those who are involved. But the fact remains that the present system cannot be continued and will not be continued once the Congress and the Presidential Commission highlight its gross inequities. Given that fact, a lottery would appear to be the most sensible and least problematic of all alternatives to selective service.

A lottery can be reinforced with "fringe benefits" to make the incidence of luck less brutal. Since there would still be gross differences in sacrifices between those who serve and those who do not, the gap could be reduced by raising the level of military pay and by providing educational and training benefits for the inductee and enlistee. For instance, it would be desirable if the armed services were to provide educational and training benefits, prior to their entering upon a term of active duty, for young men who join the enlisted reserve. Such a system would prove both efficient and economic, since it would reduce the amount of time and resources that the Armed Services have to devote to training their own specialists. The G.I. bill, which was recently passed, also makes a contribution to greater equity. I would further favor providing transitional education and training benefits for career men who, at the end of twenty years service, must fit themselves into the civilian economy.

One other point: present standards for military service lead to the rejection of large numbers of young men of limited aptitude and education—roughly one third of the age class. The manpower pool is sufficiently large that the Armed Services do not have to induct the hard-to-train and hard-to-discipline. From the vantage point of the Armed Services, such a policy is easy to appreciate. But if the frame of reference is broadened from the military to the national scene this policy is not the only possible—or the only correct—one. Under recent federal legislation, we have been spending over two billion dollars annually in training and retraining young people without jobs; and we shall probably soon spend much more. In World War II, the Armed Services, particularly the Army, did an outstanding job in providing special training opportunities for a half million illiterates.

The establishment of the Job Corps, the Neighborhood Youth Corps, and other training and training-related efforts under civilian auspices appears to have decided the issue in favor of the civilian sector.

Yet the recent statement of the Secretary of Defense that the Armed Services will induct annually about 100,000 men with low aptitude scores suggests that some policy ambivalence exists about the preferred manner of dealing with disadvantaged youth.

This move by the Department of Defense may provide the opportunity for a good experimental study of the relative effectiveness of military versus civilian efforts at socialization of, and skill acquisition by, disadvantaged youth. It is by no means clear that private corporations, nonprofit organizations, or civilian governmental departments will be able to do as good a job as the Armed Services.

This much is clear: military manpower policy can never be effectively separated from national manpower policy. And national manpower policy must always be the concern of the entire citizenry.

Tribute to Pfc. Milton Olive III, Congressional Medal of Honor Winner, by Edward C. Logelin III

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. COLLIER. Mr. Speaker, the American people have, during the past few months, been shocked, ashamed, and disgusted at the actions of those who have in various ways obstructed the war effort. It is my firm belief that such irresponsible elements represent only an infinitesimal percentage of our population.

While many of those who have attempted to stop troop trains, hinder the operations of defense industries, and interfere with the draft are young people, they do not speak for more than a handful of our youth. More representative of the attitude of the younger generation was the action of Milton Olive III, who made the supreme sacrifice in Vietnam.

The following account by Edward C. Logelin III, which appeared in the 1966 edition of Ariel, a publication of Lawrence University, Appleton, Wis., is an eloquent recognition of the heroism of Private Olive. Under leave to extend my remarks, I insert Mr. Logelin's tribute:

[From the 1966 edition, Ariel, Lawrence University, Appleton, Wis.]

(By Edward C. Logelin III)

In a small jungle clearing near Lai Khe, South Vietnam, five young men sat around a flickering fire and talked.

They talked of many things: Vietnam, home, civil rights, and the future.

Finally, a young Negro P.F.C. rose to his feet calling an end to the discussion by saying, "What it all boils down to is that you gotta care. You just gotta care."

A few weeks later, that same young man became the eighth member of his race to win the Congressional Medal of Honor. He did it by diving on top of a Viet Cong handgrenade to save the lives of his buddies at the price of his own.

At that moment, he did not stop to ask whether or not he had been fairly treated as a citizen or if one of the men he saved thought of him as less than a man. At that moment, he passed beyond the questions of race, creed, or color.

Maybe this is what we can learn from Vietnam and the meaning we can find in such a controversial situation. In that moment, P.F.C. Milton Olive III was saying that he believed, that he hoped, that he cared. Perhaps in Vietnam we can find a preview of what a country and a people are capable of being—what a people and a country will be.

Today in Vietnam, the American is being asked to be more than a fighting man to do more as an individual than in any other war in our history. He is asked to be a witness for that which he believes in, an ambassador for his way of life and his country.

Yesterday, he may have been walking to a class or boarding a bus; Today, he is walking down a jungle road or jumping from a helicopter. Vietnam's worth is being debated today and will continue to be debated in the future. Achievements from a limited war never offer complete satisfaction for both sides, but in the satisfaction inherent in an individual's fulfillment of a goal affecting a nation, Vietnam does offer a "Year of Opportunity."

Gang Revenge More Feared Than Court

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. MICHEL. Mr. Speaker, crime on our city streets has now reached an intolerable level. In the state of the Union speech last night, it was proposed that in order to cope with this growing problem we must spend more Federal dollars to improve local law enforcement. But what good is better law enforcement when today's criminal has been given the impression—rightly or wrongly—that even if he is caught and convicted, it will only be a short time before he is back on the streets. Many of the recent decisions of the Supreme Court of the United States have undermined the efforts of our local law-enforcement agencies. In the following editorial from the Peoria Journal Star of January 6 it is made clear that today's gangs and crooks have more fear of their own criminal associates' brand of law enforcement than they do of the police.

I include this editorial at this point in the Record:

GANG REVENGE MORE FEARED THAN COURT

The other day a youth told a Peoria court that he did not fire a shotgun at another young person and would not because he knew that if he did and killed anybody he himself would be killed within a week.

He proceeded to describe a series of youth gangs in our city that he said were heavily armed, describing all manner of weapons "imported from Chicago." He did not fear being tried in court if he killed someone. He feared being executed by the authority of such a gang . . . and promptly.

The real significance of this testimony, as has been the conduct of other accused persons and too many witnesses, lies not in the degree of truth or possible exaggeration of such remarks.

It lies in the reality that a growing number of young people in some districts of this city, as in many other towns, are not the least bit afraid or respectful of police, courts, or law enforcement . . . in comparison with the awe they have for "enforcement" practiced by "the gang" or by the criminal element.

In our search for aesthetic perfection in the laws and enforcement of society, we have abdicated the power of society and made it a poor second to the "laws" laid down by gangs and by crooks.

A few days in jail, a fine, a warning, or a ten per cent bond simply do not carry the weight that a terrible beating or murderous execution at the hands of a gang or the hands of criminals who don't give a hoot about "constitutional rights" carries.

A witness is not inclined to testify to an assault, for example, knowing that even if the youth they are testifying against is convicted the probability is that he will be free that night—and surely in a few days. The witness is not afraid of the court nor of perjury. He or she is afraid of being killed or maimed or badly hurt if they do speak.

By being so very, very civilized in the safe and comfortable marble halls of the U.S. Supreme Court building, we have succeeded in turning over a large proportion of our young people to the tender and unrestrained mercies of the most irresponsible hoodlums in town—with no effective protection. (Not to mention a growing number of the elderly.)

We have established the "laws" of outlaws as the effective law in the streets of our "progressive" society—and the supposedly real law as a kind of game for legal philosophers with little relation to the social purposes it was intended to serve.

Historically, of course, such conditions tend to get worse until they become absolutely intolerable.

At that point, society re-establishes its authority with a vengeance.

Thus, it may well be that our "humanitarian" excesses will lead us not toward a perfect justice but toward a more ruthless "justice" than has been that of the past.

Harrison E. Salisbury Reports From Hanoi—II, III

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, I want to call the attention of my colleagues to two dispatches from North Vietnam by Harrison E. Salisbury which appeared in the New York Times of December 27, 1966. They follow:

[From the New York Times, Dec. 27, 1966]

U.S. RAIDS BATTER TWO TOWNS; SUPPLY ROUTE IS LITTLE HURT

These dispatches depict two aspects of the war in North Vietnam—the extensive bombings and the enemy's speed in repairing communications. The writer is an assistant managing editor of The New York Times. He reached Hanoi on Friday from Pnompenh, Cambodia, on a plane of the International Control Commission for Vietnam after his visa application had been approved by Hanoi and his passport validated by Washington for travel to North Vietnam.

(By Harrison E. Salisbury)

Hanoi, North Vietnam, December 25.—Hanoi's Christmas quiet was shattered at 2:30 P.M. today when an air alert sounded, antiaircraft guns roared and a United States plane was reported shot down.

Residents in the center of Hanoi reported that they had heard the sound of aircraft shortly after the alert sounded. Almost immediately, antiaircraft guns fired and the United States plane was reported downed. Another alert was sounded when a second plane appear about 12 miles from the city.

Hanoi's alert was apparently the same as that touched off in Namdinh, 50 miles to the southeast, where this correspondent was inspecting earlier bomb damage. The alarm sounded at Namdinh at 2:26 P.M., when it was announced the plane had been sighted approaching from the north.

Mayor Tran Thi Doan, a petite 40-year-old woman, led a group of officials to a shelter beside the City Hall, where she continued to tell of a series of 51 raids on the city up to Friday. None of the raids, as far as she knew, had ever been announced in the West.

The Namdinh alert continued until 2:47 P.M.—which residents thought remarkably long since fast-flying planes had time to make several round trips from the vicinity of Hanoi in that period. However, this duration may have been occasioned by the reported downing of the American plane. The 2:26 alert, at Namdinh was the third on Christmas Day. Namdinh officials attributed the alerts to American reconnaissance, which they believed had been continued despite the Christmas truce.

Christmas wasn't a joyous occasion for Namdinh although strings of small red pennants decorated the old gray, stucco Catholic church and a white Star of Bethlehem had been mounted on the pinnacle of the tower. Few Americans have heard of Namdinh, although until recently it was the third largest North Vietnamese city.

Mayor Dean regards her city as essentially a cotton-and-silk textile town containing nothing of military significance. Namdinh has been systematically attacked by American planes since June 28, 1965.

The cathedral tower looks out on block after block of utter desolation; the city's population of 90,000 has been reduced to less than 20,000 because of evacuation; 13 per cent of the city's housing, including the homes of 12,464 people, have been destroyed; 89 people have been killed and 405 wounded.

No American communiqué has asserted that Namdinh contains some facility that the United States regards as a military objective. It is apparent, on personal inspection, that block after block of ordinary housing, particularly surrounding a textile plant, has been smashed to rubble by repeated attacks by Seventh Fleet planes.

The town lies only 20 miles inland, which may explain why the Seventh Fleet seems to have made it its particular target. "The textile plant, whose most dangerous output from a military point of view would presumably be cloth for uniforms, has been bombed 19 times, but is still operating under great difficulty.

Other industries in Namdinh include a rice-processing plant, a silk factory, an agricultural-tool plant, a fruit-canning plant and a thread cooperative. All have been damaged in raids. The least affected operation is the rice mill, which is working at normal capacity.

Street after street in Namdinh has been abandoned and houses stand torn and gaping. One deserted street is Hang Thao or Silk Street, which was the center of the silk industry. Almost every house on the street was blasted down April 14 at about 6:30 A.M. just as the factory shifts were changing.

Forty-nine people were killed, 135 were wounded on Hang Thao and 240 houses collapsed. Eight bombs—MK–84's accomplished this. These are huge weapons weighing about 2,000 pounds.

The residents of Namdinh have become specialists in United States weapons. They rattle off names like MK–81, MK–83 and MK–84 and various categories of missiles, including Bullpups, as baseball fans do batting averages, most attacks have been carried out by F–105's and F–4's but B–57's, A–3's, A–4's and A–6A's have also been used.

Another target in Namdinh has been the Dao (Black) River dike. The dike has been hit six times and there have been many near-misses. Breaching of the dike would seriously affect the region's rice agriculture. However, supplemental and reinforcing dikes have been built. And with a plentiful labor force always at hand to repair gaps quickly, the danger of serious damage by air attack seems minimal.

CALLED AN OBJECT LESSON

Why have American planes devoted all this unannounced attention to Namdinh? "Americans think they can touch our hearts," Nguyen Tien Canh of Namdinh's City Council said, apparently meaning that Americans thought they could intimidate the populace by continuous attacks.

A second suggestion was that the unannounced assault on Namdinh was supposed to be an object lesson to show Hanoi what United States air power could accomplish if it was directed more powerfully to North Vietnam's capital.

Whatever the explanation, one can see that United States planes are dropping an enormous weight of explosives on purely civilian targets. Whatever else there may be or might have been in Namdinh, it is the civilians who have taken the punishment.

A brief tour of Namha Province in which Namdinh lies, shows Namdinh is far from being exceptional.

President Johnson's announced policy that American targets in North Vietnam are steel and concrete rather than human lives seems to have little connection with the reality of attacks carried out by United States planes.

A notable example is Phuly, a town about 35 miles south of Hanoi on Route 1. The town had a population of about 10,000. In attacks on Oct. 1, 2 and 9, every house and building was destroyed. Only 40 were killed and wounded because many people had left town and because an excellent manhole-shelter system was available.

The community had no industry, but lay astride a highway and a railroad line running from Hanoi, which had a couple of sidings in town. Presumably, planes were attacking the railroad. But in the process they destroyed another residential community.

Since bombing is far from an accurate process, at best, and since people in Vietnam work, live, study and amuse themselves in the same streets as those on which military targets are situated or on adjacent blocks, the outlook is for more destruction to life, residential quarters, schools and every other variety of nonmilitary facility. The same rule applies whether the target is so-called Hanoi vicinity, a crossroads, a village or a hamlet.

[From the New York Times, Dec. 27, 1966]

Foe's Transport Little Affected by Raids on Key Supply Route

Hanoi, North Vietnam, December 26.—Viewed from air reconnaissance or on photographic maps, National Route 1, the old French-built highway that runs south from Hanoi to Saigon, must look like a bombadier's dream target.

The highway and a railroad run parallel only a few feet apart, mile after mile, straight across the table-flat delta of the Red River. The highway is marked by lovely, regularly planted shade trees, and camouflage, disguise or concealment is utterly impossible.

This is no jungle country. This is no tricky mountain terrain. This is rich, flat ricelands crisscrossed by irrigation flows and paddy fields. The railroad and highway could not be a plainer target if they were picked out by continuously flashing beacon lights.

It is easy to imagine Air Force strategists inspecting a map and concurring that Hanoi's southward supply services can easily be interdicted by a few easily placed bombs.

But appearances can be remarkably deceiving, as ground-level inspection of Route 1 quickly discloses. Viewed on the ground, it is obvious that the "dream target" is in reality a snare and a delusion.

The railroad and highway have been bombed again and again and again, but it is doubtful that rail traffic has ever been held up more than a few hours, and the highway seems capable of operating almost continuously regardless of how many bombs are dropped.

The secret of the railroad is simple and it lies beyond the ability of air power to interdict.

If the track uses small, light equipment when a bomb smashes the rails or overturns a car, removal and repair problems are simple. Gangs of workmen can easily clear the line. Moreover, repair materials probably sufficient to construct two or three additional railroads are kept on hand, seldom more than a few hundreds yards from any possible break.

The same thing, only more so, is true of the highway, which can be repaired and restored even more rapidly by the use of readily available manpower and repair materials similarly stockpiled in advance, apparently along the whole expanse of Route 1.

The results of American bombing of the route are readily visible—particularly in small villages and hamlets along the route. They have suffered severely, often being almost obliterated. But the effect on transportation has been minimal.

Another factor in this situation is not visible to reconaissance planes. This is that almost everything movable in North Vietnam can be moved equally well either by train or by truck, and the truck routes are virtually noninterdictable.

There is a third major alternative—human backs, bicycles and carts. As the Korean War demonstrated, where trucks and human carrying power are available as alternatives, it is impossible to interdict supply movements.

Even in the region of the Seventeenth Parallel, which divides North and South Vietnam, where United States bombs have leveled the whole countryside, movement continues by night with little impediment.

A basic flaw in the bombing policy from a military viewpoint would seem to be its failure to take into account the nature of the country and the people to which it is being applied. If the Pennsylvania Railroad and the major highway to Washington were bombed out, the disruption of United States supplies and services would be enormous and the military consequences in wartime would be grave.

Here it is hardly felt. Traffic and supplies simply flow around and past the point of interuption and the damage to rail or highway is quickly made good. The principal sufferers are the people who have the misfortune to live along the railroad and highway and on whose homes far more bombs rain down.

Another example of the ground-level reality of United States bombing compared with the communiqué version relates to air attacks carried out Dec. 13 and 14 in Hanoi. One of the United States targets was specified by the communiqué as a "truck park at Vandien."

Vandien is in the southern part of Hanoi along Route 1. Administratively it is separate from Hanoi, but actually it is a continuous part of the urban center. United States maps show the truck park as situated just east of Route 1.

In fact, there is a large, open area with light buildings and compounds that may or may not have been a truck park, lying possibly a quarter-mile east of Route 1, which has been badly smashed by bombs.

But the bomb damage does not halt at the compound lines. It extends over an area of probably a mile or so on both sides of the highway, and among the structures destroyed in the attack was the Vietnam-Polish Friendship senior high school, lying on the west side of the highway, probably three-quarters of a mile from the presumed United States target.

It is the conviction of the North Vietnames that the United States is deliberately directing bombs against the civilian population although ostensibly contending that "military objectives" are the target.

Technology and Mining

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. ASPINALL. Mr. Speaker, the application of research and technology to one of the most ancient of man's industrial pursuits—mining—has contributed in no small measure to the continuing leadership of this Nation in the world marketplace. As an outstanding example of this constant industrial progress, I submit for my colleagues the remarks of Mr. Frank Coolbaugh, chairman of the board of American Metal Climax, Inc., delivered at Climax, Colo., on November 19, 1966, on the occasion of that company's dedication of a molybdenum oxide chemical recovery plant.

The address follows:

Governor Love, Congressman Aspinall, distinguished guests, ladies and gentlemen; representing AMAX, but more importantly as a long time resident of Climax, I am most happy to welcome you on the occasion of this dedication of our oxide molybdenum plant. This facility which you will see this afternoon does not represent a large production unit in terms of molybdenum output when compared with many of the other expansions which have previously taken place at this mine. It does, however, represent a new plateau in the development of processes for the economic recovery of molybdenum from associated minerals which had heretofore stubbornly resisted practical extractive techniques. This new plant also serves to highlight the stress which this company has given to research in its long range plans for growth and stability.

Sometimes it takes the tenacity of a bulldog, and more, to fight an idea through to fruition. Such has been the case with the recovery of oxide molybdenum. The first test work for oxide recovery was not initiated in the 30s or the 50s but in 1919, shortly after our original mill was put on stream in 1918 during World War I. Because molybdenum was strictly a war material at that time, the mill was shut down before midyear in 1919. A laboratory was rented in Golden, however, to pursue the exide recovery problem along with other metallurgical approaches. This program was carried on for something under a year when it had to be terminated for budget reasons. The seed of this idea never died, however, and now, after some 45 years, it has germinated. An interesting sidelight on that little laboratory which was rented in the old experimental plant at Golden in 1919 is that it served as the starting point for the Research Foundation of the Colorado School of Mines, which is today one of our country's great metallurgical research institutions.

I am proud to consider myself as one of the Climax pioneers and, while I can't lay claim to playing a part in its early development or operation during prewar and World War I days, I am sure I am safe in saying that since the time I was employed as a laborer in the Climax mine in 1933 I have witnessed most of the expansion steps and, in some instances, might even claim to have assisted in the decisions which have made this company the industry leader it is today.

I will now take this opportunity to bring you up through the years since Climax's inception, briefly outlining our development pattern, and describing our progress toward meeting our obligations to the public, our customers, our shareholders, and our employees, by the almost continuous application of the processes and products of research, experimentation, and innovation.

The earliest ore reserve determination and the methods for mining and concentrating the ore above the Leal Level of this mine (which would be well above the 12,000 foot elevation mark) were predicated on producing an average grade of ore between 1½ and 2% MoS_2. In fact, at that time the cutoff grade was 1%. Even with this high grade ore, production costs were high and a price of $4 a pound for molybdenum realized only a nominal profit.

Of course, what was considered a substantial ore reserve then would be exhausted in 3 or 4 months' time at today's production rate. Our latest indicated reserves, added to the tonnage which has been extracted from the mine since 1919, are more than 100 times greater than the economic reserves indicated before World War I. From that time until now we have pursued a steady and successful campaign whereby both technological application and individual effort and experience have made it possible for us to periodically lower our cutoff grades of ore in the mine, and thus effect a complete change of concept regarding production levels and economic reserves. Even in the face of the steady trend toward higher costs for manpower and materials, we have, over the years, substantially increased the productivity rate and lowered the unit costs of processing the ore. Today, however, in an all-out effort to maximize our production and reserve picture and to employ the highest degree of conservation of this great mineral asset, we have reduced the cutoff, or break-even, grade of ore to something less than 2/10 of 1% MoS_2 and no amount of research has as yet indicated a way of reversing the trend toward a gradual diminishing margin of profit which we must realize on each pound of molybdenum produced.

The research and experimental efforts and applications at Climax have taken many forms. In the first place, most of the ideas have been conceived and planned by the doers we find in our own operating, technical and service organizations. Secondly, they may be the result of the follow-up or adaptation of some technique or methods developed by another company. And, while we do brag a lot about our high standing as a research oriented company, we can hardly lay claim to knowing it all and, seriously, could not afford to overlook the tested and proven developments or techniques worked out by others. That is, of course, assuming they are available to us for study, testing and eventual implementation. Thirdly, is the direct use of research teams or organizations whose primary purpose is research and development and who may be charged with either specific or multiple research objectives. Within the Climax organization we have several permanent research organizations and laboratories. Our largest and our basic unit is located in Ann Arbor, Michigan, where it adjoins the University of Michigan campus. In this facility, where 90 people are employed, a major emphasis is directed to alloy applications in iron and steel which, of course, is responsible in a large part for putting molybdenum on the map and keeping it there, by means of the demands for quality and dependability which have been established in Industry throughout the world. While primarily occupied with the metallurgy of iron and steel, this laboratory works in close harmony with the process research laboratories of the company, located at the Climax refinery in Langeloth, Pennsylvania, at its Golden, Colorado, laboratory, and at the Climax laboratory here. These three process research establishments are the work horses of the operating plants. They continue to hammer away at the basic objective of improving process efficiencies even though they realize it will never end. Concurrently, they must also be ready to assist, plan and implement whatever new problems or ideas are brought to their attention which might have a beneficial impact on the company's business.

Even with this pool of experience, and the scientific and experimental facilities which are provided, it has often been necessary to retain special consultants and to farm out research or experimental projects to outside organizations. Such was the case in our determination to get along with the oxide project. In this instance, two Colorado research organizations and a Canadian firm of metallurgical consultants were called in to work with a carefully selected group of technical men from the various company research laboratories and from its operating management. I can only say that I feel this specific joint enterprise has represented one of the most productive and efficient research teams with whom I have ever had the opportunity to be associated.

How have we applied research and technology to our mining system at Climax?

The problems which have faced our mine managers and engineers throughout the years are much the same as have faced mine operators everywhere. I like to feel, however, that the extra, special effort which has been directed to planning and research at Climax has been the rule rather than the exception, and it has paid us back handsomely many times over. A completely new caving method of mining was developed by Climax engineers and miners and tailored to the Climax ore deposit through years of study and pilot experiments. A continual process of improvement and technological change keeps this unique system up to date. This mining method has been used as a pattern at several other major mining operations. The mine loading and haulage system is also under continual study and change much as traffic and transportation problems are covered in an efficient highly populated industrial center. Special emphasis in the design and planning of the loading and haulage systems, as well as in the development of improved mining and blasting techniques, has proven effective and rewarding in establishing the best safety and ventilation applications. Dozens of items of mining equipment have been conceived, built and adapted to Climax use from which they have provided major efficiencies and cost savings. As the newer mining levels dropped deeper under Bartlett Mountain, improved techniques for underground crushing, and for lifting the ore to surface, provided special and knotty research problems. The resultant incline conveyor system for the 600 and 900 foot mining levels, which has been accepted and is under construction, will undoubtedly provide another industry model for efficiency, production and low cost.

The Climax surface plant has been a research man's dream. In its early operations the mill produced a very low grade molybdenum sulfide concentrate from a very high grade ore at a very low recovery rate. To enumerate all of the in-process and laboratory projects which have been completed in our desire and drive to improve on these metallurgical processes would literally take days. I will not try, in fact, except to point out that at our present plateau we produce a very high grade molydbenum sulfide concentrate and maintain a high recovery rate. (I wouldn't want it to get around, however, that I think the present recovery rate is good enough.) At the same time, the grade of mill feed has fallen so low that it would have been classified as "potato dirt" and worthless a few years back.

While our main target has always been to produce more moly with less waste from this rock pile under Bartlett Mountain, we have, since the mid-30s, also been intrigued and possessed with the possibilities and problems of extracting the economic metal and mineral by-products which are associated with the molybdenum sulfide in the ore. In other words, to use a timeworn phrase, to get everything out of the pig but the squeal. We have now progressed a long way toward this goal but feel that there may still be further substantial by-product contibutions. As a result of our research efforts to date we are now an important producer of tungsten at Climax. In fact, I believe the second largest in the United States. We are the only domestic tin producer, although it is minor production compared to the other by-products. And, we are a substantial producer of high grade pyrite for the chemical industry. Now, of course, we have added moly oxide. Some of the other by-products which we know exist in substantial quantities, and which we feel may be included as potential future products, include topaz, fluorite and a few of the rare earths.

As we look ahead toward production from our developing project at Urad in the upper Clear Creek Valley, or from other likely prospects in Colorado and elsewhere, we are confronted in each case by a new set of parameters on which to base our technological assessments. Since we expect, in most cases, to be dealing with marginal projects, as compared to Climax, the research phase is doubly important if we are to justify their existence as operating entities.

In closing, I hope I have not overworked this research concept and have, in fact, successfully conveyed to you the importance which we attach to research and its proper application throughout all phases of our business. This is true not only in the Climax Company but also with every other division and subsidiary unit of American Metal Climax.

Harrison Salisbury Reports From Hanoi—IV, V

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, I wish to bring to the attention of the Members of the Congress the dispatches by Harrison E. Salisbury from North Vietnam which appeared in the New York Times of December 28 and December 29, 1966.

They follow:

[From the New York Times, Dec. 28, 1966]

HANOI DURING AN AIR ALERT: WAITRESSES TAKE UP RIFLES

(By Harrison E. Salisbury)

HANOI, NORTH VIETNAM, December 27.—Just before 2:25 P.M. yesterday, there was a muffled distant roar, 10-foot windows in this old French-built hotel rattled and heavy gray curtains gently swayed inward.

At the count of three there was another tremendous distant rumble and again the windows shook and the curtains swayed. Moments later came a third.

The wail of a siren then sounded the alert, and the hotel's defense staff scrambled for tin hats and rifles.

Guests emerged from their rooms and hurried down the great marble staircase, through the long lounge with its slightly bedraggled tropical Christmas tree, its bar with a remarkable collection of liquors of all lands—including Stolichnaya vodka from Moscow, rice wine from Peking and Gordon's gin from London—and out across the interior courtyard, where shelters are situated.

By the time the guests had begun to descend into the sturdy concrete bunker, little waitresses in their black sateen trousers and white blouses stood ready with rifles to fire at any low-flying planes.

Inside the shelter, by curious coincidence, Americans found themselves in the majority—four members of an American peace delegation, Mrs. Grace Newman of New York; Mrs. Joe Griffith, whose husband is a Cornell instructor; Mrs. Diane Bevel, associated with the Student Nonviolent Coordinating Committee, and Miss Barbara Deming of Liberation magazine, and this correspondent.

But it was a widely international group, including the deputy director of Tass, Aleksandra A. Vishnevsky, who chanced to be in town; a correspondent of the Italian Communist newspaper L'Unita, members of a Soviet trade-union delegation, two Cubans and an East German, there were no Chinese.

The foreigners chatted a little excitedly about what was to most a new thrill. But to the Vietnamese air alerts and air raids are no novelty and no thrill; they are deadly serious business.

The pretty waitresses with rifles are part of this serious business. It is unlikely that United States planes are brought down by rifle fire, but the population is trained to man posts and throw up a hurricane of small-arms fire in support of conventional antiaircraft and missile defenses.

The small-arms fire has two purposes.

First, it is designed to make United States low-level attacks increasingly hazardous. According to Hanoi residents, low-level bombing is frequently employed by United States planes in an effort to circumvent the radar and missile system.

Second, the firing of rifles gives the populace a feeling of participation and of fighting back—important in maintaining morale and counteracting the feelings of helplessness and defenselessness that civilian populations often experience.

The alert yesterday was only six or seven minutes long. It was caused, the authorities said, by the appearance of a pilotless American reconnaissance craft near the city. The three tremendous blasts presumably were SAM surface-to-air missiles. The same kind of robot plane, it was disclosed caused Hanoi's Christmas alert at almost the same hour.

Today the foreign press corps was taken to see where the drone that appeared on Christmas was shot down. They went on a convoy of half a dozen cars, most of them covered with camouflage fishnet, which quickly slides over the roof and hood and into which leaves and greenery can be slipped.

Hardly a car or truck moves outside Hanoi without camouflage, and most cars in the city are permanently bedecked. So, for that matter, are many people, who wear sprays of leaves and branches in their helmets or straw hats. This too is part of an organized, well-designed effort to reduce bombing hazards.

The caravan made its way northeast across the Paul Doumer Bridge. . It appeared, from this trip across the bridge, that bombing on Dec. 14 was directed at its approaches and fell short in each case, striking residential quarters. The bombs dropped in the Hoan Kiem and Gialem and Yenvien quarters.

Describing the Yenvien attack, an American communiqué said the target was rail yards. Some bombs certainly fell along the railroad. But there are large numbers of apartment houses close by, and one after another was blasted out.

Because of the highly organized repair facilities, rail traffic is moving normally, but residents who were not casualties have been compelled to leave their destroyed homes.

The drone downed on Christmas Day fell 12 or 13 miles northeast of the city in the Tienson district of Habac Province. It proved to be a Ryan model with a wingspread of about 18 feet that the Americans call the Firebee.

The wing and fuselage, somewhat crumpled, lay in a pile. Eight or nine girls dug in muck about seven feet deep for the engine, which was gradually being recovered.

The robot plane, which was shot down adjacent to the main rail line linking Hanoi to China, presumably had been dispatched to transmit photographic intelligence on rail conditions and traffic movements. According to the girls digging out the engine, the drone was at an altitude of only about a mile when downed.

The seriousness with which the North Vietnamese take the air threat has undoubtedly kept civilian casualties lower than might be expected in comparison with the vast damage said to have been done to ordinary living quarters and the destruction reported in small towns and villages.

The key to this is the manhole concrete shelter, which seems to be a North Vietnamese invention. There are hundreds of thousands of them along every highway and every city street, and they are still being put in place by the thousands.

At 5 o'clock the other morning I saw one lonely man patiently digging one in. They are made with concrete, exteriors like drain pipes, largely by hand. With their two-inch-thick concrete covers they are impervious to anything but a direct or very close hit.

The other factor reducing casualties and loss is dispersion. Everything dispersible has been dispersed. The countryside is strewn with dispersed goods and supplies. The same is true of the people.

Two-thirds of the machinery and workers at the big textile plant near Gialem have been sent to the countryside. The wisdom of the precaution was demonstrated, it was said, when the plant suffered damage from United States rocket fire Dec. 13 and 14.

[From the New York Times, Dec. 29, 1966]

NEW CAPITAL CITY PLANNED BY HANOI—NORTH VIETNAMESE ASSUME WAR WILL RUIN PRESENT ONE

(By Harrison E. Salisbury)

HANOI, NORTH VIETNAM, December 28.—Hanoi officials say they have blueprints for a complete new capital to be built after the war on a site already selected not far from the present capital. The new capital is being planned on the assumption that sooner or later Hanoi will be destroyed in the war.

President Ho Chi Minh has warned the country that it must be prepared to face the destruction of both Hanoi and its port, Haiphong, as well as all other cities or towns of any size.

The new capital will probably be built in any case, since the present city is small, shabby and incredibly run down after more than 20 years of almost continuous warfare involving the French, the Japanese and now the Americans.

Unlike most capitals of Communist countries, Hanoi has no massive new government buildings, no grandiose sports palaces, no glittering opera house. The old French-built opera house is still the city's biggest assembly hall, and it is closed now because the authorities forbid large gatherings for fear of air-raid casualties.

Such funds as have been available to North Vietnam in the war-torn years since it came into existence in 1954 have gone largely into factories and the construction of housing.

A visitor finds that shops are generally open for only a few hours early in the morning. Hanoi still rises at 5 or 6 A.M.—and again early in the evening.

Bicycles are almost the universal form of transport, and in late afternoon and early evening the streets are jammed eight abreast with whirring cycles, most of them carrying two persons or one person and a burden of some kind.

A consensus of officials suggests that about one-third of the city's population has been evacuated or dispersed to the nearby countryside. Many institutions have been evacuated. Most of the Polytechnic University's departments have been sent to the provinces. The Museum of Fine Arts was sent to out-of-town caves for the safe-keeping of most of its more valuable collections, including 14th-century Buddhas.

CHILDREN ARE EVACUATED

About half the walls of the museum, which is a relic of French days, is occupied by full-size photographic reproductions of the objects, which were sent away last year and early this year.

An intense effort has been made to send schoolchildren away from Hanoi, although not necessarily far. A visit to a high school at Xuandinh, about seven miles outside the capital, found 300 pupils from Hanoi in a body of 710. The evacuated youngsters include many whose parents are officials and workers in Hanoi.

The school provided an example of the intensive precautions against air attack. The school is dispersed throughout the village, with not more than one class in any building and no classes less than 150 yards apart.

The classes are installed in simple structures, including huts with earth floors. Foxhole shelters are dug right under the children's desks. The schoolrooms are surrounded by great walls of earth and clay and the network of paths from one class to another is edged with slit trenches, concrete manhole shelters and earth-packed lean-to shelters.

The children and many adults wear heavy, woven straw hats about an inch thick, that are said to be highly effective against fragmentation bombs. They also carry first-aid kits along with their books.

Xuandinh has not suffered from air attaks, but the authorities said several youngsters were injured Aug. 13 when they were buried in a shelter in a nearby village.

BASIS OF CASUALTY ESTIMATES

It should be noted, incidentally, that all casualty estimates and statistics in these dispatches are those of North Vietnamese officials.

However, descriptions of bomb damage are based wholly on visual inspection.

As far as this correspondent is aware, there has been no censorship of his dispatches although they are read by North Vietnamese officials before being transmitted. A number of photographs have been taken by this correspondent, and these must be cleared by officials before they can be mailed or otherwise transmitted.

Dispersion of population and enterprises has brought hardship and difficulty to individuals and to the economy. To ease supply problems, the distribution of foodstuffs and consumers goods has been decentralized and is controlled by provincial authorities. This is also designed to minimize the effect of any strikes on major depots in Hanoi and Haiphong.

The authorities contend that there has been little fluctuation in food prices although shortages have occurred. In the villages and in many places in Hanoi and vicinity, peasant women appear with their straw baskets of cabbages, cauliflower, lettuce, greens, leeks and other vegetables and squat beside them along the roadsides.

At this season there appears to be no shortages of vegetables. Restaurants, at least, have ample supplies of rice and all the ingredients of the spicy Vietnamese cookery—peppers, pork, chicken, turkey, beans, onions, bean sprouts, carrots, soy sauce, pepper sauce, delicate China tea and thick French-style cafe noir made from a coffee that North Vietnam grows and exports.

The Story of Frank Boyden of Deerfield

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. CONTE. Mr. Speaker, in the issue of the New Yorker magazine for March 19, 1966, there appeared a biographical profile of a most remarkable man, the world renowned headmaster of Deerfield Academy in Massachusetts, Mr. Frank Boyden. The article, written by a Deerfield alumnus, John McPhee, traced the long and productive life of Frank Boyden, now in his 86th year and the only headmaster Deerfield Academy has had in its 60-odd-year history.

I am privileged to count Frank Boyden among my good friends as well as my outstanding constituents. I am proud also to count Deerfield Academy among the many outstanding academic institutions located in the First Congressional District of Massachusetts.

I was delighted, therefore, to read the long and fascinating piece appearing in the New Yorker and, because there are so many notable men in public life today and in this very body who count their days at Deerfield as among the most important and rewarding of their lives, I was further pleased to insert the New Yorker article in the pages of the Congressional Record. In my judgment, the life and career of Frank Boyden is a superb example of the capacity for our free society to produce dedicated visionaries and to be able to profit from their endeavors.

Soon after the New Yorker article appeared, it was republished in book form by Farrar, Straus & Giroux. The book has now also been condensed and republished by the Reader's Digest magazine.

All this attention was bound to generate a book review sooner or later and, sure enough, the Washington Post, on December 27, 1966, did publish a fine review of "The Headmaster" by its book editor, Geoffrey A. Wolff.

Mr. Wolff, in addition to a technical review of author McPhee's efforts, provides some further and valuable insights to the subject himself, Frank Boyden.

Under unanimous-consent procedures, therefore, I am pleased to insert at this point in the Record the book review entitled "Go to Deerfield and Never Grow Up":

Go to Deerfield and Never Grow Up

(By Geoffrey A. Wolff)

Fifteen years ago, my parents were shopping around for a school to which to send me for my intellectual and moral edification. One ruled out of consideration was Deerfield Academy in Massachusetts. Deerfield seemed unpromising because its excellent reputation was so completely a function of its headmaster, Frank Boyden, and he was 71, had run the school since 1902 and it was thought that the repeated rumors of his impending retirement must finally be translated into fact.

He is now 87 and seems no closer to retirement than he was 15—or 50—years ago.

Deerfield is among the half dozen or so names that invariably are included on any list of America's best private schools: Exeter, Andover, Groton, St. Pauls, Choate and Deerfield. And among these it is *sui generis*.

While Andover and Exeter, largest and richest of the group, are sophisticated campuses which attempt to prepare students for college by imitating the freedom and high intellectual pressure of the university, Deerfield is famous for solid, but not brilliant, teaching, close parental-type supervision and its compulsory athletic program.

Unlike Groton and St. Pauls, it is not modelled after an English public school. Unlike Choate, it eschews pages of detailed regulations, violations of which account for a considerable body of alumni whose wedding notices announce that Mr. Jones "attended" (but was not graduated from) St. Grottlesex. Only five boys have been fired from Deerfield in 64 years. It has no student government, no faculty committees, no catalogue.

Instead it has Frank Boyden. He is a man of incredible ego whose conscience is so clear of guilt and whose consciousness so free of angst that we are told by McPhee that he can sleep anytime, anywhere and for so long as he pleases whenever he wishes. Nowhere in this rather adulatory history is the suspicion raised that there may be ways to educate and shape young men that are not Frank Boyden's ways.

McPhee gives us a headmaster who is devout, energetic, and canny, and who believes in the elementary verities. The school is his life: he corresponds with its graduates and advises them long after they have become grandfathers and board chairmen and college presidents.

His office is the central hallway of the main building and he sees each of his 500 students at least once a day. He is only 5-feet-4 but his presence is the central fact for those students.

Like Thomas Arnold of Rugby, Boyden is an autocrat. McPhee quotes him as calling himself "indestructible and infallible." He labels him elsewhere as a "magnanimous despot" and a "patriarch."

Until he was nearly 80 he was head coach of the football, basketball and baseball teams. He has never delegated authority: as McPhee relates it, "At Deerfield, all ranks between the five-star general and the noncommissioned officers are vacant."

What is frightening, as well as impressive, about such unchallenged rule is the dependency it creates. Boyden speaks in short, pithy sentences; his judgments are simplistic ones, unconditioned by doubts or alternatives.

McPhee, who wrote a complicated and sophisticated account of Bill Bradley, Princeton's recent basketball hero, seems to have been so greatly affected by the Boyden presence that his prose imitates his subject: his sentences are simple and often simplistic.

Boyden is acutely self-conscious of his school's image. His finely honed sense of *panache* extends to the careful selection of hearty, good-looking athletes to be the first students to emerge from buses on road trips.

He has a Dance Committee, made up of like ambassadors of ruddy good will which makes trips to various girls' schools to carry the banner of Deerfield's social eligibility. McPhee quotes one recent graduate as saying "We sometimes felt like signed postcards: 'You must come and see our school'."

For all he has accomplished, and he has unquestionably accomplished more than any headmaster in the history of this country, it is still probable that his school will change radically with his retirement, whenever in the next 100 or so years that may come.

And in a complicated world it is unnerving to hear a man who has successfully barred the 20th century from his school grounds quote with approval and certainty Harvard Dean Henry Pennypacker's dictum that "After a man is 30, he is going to settle most of his social and moral problems in terms of his training in secondary school."

Harrison E. Salisbury Reports From Hanoi—VI, VII

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, I am sure my colleagues will be interested in the articles by Harrison E. Salisbury from Hanoi, North Vietnam, which appeared in the New York Times on December 30 and 31, 1966. They follow:

[From the New York Times, Dec. 30, 1966]

Hanoi Propaganda Stresses Tradition: War Against Odds

(By Harrison E. Salisbury)

Hanoi, North Vietnam, December 29.—The Vietnamese fighting tradition, a tradition of struggle against long odds, of unyielding battle against powerful foreign enemies, is the focal point of North Vietnam's central internal propaganda. It is carried into every aspect of daily life.

At a concert presented in a chilly converted movie house last night, 12 of 14 song-and-dance numbers celebrated the heroic feats of individual Vietnamese against Americans. In each case the Vietnamese won against overwhelming odds.

One ballet depicted a group of ferry men who pulled their craft across a stream despite United States air attacks. Several were killed but the ferryboat crossed the river and the plane was shot down.

There were songs celebrating Hanoi's antiaircraft defenders, South Vietnamese jungle troops and the defenders of Conco Island, which lies off the coast not far north of the demarcation line between North and South Vietnam and has been the scene of intense antiaircraft barrages.

BINDING UP THE WOUNDS

Another dance number dealt with a Red Cross worker whose husband had fallen in the war and who takes from her brow the traditional white mourning band and uses it to bind up the wounds of an antiaircraft gunner. Still another ballet shows Vietcong troops storming a United States strongpoint and unfurling a banner after capturing it with heavy casualties.

One note of satire was introduced: A Vietcong youngster captured a horrible appearing American captain and chased off ferocious G.I.'s with an imitation hand grenade made of a jungle nut.

By the end of the evening the United States Air Force had suffered heavy losses, but it was notable that Vietnamese casualties were not light. The audience was being conditioned to accept heavy sacrifices in the war.

The audience, which included large numbers of youngsters wearing a variety of uniforms and semi-uniforms, reacted with vociferous applause. However, it did not seem to take too seriously a group of maidens in native costumes who sang, to the plucking of long-necked, three-stringed mandolins, that they were going to shoot down a United States plane and promptly announced that they had downed not one but two.

The theme of the Vietnamese David conquering the United States Golaith is struck constantly. The State Revolutionary Museum here is largely devoted to exposition of the Vietnamese military tradition.

TWO LEGENDARY QUEENS

The story begins in A.D. 40, when Vietnam's legendary Trung sisters raised an army against a Chinese garrison, slaughtered it and reigned as joint queens until a Chinese expenditionary force defeated them. The queens, who then took their own lives, are venerated as a kind of double Joan of Arc, with both religious and patriotic significance.

The next Vietnamese hero was Than Hung Dao, honored as the commander who defeated an invading force of 300,000 Mongols. Than's 31-year battle is much celebrated these days. So is the great victory of Nguren Tral in the 15th century against invading Chinese of the Ming Dynasty. A monument to his defeat still stands in Hanoi.

The Vietnamese frequently recall that the Chinese were defeated after a 10-year battle and, when they admitted defeat, were given food and assistance to return home. This exemplary tale is often recited to Americans.

The main line of the museum's theme really begins with the French take-over in the eighteen-seventies and the opening of the long struggle for Vietnamese independence, which is presented as a constant battle continuing to the present.

LIKE A CHAMBER OF HORRORS

The museum then becomes something like a chamber of horrors—an endless catalog of the cruelties and tortures inflicted on the Vietnamese and of the ingenious and terrible weapons by which they fought back.

From the earliest times the Vietnamese employed iron arrowheads with a fishhook configuration that are impossible to withdraw. They were used against the French, and now, it is said, are still used by hill tribesmen against the Americans. Jagged spikes were implanted in jungle trails to pierce the bare feet of troops. A similar, more complex trap, constructed of dozens of whirling, barbed hooks that bite into a soldiers legs in a dozen points when he crashes through its leafy cover, is used against the Americans.

The museum displays daggers used to kill French officers and disemboweling knives assertedly used against Vietnamese men and women.

There are also contemporary horrors—captured arms turned against the French and then against the Americans, as well as samples of bombs dropped in Vietnam and photos of the effects of napalm and air bombardment.

Most of the Hanoi institution visited have at least a small collection of bomb fragments or samples of United States aerial weaponry, including fragmentation bombs. Two varieties are displayed.

An older type known to the North Vietnamese as the pineapple, which was dropped with wind vanes and exploded on contact, has a yellow canister about the size of a coffee mug. This, the North Vietnamese say, is being replaced by a more efficient device known as a Guava, which is a small cylinder. Three hundred Guavas, dropped in a large canister, scatter and roll some distance, then explode, saturating 600 square yards with pellets.

A FADING DISTINCTION

In Hanoi's propaganda, distinctions between the French and the Americans virtually disappear. Thus the great Dienbienphu defeat of the French becomes a classic example of the ability of a small Vietnamese force to deal a shattering blow to a powerful foreign enemy. If the North Vietnamese only fight on, eventually another Dienbienphu will be achieved—so goes the official line.

Official after official insists that there is no alternative to the continuing struggle because otherwise freedom and independence will be lost, and, they say, it is better to die than to be enslaved.

[From the New York Times, Dec. 31, 1966]

No Military Targets, Namdinh Insists

(By Harrison E. Salisbury)

Hanoi, North Vietnam, December 30.—North Vietnamese sources said today that, as far as they are aware, a United States communiqué yesterday was the first to mention Namdinh as a bombing target. The communiqué said the Namdinh freight yards had been bombed.

[Arthur Sylvester, Assistant Secretary of Defense for Public Affairs, said in Washington Thursday that Namdinh had been mentioned three times as a target in communiqués from Saigon. He also said the targets in 64 attacks on the city were military ones.]

Namdinh, North Vietnam's third largest city, is about sixty miles south of Hanoi. Its population until recently was given by officials as a little more than 90,000.

REPEATED RAIDS ALLEGED

Namdinh has been repeatedly bombed since June 28, 1965, according to city officials. They contend that the city is essentially a cotton and silk textile center containing no military objectives.

It is the contention of city officials that, at least until yesterday's communiqué, the United States had never officially described Namdinh as having military objectives.

Are there or have there been military objectives in Namdinh? the railroad runs through town and presumably there are freight yards and depots.

There are a textile factory and a rice mill, both of which this correspondent saw. Both are operating, but the textile mill has been severely damaged.

There was also a silk mill, which officials said had been destroyed. There are a fruit-canning plant and a thread cooperative.

Whether the cannery is operative this correspondent cannot report since he did not see it and the officials did not say. They said the thread cooperative had been destroyed. I saw the main street, where the thread co-op was said to have been situated, and it is badly smashed up.

UNANSWERED QUESTIONS

About an agricultural-implement plant nothing was said except that it was one of the city's industries. Was it converted to war production? This correspondent cannot say. Are there other war plants in town? This correspondent cannot say.

He saw intensive destruction of civilian housing and ordinary business streets in considerable areas—damage so severe that whole blocks have been abandoned. These areas lie largely but not entirely in the vicinity of the textile plant. There is severe damage all over town.

The bombed areas of Namdinh possess an appearance familiar to anyone who saw blitzed London, devastated Berlin and Warsaw, or smashed Soviet cities like Stalingrad and Kharkov. The effects of bombing at ground level seem to have changed little since World War II.

How was the destruction of Namdinh accomplished? The data on the bombings come from city officials, who have an elaborate dossier of times, dates, places, numbers of planes, casualties, houses destroyed, and so on.

OTHER PLANES MENTIONED

They contend that Seventh Fleet bombers carried out the most persistent and destructive of the raids, but they did not say that only the Seventh Fleet was involved. They listed strikes by F–105's and F–4's, RB–57's, A–4A's, A–6A's and A–3J's.

According to the officials, the first serious attack was that on Hang Thao (Silk Street) at about 6:30 A.M. on April 14 by two low-flying United States planes of unspecified type that dropped eight mark 84, bombs. Casualties in this attack were put at 49 killed, and 135 wounded, with 240 houses demolished.

The officials said the casualty rate was sharply reduced because only 2300 of the normal population of 17,680 remained there, the rest having been evacuated.

The officials contend an attack was made on nearby Hoang Van Thu Street, formerly the Chinese quarter, on May 18. This attack, they say, was carried out by two F–4H's from an altitude of about 1,800 feet at 11:04 A.M. in heavy rain, which had flooded many raid shelters. Casualties were put at 13 dead, including a number drowned, and 11 wounded, and 372 houses were listed as destroyed. Only 230 of the normal population of 7,858 remained in the street, the others having been evacuated.

Regarding the question whether United States planes deliberately attempted to breach the Black River dikes, the city officials contend that on May 31 and July 14 six bombs were dropped on a mile-long section of the dike, causing a number of breaches.

There were other raids on July 20 and July 31, they say, and a large number of near misses at other times.

The damage has been repaired the officials say. However, bomb craters are still visible.

[The United States insists that no effort has been made to breach dikes, though it is conceded that they may have been hit accidentally.]

ATTACKS CALLED DELIBERATE

The Namdinh officials think the attacks were deliberate. The dikes are in the open area outside the city with no recognizable targets in the surrounding landscape, at least at this time.

In any event, officials take the view that the Americans will breach the dikes and are expending tens of thousands of man-hours building emergency supplementary dikes, which snake through the city itself, as well as massive secondary reinforcing earthworks outside the city.

The question of dikes is a question of life and death in this Red River delta. In the high-water season Hanoi lies possibly 20 feet below river level and most of the countryside would be inundated, with the ruin of crops and enormous loss of life should the dikes be blasted.

Vivid in North Vietnamese memories is the 1945 flood, when the dikes burst partly as a result of Japanese action. In the resulting disaster of flood, crop failure and famine, it is estimated, 1.5 million to 2 million lives were lost.

[From the New York Times, Dec. 31, 1966]

PROBLEMS OF COVERAGE

(NOTE.—*In the following dispatch, Mr. Salisbury describes how he arranged to get to Hanoi and the conditions under which he is working there.*)

HANOI, December 30.—To a correspondent with years of experience in Communist countries, reporting from Hanoi has many familiar aspects. But the fact that the reporter is behind enemy lines in a real, if undeclared, war gives the experience a special atmosphere.

The first problem in reporting from North Vietnam is of course, to get there. The effort to win Hanoi's permission for a visit began nearly 18 months ago and was pursued systematically through a number of channels.

The effort was intensified just a year ago when the fact that Hanoi had permitted a visit by Prof. Staughton Lynd of Yale University suggested that a reporting opportunity might be ripe. However, telegrams and letters to North Vietnamese officials produced no response then.

The endeavor was renewed last spring as a preliminary to a long trip around the perimeter of Communist China. In the hope that representations on the spot in Asia might bring a favorable response, this correspondent had his passport and that of his wife, who acocmpanied him then, cleared by the State Department for travel to North Vietnam, China and North Korea.

VISA AVAILABLE IN PARIS

In June Hanoi indicated that it might be possible to make the trip, but, after hesitation, North Vietnamese officials advised that the time was not convenient but would probably be before the end of the year. After that there was nothing to do but wait and send frequent reminders of continuing interest.

The break finally came just before Christmas, when North Vietnam advised that a visa could be picked up in Paris .

Another problem in covering Hanoi, for an American journalist, is getting here. Communist China is issuing no transit visas for United States newsmen. The sole entry route for them is on the once-weekly plane of the International Control Commission, which flies the Saigon-Pnompenh-Vientiane-Hanoi route.

I picked up my North Vietnamese visa in Paris Dec. 20 and boarded the Hanoi plane in Pnompenh Dec. 23, arriving at 7:30 P.M.

Details of coverage have been handled about as they would be for a correspondent visiting an Eastern European country a few years ago. Interviews, trips and visits are arranged by the Foreign Ministry's press department.

The first request submitted was for an opportunity to inspect sites in Hanoi that it was reported United States planes bombed on Dec. 13 and 14. The Foreign Ministry made a car and interpreter available and sent the party to streets where damage had occurred.

On the question of pictures, it was said that black and white film could be shot but not color film, apparently since facilities for developing color were not available. All film must be developed here for inspection by the military authorities. No photos taken by this correspondent have been held up so far.

ONE REQUEST REFUSED

Permission to take a picture has been refused only once—by the director of a textile factory in Hanoi who did not want photos of his girls working at their looms. In this case the objection seemed bureaucratic rather than military.

Again because of the sensitive position behind the lines, this correspondent asked in general terms to be shown around the country where the authorities would permit. A trip to Namdinh on Christmas Day was the fruit of such a request.

Most trips are made with one or another correspondent. With the exception of the Agence France Presse man, all the others here are from either Communist countries or the Communist or left-wing press. There are always interpreters or Foreign Ministry or press officials accompanying the press parties.

Dispatches are submitted to the cable office through the Foreign Ministry, which obviously reads them before transmission but, as far as is known, has not censored anything.

HAZARDS OF BOMBING

These procedures are about what one would encounter on brief trips to many Communist countries. The authorities are not willing to expose a correspondent to the hazards of bombing, which are only too real outside Hanoi. Even for a trip of six or seven miles outside the city, cars are camouflaged.

The trip to Namdinh was deliberately timed for the Christmas truce and would not have been made otherwise.

Hanoi's Western colony is small. There is a French representative who is something like a consul. There is the Canadian component of the Control Commission, which is assigned to enforce the Geneva agreements on Vietnam. There is also a scattering of non-Communist diplomats, including the Indian consul general and the Indian component of the Control Commission, which also has Polish members.

There are two hotels populated generally by foreigners, including a mixture of Eastern Europeans, visiting delegations and representatives of Asian and African countries.

Hanoi is not exactly a swinging town, but there is more bounce to it than one American at least had foreseen.

Lindsay Hoben: A Truly Great American Journalist

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. REUSS. Mr. Speaker, the integrity, the independence, and the forward-looking approach to the news that together have made the Milwaukee Journal one of the truly great American newspapers are a fitting memorial to Lindsay Hoben, who died Sunday, January 8, a week after he retired as its editor and vice president.

A product of the Journal organization, Mr. Hoben's career spanned 40 years of dedication, not only to his profession, but to the community, the State, and the Nation. His sound judgment, wise leadership, and keen sense of truth and justice, have left a permanent mark on both the contents of the Journal and the staff that produces it.

Although Mr. Hoben's death leaves a void that will be difficult to fill, his foresight in educating and training younger executives for the responsibilities that lie ahead bodes well for the future of the Milwaukee Journal. That too is a great tribute to Mr. Hoben.

He joined the Journal staff as a church writer in 1926. Later he toured much of the world, and was one of the first American newspapermen to visit the Soviet Union. His knowledge of local, national, and world affairs eventually led him into the editorial writing field. He became chief editorial writer in 1949. Many felt the sting of his penetrating analysis of the news, yet he was respected equally by friends and critics.

Mr. Hoben was a product of the great traditions and accomplishments of the Milwaukee Journal. Just as surely, those who follow will be a tribute to the genius and ability of Mr. Hoben.

How Armed Citizens Aided Austin Police

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an excellent editorial appearing in the Trenton, Mich., Times, an outstanding weekly newspaper published in the 16th District of Michigan, discussing the honorable action of citizens assisting law enforcement agencies in the apprehension of a dangerous and deranged sniper.

This splendid editorial chronicles how law-abiding armed citizens aided Austin police in the prevention of more hazards to other law-abiding citizens. The editorial is as follows:

HOW ARMED CITIZENS AIDED AUSTIN POLICE

Among the obstacles to countering Charles J. Whitman's deadly fire from atop the University of Texas tower at Austin was a determined lady librarian who threatened to revoke a student's library card because he wanted access to a vantage point for firing his carbine.

That incident, reflecting campus shock and disbelief over the whole episode, figures in hitherto unpublished aspects of the Austin case in the November issue of the American Rifleman, magazine of the National Rifle Association. A special report relates the service rendered by three armed citizens, two students and an ex-serviceman then employed at the university, in cornering the crazed mass killer.

The students, James M. Damon, of Austin, studying for a Ph.D. in Comparative Literature, and Robert A. MacQuigg, of Dallas, a native of Canton, Ohio, both were walking to meet their wives nearby for lunch when Whitman opened up. Both sped home for arms.

Damon fired probably the first rifle shot at Whitman, helping to drive him behind the tower parapet and disrupting his accuracy. Later when Damon sought access to a roof patio as a better firing point, a librarian temporarily turned him back. MacQuigg, a biology graduate now at Naval Officer Training School at Newport, R.I., joined in the firing and sent one shot close over Whitman's head when the sniper reached for an ammunition box on the parapet.

Allen Crum, the ex-serviceman who courageously went to the top of the tower after Whitman with three policemen, is quoted by the magazine as saying: "This ground fire was a Godsent to us, inasmuch as it pinned Whitman down in one spot, on the west wall. The right of the private citizen to bear arms was never more graphically demonstrated.

The two students, using military surplus arms, fired 35 and 31 rounds respectively. Theirs, the magazine said editorially, was part of the ground fire that "neutralized the sniper within 30 minutes and held him virtually harmless for an hour, until he was killed."

Whitman inflicted nearly all of his casualties in the first 20 minutes, the magazine said, because few on the campus readily recognized the report of a high-powered rifle and the shots echoed until it was hard to tell where they came from or how to avoid them. Damon in his account said, "People flocked to see a killing and this curiosity literally cost several of them their lives. Most could have escaped injury if they had not been ignorant of what a skilled shooter can do with a modern telescoped rifle; yet many people consider this ignorance of firearms a virtue."

Commenting on the actions of Austin's armed citizens, Police Chief Robert Miles said, "They did it on their own. I don't want to condemn their action because their fire did help to pin him down. And most important, it was not irresponsible shooting. They shot only at the tower."

Harrison E. Salisbury Reports From Hanoi—VIII, IX

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, as the new year opened, the New York Times continued to publish the series of articles by Harrison E. Salisbury from North Vietnam. I wish to call my colleagues' attention to the articles which appeared in the issue of January 1 and January 2, 1967. They follow:

[From the New York Times, January 1, 1967]

North's Economy Badly Disrupted—Despite Big Drain, It Seems Able to Continue War

(By Harrison E. Salisbury)

Hanoi, North Vietnam, December 31.—The North Vietnamese agree that the conflict in Vietnam is a rough affair for them.

Every official interviewed stresses the difficulties, handicaps and hardships that must be overcome to carry on in the face of American bombing.

A collossal number of man-hours must be devoted to the transport of goods and supplies, to the repair of bombed railroads, highways and bridges, and to the dispersal of goods, people and industries over the countryside.

Effects on industry and agriculture are inevitable, but no precise statistics are available, possibly because they are regarded as military secrets. One official estimated food production last year at 6 per cent above 1964, but he had no figures for 1966.

Eastern Europeans here say the rice crop has fallen short by a substantial margin, largely because of bad weather but possibly in part because of a diversion of men and women to the war effort. The result is expected to be additional rice imports from Communist China and the Soviet Union, probably mostly from China.

Food is rationed and thus far, according to foreign sources, supplies have apparently been maintained. The rice ration ranges from 13.5 to 20 kilograms (29.7 to 44 pounds) a month, supplied at a low, fixed price. In December 10 per cent of the ration was provided in maize.

There is a monthly ration of half a kilo to a kilo of sugar and about the same for meat, which may be provided in the form of butter and fat. Vegetables and fruits are available in peasant markets, as are some chicken and other meats.

It is the conviction of non-Vietnamese that as long as the Communist Government is able to maintain the rice ration at about the present level, the ability of the populace to sustain the fighting effort will be unaffected.

The question of distribution is serious because of United States bombing of supply routes, but is being met at least in part by radical decentralization.

Observers from Eastern Europe who have been resident in Hanoi for a year or two concur that there has been a decline in the living standard in the last year and that the American bombing has had a serious impact on North Vietnamese industry despite valiant efforts to keep factories going.

In this connection, they point out that North Vietnamese industry never was extensive and that the general level of the economy was not dependent on advanced technology and comforts. The life of the Vietnamese is hard, but the Eastern Europeans say it has always been hard, so that the deterioration is not really tangible.

The Government has reduced prices on a handful of consumer goods, notably bicycles, which have been cut 30 per cent to 200 dongs (the dong is nominally valued at 3.53 to the dollar and there is no free rate). Bicycles, which are manufactured in North Vietnam, are vital to every aspect of life.

There has been a 50 per cent cut in the cost of medical supplies and pharmaceuticals, 30 per cent in radios, to bring their price to 100 to 200 dongs, and 50 per cent in school textbooks, but none of these have much effect on every-day life.

As far as interdiction of supply movement by American bombing of highways, railroads, supply depots, bridges and rail yards is concerned, discrepancies between United States estimates and ground-level observations will undoubtedly continue. Essentially the same argument raged all through World War II and was repeated in the Korean war, which provided conditions more nearly parallel to those in North Vietnam.

Korea demonstrated that, by the liberal use of manpower, night transport and multiple routes, amazing quantities of materials could be moved in the face of the heaviest bombing. North Vietnamese conditions are somewhat more difficult for ground movement, however, because so much must be transported across the flat delta region around Hanoi and Haiphong.

That is no easy task in view of United States air strength. It requires an enormous concentration of manpower, and the North has a population of only 17 million.

This population is almost totally organized. Even foreign embassys' cooks and maids must devote at least two of their free days to Government work each month. Children spend about a third of their time on studies, a third on defense or defense-related tasks and a third on farm or industrial production.

The same sort of utilization of labor runs across the board. In July, according to an official announcement, a million men and women were mobilized. They are used on defense, civil defense and labor tasks such as repair of railroads and emergency dikes.

It is no secret that for months almost all supply and personnel movements have been, as in Korea, only at night.

What happens when a bridge is knocked out by bombing? One non-Communist diplomat described a particular bridge between Hanoi and Haiphong that, to his knowledge, has been knocked out and quickly restored four times. Pontoon ferries of boats and bamboo are kept available and put into service within a short time. A labor force appears and goes to work with previously stockpiled materials to put the bridge back into service.

Another non-Communist source told of passing through Vandien, which is on the southern outskirts of Hanoi, and has been specified by United States communiqués as the site of a truck park that has been attacked several times. The foreigner reached Vandien a couple of hours after a raid, he said, and found about a quarter-mile of railroad track plowed up by bombs. By the time he departed, he added, 1,000 men and women were at work and had already relaid a substantial section of the track.

One key favor in North Vietnam's ability to fight on lies in the aid poured in by the Soviet Union, Eastern European countries and China. The quantities are closely guarded military secrets, but it is no secret that they are large and vital to the maintenance of the war effort.

Westerners who have visited Haiphong recently agree with Eastern Europeans that the port is jammed with shipping carrying huge quantities of essential supplies.

There has been no bombing of the Haiphong port area. One Westerner said the city was untouched and that the attacks on oil depots there had been precise and effective.

The great quantities of supplies and, presumably, arms are moved out of Haiphong into the countryside. It is certainly true, as a British observer, Norman Barrymaine, has reported, that quantities of material are scattered over the landscape. This is particularly visible at distances from Hanoi.

To this observer it looked like deliberate dispersion. Half the supplies in the country seemed to this correspondent to be dumped at random. However, they looked normal for wartime military dispersion.

The basic question would seem to be: Has all this hurt the North Vietnamese so much that they are ready to quit? Their answer is, "By no means!" And they say that they expect their task to get a lot harder before it gets easier.

[From the New York Times, Jan. 2, 1967]

Villagers Tell of Raids in North—Bombing and Strafing Are Reported in Phatdiem

(By Harrison E. Salisbury)

Phatdiem, North Vietnam, January 1.—A cock's crow and the back of a village dog brought the new year in to this rich delta land in Ninhbinh Province 75 miles south of Hanoi, and at 6 A.M. the iron toll of church bells called the faithfull to early mass.

Phatdiem is a complex of Roman Catholic villages lying six miles from the Gulf of Tonkin. Jesuits brought the faith to this region in the 17th century and it has never died out. From the doorstep of the Anhoa commune's administrative committee building, five church towers loom up over the landscape like a kind of tropical Millet painting.

It was peaceful in the Phatdiem area today. The Rev. Nguyen The Vi was busy from morning to night celebrating mass in a number of village churches. The big central cathedrals are no longer used, he said, because of danger to the congregations from air attacks.

In village streets peasants laid out their straw in bundles for thatching. It was chilly in the early morning but the sun finally made an appearance to dry out the straw.

On hardearth courtyards women spilled out rice to thresh and clean. On wattle fences rattan for basket weaving was set out to dry after it had been dipped in dye of maroon and deep green.

The village barber set out his chair and proceeded to give customers shaves and haircuts in the open air. Youngsters herded great gray water buffalo and women heated kettles for rice, which is the area's great crop—rice so tasty that here it is known as the "rice of the kings."

CANDLE USED IN CHURCH

The atmosphere seemed peaceful in Phatdiem because the New Year's truce was in effect and residents did not expect planes to be flying overhead. When Father Vi returned to his parish house after his rounds about 7 P.M., he lighted a kerosene lamp and turned the wick up with pleasure, saying: "Ordinary nights we can't have light like this. We can only use a tiny candle. That's what we use in church as well."

Phatdiem is a heavily populated area. Behind every wattle fence three or four little brown faces appear to stare at the tall American visitor. In every thatched hut there seem to be at least a half dozen people.

This complex of villages lies southeast of Ninhbinh and south of Namdinh. Ninhbinh and Namdinh, provincial centers on a railroad, have attracted great attention from the Seventh Fleet, according to local authorities.

According to Phatdiem residents, Seventh Fleet bombers frequently come in low over the coastline and, flying westward, bomb and strafe Phatdiem. Sometimes, the residents say, the planes come in from the west and bomb and strafe. The map suggests that bombers might be on runs to and from Ninhbinh and Namdinh if they cross over Phatdiem.

Phatdiem has no visible military objectives. That is not to say that there may not be antiaircraft sites in the vicinity or military barracks or supply barns.

SOME CHURCHES DAMAGED

A half dozen Catholic churches in the village complex have been damaged, some severely. Speaking sadly of the destruction, Father VI said that many churches in the Ninhbinh region had been built with the aid of contributions from Roman Catholics in the United States.

There is a cemetery in Ninhbinh that, he said, Americans had helped to maintain. Two nuns who were killed in some earlier Vietnam war are buried there, he said.

The cemetery has been damaged and the nuns' grave and monument smashed. The priest expressed the hope that there might be fellow members of his faith in the United States, who might sympathize with Phatdiem's time of trouble.

The principal part of the town, which is laid out along a canal in front of Phatdiem Cathedral, has been abandoned, residents say, because of the frequency of bombings.

Phatdiem's main street fronted on the canal and was lined mostly with one-story shops and a few two-story residences. Across the canal, and connected to it by a footbridge more than a hundred years old, was a movie house.

In the district as a whole, officials said, there have been more than 150 attacks since 1965. They said the worst raid in the village complex was on Kientiung village April 24, in which 72 persons were listed as killed and 46 as injured.

Fourteen were killed, according to the authorities, in an attack Nov. 20. Vu Cat, chairman of the Roman Catholic community, said he was in church when the bombers came. He rushed back, he said, to find his wife and five of his children dead. One boy of 4 who survived was wounded and a 16-year-old boy who was tending a water buffalo was not hurt.

The 4-year-old is still in a hospital, one leg badly injured and the other amputated. Also in the hospital are Than Van Mui, 12, who lost part of a foot and most of one hand, and a woman who has lost her voice because of a neck wound.

The hospital has been dispersed into half a dozen thatched huts around the countryside. Authorities say it is too dangerous to occupy and is not a substantial building. Most such buildings in the region, they say, have been hit by bombs.

Save the New Metropolitan Opera Company Instead of the Old Opera House

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Record, I include a letter I have addressed to the Honorable Anthony J. Travia, speaker of the New York State Assembly, on Thursday, January 5, 1967. The text of the letter follows:

Dear Mr. Speaker: Because you are a devotee of opera and Speaker of the New York State Assembly, this letter is written to you.

The Court of Appeals of our State has declared unconstitutional a law, passed by the Legislature at its last session, aimed at preventing the demolition of the Old Metropolitan Opera House. During the period that this Statute was considered by the Legislature and reviewed by the Courts—from the Supreme Court to the Court of Appeals—this sole asset of the Metropolitan Opera Company was frozen. The Opera Company could not exercise full control over this property on Broadway at 39th and 40th Streets, Borough of Manhattan. It could not use it for security to meet its current financial difficulties. It faces a deficit of staggering sum. About $500,000 annually, to be used to reduce its current deficit, may be lost to the Metropolitan Opera Company unless it can go forth with its contract of sale of this old structure. Most of us, who are subscribers to seats at the Opera have liberally contributed towards making up this deficit. Many others have made contributions, but the deficit still lingers.

It would be impossible to operate two huge Opera Houses in New York City on any profitable basis. The Old Opera House could not possibly compete with the New House at Lincoln Center. Oscar Hammerstein, some years ago, tried to operate a second Opera House on West 34th Street—the Manhattan Opera. He woefully failed. Even the glittering operatic stars that Hammerstein gathered together could not make the venture pay. A similar fate awaits any new attempt to salvage the Old Metropolitan Opera House.

It is said that ballet, Comic Opera as well as Grand Opera, concerts, and orchestras could perform there. But could it be done profitably? Town Hall, Carnegie Hall, the Lincoln State Theatre, City Center Theatre, Philharmonic Hall, Madison Square Garden, many theatres, and hotel ballrooms would all compete.

It would cost a King's ransom to recondition and air-condition the Old House. Where is the money to come from?

Although I understand full well the objectives of those who seek to extend cultural activities in New York City, I do not believe that the so-called "Old Met Committee" is anxious to provide additional facilities. If they were, they would contribute to the new Metropolitan Opera House instead of seeking to preserve, for sentimental reasons, an ugly, outmoded, and by now, dilapidated building. I believe the enthusiasm of the members of this Committee is misguided.

Undoubtedly, a bill or bills will be offered to replace the Statute declared unconstitutional. In the interest of the aesthetic and cultural values of New York City and in the interest of strengthened opera, as now produced at Lincoln Center, I urge your opposition to any legislation that would interfere with the legitimate use by the Metropolitan Company of its asset, namely, the Old Opera House on Broadway.

Very truly yours,

Emanuel Celler.

Grim Choices in Southern Africa

EXTENSION OF REMARKS

OF

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. FRASER. Mr. Speaker, one of the most perceptive articles written about the explosive situation in Rhodesia in recent weeks appeared in the December 7 New York Times. The article was written by Drew Middleton, the Times correspondent at the United Nations.

Although Mr. Middleton's observations were made a week before the U.N. Security Council approved economic sanctions against Rhodesia, many facts in the article remain pertinent. Predictably, Britain did not seek sanctions against South Africa. And—again predictably, I think—the sanctions against the Ian Smith regime in Rhodesia will be insufficient to topple the regime, as Mr. Middleton's ambassadorial informants indicated.

Because the United Nations, with U.S. support, has not taken firm enough action against Smith, black Africans, who now bear the responsibility for effective action, face the grim choices of using force or seeking help from the East instead of the West. These opinions are attributed to African diplomats.

The potentials in southern Africa are summarized in this frightening sentence:

> Veteran diplomats, not prone to exaggeration, consequently saw the Rhodesian action as a torch laid to the trail of gunpowder that can explode the whole racial situation in southern Africa.

It is the obligation of the United Nations and the United States to do everything possible to avoid that explosion. So far we have not done enough.

Following is the full Times article:

West May Lose Trust of Africans if Sanctions Fail To Curb Rhodesia

(By Drew Middleton)

United Nations, N.Y., December 6.—At the Salisbury Club bar one day last spring a Rhodesian Tobacco planter slapped a South African business man on the back. "As long as they don't dare touch you, chum," he said, "we'll get by."

This sentiment was echoed in more formal terms today by many ambassadors, European and North American as well as African, as news circulated of Rhodesia's rejection of Britain's terms for a settlement of their quarrel.

The ambassadors are convinced that Britain will not ask for the application of selective, mandatory, economic sanctions against South Africa in the Security Council and that, as a consequence, the sanctions it seeks, and may get against Rhodesia, will be insufficient to bring down Ian D. Smith's independent regime.

No ambassador, of 22 questioned, believed that the United States would support the application of sanctions against South Africa although it was agreed that the American Administration would back sanctions directed against Rhodesia alone.

Veteran diplomats, not prone to exaggeration, consequently saw the Rhodesian action as a torch laid to the trail of gunpowder that can explode the whole racial situation in southern Africa.

Rhodesia is the touchstone of a continuing crisis that extends from Mozambique, the Portuguese territory facing the Indian Ocean, westward through Rhodesia and South Africa to South-West Africa and Angola, Portugal's West African territory.

The outcome of the Rhodesian dispute will also affect, as President Kenneth Kaunda of neighboring Zambia warned last month, the continued tolerance by black African societies of the white minorities that exist and flourish in Zambia, Kenya, Tanzania, Nigeria and half a dozen other countries of central and west Africa.

The Zambians have done their best to encourage rebellion against Mr. Smith, although Mr. Kaunda is basically a man of peace who hopes for a rational solution of an issue that now appears to have developed beyond a negotiated solution.

The widely expected refusal by Britain to go all the way and call for economic sanctions against South Africa, will place the responsibility for effective action upon the black Africans. For if they believe, as they say they do, that sanctions on Rhodesia will be ineffective, that neither the Americans nor the British will apply sanctions against South Africa and that the British will not use force, the ball is in their court.

Can the black Africans organize and use force? Some African diplomats believe this is possible. But they are in a minority. In the Organization of African Unity, veterans of the Old Britsh and French colonial armies contend that black Africa does not have the trained soldiers, the equipment, particularly in the communications field, the gasoline or the coherent command to launch an attack on a well-trained, fervent Rhodesian military force.

The other choice for black Africa is one that few of its leaders would take. It is to abandon hope of help from the West, which means Britain and the United States in the Security Council, and turn to the East. Both the Russia and Chinese Communist parties have done their best to exploit African feelings about Rhodesia and its associated problems in Southern Africa.

But there appears to be scant desire in the key African countries to call in the East to redress the failure of the West.

The long-term view, which may be as valid now as it was last April, was put by a young British intelligence officer then in Dar es Salaam:

"If we don't do anything on Rhodesia, and that's you Yanks as well as us, and the Africans can't do anything, we're both finished in Africa. I don't mean they'll go to the Commies right away. But if we don't help them, it'll be the Commies they listen to in the future. And it won't matter if Barclays Bank is lending them money or the Agency for International Development is helping them build waterworks. If we can't help on Rhodesia, we're through."

Harrison E. Salisbury Reports From Hanoi—X

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, I have been bringing to the attention of my colleagues the series of articles written from Hanoi, North Vietnam, by Harrison E. Salisbury, the Pulitzer Prize winning managing editor of the New York Times. In the New York Times of January 4, 1967, Mr. Salisbury reported on his discussion with Premier Pham Van Dong of North Vietnam. I am sure that his report on his conversation with the North Vietnamese Premier will be of great interest to my colleagues, and I include it at this point in the RECORD:

[From the New York Times, Jan. 4, 1967]

PHAM VAN DONG PLACES STRESS IN INTERVIEW ON ENDING THE FIGHTING

(By Harrison E. Salisbury)

HANOI, NORTH VIETNAM, January 3.—In a detailed discussion of North Vietnam's views on the war in Vietnam, Premier Pham Van Dong emphasized that once hostilities were brought to an end, it would be possible to "speak of other things."

"The moment the United States puts an end to the war, we will respect each other and settle every question," he said. "Why don't you [the United States] think that way?"

At another point, he said that with a cessation of hostilities, "we can speak about other things." He added: "After this there will be no lack of generosity on our part—you may be sure of that."

The Premier, who conducted the four-hour conversation in a reception room of the Presidential Palace, spoke vivaciously, swinging around in his chair to face his interviewer directly.

He said that he did not care for interviews because he thought they hampered a free exchange of opinions. He took as a framework for his remarks a series of questions put to him by the correspondent in advance, but these were merely take-off points in a wide-ranging discussion.

The Premier also took the occasion to discuss proposals from various quarters for bringing the war to an end by discussion. He appeared thoroughly aware of the wide variety of proposals that have been advanced, and did not hesitate to express his views on some questions privately.

The discussion closed on an optimistic note. Mr. Dong said that frank talk was a good thing and was essential to understanding.

"If we do not agree today we will agree tomorrow," he said. "Otherwise the day after tomorrow."

At the same time the Premier stressed again and again that North Vietnam was prepared to fight 10 years, 20 years, or any number of years in support of its sovereignty and independence in its "sacred war."

"We are determined to fight on until our sacred rights are recognized," he said, stressing Vietnam's valiant history in resisting invaders.

Three times the Vietnamese drove the Mongols out of their country, he recalled, and he asked how many times the Pentagon wanted to fight.

"We are an independent country," he said. "We have our policy of independence and sovereignty. We are masters of our destiny, of our affairs, of our policy, of our policy both major and minor. If we were not independent we could not wage such a war as we are now waging. We are independent and sovereign in all our foreign policy. That is the situation up to the present, and so it will be in the future."

He stressed Vietnam's independence, he said, because in the United States "there has been so much misunderstanding on this point."

One question submitted to him was: Under what circumstances North Vietnam would accept volunteers? The Premier replied:

"This depends on the situation. We have made preparations. Volunteers are not lacking—volunteers for the armed forces and civilians as well. If we need them, many will come. This is an important point on which we rely. This point also shows the independence of our foreign policy."

By this he presumably meant that volunteers would come only if North Vietnam asked for them and set the conditions for their coming.

Premier Dong entered into an extended discussion of Hanoi's four-points for ending the war, which are as follows:

Recognition of the independence, sovereignty, unity and territorial integrity of Vietnam, and the withdrawal of United States forces from the area; pending reunification of Vietnam, respect for the military provisions of the Geneva agreements barring foreign forces; settlement of South Vietnam's internal affairs by the South Vietnamese under the guidance of the National Liberation Front and peaceful reunification of Vietnam by the peoples of North and South without foreign interference.

The Premier stressed that the four points were not to be considered as "conditions" for peace talks. He described them as providing a "basis of settlement of the Vietnam problem." He said they were to be understood as "valid conclusions for discussion."

"The big question," he added, "is to reach a settlement which can be enforced."

"The party which has to make first steps is Washington," he continued. "We have no doubt on this point. We cannot press history forward. If this does not come about today, it will come tomorrow. It's no use to make haste. If we show haste, the question will be put wrongly and we will have to wait again. So let the situation ripen."

Mr. Dong said he thought the most difficult of Hanoi's points for the United States to accept was the third, concerning South Vietnam. On this, he said, the North fully supports the Communist-led Liberation Front, the political arm of the Vietcong, and nothing can divide the two parts of the country. However, he thought actual reunification would not be a sudden process and he said there was no intention in the North to annex the South.

"We will consider this among ourselves," he said. "We will settle it by the most convenient means. There is no rush about it."

As to how long the war might go on if unresolved by negotiation, he said:

"We are prepared for a long war because a people's war must be a long war, a war against aggression has to be a long war. Nobody knows how long it will be. It lasts until there is no more aggression.

"We are preparing for that kind of war. Everyone of our citizens thinks like that. This is the kind of question often put to us by foreigners because they don't understand."

"This kind of question surprises us," the Premier commented. "How many years? What I used to tell our friends was that the younger generation will fight better than we—even kids just so high. They are preparing themselves. That's the situation.

"I'm not telling that to impress anyone. It's the truth. It's the logical consequence of the situation. Our Vietnam nation is a very proud nation. Our history is one of a very proud nation."

"How many years the war goes on depends on you and not on us," he added.

A repeatedly emphasized point was that the determining aspect lay not in American material superiority but in the fact that the Vietnamese fought for "independence, freedom, for life itself." The Premier said that the war "stands for everything for this generation and for future generations."

He conceded that this determination on the part of the Vietnamese was difficult to understand, not only for Americans but for many of North Vietnam's friends in Europe who did not see how the North Vietnamese could withstand an American expeditionary force well equipped with weapons and the nearby Seventh Fleet.

Now, however, he said, the North Vietnamese are able to demonstrate to their friends their ability to stand up to American material force.

"I have no hope of convincing you on this point," he added, "but I must tell it to you because it is very important."

Premier Dong based his presentation on an analysis that found the North Vietnamese position one of strength, not weakness. He said Saigon and Washington did not agree with this analysis, but suggested that perhaps they would in the future. The bombing of the North, in his view, has on balance proved a military failure.

It has caused severe damage, he said, but it has not compelled the North to capitulate. On the contrary, he indicated, northern military strength has increased and will continue to do so after passing through a most difficult period.

The key factor in this, Mr. Dong said, is the courageous strength of North Vietnamese youth. He said three million had volunteered for the army.

The economic aspects of bombing have been overcome, he said, and the country is in a position to continue the war and expand its potential.

He insisted that the situation in the South had turned very favorably for the Vietcong and he particularly stressed political weakness in Saigon where, he said, intensification of the political struggle against the regime was to be expected.

Noteworthy Sermon by Rabbi Jacob J. Weinstein

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. O'HARA of Illinois. Mr. Speaker, it is my pleasure and my pride to number among my constituents Rabbi Jacob J. Weinstein of K.A.M. Temple, Chicago. The Honorable Arthur J. Goldberg, permanent Ambassador to the United Nations, Dr. Hans Morgenthau, famed member of the faculty of the University of Chicago, and Judge David L. Bazelon, chief judge of the U.S. Court of Appeals for the District of Columbia Circuit, are members of his congregation as are State Representative Robert Mann, former State Representative Abner Mikva, and Alderman Leon Despres of the fifth ward of Chicago.

On September 23, 1966, Yom Kippur eve, Rabbi Weinstein spoke on "Personal Atonement for Collective Sins," and I have had so many letters in compliment from those who listened that I am extending my remarks to include the text of a noteworthy sermon by one of the Nation's great spiritual leaders.

The sermon follows:

There is hardly a High Holyday Service that I have approached these 28 years I have been with you when one solicitous friend or another has not offered me the advice to make these sermons personal, religious, inspirational rather than social, secular and analytical. "Bathe us in the beauty of ethereal thoughts," they say, "not in the blood and sweat stained stuff of the market place and the battlefield." When, on rare occasion, I have followed this counsel I have been charge with being escapist and pollyannish. When I have not, I have been accused of turning the pulpit into a soap-box—which, by the way, should not be such a serious indictment—cleanliness being kin to Godliness.

In a deeper sense however this choice is an unreal one, surely an un-Jewish one—for ours is a Monotheistic faith based on a monistic view of the world. As our God is One so is the world one. Our Unity is all inclusive. We make no categorical distinctions between form and substance, between ends and means, between sacred and secular. So jealous have we been of the Oneness of our God that we have not permitted Him to slough off responsibility for evil onto some Devil or God of Darkness. He is the God of good *and* evil who has given man, His creature, the capacity to distinguish one from the other and the free will to convert the neutral energies of life into acts of goodness (Mitzvot) or acts of badness (Averot).

The chief role of these High Holydays is to take inventory of our souls to determine how well or ill we have exercised that free will. Certain of our sins such as the failure to observe the Sabbath, to pray at stated times, to avoid idolatry, not to take the Lord's name in vain were sins against God and would be forgiven by God since He is a compassionate God extending mercy unto the thousandth generation. We can indeed bespeak His forgiveness for it is more His nature to forgive than ours to be forgiven. The cow, Buber reminded us, loves to suckle more than the calf to suck.

But for those sins which man commits against his fellow man, prayer and penitence are not enough. There must be reconciliation with the one we have wronged on whatever terms that reconciliation can be attained. Though it requires a humility rare indeed in a society which calls on our more aggressive qualities for success if not for survival, it was possible to achieve reconciliation in the intimate circle of family and friends and, indeed, in the entire Shtetl when Jews lived completely within the context of the laws and customs of the tradition.

These homely pieties are still valid and we should not belittle them. *But they are no longer adequate to the human situation.* They are archaic, though delightfully nostalgic—as the horse and buggy, the bed warmer and the butter churn are poignantly nostalgic. The fact is that our anxiety and agony is largely due to the collective sins of our society, to poverty, to race prejudice, to war. We sin by syndicate and atone singly. Our personal repentance can no more atone for these vast corporate sins than a rounded pebble can stop Niagara. That is why the God of the secular city can be found more often in the arena of economics and politics than in theology and philosophy. It is in these areas where man confronts God and where the social conscience is sensitized or blunted, aroused to protect or pressured to conform.

We have long been acquainted with the phenomenon of the cultural lag where society holds on to primitive forms of behavior while professing allegiance to higher norms, but what we are most concerned with here is a social imbalance due to the fact that our aggressive anti-social hates and hostilities are more effectively organized than our altruistic and loving propensities.

I would like to have you consider with me three areas where this imbalance illustrates the gap between mobilized evil and socialized good. There is in each one of us a love of nature in its various forms. We rejoice in green grass, in leafy trees, in clean streams and pure skies. The Psalmists celebrated the God of nature—"How glorious are Thy works in all the world," "He maketh me to lie down in the green pastures, He leadeth me beside the still waters, He restoreth my soul." A good man is compared to a tree planted by streams of water, that yields its fruit in its season, and whose leaf does not wither. That adoration of nature is one of the constant sources of true religious piety. What the Psalmists began, the nature poets of all ages have continued. With Wordsworth, our generation "heard in nature the still sad music of humanity, felt a presence that disturbed us with the joy of elevated thoughts, a sense sublime of something far more deeply interfused whose dwelling is the light of setting suns, and the round ocean and the living air and in the mind of man."

We sorrowed with him that the world was too much with us, so that getting and spending we laid waste our powers, little we saw in nature that was ours. And while some of us cultivate our gardens, or keep a place in the mountains or by the sea, and while others of us have joined Audubon Societies, and Wilderness Societies, and Daniel Burnham Clubs and have contributed to Save the Redwoods, Save the Dunes, Save the Everglades, the Appalachians, Yes, Save the Grand Canyon—these brave sodalities of bird watchers, animal lovers, tree protectors have not proven effective against the Steel Companies who want the Dunes, the Coal Companies who want the coal in the Cumberland hills where, the lumber companies who want the profitable board feet of saleable lumber from those 2000 year old Sequoias, the produce farmers who want the water that nourishes the flora and fauna of the Everglades and the power interests who see the Colorado not as the liquid paint brush of the Grand Canyon but as the procurer of power for their concrete dams. We have not yet proven as swift as eagles and strong as lions in preserving God's gifts for all the generations of men. The High Priests and promoters of profits have organized greed more effectively than we have organized our love of nature.

But there is still hope. We can save at least a part of our natural resources if we take counsel with our conscience and if we truly believe that we are trustees of God's good earth as our faith teaches us and that someday we will have to render an account (as the admonition above the Ark reminds us) "Before Him Who Made The Heaven And The Earth And All That Is Therein." This is not a dispute between the bird watchers and the men of affairs, the poets and the pragmatists, the beachcombers and the convention hucksters. This is a question of enlightened self interest versus short time gain, of those who would heed the beating of the distant drum against those who would take the cash and let the credit go.

* * * * *

Now let us consider another example of the manner in which skillfully organized bigotry—though representing the will of a minority may prove more effective in the actual give and take of the social process than the less adequately organized good though representing the will of the majority and the major premises of our culture.

I daresay that each one of you acts as a decent and thoughtful human being toward any individual Negro who works for you or with you or who happens to be your neighbor. I know that many of you have warm, mutually supportive relationships with Negroes. I daresay that the majority of American citizens in the North would follow their instinct of live and let live and would sustain the implementation of our Constitutional Bill of Rights in granting the Negro equality of citizenship. And yet our streets are full of violence. In our own city the Negro is still ghettoized, still attends the schools where there are the less qualified teachers, and suffers from two and a half times the unemployment of our general population, while the unemployment of Negro youth is four times the general unemployment rate. Now here we confront a situation where the nation's laws and the Federal Government have caught up with the moral mandates of the Judeo-Christian ethic in the field of jobs and schooling but not in the field of housing.

* * * * *

A very unfortunate by-product of the filibuster defeat of the Civil Rights Bill in the present session of Congress, is that it will give an unholy sanction to the backlash of the white voter—and may set back the progress of the Negro in schools and jobs as well as in housing. Such a setback will play into the hands of the Black Power advocates and polarize the issue between Black extremists and white. But this defeat in Congress will not have that dire consequence if we are resolute on the local level. If, for instance, the Summit Agreement reached here several weeks ago is carried out and real estate offices encourage their clients to abide by the Occupancy Ordinances of the city and the state; if we take care to scatter low rise public housing in all the neighborhoods we can more than undo the effects of that legislative defeat. If our new school superintendent benefits from the mistakes of his predecessor and accepts integration as a high priority goal of public education and takes some giant steps toward making quality education available for all our children we shall truly be on the move.

If our End Poverty Programs really cuts the Gordian knot of those economic disabilities of the Negro which have made civil rights a peripheral need of his life and which have made slum Negroes suspicious of the whole white power structure and the Negro leadership which has worked with it, then we will be marching to the Promised Land. Here the long and rocky trail of Emancipation really stops at our individual doors and the issue of human justic is placed in our hands. This is indeed a time to recount the sins we have sinned in the past—the old houses and the old clothes we have dumped on our Negro neighbor, the differential wage we have paid him, the schooling we have withheld from him. It is a time to reckon with the stern law of atonement implicit in a moral universe and to take steps to right past wrongs not only that we may requite those who are oppressed but that we might reunite the white and black children of our common Father and re-knit the inner dark city and the outer white city and restore the House still divided against itself.

* * * * *

Finally, there is one further area where this truth can be illustrated. I saw only a week ago on the television, the burning of a village in Vietnam. American soldiers were applying torches to thatched huts while women and children and old men were weeping in terror. I watched a Vietnamese woman try, in her crazy grief, to enter her flaming hut to retrieve some household object. A young lieutenant * * * explained to the reporter that he had taken the responsibility to order this village burned to the ground because he had detected several gun bursts from the surrounding shrubbery. He did not want his men to be endangered so he took this drastic step which made another score of refugees for the U.S. government to take care of. That act of violence is our act of violence. Those soldiers bear the uniform of our country. We citizens are giving them the weapons to carry on this war. It is true that this is an undeclared war—we were never given the chance to vote on it. In fact many of us thought that we were voting in 1964 to make this very kind of war impossible. But the Congressman and Senators who represent us do, in great majority, support the Administration in this war and as long as that is the case we are responsible.

I want to avoid the air of self-righteousness. I do not say that all those who favor the war are barbarians, guilty of murder in the first degree. Many, I grant you, are patriots. Loyalty to America is their highest loyalty and they do not hesitate to say: "My country, right or wrong, my country." It is enough for them that they are in a fight and they believe that they are acting in the most responsible manner to see that they win that fight. Many others would clothe this elementary patriotism with the cloak of idealism. They are, they say, in this fight not only to affirm the power and prestige and national interests of our country, but to save the world from the total domination of the Communists. They believe that they are acting in the best interests of humanity by stopping the expansion of Communism now—even at the cost of hundreds of thousands of lives rather than by waiting until Communism becomes too strong to stop. A surgeon, said one proponent of this point of view, cannot be accused of immorality or cruelty if he amputates a limb to save the whole body from corruption. This view is so well organized and engineered that our Administration has no trouble getting from Congress any appropiration it asks for to pursue these goals.

Now I am not competent to discuss the whole wide spectrum of issues raised by this war. I am impressed however with the research of some of the best historians and political scientists of our country, including our own member Dr. Hans Morgenthau, who have pointed out these considerations.

1. There is much doubt that this is a legally declared war and that the South Vietnam government was a viable independent Government empowered to invite us to protect them from Communist aggression.

2. There is considerable doubt that the war in which we intervened was originally a war between a country and an invader rather than a civil war between segments of the South Vietnamese population.

3. There are reputable military strategists who doubt that the bombing of North Vietnam is in any way shortening the war. There is evidence pointing to the fact that it is increasing the infiltration of North Vietnamese and thus enlarging the war with the almost certain prospect that we will be enmeshed in a long land war, with the further prospect of involving the Chinese with the still further prospect of inducing fearful pressures to use nuclear bombs to bring an end to the slaughter of American troops.

4. There is a great body of learned opinion that the fear of China on our part and our addiction to the domino theory is an emotional reaction and not sustained by a deeper analysis of the dynamic evolutionary character of Communism as illustrated by its development in Russia. This analysis indicates that Communism becomes monolithic and aggressive under threat of foreign aggression but mellows and becomes more nationalistic, more concerned with consumer improvement when it is free of the fear of invasion.

5. We have misread the nature of the Vietnamese people and their neighbors in Thailand, Cambodia, Indonesia, Laos, Burma who are historically conditioned against China and who would resist a takeover and who would meet the challenge of indigenous Communism successfully on their own and even more successfully if America continued her economic aid to overcome the poverty that often breeds Communism and if, in addition, we sent peace corps aids and technological and academic missions to demonstrate that people can have economic security without surrendering political freedom.

These considerations are, I believe, reasonable and historically valid. But as Rabbi I would oppose this war on even higher ground. I cannot accept war as a just instrument of social progress. I do not believe that my religion permits me to stretch the justification of self-defense to fight Communists in Vietnam to prevent their coming into the Philippines or Hawaii. I cannot join in the holy crusade aganst the anti-Christ of Communism because my reading of history convinces me that most crusades were pious frauds, a mere sprinkling with holy water of greed, venality and looting. I cannot find in the religious tradition of Judaism a sanction for using the land and people of a third nation—Vietnam—as a testing ground to prove the restraining military power of this country. I cannot find in my tradition sanction to reduce the men and women and children of Vietnam to faceless data in an experiment in the uses of power. I have looked into these faces and I find them to be my brothers and sisters. I do find in my religious tradition the sanction to consider loyalty to mankind more ethically imperative than loyalty to one portion of the human family.

I find in my tradition and in the experience of my people a consistent disillusion in war as an instrument that can settle anything. I do find in my tradition the clarion call for the nations to come to the Mountain of the Lord and reason together and beat their swords into ploughshares and learn war no more. How fervently then must we join in the hope that the plan for de-escalation proposed by Ambassador Goldberg will be received by the North Vietnamese; that they will not be discouraged by our Government's peculiar performance of announcing greater military intervention side by side with our peace offers; but that they will take the calculated risk of accepting our good faith, so that we can take the first step to peace.

Therefore on this eve of the Great White Day we are bidden to acknowledge our share of the sin in this war of aggression and to resume our character of lovers and pursuers of peace by joining at least one of the many organizations who are struggling to de-escalate this war and by joining the Association of the United Nations or the United World Federalists to help strengthen the only agency we have that may someday speak to national power and make the breakthrough from the tribalism of national chauvinism to World Government under World Law.

Then we can pray with all our heart the prayer of Sim Shalom—for we shall have added to the sacrifice of our lips the energies of purse, of hand and heart.

Grant us Peace, Thy most precious gift, O Lord and enable Israel to be a messenger of peace unto the peoples of the earth. Amen.

Harrison E. Salisbury Reports From Hanoi—XI, XII

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, I hope that my colleagues will read the further dispatches from North Vietnam by Harrison E. Salisbury, which appeared in the New York Times of January 5 and January 7, 1967. They follow:

[From the New York Times, Jan. 5, 1967]

AID SAYS LIBERATION FRONT IS INDEPENDENT OF THE NORTH—HE ASSERTS IN HANOI INTERVIEW THAT IT MUST BE HEARD ON ALL SOUTHERN ISSUES, INCLUDING A SETTLEMENT OF WAR

(By Harrison E. Salisbury)

HANOI, NORTH VIETNAM, January 4.—The aims, aspirations and operations of the National Liberation Front are viewed by its leadership in terms sharply different from the picture held by many Americans.

This contrast in view was the highlight of an interview given by a member of the Central Committee of the Liberation Front, the political arm of the Vietcong. [The Vietcong are the Communist-led South Vietnamese force fighting against the Saigon regime and its allies, principally the United States.]

The picture of the Front and its role in Vietnam was presented by Nguyen Van Tien, a former Saigon professor, a member of the resistance movement since 1945, a member of the Front's Central Committee and its permanent representative in Hanoi.

Mr. Tien is a distinguished-looking, gray-haired man of quiet manner who has a considerable grasp of English. His office is housed in a newly refurbished villa close to the Foreign Ministry that once was the United States mission's headquarters in Hanoi.

As described by Mr. Tien, the Front is an independent entity. It now has 15 offices in Communist capitals, and several others such as that in Algeria.

His own task in Hanoi is not precisely a diplomatic one but "a special form not seen anywhere in the world," he said. But on all questions relating to the South, he added, his people and the North Vietnamese conduct discussions on the same footing.

"The North cannot speak for the South," he said. "Anyone who has to discuss South Vietnam, must speak with the Front."

If North Vietnam has some question concerning the South, he said, its representatives have to talk the matter over with him.

He was asked whether all aid to his cause had to go to North Vietnam, and whether it was then funneled to the South. Not at all, he responded, explaining that if aid is for the South it has to be arranged directly with the Front. There has to be clear specification of what is destined for the North and what is for the South, he said.

PLACE AT PEACE TABLE

He emphasized that North and South were one people and one nation and engaged in a common struggle and said that this was why each had the right to demand aid from the other.

Asked who ran the armed struggle in the South—the North, as is presumed abroad, or the South—he replied: "The direction of the struggle is run by the South, not the North."

Since all questions on the South are settled by the Front, Mr. Tien said, it naturally must be represented at the conference table when peace talks begin.

What about reunification? The Front and the North would have to discuss that on the basis of equality, he insisted, and the Front would then decide all matters for the South as far as reunification is concerned.

He said Southern thinking was that reunification could occur only step by step. The first step would be to renew trade, mail, and travel between North and South. Because of the division of the country, many people have not seen their relatives for 10 years, Mr. Tien remarked.

As to what steps would be taken after that or what time period might be involved, he offered no specifics but conveyed the impression that there would be no hurry and that there were many complicated questions to be resolved.

Some of these may arise from differences between the program of the Front and the policies of North Vietnam.

The Front has a five-point program calling for national independence, democratic freedom, peace, neutrality and reunification. The neutrality plank envisages a government generally aligned with neutralist Asian states such as Cambodia, Laos and Burma. In contrast, North Vietnam is a firm member of the Communist bloc.

The Front says it wants to end all alignments to any bloc or system, whether American or Communist.

How the neutrality question might be worked out has not been indicated.

Another point of some divergence lies in the political complexion of the Front's Central Committee, which includes, according to Mr. Tien, not only Communists but bourgeois intellectuals and members of the religious sects and other parties. There are differences among them as to the type of government that should be set up after the war, he said, some believing it should follow the socialist path and some the Communist, with the most powerful group standing firm for neutrality.

Mr. Tien's picture of the Liberation Front differed sharply from that held by many in the United States that it is an organization created and directed by and subservient to the Hanoi regime. Such ideas, he contended, are a serious miscalculation.

He said the United States should recognize the leading role of the Front in the South, both now and in the future, once peace is restored.

[From the New York Times, Jan. 7, 1967]

NORTH VIETNAM RUNS ON BICYCLES—PARTS ARE PRICELESS—OTHER TRANSPORT IS USUALLY POOR

(By Harrison E. Salisbury)

HANOI, NORTH VIETNAM, January 5.—The best present you can give your girl friend in Hanoi is not a box of candy or even a diamond ring. It's a new chain for her bicycle.

The bicycle is just as essential to the North Vietnamese as the auto is in Los Angeles. Without the bicycle Hanoi's life would come to a halt. If by some magic weapon all the bikes in North Vietnam could be immobilized the war would be over in a twinkling.

Hanoi citizens, according to foreign residents, are notably honest and theft is almost unknown. Diplomats say there is only one thing that sometimes disappears—a bicycle.

On the broad boulevards great sections of sidewalk are roped off in the early evening just before the movies start. Outside the theaters 600 bikes, each with its wheel lock, will be parked row on row in portable wooden racks. Each also has a license tag issued by the municipal authority, which averts confusion since so many of the bikes are identical.

One of North Vietnam's leading light industries is bicycle production. Bicycles are also imported in large numbers from Communist China and from Eastern European countries, particularly East Germany.

A bicycle from China costs 200 dongs since a 30 per cent price cut this year. The dong is nominally valued at 3.53 to the dollar, but its purchasing power is more clearly reflected by pay rates, which for factory or office workers range from 70 to 80 dongs a month.

Bicycles are not rationed, but the market is controlled by the issuance of purchase permits through places of employment. The same Chinese bicycle that costs 200 dongs in a store will fetch 1,000 in a private sale.

TIRES AND GEARS, TOO

Under wartime conditions spare parts are often in short supply, which is why a new bicycle chain is such a priceless present. Tires are good presents, too, as are gears, wheels and other components.

Hanoi has no taxis. Only diplomats and high officials have cars, and they are provided for foreign visitors. There is a small number of hand-hauled, rubber-tired carts, but these are more likely to be filled with boxes and bundles than passengers.

Hanoi has a small municipal streetcar system using half-size tandem cars, but it operates only in the evening and early morning because of the bombing. There is a bus system for the suburbs and nearby towns, but it seems to run irregularly, mostly at night, utilizing a beat-up fleet of old, camouflaged buses.

The bicycle is the key to transport in the country as well as in Hanoi. It is the bicycle that carries fantastic burdens when rail and truck links are impeded by bombing.

FROM TRAINS TO BIKES

One foreign resident told of coming upon a place near Haiphong where bombing had severed a rail line. A brigade of hundreds of bikes was on the scene. Freight was transferred from the train to the bicycles—600 pounds on each. In a remarkably short time, the foreigner related, the freight was moving along the bombed-out tracks to a point where it could be reloaded onto another train.

The most active period for transport is at night since the American air effort slackens then or is more easily evaded. Then the big truck convoys and myriad bicycle caravans roll.

The whole rhythm of city life has been geared to bombing schedules. Most shops open from 5 A.M. to 8 A.M., then close until late afternoon or early evening. The 5 A.M. shopping hour is not difficult for a Hanoi resident. Government offices and factories begin their working day at 6 o'clock, and by 7 o'clock the city is bustling with life.

The slackest period comes from 1 P.M. to 5 P.M., the period when bombing attacks have most frequently occurred.

In those hours foreigners usually stay in hotels or embassies rather than face the prospect of being caught on the street and having to take refuge in one of Hanoi's many individual manhole shelters. They are just the right size for the Vietnamese but Russians, Frenchmen or Britons often find them uncomfortable.

The American Merchant Marine: Our Leaky Pipeline to Vietnam

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. GARMATZ. Mr. Speaker, as chairman of the House Committee on Merchant Marine and Fisheries, I am disturbed over the lack of public awareness of the serious decline of the American merchant marine.

Our committee is doing all it can to combat and reverse this critical situation, but we have been severely hampered in our attempts to carry this story to the public, primarily because of a lack of adequate coverage by the Nation's press.

Recently however, several outstanding articles have been published and I intend to insert them periodically into the CONGRESSIONAL RECORD. One of these, entitled "Our Leaky Pipeline to Vietnam," appeared in the December issue of Reader's Digest. Written by Lester Velie, an editor of that publication, it presents a trenchant analysis of the decline of our merchant fleet as well as the factors causing it and the many problems confronting those of us who are trying to correct it.

Articles like this can help focus public attention on the maritime industry's alarming deficiencies and on the need to rectify this intolerable situation.

The article follows:

Our Leaky Pipeline to Vietnam

(By Lester Velie)

By its shocking neglect of our merchant fleet, the federal government has reduced the United States from first to fifth place among maritime nations and crippled our ability to meet overseas commitments.

In the fall of 1965 the S.S. *Malden Victory*, an aged veteran of World War II and Korea, was towed hastily from the James River where, with other mothballed ships of the reserve fleet, she had been resting and rusting for years. It was the time of the first Vietnam build-up, and the need for ships was urgent. So at a Norfolk, Va., shipyard, men worked around the clock to restore the rust-pitted corpse to life.

Such was the urgency that there was no time to scrape the rust from the hull. New paint was sprayed over old. There wasn't even time for a trial run to prove out the hasty repairs. A little over a month after she had been towed from the "bone-yard," the *Malden Victory* put to sea with a cargo of light artillery and ammunition for Vietnam.

Just out of Norfolk, the main steam line to the power plant sprang leaks at the rusted joints and was patched at sea. Then, south of Cuba, the discharge line to the main condenser gave way, requiring four days of repairs at the Panama Canal. Off the coast of southern California, the temperature in the engine room soared to 130° when the two ventilator motors blew out.

After emergency repairs at San Pedro, Calif., the *Malden Victory* set out on the Pacific again. Now the ancient packing around the rudder post disintegrated, letting the sea in—and the clogged scuppers could not drain it off. The rising water threatened to disable the electric steering motors, crippling the ship and throwing it at the mercy of the heavy seas.

In desperation the crew formed a bucket brigade an, for nine hours, pased pails of water up to the deck above. Finally the ship's first assistant engineer managed to clear the scuppers with a high-pressure fire hose. Out poured broken beer bottles, rusted nuts and bolts that must have accumulated since the ship's launching 21 years before.

The *Malden Victory* never did get to her port of call for Vietnam on that first try. Boiler trouble forced her to alter course, and she limped into Yokosuka, Japan, for 27 days of repairs. Here the Navy's Military Sea Transportation Service—in charge of the Vietnam sea lift—removed her cargo, and she returned home.

ORPHANED INDUSTRY

The *Malden Victory* is one of the 161 World War II reserve-fleet ships on which we have been forced to rely to supply Vietnam—because we have been caught with our ships down. Despite a Congressional mandate—the Merchant Marine Act of 1936—Washington policymakers are allowing the American flag to vanish from the seas. We spend billions to subsidize highways, airlines and space travel; we find money to aid farmers, clear slums. But a babble of contending voices and interests has turned our ship industry, comparatively, into an orphan.

As a result, the 5500 American flag ships we had at the war's end—both privately owned and in the government reserve fleet—have dwindled to a fleet of 900-odd privately owned vessels, plus a similar number of mothballed reserve ships. Although we are the world's leading trading nation, we have so few ships of our own that we must rely on foreign-flag ships to carry 92 percent of our exports and imports. Every year we have fewer ships, for we are building virtually no replacements. Last year our shipyards delivered only 16 deep-sea vessels. And this fiscal year, at a time when we're involved in a major war—and are committed to come, if needed, to the aid of some 40 nations—our budget calls for a *cut* in construction, to 13 vessels.

In war a nation's commercial fleet is its fourth arm of defense—along with the Army, Navy and Air Force. Yet this fact has been ignored by three successive administrations. It is cheaper to have foreign ships haul our goods, they argued; in a war emergency we could rely on airplanes to fly troops and on foreign shipping to haul supplies. And, for insurance, there was always our reserve fleet.

To see how this thinking has worked out, look at the *Malden Victory's* sister ships in the reserve fleet—as they struggle to supply Vietnam over the longest logistics route in our military history.

OUT OF THE GREASE

When World War II ended, some 2,300 Liberties, Victories and other vessels were laid up in Puget Sound, in the James, Potomac and Hudson rivers, and in other "boneyards." Even then, most of the ships were already obsolete, for to speed mass production they had been built from designs of the 1920's. Defense Secretary James Forrestal had described them as "make-shift jobs."

Some were repaired and used in the Korean and Suez crises, then put back. All, swathed in cocoons of grease, lay year after year, their sensitive insides ravaged by humidity in summer and freezing cold in winter. Spare parts disappeared, and some of the ships were "cannibalized" to repair others. When the Vietnam buildup began, it cost an average $500,000 to "restore" each ship.

A Bethlehem Steel Corp. shipbuilding executive described their condition: "The preservative grease on the hull and superstructure had usually hardened and could be removed only by sandblasting or with chemicals. When we'd open up the big engine we'd find the guts all gone." Electric motors were shot, switchboard contacts were covered with verdigris. Spare parts had long disappeared and the original producers, who no longer stocked them, required six months to manufacture them anew.

AT TURTLE PACE

Even after they had been reactivated, some of the ancient ships broke down so often that they spent almost as much time in repair docks as they did under way. By last September 30, according to the Maritime Administration, reserve-fleet ships had lost a total of 1440 days at repair docks.

This would indicate only 4.4 percent of voyage time lost in repairs. But it all depends on how you keep the books. According to the Maritime Administration's reckoning, if a ship limps along at sea with boiler trouble and so prolongs the voyage, the percentage of time lost (repair-dock days, divided by voyage days) actually decreases. And when a ship waits to unload in Vietnam—sometimes for weeks—that too is added to voyage days. So the percentage of repair time is made to look deceptively small.

To the loss of precious time, add the waste of money. By last September, repair costs for the 135 reserve-fleet ships then operating had mounted to $1,230,000. Added to the $3,888,000 in wages and other charges that accrued during repair delays, and the cost of reactivating the ships in the first place, the bill for using these obsolete, turtle-pace ships is close to $75,000,000. Used as matching subsidy funds to encourage new construction, this sum could have added about ten fast, modern vessels to our merchant fleet. Moreover, for all the millions spent on them, the over-age vessels can last only a few years more. Our penny-pinching neglect of our commercial fleet is false economy indeed.

FRUSTRATED CARGO

When cargo is delayed, shipping men say it is "frustrated." To the story of frustration already told, add delays caused by crew shortages. For obvious reasons, skilled seafarers—marine engineers, mates, oilers—have been abandoning our dwindling merchant fleet. For example: because of lack of opportunity less than 15 percent of the men who graduated from the U.S. Merchant Marine Academy in 1960 have followed careers in the merchant fleet. Most of the others took jobs in industry, as did many men already holding licenses as chief engineers or assistants.

So, time and again, we have rushed reserve-fleet vessels from mothballs, run up overtime bills to repair them in a hurry—only to have them lie idle for as long as two weeks while the ship's operator scratches frantically for crews. Last July, 15 sailings were delayed for an average 4.5 days each. And, as more ships were broken out, the crew situation worsened. On almost any day during late September, 14 or more reserve-fleet ships were being delayed at their docks for lack of crews.

To permit the ships to sail for Vietnam at all, the marine engineers' union has waived minimum crew requirements, allowing ships to go to sea with two less marine engineers than the normal union-contract complement. Ironically, this has sometimes worsened the crewing problem, because of the additional burdens put on the men. Sometimes, after a trouble-plagued voyage, the engine crew simply walks off in disgust.

Yet even as the crew shortages were growing critical last summer, the head of the Maritime Administration was telling Congress that there was no shortage of skilled seamen. And an inter-agency committee of government officials told the Selective Service that shipping was not an essential industry, that seamen—including marine engineers—need not be deferred!

COLD TURNDOWNS

Although the pipeline to Vietnam is leaking, we have muddled through, so far. But suppose the 320,000-man force now in Vietnam is escalated to, say, 500,000? Or suppose the war lasts several years while our ancient reserve-fleet ships deteriorate further, or that another Vietnam blazes up?

Defense Secretary Robert S. McNamara told Congress in 1962 that we could fly troops "even to areas 10,000 miles away." Alas! The theory never got off the ground. Even if there were enough aircraft, it was found more desirable to move the men in groups of 2500 to 3500 together with their equipment—to maintain unit integrity. So far 66 percent of our troops have had to move by ship, and so have 98 percent of the supplies.

The notion that we could rely on foreign shipping was exploded, too. Trouble began in the summer of 1965 with a foreign vessel chartered for Vietnam duty, the *El Mexicano*. For three days American longshoremen worked overtime to load the ship with trucks and other construction equipment. Then suddenly the Mexican government wired the ship's officers that they couldn't sail for Vietnam. To do so would violate Mexican neutrality laws. The cargo had to be unloaded.

Next, when the longshoremen began to load the equipment on a Greek vessel, the *Stamatios S. Embiricos,* they were called off again. This time 12 of the freighter's Greek crewmen refused to sail for Vietnam. The offer of a $10,000 bonus failed to move them. They lined the ship's rail, shouting gibes at the "American imperialists." Only after the cargo was transferred to the American S.S. *Bay State,* did it move for the war zone. The supplies had been delayed two weeks.

At various times, Indian and Chinese crews aboard British ships, Japanese sailors, even Okinawans, have refused to sail to Vietnam. Seven crews turned us down in the space of several weeks. Meanwhile, not only did our NATO allies not come forward with ships, but some permitted their vessels to be chartered by the Russians, thereby freeing regular Soviet vessels to supply North Vietnam. The bitter lesson is that we cannot rely on others for ships.

SURGE POWER

But can't we, then, call on all the foreign-registry ships owned by Americans? They are said to be under the "effective control" of our government: their owners are committed to turn them over for emergency use. Trouble is—as we've seen—we can't rely on their foreign crews. Also, most of these vessels are tankers or bulk carriers, built to haul grain or cement or ore, and aren't suitable for the Vietnam run. In late September, *not one foreign-flag vessel,* including those under "effective control," was helping supply Vietnam.

Finally, Vietnam has rubbed our noses in the crucial need for "surge power"—a country's ability to divert commercial ships to war use without stripping its sea lanes. In 1965 the Pentagon learned about "surge power" when it sought and obtained almost 50 of the 300-odd subsidized liners which ply regular scheduled routes under the house flags of U.S. Lines, Moore-McCormack, Lykes Brothers and others. Their owners raised such a hue and cry about losing some 50 million dollars yearly of hard-won business to foreigners—which, they said, they'd never regain—that the Pentagon returned one third of the ships.

HAMMER AND SICKLE

Although time is running out, I could find no sense of urgency in Washington among those who have the power to reverse our disastrous shipping course. There's no evidence that our admirals have succeeded in convincing their boss, McNamara, that we need a strong merchant fleet. And at the Department of Commerce—home of the Maritime Administration—Secretary John T. Connor, who champions a strong fleet, states simply: "The President does not give shipping the highest priority."

In dramatic contrast, the Soviet Union *does* give shipping a high priority. Since 1947 the U.S.S.R. has risen from eleventh place among maritime powers to seventh, while we have fallen from first to fifth, a place we won't hold for long. We have a meager 41 seagoing vessels on order; the Russians, 464. In fact, one fourth of all ships being built today will fly the hammer and sickle, and within a decade Russia will dominate the world's sea lanes. Unless, of course, we take the Russians' sea challenge as seriously as we take their space challenge.

Ships represent a crucial political and economic instrument. The Russians already send ships to 91 nations, and are opening up routes to underdeveloped countries in Africa and South America—a cold-war development of the utmost significance. We are abandoning routes.

In the light of all this, we had better start asking: Who scuttled our merchant fleet? And what are we going to do about it?

Harrison E. Salisbury Reports From Hanoi—XIII, XIV

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, the New York Times of January 8, 1967, carried two articles from Hanoi by Harrison E. Salisbury which are part of the series which I have been inserting in the Appendix of the Record. I call them to the attention of my colleagues:

[From the New York Times, Jan. 8, 1967]

Hanoi Reiterates Its Stand That Four Points Are Basic—It Comments on Theories That Dong's Remarks Hinted a Change—Clearing Skies Bring U.S. Planes Over the Capital of North Vietnam

(By Harrison E. Salisbury)

Hanoi, North Vietnam, January 6.—So much speculation and excitement were generated in Washington, London and Paris by Premier Pham Van Dong's remarks this week on the war that Hanoi issued an official statement today designed to bring the matter back to earth.

The speculation centered on Premier Dong's statment to this correspondent defining the nature of North Vietnam's program for resolution of the Vietnamese conflict. Foreign diplomats and press commentators read into his declaration two interpretations: that North Vietnam's position had changed and that its four-point program was negotiable.

The passage in the interview that stirred excitement was as follows:

"We have our point of view and we have put forward four points, which constitute the basis for settlement of the Vietnam question. These should not be considered 'conditions.' They are merely truths.

"The most simple thing is to recognize our sovereignty and our independence. It involves only recognizing the points in the Geneva agreements. The ruling circles of the United States do not like to accept our four points, and particularly the third point. That means that they are still clinging to South Vietnam, that means they are still introducing themselves into a tunnel.

"Now what can you do about that? We must come to a solution on the basis of the four points. Whichever way you may go around, finally you must come to the four points."

The Premier continued:

"Besides the four points, we have also put another point. That is to demand that the United States put, unconditionally and for good, an end to the bombing and all hostile activity against the North."

In discussion later on, when Mr. Dong was asked to clarify further the status of the four points, he phrased his response thus:

"It is wrong to say that we are putting some conditions. What I have told you are not our 'conditions,' but conditions for valid settlement. The question is how to reach a settlement which can be enforced."

Those are the Premier's precise words. Today they were officially restated as follows:

"The four-point stand of the Democratic Republic of Vietnam constitutes the basis of a settlement of the Vietnamese problem."

The four-point program is as follows:

1. Recognition of the independence, sovereignty, unity and territorial integrity of Vietnam and the withdrawal of United States forces from the area pending reunification of Vietnam.

2. Respect for the military provisions of the 1954 Geneva agreement, including those barring foreign forces.

3. Settlement of South Vietnam's internal affairs by the South Vietnamese in accordance with the program of the National Liberation Front.

4. Peaceful reunification of Vietnam by the peoples of North and South without foreign interference.

The circumstances of the Premier's statements should be explained. He received this correspondent last Monday afternoon in the Presidential Palace. He had familiarized himself beforehand with a detailed group of questions submitted in advance.

Lists of questions had been prepared not only for himself but for President Ho Chi Minh and the Defense Minister, Gen. Vo Nguyen Giap. It was tacitly understood that the correspondent probably would be received by one, but there was no advance indication of which one.

Premier Dong said he would endeavor to discuss the questions, but not in a formal interview, which he finds uncomfortable. He said he would make a series of observations, then the observations could be discussed and questions put in an informal manner.

He asked that since the interview was being conducted so informally, anything written about it be submitted for checking to make certain that the quotations were precise.

With agreement on these ground rules, the discussion was launched. Mr. Dong divided his remarks into two main sections. The first was devoted to the war, its origin and prospects. The second dealt with questions involved in a settlement. There then was considerable interchange, the whole discussion occupying about 4½ hours and touching on most of the vital issues in the conflict.

Certain segments of the discussion were placed off the record. A dispatch reporting on the talk was submitted Tuesday to the Foreign Ministry, which checked it closely, proposing certain textual changes and deletions. Thus the dispatch as transmitted and published represented a careful, accurate report of the Premier's views.

Today's statement was not designed to dispute that dispatch. The ministry rechecked the text after the wave of speculation arose and made some minor clarifications, which are incorporated in the passages quoted in this dispatch as well as in the textual version that accompanies it.

What is the significance of all this?

It appears that the greatest care and caution should be observed in attempting to analyze official North Vietnamese statements. Even when precisely made, they may not be fully understood in the West.

The question of the four points is particularly complex. When Premier Dong says they are not conditions that must be accepted prior to peace negotiation, he is speaking quite sincerely. While Hanoi does not insist that they be agreed upon before it will sit down at the conference table, it does insist on a solution based on them.

Whether this is a distinction without a difference remains to be seen.

If the four points were made the agenda of a conference, the West would certainly presume that there would be give and take and that, in effect, the points were negotiable. But this may not be Hanoi's view at all, especially since the Premier says that the points constitute "conditions for a valid settlement" that "can be enforced."

The speculation and excitement aroused by the interview have been intensified, in the opinion of some diplomats in Hanoi, by a widespread failure in the West to realize that Hanoi has said much the same thing several times.

Whatever the situation, the Premier's entire statement contained a number of illuminating insights into North Vietnamese thinking, not all of which are readily apparent.

[From the New York Times, Jan. 8, 1967]

Clear Skies Bring a Hanoi Air Alert

Hanoi, North Vietnam, January 7.—When the sun finally broke through Hanoi's gray skies at noon yesterday, a resident of the Thongnhat Hotel nodded and said, "We'll be having visitors after lunch." He was right.

Almost on the dot of 2:30 P.M., Hanoi's sirens wailed, the pretty hotel waitresses grabbed their rifles and helmets and the guests filed out into the rear courtyard, where the hotel's three white roosters majestically strut in a tall cage.

Despite the urgings of a small, helmeted, gun-carrying porter, the guests did not enter the air raid shelter, but instead dallied in the warm sun, peering up at the almost cloudless sky.

RIFLEMEN ON ROOFS

On the roofs of nearby buildings, including the State Bank, men with rifles were wheeling right and left watching for planes. Suddenly came the crack of an old-fashioned antiaircraft gun close by certainly within a block or so.

The guests edged a little closer to the bunker's entrance. There was a pause. Then, with deep Martian thunder, Hanoi's SAM's, surface-to-air missiles, opened up and the guests heeded the warden's plea and walked down the concrete steps into the bunker.

The Thongnhat hotel's bunker probably is the flossiest in town. It has park benches and folding chairs on which to recline and a couple of fluorescent lights. It is long and narrow and the concrete floor is clean. It is equipped with old-fashioned red fire extinguishers made by French concern with the unlikely name of "Compagnie Knock-Out."

After the SAM's had let go once or twice, a high-pitched distant whine was heard. It was the first time this correspondent had actually heard hostile planes overhead, although it was the eighth alert he had undergone in a fortnight in North Vietnam. The characteristic sound of supersonic planes was unmistakable. Veteran's of Hanoi's air raids identified them as F-105's, Republic Thunderchiefs, which may or may not have been accurate.

With the sound of the planes high over the city, the SAM's let go several more times and there was a heavy crash of conventional antiaircraft batteries, though they were mostly some distance away.

This was Hanoi's second alert of the day; there had been a 10-minute alert in the morning but without audible gunfire or planes.

After 20 minutes the all-clear sounded and the guests emerged from the bunker.

RESIDENTS NOTE A LULL

Hanoi residents say there has been a decided lull in close-in bombing since the attacks of Dec. 13 and 14.

Some have attributed this to the presence of a United States correspondent and have predicted that with his departure today the attacks will intensify.

Actually there apparently has been considerable air action over Hanoi's more distant approaches.

Efforts by this correspondent to revisit Namdinh, the scene of controversial bombings by United States warplanes, were frustrated because of heavy air action reported in the last few days in areas between Hanoi and Namdinh, about 65 miles to the south.

Many Hanoi residents now consider themselves experts on United States bombing tactics. In recent weeks, they say, American planes have come in from almost any direction and not infrequently are over the city before, or almost simultaneous with, the siren's sound. They attribute this to a low-level approach, which makes radar detection and plotting more difficult.

Not infrequently United States planes are over Hanoi, according to residents, for considerable periods of time. They were reported to have been overhead for about 45 minutes in the Dec. 13 attack, criss-crossing the city as they singled out their targets.

One military observer here expressed some puzzlement over the Dec. 13 and 14 attacks.

He said the targets were small and difficult to hit and had to be approached through antiaircraft fire. He said he was not certain why they had been picked out, since some seemed to have such small military value. The observer said that he knew from personal observation that there were only 12 or 14 trucks and buses being repaired in Vandien, in the southern outskirts of Hanoi, which was heavily hit.

It was reported that in this attack the Vietnam Polish Friendship Highschool, about three-quarters of a mile from the repair yard, was hit.

"There would seem to be more important military objectives in Hanoi, including, for instance, the Paul Doumer Bridge or the city power plant," the military observer said. "Bombs were dropped at either end of the bridge. But whether the bridge was not a target or the action was accidental or designed to show the bridge could be hit if the United States wanted to certainly wasn't clear."

Diplomats in Hanoi are not exactly pleased at the United States air action in and around Hanoi.

"I know just how the Hanoi people feel," on diplomat's wife said. "When American planes are overhead I'd shoot at them, too, if I had a rifle."

CANADIAN MISSION HIT

Among the buildings that have been hit, reportedly in the Dec. 13 attack, was one housing the Canadian mission to the International Control Commission.

One Canadian took some metal fragments, put them in a box and sent it off to friends in Saigon with a note saying, "Look here, chaps, this is getting to be a little bit much!"

"I don't know how well they appreciated his sense of humor down in Saigon," another Canadian said.

A Western diplomat said it was only luck that prevented serious casualties and damage on Dec. 13 at the Chinese, Polish, Rumanian and Russian embassies, which form a quadrangle.

Diplomats from both East and West said that in the attack, a rocket from a United States plane hit a tree just outside the Rumanian Embassy. The rocket engine lodged there. A red-hot chunk of metal was said to have blasted through an open window into Rumanian military attache's office.

The blast is reported to have knocked Rumanians in a shelter in their garden to the floor. Pieces of the rocket shattered a corner of the Chinese Embassy and knocked many tiles from the roof.

Many of the charges and countercharges of the air war remain unresolved as this correspondent's fortnight in Hanoi draws to a close.

Efforts to prolong the stay have been gently discouraged. The original plan was a one-week visit. This was doubled at this correspondent's request.

One thing seems certain: this may have been the first visit of an American correspondent to wartime Hanoi, but it is not likely to be the last.

For a Safer Society

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. MULTER. Mr. Speaker, I listened with particular interest this evening to the great state of the Union address delivered by President Johnson.

One of the recommendations the President will send us will call for strict controls on the sale of firearms. I have advocated this for many years and I have sponsored legislation to accomplish this purpose—legislation which I expect to reintroduce in this 90th Congress.

An excellent argument for the control of firearms was made in the following editorial from the November 19, 1966, edition of the New York World Journal Tribune. I commend it to the attention of our colleagues:

For a Safer Society

There are spectacular lunacies of multiple murder in Chicago, New Haven, Austin and Mesa. They overshadow individual tragedies that in their way are even more appalling because they are so commonplace as to attract only local attention, so routine as to be relegated to inside pages.

There was, for instance, the 15-year-old New Jersey boy who had previously been in trouble for firing a BB gun at passersby. Like an addict proceeding from marijuana to heroin, he next acquired a .22-caliber rifle from a mail-order place in California.

He used it one night recently, police said, and a 17-year-old high school football star was critically wounded while walking with a girl in a wooded area of the Bergen County community of Woodcliff Lake.

A bullet nicked the victim's spinal cord, perhaps paralyzing him permanently.

The town's police chief called the shooting "senseless," saying "the suspect didn't even know the boy he shot or the girl."

By that account, in other words, it was strictly impersonal. One random victim would have done as well as another. The main thing, one infers, was the impulse to shoot somebody—anybody.

Political reality suggests that both the Johnson administration and the enlarged Republican minority in Congress will be receptive at the next session to domestic legislation with modest price tags.

Here's a suggestion for one vital piece of legislation that would be virtually cost-free: a meaningful federal law to regulate the sale and shipment of firearms.

The suggestion is not new. Nor is the reflexive opposition—the tiresome recital by the National Rifle Assn. concerning the constitutional right to bear arms, the alleged persecution of the sportsman and the fatuous assertion that people, not guns, kill other people. And, oh yes, the "practical" argument that a determined killer will find a weapon, laws or no laws.

We submit that the American public has listened to enough of that rot.

The constitutional right to bear arms relates to a militia. It was not meant to foster crime—or the organization of lethal zanies like the Minutemen.

It is true that people shoot people, but equally true that they need guns to do it.

Finally, it is probably true that homicidal types will always manage to find the weapons they want, including guns.

But that does not dispel the obligation of government to make it as difficult as possible for the immature, the deranged and the criminal to get their hands on firearms—which are unique among hand weapons in having no other function than to fire bullets at something or someone.

President Johnson has made impressive advances under the banner of a Great Society. By articulating, and impressing on Congress, the national necessity for checking the willy-nilly flow of guns and ammunition, he can help measurably to make this also a safer society.

Harrison E. Salisbury Reports From Hanoi, XV

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, again I want to bring to the attention of my colleagues an article which is part of a series of reports filed from North Vietnam with the New York Times by Harrison E. Salisbury. This article appeared in the New York Times of January 9, 1967:

[From the New York Times, Jan. 9, 1967]

CATHOLIC CHARITY AID VISITING HANOI

(By Harrison E. Salisbury)

HANOI, NORTH VIETNAM, January 7.—Msgr. Georg Hüssler, secretary general of a West German Roman Catholic welfare organization, has arrived in Hanoi—the first foreign Catholic functionary to visit North Vietnam since the establishment of the Communist regime.

Monsignor Hüssler's mission is one of relief. He came to Hanoi with the Rev. Martin Niemöller, a German Evangelical pastor and one-time submarine commander, who was imprisoned by the Nazis, to hold talks with North Vietnamese Red Cross and medical officials.

For some time the German organization, part of Caritas International, has been making a financial contribution to the North Vietnamese Red Cross, to the South Vietnamese National Liberation Front's Red Cross organization and to the Red Cross in South Vietnam.

Now Monsignor Hüssler is seeking to ascertain what medical supplies North Vietnam can use—possibly penicillin and other antibiotics, quinine and surgical instruments.

His visit is regarded in other aspects as well. It is taken as a symbol of Pope Paul's deep interest in peace in Vietnam and of the Vatican's abiding interest in strengthening ties with Roman Catholics in the North.

Monsignor Hüssler was to confer with the Catholic hierarchy here, instituting the first personal contact between Rome and the Hanoi churches since the Communist regime took over the North in 1954.

One important aspect of Monsignor Hüssler's visit was understood to be a tangible demonstration that the Vatican's interest is not concentrated exclusively on the church in South Vietnam. The intimate association of the southern church with the Diem regime through the late dictator's brother, the Most Rev. Ngo Dinh Thuc, then Archbishop of Hue, was taken by many in the North as a sign of partisanship in the North-South struggle.

According to an estimate provided by the Rev. Ho Thanh Bien, pastor of St. Dominique Church here, and by what is called the Liaison Committee of Patriotic Catholics, a lay organization, there are just under a million Catholics in the North. No estimate of the number who went South in 1954 was offered, but the generally accepted figure outside Vietnam is a million.

Monsignor Hüssler puts membership in North Vietnam now at something over 700,000.

In the heavily Catholic district of the Phatdiem area, 75 miles south of Hanoi, local officials said approximately 10,000 of the region's population of 80,000 went south. The officials attributed the exodus to an intensive campaign by representatives of the Diem regime, who said that under the Communists the church would be suppressed.

The local authorities in the Phatdiem area maintain that they still have 82 churches functioning for a population that is again about 80,000.

Father Bien said that six of the North's 10 Bishops went south, and with them all 10 seminaries operating in the North. He estimated that two-thirds of the North's priests also went south.

He said, and Monsignor Hüssler confirmed, that since 1955 the Vatican had confirmed six new bishops and that all 10 dioceses now had bishops. Father Bien also said that the 10 seminaries had reopened and that about 100 priests were in training. He said the Most Rev. Trinh Nhu Khue, named Archbishop of Hanoi in 1962, was the principal church functionary in North Vietnam.

Both Father Bien and officials of the Patriotic Catholics said that they were in mail communication with Rome, that the Pope's edicts and other materials were being received and that they sent back acknowledgements.

Asked why there had been no personal contact, they insisted that this was not due to Government interference but that such contacts "depend on the situation," which they described as being complicated, at least in part because of the war.

They estimated that 300 to 400 priests were serving churches in the North. Hanoi has 12 churches, with 10 priests and possibly 20,000 worshippers, they said, explaining that Hanoi had never been as strongly Catholic as the countryside.

There are no schools of general education run by the Catholics, but children are given instruction at church, particularly during the two regular vacation periods each year, the churchmen said.

There are still a number of nuns and many convents operating, the churchmen said, but they conceded that many nuns had gone south.

They said the official position was one of noninterference in religious matters. According to these spokesmen, the Government provided considerable funds for rebuilding churches after partition.

Roman Catholic members of the diplomatic colony attend mass in Hanoi churches but have had little contact with the priests. One Frenchwoman goes to a Hanoi priest for confession. Another Catholic, a diplomat, does not, feeling that it might be embarrassing for the priest.

There are constant references in conversations with both laymen and priests to the exodus of Catholics in 1954, and it is evident that deep and bitter wounds have been left.

Regarding the Vatican's efforts for peace in Vietnam, neither priests nor clergy offered any more specific comment than that the church fully supported North Vietnam's peace proposals.

It was said that many churches had been destroyed or damaged by United States bombing and that two priests had been killed.

Supersonic Transport

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. BOW. Mr. Speaker, the New York Times of January 2 commented editorially on the present program of construction of a supersonic transport plane, and I wish to place that editorial in the RECORD today.

The Times has presented forcefully many of the arguments in support of a new look at this program. These arguments also lend support to my bill, H.R. 12, which would provide for private financing of the SST project. I am including with my remarks my letter to Mr. John B. Oakes, editorial page editor of the Times, in which I call his attention to H.R. 12 and to the fact that there are many similarities between my proposal and the editorial comments in his newspaper.

I hope that H.R. 12 will receive early and serious consideration by the appropriate committee.

The letter and editorial follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., January 11, 1967.

Mr. JOHN B. OAKES,
Editorial Page Editor,
The New York Times,
New York, N.Y.

DEAR MR. OAKES: I am delighted to note the position the Times has taken as expressed in the editorial, "Paying for the SST", January 2, 1967.

Many of the principles you enunciate are contained in a bill I introduced in the 89th Congress and in H.R. 12, which I introduced on the opening day of this Congress.

I am sending under separate cover a copy of H.R. 12, together with a copy of my remarks when H.R. 12, was introduced.

I welcome any constructive criticism the Times' staff members may wish to offer to improve H.R. 12. A great deal of research and effort has been expended in the preparation of H.R. 12, but I always take the position that it may be possible to improve any projected plan or program.

I heartily agree that open debate in the Congress on the SST costs and financing is sorely needed, and long overdue. To this end, I recently urged the President to join with me in requesting early hearings on H.R. 12.

I earnestly hope the Times will continue to lend strong support toward achievement of the objectives we mutually support in the SST matter.

Sincerely yours,

FRANK T. BOW,
Member of Congress.

[From the New York Times, Jan. 2, 1967]

PAYING FOR THE SST

As winner in the competition for design of a supersonic passenger plane, Boeing will acquire a Government-endowed monopoly on sales of an American SST designed to carry 300 passengers at upward of 1700 miles an hour.

Until recently the race to build an SST had not aroused much attention, perhaps because the whole idea of flying two or three times the speed of sound seemed a little too far out to be taken seriously. Now, the SST is coming—and it should come. But so important and expensive a project must be accompanied by much fuller and more open debate over its costs and consequences.

The key issues to be explored are not technological. The aerospace industry is confident it can solve the complex and intricate problems involved in transporting human beings from New York to Tokyo in less time than it now takes to travel by subsonic jet from New York to Los Angeles. Given the industry's past record of accomplishment, there is no reason to doubt its ability to overcome potential stumbling blocks, including the perplexing problem of sonic boom.

But development of the SST does raise serious financial and ethical questions: Should the nation's taxpayers pay almost all the development costs for the SST without knowing just what the final bill will be? If no single company has the financial and technological resources to build the SST without Government help, should the Government's competition to end competition give Boeing an unassailable—and undesirable—technological lead at the expense of the rest of the industry? Does the threat of foreign competition—both from the French-British Concorde and a Soviet SST—make the development of an American commercial model so essential that Federal expenditures for it cannot be reduced or postponed when the soaring costs of Vietnam call for utmost budget stringency?

The SST's priority is debatable and so is its financing. The industry may be right in asserting that the costs of development are so huge that no company can afford to take the risk on its own. It points out that the backing of both Britain and France has been required to launch the Concorde. But if the combined efforts of two countries and their aircraft industries are needed for that much less ambitious project, the American SST might be more safely and soundly developed if it commanded the combined resources of the entire American industry and the Government.

There are obvious advantages in industry-wide cooperation. It would promote a spread, rather than a narrowing, of technology. It would mean less cost—and less risk—to taxpayers. And it would remove the threat that Government participation might eventually lead to Government control.

In 1964, when the SST was still largely in the dream stage, we suggested that a joint venture would be preferable to a competition that would give one firm a commercial monopoly with Washington as its sole—and perhaps not so silent—partner. We still consider a joint venture the best way to produce the SST at the most economical cost. With the first generation of SST already planned and a second generation being studied, questions of cost and technology can no longer be swept under the rug.

The possibility that SST may not be able to operate at a profit, as one expert involved in the negotiations for its development predicted the other day, makes it essential to put a limit on Government's risk with the taxpayer's money. If the Treasury is to advance most of Boeing's development costs, which seems to be the Administration's plan, there must be iron-clad guarantees that it will be repaid.

It would be preferable if the entire aerospace industry participated, along with the Government, in this big and speculative project. By setting up a new corporation along the lines of Comsat, the SST would have more chance of being a success while strengthening the industry without undue risk to the taxpayer.

What is at stake is not the commitment to proceed with SST. That decision has been made and cannot—and should not—be reversed. But if the SST is to be sound economically as well as technologically, the Administration and the industry must be less secretive and indefinite about costs and how they are to be financed. An open debate is needed on how to get the most for the taxpayers' money.

Letter From India

EXTENSION OF REMARKS

OF

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. BINGHAM. Mr. Speaker, last November I made a brief visit to the city of Bombay in India. On November 25 the Times of India printed a report of statements I had made at a press conference, in response to questions about the future of the American aid program in the light of India's current famine.

I include herewith a letter which I have since received, which I believe to be of interest:

9A/36, WEA, K'bagh,
New Delhi 5: 26.11. 1966.

YOUR EXCELLENCY, This is a salute of warm welcome, admiration and gratitude for making the most significant observation of the century, reported on p. 5 of the Times of India, Bombay, dated Friday, the 25th:

"However, he said, the American people were convinced that no aid programme at the moment was more important than the programme here in India. This was not just because it was the largest programme, which it was, but because the stakes were so high."

That is sense, common sense, good sense such as not every politician in the old world or even the new is always capable of. I salute you!

I take my hat off to you a million times for doing something. Most legislators in my country are too lazy to do—issuing questionnaires more than once to as many as 10,000 constituents to feel the public pulse.

Politicians in my country are content to feel the public purse, not pulse! That is the tragedy. They are as close to public opinion as the earth is to the sun.

Yes, the stakes are high, as you said. Every Indian should be made to lean more and more on democracy and private enterprise.

What would I do to promote that if I were President Johnson, Mr. Rusk or Mr. Bowles? I would devote the American rupee funds in India in their entirety to a swift spread of the English language and through it a knowledge of American democratic values and farming methods. But America's greatest farm is the Congress which nourishes and sustains the democratic growth all over the world, though the farming I have in mind is actually food farming.

Some American model farms in this country—cattle, poultry, fruit and vegetables—as providing firsthand demonstration of her modern methods, would be a great help.

Yes, Your Excellency, we must do something concrete to make India lean more and more on the side of the great democracies. Perhaps, Canada, Britain and Australia, too, have a stake in this. In other words, all the English-speaking or English-*using* democracies.

May I beg you, implore you to send a copy of this letter to every American Congressman and senior member of the Administration? Pray, do!

Yours very sincerely,

C. BALAN.

Tribute to N. Edward Disbrow

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. WOLFF. Mr. Speaker, I was saddened to learn of the passing away on Friday, December 30, 1966, of one of my district's most distinguished citizens and publishers, N. Edward Disbrow. I extend my deepest sympathy to his family and relatives, and I include in my remarks the editorial of his paper, the Oyster Bay Guardian, which tells more eloquently than I of how he will be missed:

N. EDWARD DISBROW, EDITOR AND PUBLISHER, DIES DECEMBER 30—VILLAGE MOURNS LOSS OF FRIEND—SERVICES ARE HELD TUESDAY, MEMORIAL MASS TO BE SAID SUNDAY AT ST. DOMINIC'S

N. Edward Disbrow, editor and publisher of the Oyster Bay Guardian for almost twenty-one years died in the early morning hours December 30th at his home at 18 School House Lane, Syosset. He was 61 years old. A few hours before, he had put his final issue of the Oyster Bay Guardian "to bed."

Services, held Tuesday at the Beney Funeral Home, Syosset and conducted by the Rev. Paul Bowles of St. Paul's Methodist Church were attended by scores of friends, many of them prominent in the life of the village and the town. Nearly 100 Masons attended Masonic services the night before. On Sunday at 10:30 A. M. a memorial mass will be said for Mr. Disbrow at St. Dominic's Church. Burial was in Memorial Cemetery, Cold Spring Harbor.

A life-long resident of the Oyster Bay area, and a graduate of Oyster Bay High School, he began to work on the weekly newspaper which had been founded in 1899 by his grandfather, Nelson H. Disbrow, and his uncle, Leslie C. Disbrow, when he was only 16 years old. The day after Christmas he started his 46th year on the Guardian.

Ed Disbrow looked out on the world over the top of his printer's specs from "the stone" by the big, grimey window in front of the print shop on West Main Street. And those penetrating hazel eyes missed very little of the passing parade.

KNEW EVERYONE

He knew everyone in town, and very nearly everyone in the surrounding villages. He rarely forgot a name, or a face. He knew the genealogy of every old family in the village, and he knew more about the new families than most of them realized. He loved to talk, and he was a good talker. In a unique way, he made Oyster Bay come alive to those newcomers who found their way inside the Guardian's door.

His memory stretched back into the memory of his forebearers, and far beyond his sixty-one years. He believed in God, the Constitution of the United States, free enterprise, thrift, hard work, Masonry and the Republican party. He knew what he thought was right, and what he thought was wrong, and he could tell you which was which in no uncertain terms.

MASTER PRINTER

He was a master printer. He was fond of pointing out that even the rudiments of the printing business could not be learned in less than seven years. He was a master printer, and he came from a family of printers. His grandfather, Nelson, entered the printing business on the Prattsville (N.Y.) News, from there went to work for J. B. Lyon, the state printer at Albany, later joined the Northport Journal in Northport, Long Island. Finally, on February 10, 1899, the same year that Nassau became a county, he and his son Leslie founded the Oyster Bay Guardian. A strong-minded and intrepid editor (Ed Disbrow said he had inherited his disposition) he delighted in uncovering dishonest politicians; was once shot at through the Guardian window, an incident he later reported in the pages of his publication with great relish.

BIG HEART

Ed Disbrow was a small man (he wore a size 5 shoe) with a big heart and a particular weakness for small girls. He had less use for appearances than he had for his "store teeth," which he relegated to a shelf in his closet. He tried with utter honesty to guide his publication through the annals of Oyster Bay history with an impartial attention to the truth as best he could determine that truth. He believed facts should speak for themselves, and he had no patience with editorializing.

Ed Disbrow was proud to be a member of Matinecock Lodge, No. 806, F. & A.M., and a charter member of Hook and Ladder Co. No. 1, Syosset Fire Department, and the Syosset Volunteers and Exempt Firemen's Association.

He is survived by his wife, the former Mary Allison; two daughters, Allison D. Spencer of Kings Park, and Margaret D. Layton of Syosset; five grandchildren, Kathleen, Susan and Nancy Spencer, and Allison and Margaret Layton; three brothers, George of Sag Harbor, Richard of Syosset, and Stephen of Oyster Bay; and two sisters, Mrs. Sally Wilson of Pennsylvania, and Mrs. Molly Kealey of New York City.

B. M. "Mac" Myers, Jr., Regional Director, U.S. Post Office Department, Dallas, Tex., Addresses Sixth District Postmasters

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, while visiting in my congressional district during the recent adjournment of the Congress, I had the opportunity to attend a meeting of all of the postmasters from my district at which time my good friend, Mr. B. M. Myers, director of the Dallas, Tex., region, presented the major address.

All of us realize that the Post Office Department is faced with a most tremendous job and there is no question in my mind but what the problem is being met and it is because of men like Mac Myers and the countless others who have devoted their lives to the Department. Mac Myers' address, however, seems to hit at a basic issue and I commend it to all of the Members of this body.

The address follows:

BANQUET TALK AT NAPUS DISTRICT MEETING, COLLEGE STATION, TEX., BY B. M. MYERS, JR., NOVEMBER 5, 1966

I know that every one of you, like each of us in the region and those in the Department in Washington, have been concerned with the problems in the handling of the explosive increase in the volumes of mail that we have experienced for the past month. We are still experiencing this unprecedented volume but tonight I can proudly say that we have it under control and regionwide are maintaining a current status. The condition we enjoy at this moment was possible only by the Department quickly recognizing the situation and coming through with emergency increases in funds and authorizing the employment of 89-day temps at this time and by concerted, dedicated and effective attention that you postmasters gave to getting the mail moving. I have so often said to you how grateful I am and always proud of the postal personnel in the Dallas region.

But as a result of this sudden, unexpected increase in mail volume and our inability to immediately keep its delivery as current as the public is accustomed to, we have experienced some unfortunate publicity and criticism from the public. I am convinced that those who saw fit to be critical were in the main uninformed. It appears that too often criticism was hastily voiced and based only on one side of the story. It is in that vein that I would like for us to think for a few minutes tonight. Or, to say it another way, "What am I—what are you doing—to the image of the postal service?"

It has been said that there is nothing harder to piece together than a shattered "image," especially if it's yours! And it could happen more easily than falling off a pedestal. We are living in an era when the public seems to have an unquenchable thirst for information, particularly information concerning the care and efficiency we exercise in spending their tax dollar. And I for one think that this is good because it leaves little chance for inefficient management in Government to go undetected or stay out of the spotlight.

So that we can evaluate the present image of the postal service, what it should be and what we are and can do about it, we obviously need to take into account the conditions under which this image is to be improved and maintained. Everywhere we look around us and in all of our own personal activities, we see among our acquaintances, ourselves, our patrons, an ever increasing demand for perfection, for improvement in almost every phase of life. We demand more rapid, positive transportation. We demand better and safer highways. We expect immediate, available quality merchandise and at a convenient location for procurement. We have become accustomed to plentifulness and to the ability or right of demanding quality merchandise and immediate service. So how can we, why should we, expect a tolerant public if the type of postal service we provide is not in keeping with the need of the times in which we live?

We in the postal service frequently refer to the fact that in excess of eighty per cent of the mail is business mail. Not too many years ago, it was the reverse when more than eighty per cent of our mail was the friendly exchange of letters between friends and families.

This change has brought about the awareness of the need of the public of the timeliness and certainty of mail delivery. For example, the average collection of premium payments by a large insurance company sometimes runs in excess of $25,000 a day. They, therefore, are obviously financially interested in prompt mail service. If we delay the handling of their mail just 24 hours it means they have thousand of dollars less operating capital or must pay interest on operating funds borrowed. A mail order concern advertises that they can fill orders within a stated period of time. We fail to give reliable, timely service and they obviously lose business and rightfully blame us.

To best illustrate the sensitiveness of the mail service today to the business community, let me relate a conversation I recently had with the executive of one of the larger mail order concerns. This conversation occurred during the period when we were literally swamped with this unexpected increase in third class and catalog mail. He pointed out that over the years they had made tests to determine when they could best make a sampling of orders received to identify what merchandise should be reordered or restocked because of the demand by the public. They found that within ten days after their catalog had been mailed they could make realistic samplings of the orders received and immediately place their orders for new stock or for printing of their next year's catalog. As a result of the delays that occurred this year, they are deeply concerned over their merchandising policy for next year.

So this is the climate—the demands of the times—in which we must maintain, improve or lose the image of the postal service.

"What am I—what are you—doing to the image of the postal service?"

Now we have made many changes, all designed to give improved postal service to the public. The sectional center concept, Zip Code, airlift, advance businss collection, delivery, and on and on. But what kind of a job have we done to create understanding of these new and improved innovations by the patron? You hear complaints by misinformed people that sectional centers were conceived to bring about gradual discontinuance of trains. You hear and read that there is no direct mail service between two given cities possibly twelve miles apart and that mail is being routed in a circuitous route ninety miles distanct merely to get it twelve miles away. How well have we explained to the public that it may be true that mail from point "A" to point "C" is being routed in a round-about way but that it is more economical and better service than they previously had? Is it of any concern to you when you place a long distance telephone call that it is often routed clear around the country to get to some nearby city? What difference does it make if it is sure and economical service? The public would accept this same thing about indirect mail routing if they understood. How well have we done in creating understanding on the part of the public on the use of the Zip code? Or do too many of them still think that we are requesting Zip codes just to save us work?

Recently, in the analysis of mail service for a city not too distant from where we are tonight, it was disclosed that we were still making a mid-afternoon dispatch by star route at a cost of some three thousand dollars a year. The study proved conclusively that when the mail from that center arrived at the sectional center it stayed there until early morning dispatches on outgoing star routes. There was a late afternoon dispatch from that same city that arrived at the sectional center several hours before the outbound mail runs commenced. It was elementary that we would decide to eliminate the mid-afternoon trip and save three thousand dollars a year when it was accomplishing nothing. Can you imagine what the headlines of the local paper said? They stated "Mail Service Cut in Half." The postmaster was quoted several times. He later stated that he was misquoted and I do not question his word. But I do wonder this: If we had the right image and if there had been mutual respect between the postmaster and the publisher, and if the postmaster had explained at the time the service was being readjusted that it was a good, economical move with no detriment whatever to the mail service from his city, wether those headlines would have appeared.

And as we consider our image as managers, what attitude do we demonstrate to our employees and to the patron in support of administration and postal service policies? Do we have an attitude of respect for authority? How does the employee have any way of knowing which regulation or law to observe and which one to ignore when he sees or hears daily disregard by the postmaster of regulations, policy or instructions from higher authority? In that same vein, almost every newscast contains a new story of some instance showing a growing and widespread disrespect and contempt for law and order. It is easy to blame someone else or say "I'm glad that's not happening in my city," but do we have the right to blame others and we certainly can't be sure that won't happen in our neighborhood. Haven't you and I, by selective disrespect of law, created either this confusion or this lack of understanding among the young people? How many laws did you break today? Do you stop at stop signs because it's law or only when you think a policeman may be around the corner? How often do you exceed the speed limit, one eye on the road and one eye watching for radar? It is fairly obvious that those with whom we associate have no way of knowing when we should and when we shouldn't respect law and order or higher authority. How often do we discuss in the presence of our employees, our children, our grandchildren, methods of evading income tax?

Mr. Parent or Grandparent, which law do I break today? Is today my day to commit murder or is it tomorrow that I commit assault and robbery?

Mr. Postmaster, is this the day that I can destroy that letter or is it my day to loiter or falsify my time card? What law do I break today?

There is one thing for sure. Your family, your acquaintances, your employees and postal associates do have an image of you. How good is it? If we instill in our employees an attitude of dedication, respect for law and postal regulations, a respect for law and order, it must be by demonstration constantly on our part.

Many of you have heard me comment that once you became postmaster, that once I became a regional official, that as long as we hold our jobs we constantly wear the cloak of the office. There is no way that at the close of office hours we can hang our official cloak in the closet and proceed until tomorrow morning as Mr. Plain John Doe Citizen. Wherever we go, wherever we are around anyone who knows how we make our livelihood, we wear the cloak of our office. What are we doing after office hours to create the proper image of the position we hold, of the service we represent, and of our citizenship. We are privileged to be in the greatest of all public services, for not only do we make a livelihood where every God given talent can be used daily for the betterment of our fellowman, both by good postal service and by the image we create.

Harrison E. Salisbury Sums Up

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. RYAN. Mr. Speaker, Harrison E. Salisbury, the Pulitzer Prize-winning assistant managing editor of the New York Times, who recently reported from Hanoi, has begun a series of articles summing up his experiences and observations in North Vietnam. Mr. Salisbury's previous articles, which I introduced into the CONGRESSIONAL RECORD yesterday, provide useful information concerning the war which had previously been unavailable. I am sure that his summing up articles will also be of great value.

I bring to the attention of the Congress the first article in the series which was published today in the New York Times. I intend to submit the others as they appear.

The article follows:

[From the New York Times, Jan. 11, 1967]

Hanoi Inviting Westerners To Inspect Bomb Damage

Following is the first of a series of articles by an assistant managing editor of The New York Times summing up observations on his visit to North Vietnam.

(By Harrison E. Salisbury)

HONG KONG, January 10.—The parade to North Vietnam has begun—not merely just of newsmen or of Americans—but of Westerners of all kinds.

The North Vietnamese Government has reached a momentous decision—to open its doors and invite the world in to inspect the results of American bombings.

The trip of this correspondent to Hanoi was not the last there for an American correspondent.

There are indications that hardly a week will pass through the winter when one American newsman or another or a distinguished West European guest will not be taken for a walk through the shattered streets of Namdinh.

Visitors will tour the complex of Roman Catholic villages around Phatdiem, south of Hanoi, inspect the flattened village of Phuly or poke through the ruins of Hanoi's Pho Nguyen Thiep Street and the wasteland of the Phuctan area along the Hanoi Red River levee.

Before this correspondent left Hanoi in the pre-dawn hours Saturday on the plane of the International Control Commission, the truce observation body set up under the 1954 Geneva accords ending the Indochina war, the North Vietnamese capital was already receiving more visitors from the West.

The same plane that took this correspondent out of Hanoi had brought in two other Americans, Harry Ashmore, one-time editor of The Arkansas Gazette of Little Rock and now chairman of the executive committee of the Center for the Study of Democratic Institutions, and William C. Baggs, editor of The Miami News. With them was Luis Quintanilla, a former Mexican Ambassador to the United States, who made the trip as a private citizen.

Already in Hanoi were the Rev. Martin Niemöller, a West German Evangelical pastor and one-time submarine commander, and Msgr. Georg Hüssler, secretary general of Caritas, West German Catholic welfare organization. They came for talks on North Vietnam's relief needs.

Hanoi at long last has decided to open North Vietnam's doors not merely to Communists, fellow travelers, leftists, peace advocates and supporters of North Vietnam's cause. It has decided to admit a cross-section of political beliefs and sympathies and visitors from all kinds of countries, but particularly from the United States and Western Europe. Actually Hanoi has seemed to be inching toward this decision for months. For instance, this correspondent began his effort nearly 18 months ago, to persuade North Vietnam's authorities to permit him to visit Hanoi. The first indication that a visit might be possible came six months before the visa actually was granted, namely last June, when a formal visa application was accepted in Pnompenh, Cambodia.

In June the North Vietnamese authorities thought the trip could be made, then changed their mind and said it would have to be postponed, but promised it could be carried out by the end of the year.

It was about that time that Hanoi, after more than six months of requests, permitted the first resident Western correspondent to take up his duties in Hanoi—Jean Raffaelli of Agence France-Presse. During the summer and autumn two or three West European visitors were admitted, including Jacques Decornoy, correspondent of the newspaper Le Monde of Paris, who completed a visit to North Vietnam in early December.

APPLICATIONS RECEIVED

Ngo Dien, chief of information of the North Vietnamese Foreign Ministry, said Friday that his ministry had received so many cables in the last fortnight for permission to visit Hanoi that it had been unable to read them all. He said the applications made a stack of cables nearly half a foot high and numbered in the hundreds from all countries of the world, but particularly from the United States.

This does not mean that North Vietnam will be admitting all those who apply. It simply does not have the facilities to cope with more than a handful of visitors at a time. But the flow of visitors will undoubtedly be maintained, to include many Americans, especially journalists, and to cover all varieties of sympathies and viewpoints.

This decision by Hanoi may well, in the opinion of diplomats in Hanoi, have a major impact on the course of the war.

Visible evidence of damage caused by bombing is apparent to outsiders who walk down the streets of Namdinh or who try to reconstruct in their minds what the village of Phuly may have looked like before bombs virtually obliterated it. It is against these impressions of human suffering and devastation that air strategists' arguments concerning military objectives will have to be placed.

BOMBINGS INVESTIGATED

A Scottish member of a seven-man team that is investigating the bombings for Bertrand Russell, the philosopher, said:

"I am willing to concede that the Americans did not deliberately order their pilots to destroy villages, bomb out housing and kill civilians. It is even possible that the bombers consistently were striving to strike at purely military targets although this seems hard to believe in the case of miserable peasant villages that have been devastated.

"But the fact remains that, whatever the reason, bombs actually have leveled villages, killed large numbers of civilians and destroyed a very great deal that cannot be considered military by any stretch of the imagination."

Lord Russell's group is seeking evidence on "war crimes" to be used at a planned "trial" of President Johnson and other United States leaders. The tribunal, which has no legal standing, is scheduled to meet in Paris in March.

The impact of continuous and detailed reports of the bombing by Westerners should not, in the opinion of diplomats sympathetic to the United States, be underestimated in Washington.

"Who remembers that the Nazis were trying to destroy the motor works in Conventry?" one diplomat said. "All we remember is that the Luftwaffe destroyed the cathedral."

The effect on world opinion may be heightened by television and documentary film coverage of North Vietnam. Japanese and French film crews are already at work there. It is likely that Hanoi will soon also let an American team take pictures for American television audiences of what the bombing looks like from the victims' side.

This involves delicate decisions for the North Vietnamese. Their military men are a little nervous about having so many foreigners, particularly Americans, moving about, making observations and taking pictures. But the basic decision clearly has been made that the advantages outweigh possible risks.

This correspondent has worked under wartime conditions in many countries. Restrictions imposed during his fortnight in North Vietnam were remarkably light. There was no censorship of dispatches although they were read before being transmitted. Nothing was changed or deleted as far as he could ascertain.

The only restriction this correspondent encountered concerned his interview with Premier Pham Van Dong, which was granted with the understanding that certain parts of the talk were to be off the record. In addition the North Vietnamese Foreign Ministry proposed certain textual changes and deletions in a dispatch reporting the interview.

Jacques Moalic, the present resident correspondent of Agence France-Presse, said he had encountered no censorship in four months work in Hanoi with one exception. The authorities told him that they could not permit him to mention certain trips by Communist party secretaries outside the country.

On picture-taking this correspondent encountered similar liberality. Color pictures were not permitted because the North Vietnamese lack processing facilities. Black-and-white photography was permitted, but the film had to be developed and inspected by the military authorities. There was no military objection to any photos submitted.

The authorities asked that one picture not be used, not for military reasons, but because they thought it conveyed a poor impression of people who had been photographed.

No pictures were taken without permission. A textile factory manager once objected to having his factory girls photographed. His reason is difficult to guess. On another occasion a picture was snapped at Phatdien, showing a view across a canal and open field. A security man requested that no more pictures be taken in that direction. Presumably there was a military reason, possibly an antiaircraft battery beyond the rim of the trees.

This correspondent exercised care not to propose pictures that might involve military objectives such as railroads, bridges or antiaircraft guns. In more than 20 years of work as a correspondent in virtually every Communist country of the world, one acquires a sense of what is likely to be regarded as a legitimate news photo by Communist officials and one that is likely to be regarded as violating either military security or the propaganda image of the country.

Comparatively speaking, the North Vietnamese were more relaxed than, for instance, Soviet officials even under today's so-called "relaxed" Soviet regime. Many pictures of village life were taken that revealed a low standard of North Vietnamese life. Such pictures would probably have aroused objections by local authorities, for instance, in Mongolia.

All visits, trips and interviews were arranged through the press department of the North Vietnamese Foreign Ministry. Because of the delicacy of the correspondent's position "behind the lines," requests were submitted in general rather than specific terms.

For example, a request was made to visit areas in Hanoi that had been bombed without specifying which ones, requests were made for trips to towns and cities outside Hanoi where bombing could be inspected without specifying them by name, a request was made to visit country villages to see the life of people without saying which villages, to visit factories, schools and hospitals without specifying precisely which ones.

Some requests for interviews were specific—to talk with the Premier, with President Ho Chi Minh, with Gen. Vo Nguyen Giap, the Defense Minister, with the ministers of health, education and planning, with leaders of the Roman Catholic and Buddhist faiths.

Most requests were met. An interview was granted by Premier Dong, but not by President Ho Chi Minh or General Giap, but it was understood that only one of the trio was likely to receive the correspondent. The Planning Minister was said to be out of town and no good economic spokesman was forthcoming as a substitute.

A request to revisit Namdinh fell through, but this was not the fault of officials. A visit had been set up for New Year's day, but delays on a trip to Phatdiem made it impossible to carry out the Namdinh trip. Efforts to reschedule failed because renewed air activity after the New Year's truce caused the authorities to regard the trip as hazardous.

No request was made specifically to visit Haiphong, and such a trip was not proposed by the authorities. The request was not made because of a feeling that Haiphong might be a sensitive military area. Actually, as conversations with diplomats revealed, the Hanoi-Haiphong triangle is open to diplomats, who travel there constantly despite air attacks.

Thus information on Haiphong and on the routes between Hanoi and Haiphong is already available in detail in world chancellories. Since Haiphong is constantly visited by foreign shipping, there is no real question of military security in that area.

One major request made to the North Vietnamese authorities failed of a possible response. This was a request for interviews with or information concerning American prisoners held in North Vietnam.

It was immediately indicated that this request would be "difficult." It was said that the prisoners were in the custody of the military and that it did not seem likely that the military would grant permission. The request was repeated up to the last day of the visit, but without success.

[Mrs. Joe Griffith, of Ithaca, N.Y., one of four American women who visited North Vietnam while Mr. Salisbury was there, reported after her return to the United States that her group had met two captured American airmen and brought back letters from other captured fliers.]

Efforts to piece together information about the prisoners from other sources, including diplomats, provided little data. It was said by the diplomats that they believed the prisoners were being given relatively good care although it was understood some prisoners found the rice diet of the Vietnamese difficult.

The authorities said the prisoners were not held in Hanoi, but had been dispersed in small groups to various places because of the bombing danger. The prisoners were paraded through the streets of Hanoi last Aug. 1. Foreign diplomats who witnessed the spectacle found it unpleasant, particularly when one Communist diplomat stepped from the ranks and struck one of the wounded Americans.

North Vietnam's decision to open the country for Western inspection has been vigorously urged for many months by East European representatives, especially Czechs, Poles and Hungarians. As far as is known to the East Europeans, neither the Russians nor the Chinese have urged North Vietnam to open its doors to the West.

"We told them again and again and again," said one Polish diplomat, "that they must let the outside world know their story. All they wanted to do was to invite delegations of their closest supporters. We told them that would not do. They must invite right-wing visitors, persons who do not sympathize with Communism, persons who are antagonistic to their system."

This diplomat told how he intervened with the North Vietnamese on behalf of a Scandinavian diplomat who wanted to come to Hanoi and how impressed the Scandinavian was with the results of American bombing and the North Vietnamese war effort.

"This man was a good bourgeois," the Pole said, "he was no friend of Communism. But he could not help but be impressed with what he saw."

The problem of handling the continuous influx of Western journalists and visitors will not be easy for Hanoi. In many cases the North Vietnamese Authorities attach a physician to the visiting groups, although in the case of this correspondent they apparently felt he was rugged enough to get along without medical aid.

They do not like to move people on highways in the daylight as there is never any certainty that American bombers may not appear at any moment. Visitors are usually driven in the early evening or pre-dawn hours to points outside Hanoi. This is not always possible, of course, and diplomats visiting Haiphong have had to take shelter en route.

Hotel facilities for visitors exist only at Hanoi and Haiphong, and even if hotels in Namdinh and Ninhbinh, for example, had not been bombed out, the authorities would be unlikely to permit visitors to stay overnight because of the possibility of attack. On trips about the country, visitors are more likely to be put up in small village hostels.

The number of interpreters and escorts is small and provides another limitation on the size of any Western influx.

Outside of casual shopping and errands and visits to foreign missions in Hanoi, this correspondent did not venture out without an interpreter, not only because of the language barrier, but also because of the delicacy of his position "behind the lines." This provides an unusual quality to a visit by an American to North Vietnam.

To an American who is constantly taken to see houses blasted by American rockets; hospitals where men, women and children hurt in the bombing are being treated; who hears survivors tell how wives, husbands or children were killed, or who hears provincial authorities proudly announce the number of American planes shot down or describe the capture of an American pilot, there is a nightmarish quality that is hard to avoid.

TWO KINDS OF AMERICANS

This aspect seldom leaves the mind of an American visitor, but seems hardly to bother the North Vietnamese, who have been trained by the Government's propaganda to divide Americans into two categories—"American ruling circles," responsible for the war, and ordinary Americans, presented as individuals of goodwill and sympathy. The average North Vietnamese, on meeting an American in Hanoi, automatically classifies him as a "good" American as distinguished from "bad" Americans in Washington and up in the skies.

An additional factor that limits the number of visitors that may be received in North Vietnam is air transportation. There are only two routes open—the plane of the International Control Commission which links Saigon, Pnompenh, Vientiane and Hanoi, and a Chinese plane that connects with services to Canton and Peking at Nanning.

The control commission plane, an old four-motor Constellation, makes the flight three times every fortnight. The service formerly was more frequent, but the commission lost a plane over Laos last year, presumably shot down although the wreckage has never been found.

Because of the dangers of flying over North Vietnam in the daytime, the commission plane remains on the ground at Vientiane until dusk, then takes off for a two-hour circuitous journey to Hanoi. The Cambodian airline maintained a Pnompenh-Hanoi service until late last summer, but suspended it after a plane had encountered United States jets on a bombing mission. The jets warned the Cambodian plane away. It flew back to Pnompenh without landing at Hanoi and further service was suspended.

The commission plane normally arrives in Hanoi about 9 P.M. and takes off on the return trip about 4 A.M. the following morning. This enables it to get across North Vietnam and northern Laos in darkness when ground fire is not likely to be encountered. The impression of travelers is that people on the ground in Laos and North Vietnam are trigger-happy and open up on anything they see in the skies on the assumption that it is out to bomb or strafe.

The Chinese planes flying in from Nanning also make the trip in darkness, usually coming in and taking off the same evening. There are one or two planes weekly on the Chinese service. Both the commission and the Chinese cancel flights at any indication of possible trouble.

Thus access to Hanoi is not easy and has not been made easier by the increasing reluctance of the Chinese to permit the transit of Western visitors bound for Hanoi. There has been speculation that the Czechoslovak airline, which now flies to Pnompenh, may add the Hanoi link, but nothing has been done thus far.

It was an eerie experience to touch down in Hanoi shortly after 9 P.M. on Dec. 23, wondering what kind of reception lay ahead. All the way from Pnompenh and through a pause of several hours at Vientiane, while waiting for darkness to fall, a Canadian sergeant who frequently traveled from Saigon to Hanoi, talked dourly about the dangers of the flight, the possibility of being shot down by ground gunfire or fighter planes of the two or three fighting forces engaged in the mountains of northern Laos.

When Hanoi came into sight, it was not the brilliant pool of light that might have been expected from a city that was supposed to have a population of more than 1,000,000 with its suburbs. The streets were marked by strings of dim little bulbs and the edges of the city faded raggedly into darkness.

When the plane touched down, the runway lights were almost immediately switched off and the aircraft taxied up to the ramp in darkness. When the engines were cut off, the plane was dark except for the wavering light of one flashlight in the hands of a stewardess. The doors opened and two North Vietnames border control officers stepped aboard, by the light of the flashlight, checked off the names of passengers and took up passports.

COLOR FILM SURRENDERED

On the ground two young men who identified themselves as a representative of the Foreign Ministry and a representative of the Hanoi Journalists Association, stepped up and led the way into the dimly lighted small terminal.

There was a half-hour wait while baggage was unloaded from the plane and the authorities checked the passports. The only questions dealt with films and the only request made was that all color film be surrendered against a receipt with the proviso that it could be picked up on exit from the country.

Then the correspondent and the two young Vietnamese got into a black Russian Volga automobile and drove into town along streets that were as dimly lighted as they had seemed from the air.

The weather was on the chilly side and the first impression was one of great activity in the streets and on the highway leading out past the airport. There were bicycles and truck and people in constant motion in the darkness. This, as soon became evident, was a customary feature of the Vietnamese nighttime landscape.

The highway paralleled a railroad line and a long train, moving slowly behind a small locomotive, first could be heard and then dimly seen in the gloom.

The hotel, once called the Metropole, but rechristened the Thong Nhat (Reunification) Hotel, proved to be a cavernous old French establishment. Four or five Europeans were chatting under potted palm trees in the lobby. The dining room was empty except for a head waiter and two waitresses.

A quick dinner was rustled up and the headwaiter then explained that the restaurant's working hours were 6 A.M. to 8:30 for breakfast, 10:30 to 2 P.M. for lunch and 5 P.M. to 8:30 for dinner. The restaurant had been kept open after hours to provide dinner for the late arrival. A bar at the end of the hotel lobby began work at 8 A.M. and stayed open until 11:30 P.M.

While this correspondent was in North Vietnam, foreign visitors included a labor union delegation from Moscow, four American women representing peace organizations, a Japanese group to investigate "American war crimes," another investigating committee sponsored by Lord Russell, the English philosopher, a group of four West Germans including Pastor Niemöller and Msgr. Hüssler and a Cuban camera crew.

To each of the larger groups, several interpreters and guides were assigned. A physician accompanied the American women and examined Pastor Niemöller, who is 74 years old, to be sure that he could stand the physical strain of traveling in the countryside.

Different organizations appeared to be acting as hosts for various groups. Some were under the wing of North Vietnamese peace organizations and others were attached to a North Vietnamese organization devoted to collecting evidence of American "war crimes."

The groups were all housed in the same hotel. Some were given private dining rooms for their meals, others took their meals in the public restaurant.

Most of the visitors were taken to see the same towns and villages damaged by bombing. But in each case the schedule seemed to be made up individually. For example, on the New Year's weekend, this correspondent was taken to Phatdiem.

He drove to the village complex Saturday evening, spent the night there and then toured the villages Sunday, talking with local inhabitants and officials. That same day at least two grounds of visitors were brought to Phatdiem—the Russell committee members and the four American women, but their paths did not cross.

The Japanese group made an extensive tour of North Vietnam. Some of its members went to the demarcation line at the 17th parallel, studying the effects of bombing in many of the smaller villages in the demilitarized zone and along the coast.

The Russell committee split into two sections to carry out inquiries in different parts of the country. Most of the trips arranged for visitors were to the south. The American women were taken on one trip about forty miles north of Hanoi.

As the volume of visitors to North Vietnam grows, it seems likely that most parts of the country will be covered although there is an obvious reluctance to take groups into areas where heavy bombing is expected.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133 p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective departments or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

New York City: The Question of Survival

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. ROONEY of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

NEW YORK CITY: THE QUESTION OF SURVIVAL

(A speech by Robert L. Cummings, president, New York Airways, before St. John's University Annual Business Conference, New York City, October 27, 1966)

Will New York City meet the challenge of progress—or, more bluntly, will New York City survive—and continue to grow?

Transportation, as much as any other single factor, has influenced and shaped the history of civilization. The sled, the wheel, the ship, the airplane—all combined—have enabled individuals to move from their own tiny spheres of influence to any point on earth—and, indeed, perhaps, anywhere in the universe. The travel of man to distant places has brought about the development of natural resources and the exchange of products to the advantage of all mankind.

Improvements in travel have always increased human knowledge and productivity. It can be argued that the Renaissance resulted from Venetian trading voyages to the Middle East.

Man, in his development of commerce, has always tried to use nature's topography to his best advantage. Man has adapted to his own use natural harbors, adjacent to waterways and the seas. From such advantageous centers have sprung rail arteries, highways with their cars and trucks, airports, barges, and other systems of distribution.

New York City is an excellent example of man's adaptation of nature to his own use. A magnificent harbor, waterways, a magnificent geological structure to anchor its skyscrapers, ample surrounding territory for growth. All of these have made this a great city. It has become the heart of world finance, its communications center, the gateway to any point on the globe, and, through the United Nations, the political capital of the world.

New York City's importance began with the exchange of commodities between Colonial United States and England and other European countries, a trade of the utmost importance to the economy of our infant nation. If trade was important then, it is of even greater importance to our national well-being today. Our increasing population needs products of the world while our technical skills produce goods other nations need. With our growing responsibilities and with attendant increases of overseas expenditures, the balance of payments requires that we export more and more. New York City is the center of this trade.

But, neither nature nor man is static. The Ice Age comes and goes. Rivers erode. Political influences fade. Balance of power shifts. National characteristics change. Wars are won and lost. As great as New York City is, there have been other cities in the past which in their days were relatively as great—Ninevah, Babylon, or Persepolis.

Perhaps rivers shifted their courses and climates changed; perhaps political decay set in, perhaps moral corruption contributed its share. In many cases, a conqueror prevailed and destroyed. Perhaps, under changing economic pressures, commerce has gradually drifted away. But, regardless of the cause, the greatness came to naught and all that remains are chiseled tablets and faded scrolls, and sand-covered ruins in now-isolated areas. This story has been repeated over and over since the dawn of civilization.

No one for one moment expects such a fate for New York City. But, it is a statistical fact that growth is more rapid and expands faster in areas of relative newness. Our own West and Southwest are good examples. Older and more mature regions of a country, while perhaps still growing, do so at a lesser rate both in population and productivity. They simply run down. They tend to accept today what was good in the past. Frontiers energize people. Frontiers stimulate youth to do the impossible.

New York City is one of our older, mature cities and in the normal course of history we might well anticipate a slowdown in construction, in production of manufactured goods, in trade, in population, in energy, and in imagination. If this does not happen, it will be stemming the tide of history. Witness Athens, Rome and Venice in relatively recent times—and even London and Paris.

Certain trends are visible upon the New York horizon. To speak of increases in population today usually means gains in the surrounding suburban areas—Long Island, Connecticut, Westchester and New Jersey. The exodus to these areas is changing the character of New York. Major stores find it necessary—and desirable—to follow this migration which is establishing a series of satellite marketing areas around New York proper. And, many more are being built. Many manufacturing plants also are finding locations in the suburban areas to be to their advantage. Obviously, skilled workers follow these plants. It is these areas which will absorb the additional five million increase in population in the next 20 years.

New York's important garment manufacturing industry has remained practically static in the past few years. A shortage of skilled labor combined with high production costs and changes in styles have influenced this trend. Fortunately, specialty stores such as those dealing in high fashions which require a concentrated market for their support have replaced some of the departing merchandising organizations.

New York City is undergoing a period of transition. It is becoming a service city rather than a production city. It is becoming a city of national and international company headquarters, a city of banks, a city of insurance companies and financial houses, of advertising.

New York is a great city today, but this alone is no cause for elation, nor is this any reason for its citizens to sit quietly by and watch the passing parade of progress. Never has there been such competition between sea ports to solicit shipping business. Modern port facilities, assured longshoremen availability, quick turn-around—all encourage the transfer of a shipping man's affection toward some other port.

The hotel, restaurant, and theatre industries are affected by innovations which are changing the pattern of the businessman's life upon which these industries depend. The shift from rail to air has changed the routing and timing of travelers. Businessmen are making one-day business stops in cities, returning home for the night. Others find that the speed of the jet airplane enables them to cover several cities in the same time train travel would have permitted only a single business call. The increased use of private automobiles affects hotel business as outlying motels receive increasing numbers of guests. These are but a few of the ever-changing elements which influence and alter the life of a community.

A city is not a dead thing. It is a living organism which grows, or decays and dies, depending upon the foresight of its administrators. Only the other day, a prominent engineer told me that it was simply impossible to forecast specific results more than five years into the future; and yet, capital investment requirements are such that any well-organized city administration is forced to anticipate at least 30 years ahead if that city is to have an ample supply of water, of highways, parks, telephones, electric power and the other necessities of urban life.

We must force ourselves to realize that acceleration of progress has itself accelerated. Ten years today accomplishes far more than 100 years yesterday, and even the wildest forecasts all too often fall far short of the anticipated goal. Surely, you say, it cannot be true—although it is—that in 1910 an editorial in the *Scientific American* stated unequivocally that "to affirm that the airplane is going to revolutionize the future is to be guilty of the wildest exaggeration." The chances are that many of our senior and wise citizens of that time solemnly nodded their heads in agreement.

Such attitudes of acceptance of the past can be tolerated no longer in these rapidly changing times. We are surrounded with great advances in techniques and applications of vibrant and progressive industries. Of these, perhaps the mammoth transportation industry provides the best example of both progress and debilitation. On one hand, the air transport segment is in the forefront of aggressive development and growth. It continually moves ahead, introducing still more modern equipment on top of already modern equipment. The jet aircraft alone has made the most significant contribution of any method of transportation yet evolved. It has reduced the size of the world; it has enabled peoples of all nations to become acquainted with other people throughout the globe; it has enabled broader exchanges of ideas and understanding which some day will lead to peace on earth; fares have been lowered, making it possible for multitudes to travel. And, we have seen only the beginning. The supersonic transport is just around the corner. Giant passenger airplanes are already on order. Progress in this industry seems never to stop.

On the other hand, the struggling, but nonetheless, deteriorating railroad situation speaks for itself. And, highway construction is simply unable to keep abreast of the avalanche of cars which overwhelms nearly every paved road. The near-breakdown of transportation naturally concentrates itself in and around population centers and New York provides a case in point.

Our problems of commuting, of crosstown traffic, of congested highways and tunnels, are well-known to each of us. The forecast for twenty years hence indicates a gain in population in this region of about 30 percent for which provisions must be planned now. Experiments are being made on high-speed rail transportation and the thousands upon thousands of miles of highways and throughways continue to grow. Transportation for the commuter and the air passenger from outlying airports and neighboring communities to central areas constitutes a major problem which demands solution. Countless methods for solving these problems have been dreamed about but few, if any, have materalized. The monorail is suggested. Faster and automated subways are proposed. Combination buses on subway tracks have been designed. Pneumatic tubes have been devised.

But, it must be borne in mind that unless public mass transportation comes into much more general use, the feed-in of more cars into New York City will only increase the congestion of surface traffic which already is stretched to the breaking point. This clearly casts doubt on the fundamental desirability of new vehicular tunnels and bridges. It is probable they will not speed traffic; they may only impede it. Perhaps some of this traffic is unnecessary. Although 85,000 out-of-towners drive to their work in New York daily, for the most part with only one person in a car, it is equally discouraging to realize that 135,000 New York City residents also drive to work in Manhattan.

Our city planners must consider all methods of transportation, no matter how exotic they may sound at the moment. The rapid transit system must be greatly expanded and improved to provide mass transportation throughout the growing metropolitan region. Indeed this may well be the most important single objective for prompt and continuing action. The degree of success obtained would be a lasting monument to any city administration.

The waterways can help with hydrofoils and hovercraft. Airways, intracity as well as inter-city, must be developed and exploited. To make our city accessible, more attractive to those coming to it or going from it as travelers, tourists, or as businessmen, every available means of transportation must be fully utilized.

Although New York City may be losing some basic manufacturing industries, it has become the service center of the world, as well as the cultural center of the United States. Manhattan alone has become a focal point of common-interest centers, as people gravitate to others sharing similar interests. Madison Avenue is a universal phrase to describe a concentrated advertising locale. The West Thirty-fifth Street area is known as the Garment Center. Wall Street is the financial center of the world. The corner of Forty-fifth Street and the Avenues of the Americas is the diamond center of the nation. As our city grows and expands, other specialized centers will develop, building our economy and attracting other enterprises—just as long as the vital blood stream of transportation continues to flow strongly and steadily.

More and more people will come to New York—but only if they can find some efficient way of getting to where they want to go. They will be flying from all fifty states, as well as from the four points of the world's compass. Because of the low unit cost of operating, the new 500 passenger jumbo jet will generate mass air transportation heretofore unknown. This means that a substantial proportion of the 80 percent of all Americans who have yet to fly will now find it economical. Because of this, our industry is confident that the many seats of these giant new aircraft will be filled. A single one of these huge jets will carry 200,000 passengers across the Atlantic in a year—the transport equivalent of four surface vessels the size of the Queen Mary steaming for one year. The question is: Is New York City ready for them? How are these great numbers of people going to get into the city? Where are they going to live and eat and carry on their daily activities?

Today's jet transport flies the Atlantic in some 6½ hours. If one assumes only an hour spent in London getting to the airport plus only a second hour in transit between Kennedy Airport and midtown Manhattan, we find about 25 percent of the total elapsed time spent on the ground. Furthermore, the 1970's will see the supersonic transport in operation. It will fly London to New York in 2½ hours, but the ground time will, at best, remain the same—two hours. Its passengers will spend 44 percent of their total elapsed time on ground transportation. Obviously, this will be unacceptable. With this potential mass of air travelers descending upon the city in about five years, it behooves New York City to move fast. Planning and philosophy are not enough. Action is mandatory—now.

Against this background, the use of air space warrants attention. The large 150 mile-per-hour, 25-passenger helicopters now flying every half hour between midtown Manhattan and Kennedy Airport and between La Guardia, Kennedy, and Newark Airports and Wall Street are showing the way.

The present helicopter operation between midtown Manhattan and Kennedy International Airport is unique. There is nothing like it any other place in the world. The scheduled time is less than ten minutes as contrasted with up to an hour or more by surface, depending upon the time of day. Beginning operations on December 22, 1965, just ten months ago, this common carrier service has already flown more than 132,000 passengers. The uniqueness lies in the fact that it delivers passengers from an outlaying airport in minimum time to a principal city center, the Pan Am Building in midtown Manhattan. Here is the focal point for three subway lines, two railroads, and vast taxicab fleets. The Pan Am Building heliport lies in the heartland of a population equivalent to that of Denver. The area contains within easy walking distance some forty hotels and thousands of business offices—large and small.

The immediate acceptance of this service exceeded everyone's expectations. Businessmen use this service over and over. The publicity surrounding the rooftop heliport created tremendous interest and cognizance of the entire New York Airways interborough operation. It has been the subject of feature stories, magazine articles, television and radio shows around the world. Although predominantly business and professional men, the passengers are from all walks of life. Their time is valuable. They come from every state in the union and so far from more than forty other nations. They are men and women who are responsible for bringing commerce and many thousands of jobs to New York City. Chiefs of state, corporate officers, justices of the Supreme Court, all have been carried. But, more importantly, this service has been good for the City. The City's endorsement and approval have been recognized as responsible leadership and progress of the highest order.

The increased utilization of air space to bring passengers and cargo directly and quickly into the various city centers can have a substantial effect on relieving the frustrating surface traffic congestion. Aircraft with a capability of vertical flight already have demonstrated their potential. These vehicles go "up and over," speeding travelers to their destinations. Larger, faster, improved helicopters carrying upwards of 70 passengers, are in prospect. Their prototypes are now flying in Viet Nam on combat missions, doing rescue work, and moving heavy equipment and materials from ship-to-shore and to critical positions under fire.

The Pan Am Building heliport is the first transportation terminal to take full advantage of the air space around it, of the highways in the sky, and of aircraft capable of vertical flight. But this is just the beginning. The United States government has sponsored a study of 500 mile-per-hour vertical takeoff and landing aircraft which will operate from midtown areas. To be successful, these aircraft will have to be economically competitive. These flying machines will carry close to 100 passengers and, with high horizontal speed and ability to land in city centers, will provide travelers with a shortened elapsed point-to-point travel time almost beyond present comprehension. On routes, such as that between New York and Washington or Boston, such a machine would be equivalent to an airplane flying at 1,000 miles per hour but dependent on slow ground transport at each end. Midtown Philadelphia would lie within twenty minutes of New York City. The terminals for these aircraft will not require large and costly accumulations of real estate; they can easily be imposed on structures and at locations useful for other purposes and will be self-sustaining economically. Their income will also be derived from functions other than those normally associated with a transportation teminal. Such a facility already exists on the Pan Am Building. Similar structures will be erected in Brooklyn, Queens, the Bronx, and on Staten Island, as business demands require.

Just two weeks ago, Mayor Lindsay, in the interests of our expanding economy, announced plans for the city's *first* major all-purpose terminal for aircraft with vertical flight performance. In addition to handling large volumes of connecting long-haul and short-haul airline pasesnger traffic, it has been announced that this facility will also function as a parking place and garage for some 2,000 automobiles and as a collection and distribution point for substantial quantities of cargo and freight as well as United States mail.

As New York continues its transition into a service type city, more new jobs will be generated, more office space required, more hotel space and added restaurant capacity—and faster, improved transportation facilities to and from and within the entire metropolitan area will be essential. Courageous planning and action are needed now to meet this mounting necessity and to keep our city moving forward and continuing in its position as capital of the world.

If we in the City of New York do not prepare ourselves aggressively and intelligently, our leadership can easily go to some other city. After all, ships that move in the air do not require large protected harbors or rivers. They merely require man-made landing areas. Other cities can, and will, make themselves attractive and accessible. They will do so in order to persuade businesses and people to come to them. We must not be smug and self-satisfied. We must not let this happen.

I do not for one moment believe that the flying machine will eliminate any other type of short-haul transportation. I believe that each type has its place in the transportation scheme and each can serve its purpose. I do believe, however, that the era of vertical flight with its ability to land passengers in midtown has arrived.

I am sure we all recognize the stake each of us has in the prosperity and welfare of the Greater New York area and, I believe, you will agree with me that this depends in large measure on the quick development of a total transportation system which will meet the rapidly growing and urgent needs of this great City.

Tribute to the Late Martin G. Hyltin, Texas Rural Electrification Pioneer

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1967

Mr. YARBOROUGH. Mr. President, Texas lost one of its leading pioneers in the field of rural electrification with the death recently of Martin G. Hyltin of Austin, Tex., who was the manager for 23 years of two of the largest such rural electric systems in the world.

Martin Hyltin was not only an ingenious manager of rural electric cooperatives, but he was also a longtime and trusted friend of mine. His death at the age of 66 was a personal loss to me, as well as to the many other friends he had made during a lifetime of dedicated service in central Texas.

His career with Texas electrical systems began in 1926, but began to reach national proportions in 1942 when he became general manager of the Pedernales Electric Cooperative at Johnson City and the Lower Colorado River Electric Cooperative at Giddings. The latter system is now known as the Bluebonnet Electric Cooperative.

Mr. Hyltin built these two systems up to a capital investment of $25 million before his retirement in 1965 and saw them expand to serve 32,000 members, including the LBJ Ranch, owned by President Johnson at Johnson City, Tex.

His ingenuity was often demonstrated. Once, during the early years when materials were in short supply during World War II, Mr. Hyltin managed to install powerlines for an airbase in San Marcos, Tex., by utilizing barbed wire removed from the area around the airbase site and stringing it along scrap poles and railroad pilings.

He also served as a director of Texas Electric Cooperatives, Inc., during his career and following his retirement in October 1965, Mr. Hyltin acted as a consultant through a company which he organized called Electrical Power Operations, Inc., until his untimely death on December 27, 1966.

Mr. President, I ask unanimous consent to have printed in the Appendix to the Record articles about this outstanding Texan from the Austin American, the Austin Statesman and the San Antonio Express.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Austin (Tex.) American, Dec. 28, 1966]

ELECTRICAL SYSTEMS PIONEER DIES HERE

Martin G. Hyltin, a Central Texas pioneer in rural electrification who served as manager of two of the largest rural electric systems in the world died Tuesday. He was 66.

Funeral will be Thursday at 10 a.m. at First Methodist Church under direction of Hyltin-Manor Funeral Home.

Hyltin's carer dates back to 1926 when he was employed as a trainee by Texas Power and Light Co. He was soon promoted to district manager.

In 1938, his friend, Max Starcke, was named operations manager for Lower Colorado River Authority and Hyltin went to work with him. In 1942, he became general manager of two rural electric systems which bought their power from LCRA, Pedernales Electric Cooperative at Johnson City and Lower Colorado River Electric Cooperative (now Bluebonnet Electric Cooperative) at Giddings.

He took on management of the two cooperatives at the time of severe shortage of materials due to World War II.

"When the war ended there were more than 11,000 applicants clamoring for electric service," he once said of those hectic early years. "A Congressman of the 10th District named Lyndon B. Johnson put forth every effort to help us serve these folks, but we still had to resort to all kinds of ingenuity."

One example of this ingenuity was the building of lines to serve a proposed air base in San Marcos. Barbed wire removed from the area around the site was strung on poles made of railroad pilings and scrap two-by-fours, and the air base got its electricity.

Before his retirement as manager in October, 1965, Hyltin built the two rural electric systems up to a capital investment of approximately $25-million, and the two systems were serving 32,000 members, including the LBJ Ranch, on more then 12,000 miles of line.

Hyltin also served as a director of Texas Electric Cooperatives, Inc., state-wide organization of the rural electrics, and served on a number of committees for this organization.

When he retired, he continued to act as a consultant through the company he organized, Electrical Power Operations, Inc., with offices in the Perry-Brooks Building.

He is survived by his widow; a son, Tommy Hyltin, Dallas; a daughter, Mrs. Nell Mays, Tulia; and two grandchildren.

[From the San Antonio (Tex.) Express, Dec. 28, 1966]

PIONEER IN ELECTRIC CO-OPS DIES

AUSTIN.—Martin G. Hyltin, a Central Texas pioneer in bringing electricity to thousands of rural Texans, died Tuesday in Austin.

Hyltin, 66, came up with ingenious ways to expand the rural electrification system during the hard-pressed war years. And after the war he had so many requests for service that the two cooperatives he managed until last year served 32,000 persons—including President Johnson and the LBJ Ranch.

Hyltin took over management of the two rural electric systems in 1942. They were the Pedernales Electric Cooperative in Johnson City and the Lower Colorado River Cooperative (now the Bluebonnet Electric Cooperative) at Giddings.

He solved a crisis of short materials to hook up the new San Marcos AFB during World War II by using barbed wire strung from poles fashioned from railroad pilings and scrap pieces of 2x4s.

After the war, 11,000 persons clamored for service from his cooperatives. When he retired in October, 1965, the cooperatives owned 12,000 miles of line and counted $25 million worth of business. He organized the Electric Power Operations, Inc., of Austin during his career and was its consultant when he died.

Survivors include his wife, a son and a daughter. Funeral services will be Thursday in Austin's First Methodist Church.

[From the Austin (Tex.) Statesman, Jan. 16, 1966]

MARTIN HYLTIN RETIRES AS ELECTRIC COOP CHIEF

Martin G. Hyltin, a pioneer in rural electrification, has retired as general manager of two of the largest rural electric systems in the world.

A dedicated man who once ordered his crews to construct power lines from pilings, two-by-fours, and barbed wire when no other material was available and 11,000 applicants were requesting electricity, Hyltin retired after 23 years with both Pedernales Electric Cooperative and Bluebonnet Electric Cooperative. Pedernales Electric serves the LBJ Ranch.

After completing his education in 1926 he worked for one of the major electric utilities until 1938 when his life-long friend, Max Starcke, was named operations manager for Lower Colorado River Authority. Hyltin became associated with that organization. In 1942 Hyltin received the additional responsibility of managing two rural electric systems affiliated with LCRA: Pedernales and Lower Colorado River Electric (now Bluebonnet) Cooperatives. This was during World War II when construction of power lines was almost halted.

It was at this time that Hyltin supervised installation of power lines for an air base in San Marcos. Barbed wire removed from the area around the site was strung along scrap poles and railroad pilings and the base got its electricity.

Although Hyltin has retired from active service with the two cooperatives he will continue to utilize his experience in electrical operations as a consultant through a company he has organized, Electrical Power Operations, Inc., at 1215 Perry-Brooks Building in Austin. He and Mrs. Hyltin will continue to make their home at 3303 Perry Lane in Austin.

The Cost of Bad Air

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RYAN. Mr. Speaker, air pollution is one of the gravest problems facing the cities of this Nation. The people of our major cities are literally choking to death on foul air. The Federal Government has finally begun to take action. At the present time, in New York City, the U.S. Department of Health, Education, and Welfare is conducting an air pollution abatement conference under the Clean Air Act of 1963 as the first step toward Federal enforcement. I testified at that conference and urged that the Federal Government use all the power available to it to set standards and then strictly enforce them. The health hazard of air pollution will be well documented at the New York conference. What has not received much attention is the tremendous financial cost to this Nation of air pollution.

Manhattan East, a leading community newspaper in New York City, has published two articles which clearly outline the staggering cost of air pollution. The articles ably written by Anthea Lahr should be read by all of us, as air pollution affects all of us. The first article, published on December 22, follows:

[From Manhattan East, Dec. 22 and 29, 1966]

THE COST OF BAD AIR

(By Anthea Lahr)

"As soon as I had escaped the heavy air of Rome & the stench of its smoky chimneys,

which when stirred poured forth whatever pestilent vapours & soot they enclosed, I felt a change in my disposition."

Seneca's words, written 2,000 years ago, might have been said by any modern city doctor to a patient suffering from a respiratory disease. In 1966, city dwellers are even more plagued and irritated by noxious air than were the Ancient Romans. The scientific discoveries man has made since Seneca's time have not alleviated, but aggravated the condition of the air.

Americans stationed in Japan after World War II were found to be suffering from what was dubbed "Yokohama asthma," and the only cure was an early removal from the fetid atmosphere of Yokohama. Thousands of Los Angeleans have been told to leave that area for the sake of their health.

Los Angeles, like Rome, is surrounded by hills, which trap the fumes and soot, to make it a potential smog booby trap to people especially suceptible to the dangers of air pollution. The sheltered topography of Los Angeles, which snares the auto fumes in its hollow, forms a melting pot for the polluted air as it is warmed up by the sunlight and turned into photochemical smog, an even more deadly mixture.

Four hundred years before Seneca, Hippocrates had written:

"When a man comes to a city, to which he is a stranger, he ought to consider its situation, how it lies as to the rising of the sun."

Luckily, New York City is a cluster of islands surrounded by sea on three sides. If it had been a city nestling in a ring of hills, it would be *uninhabitable*. The volume of polluted air over New York City is much greater than over Los Angeles, but there are sea breezes and violent weather conditions which disperse the four air. But New Yorkers still have a great problem with their air; the breezes which blow away the smoke and soot either bring polluted air from New Jersey or carry New York's polluted air to the countryside. A sudden change in the weather may cause the air to remain stagnant, or an inversion may trap the pollutants below the ceiling of warm air. This is when the problem becomes serious, when the harmful constituents of the air are *felt* to be harmful, and when the statistics begin to show the dangers of polluted air.

But the problem of air pollution is a continual plague, which does not generate excitement, action, or alarm unless the effects of air pollution can be seen and felt. In reality, however, the effects of air pollution correspond to the visibility of an iceberg.

Air pollution means poor visibility, not only on the roads, but in the air. Some 15-20 airplane crashes a year are caused by poor visibility, and the number of delays is uncountable. Delays not only mean hardship for the transients at the airport where the weather conditions are bad, but the delays grow in geometric progression, until the effect of a delay in New York, because of smog, will be felt in San Francisco, Tokyo, and Hong Kong. Many road accidents are caused by poor visibility, but how many accidents are caused through the irritability and poor judgment of a man suffering from the irritating and fatiguing effects of constant exposure to polluted air?

Air pollution, according to the Mayor's Task Force, means a bill of $500,000,000 for New Yorkers who have to pay for extra cleaning (air pollution doubles home cleaning and clothes cleaning bills), extra car washes and extra coats of paint, as well as a great toll in esthetic cost. Cleanliness is a condition which most civilized beings value for its own sake, and this continual losing battle against cleanliness, which housewives must face in New York City, contributes a great cost in morale.

Air pollution means a large amount of prestige lost and money wasted for the City of New York as a community. Industries are discouraged from building and operating in cities because operating costs are raised in polluted air.

Industry all over the country must develop expensive, corrosion-resistant materials that will survive in the bad air. At the moment, gold is a frequently used material, for, just as gold was highly prized by the Ancients as a metal which remained shiny, it is now valuable as a metal which will stay untarnished in polluted air. If silver could replace gold in this capacity, there would be a saving of $14,800,000.

Because air pollution corrodes industrial equipment, and more expensive materials and extra processes have to be employed to combat the aerial threats, research becomes retarded, and plants and transmission lines have to be over-designed. The electronics industry is especially affected, as electronic equipment can provide no more reliability than the points of electric contact within it. Thus, multiple contact points have to be installed to increase reliability and bigger equipment is needed. This also retards miniaturization, which, in a contracting world and in a space age where minute instruments are required, is vital.

An architect, building in a polluted environment, is faced with two alternatives, both unnecessarily expensive: Corrosion-resistant material for all parts exposed to the air, or a coating, like paint, which must be renewed and maintained.

So, although powerful industrial lobbies try to sell Congressmen on the economic advantages of an air pollution status quo, air pollution is a very high price to pay for urban industrial prosperity. A family of four in a city can pay up to $800 a year extra because of air pollution, a toll of $65 for every man, woman and child in the United States.

Air pollution costs $11,000,000,000 in property damage alone, and valuable buildings and works of art are disintegrating. Sulphur and its oxides are particularly harmful to limestone and marble. James Noble of the Metropolitan Museum has said: "It is pointless to collect outstanding works of art, if they are going to deteriorate so badly as to be virtually worthless."

The economic burden of air pollution is largely hidden in indirect expenses: employee absenteeism; lower property values (living on "the wrong side of the tracks" meant the side with air pollution from the engines); cleaning of grimy buildings; cleaning of clothes and household interiors; deterioration of buildings and works of art; air filtration requirements and crop losses. A sizeable proportion of the population's wealth must be devoted to "living with" a problem created by ourselves, instead of being invested in more creative and socially desirable ends. "A substantial effort toward preventing air pollution can be made at a fraction of the cost resulting from the effects of the pollution"—(Blueprint for Cleaner Air—Council of the City of New York).

"Besides this acrimonious Soote produces another sad effect, by rendering the people obnoxious to Inflammations, and comes (in *time*) *to ulcerate the Lungs, which is mischief so incurable that it carries away multitudes by languishing and Deep Consumptions, as the Bills of Mortality do Weekly inform us."*

Although John Evelyn, writing in the middle of the 17th century, did not have the benefits of modern medical research and statistics, many modern doctors would agree with him.

While it is uncertain which particular mixtures of air correspond to a specific disease, polluted air is known to be harmful to health. This was most dramatically emphasized by the disasters in Belgium (1930), where 60 people died as a result of air pollution; Donora, Pennsylvania (1948) where 17 people died; and London, England (1952), where 4,000 people died.

It has been possible to accept 40,000 auto deaths a year as the price of quick transportation; but how many deaths do we have to pay for a civilization that depends on turning wheels, manufactured temperature and chemical reactions? A modern metropolitan center is a gross alteration of nature, and this process means that it will take some human sacrifices to alert modern cities to the limitations of the air around them.

The menace to public health is far more serious than polio and smallpox, but it is also far less visible. One out of every four American men shows signs of having pulmonary emphysema, a painful and fatal disease, which is severely aggravated by breathing polluted air. There has been great difficulty in ascertaining the relationship between cigarette smoking and lung cancer, and this is largely due to the subtle nature of air pollution. Surveys have shown that breathing New York City's air does the same harm as smoking nine cigarettes a day, and is definitely a contributory cause of lung cancer.

It has been proved that high levels of air pollution can be dangerous and even fatal, but lower levels of concentration continued for extended periods of time also cause and aggravate illness and accelerate death.

Air pollutants act synergistically—any single factor may not tip the balance between health and disease, life and death, but all of them together can cause a striking increase in the disease and death rates of the population. There is little doubt that living in London for a long time increases the risk of dying from a respiratory disease, particularly chronic bronchitis.

Sulphur is one of the most harmful ingredients of the air. The sulphur contained in coal and low-grade oil turns into sulphur dioxide when the fuel is burned, then changes to sulphur trioxide or clings to soot and ash and penetrates the lungs. Sulphurous fumes from Mount Vesuvius killed many Pompeians, Sodom & Gomorrah were destroyed by sulphurous brimstone, and now sulphurous air pollution constitutes a long-range threat for millions of Americans.

"The relations between the air in a town and in its streets and that found in the open country may be compared to the relationship between grossly contaminated filthy water and its clear, lucid counterpart."

Maimonides was right in thinking that air pollution is just one aspect of the whole city environment. It is impossible to separate impure air from impure water. A hundred years ago, the world made a great effort to get clean drinking water. It seemed unnecessary to some, impossible to others, but it was done. Now the world needs clean air.

New York creates 32,000,000 pounds of garbage per day, and getting rid of it, without polluting either air or water, is one of the major problems of the 20th century. Live sewage can be seen floating in the East River on the Lower East Side, and there are only two ways to dispose of refuse—burn it or bury it. Land on which dumps can be made is running out; these dumps are the homes of vermin and the source of underground fires; and the incomplete combustion of refuse, a poor fuel material, causes severe air pollution.

"Big industries are big polluters. They are also big employers, big buyers and big political influences."—James Quigley.

The order of priority for control of air pollution nationally, based on the contribution of this source, is: 1) Motor Vehicles, 2) Generation of Electricity, 3) Industry, 4) Space Heating, 5) Refuse Disposal. Of course, local situations demand local priorities worked out with local control officials regarding local interests, such as auto emission in Los Angeles, refuse disposal and generation of electricity in New York, and manufacturing chemicals in Wilmington; Delaware. Thus, apart from refuse disposal, and private, municipal and business space heating, industry is the prime polluter, and with their immense profits, huge influence and engineering skills, should be the leader in the field, not the reluctant follower.

The steady industry pressure against air pollution control is probably not malevolence or antisocial instinct, but the normal business motivation to cut costs and raise profits. But the recalcitrance of the utility industries is odd—their profits are guaranteed by law and if costs go up, a rate increase is nearly always granted (especially for air pollution control measures) by the appropriate regulatory agency.

Living on Borrowed Resource Capital

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1967

Mr. CARLSON. Mr. President, Mr. O. W. Bidwell, an outstanding agronomist at the Kansas Agricultural Experiment Station at Kansas State University, Manhattan, has written an excellent article entitled "Living on Borrowed Resource Capital." The article was published in the September–October 1966 issue of the Journal of Soil and Water Conservation.

Our Nation has been blessed with abundant natural resources, and I think all of us realize that we must begin immediately to preserve and protect our great natural resources for future generations.

I commend the article to the attention of the Senate and the country and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIVING ON BORROWED RESOURCE CAPITAL

Standard of living has become the symbol of human progress. It has become one of mankind's greatest obsessions, the dictator's justification for a 5-year plan, the internationalist's basis for aiding "developing" nations, and an important means of preventing war. In 1949, Aldo Leopold wrote, "Our bigger and better society is now like a hypochondriac, so obsessed with its economic health as to have lost the capacity to remain healthy. The whole world is so greedy for more bathtubs that it has lost the stability necessary to build them or even to turn off the tap. (He might have added, "or to be concerned with the disposal of dirty water.") Nothing could be more salutary at this stage than a little healthy contempt for a plethora of material blessings."

America's standard of living is largely one of fortuitous circumstances. It is based on the coincidental arrival of North America on the international scene at a time when its natural resources were needed for the industrial revolution, plus the unusual American ability to exploit these resources and invent new machines to use them more easily and fully. Success is a result of our ability to adapt to a new, wild land and exploit the products of its wilderness.

The American ideology has been and still appears to be one of economic growth. Gross national product is the gage of our economic health, irrespective of our population or the size of our national debt. Yet, a sizable proportion of our gross national product may have come from exploitation of natural and human resources for quick profit. One presidential commission asserted faith in the principle of growth because "it seems preferable to any opposite, which implies stagnation and decay."

Samuel Ordway, Jr., said that realization of the American dream is expansion and economic growth. Decreased working hours, increased industrial production, increased wages, and increased corporate profits and investment incomes are possible because our technology has found new and unimagined sources of materials, plus new methods of use and reuse.

Our nation, however, is not a cornucopia, regardless of how vast its storehouse of raw materials maye have seemed to our forefathers. Already, depletion of the Mesabi range, contamination of our once-potable freshwater lakes and rivers, and depletion of groundwater resources in some of our western states make it emphatically clear that these resources have finite limits. By exploiting them, we are, in truth, living on resource capital. Similar illustrative cases could be made for the exploitation of other resources, such as soil, forests, wildlife, and air.

As we are able to enlighten people regarding our limited resources, controls will be established to curtail this pollution, exhaustion, and destruction. These controls may reduce our current increasing consumption of raw materials and the deterioration of our resource base. Success, however, will depend upon rigid control of the exploiting element in our free enterprise system that seeks to expand consumption for quick profits without concern for long-term consequences. Identifying and policing these individuals will be difficult.

The dilemma we face is the maintenance of economic growth without appreciably diminishing resource capital. Until now, maintenance of natural resources has been less important because we could substitute one resource for another that disappeared. What assurance do we have, however, that new resources will continue to turn up as old ones are exhausted?

Leopold asserted that conservation was getting nowhere because it was incompatible with our Abrahamic concept of land. He opined that we abuse land because we regard it as a commodity belonging to us. "When we see land as a community to which we belong," he said, "we may begin to use it with love and respect." He proposed "land ethic" which changed the role of *Homo sapiens* from conqueror of the land community to a member and citizen of it. Land ethic implied respect for fellow members of the community and the community as such.

At this point in time we have arrived at the place predicted by the clairvoyant conservationists, such as Leopold, Vogt, Osborn, Ordway, and Bennett. Increased water shortages, floods, and polluted air and water are beginning to impress our people and, in some cases, our legislators with the importance of joining togther to live cooperatively in mutual comfort.

As increased population demands more fresh air, water, and pure food, it becomes more apparent each day that mankind no longer can afford the luxury of allowing a few individuals to exploit natural resources. We must work diligently for more and better cooperation among men and between mankind and nature. Unless we do this voluntarily, it will be necessary to impose strict government controls. No country is so rich that it can squander its resources for the benefit of a few at the expense of so many. Rather, steps must and will be taken to see that our resources are preserved for ourselves and posterity, for as the Soviet Academicians I. P. Gerasimov and E. K. Fedorov have stated, "The natural resources of the world belong to mankind."

O. W. BIDWELL.

Spain Takes Up Major Defense Role for NATO

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. RIVERS. Mr. Speaker, under unanimous consent I insert in the Appendix of the RECORD an article by Brig. Gen. James D. Hittle, U.S. Marine Corps, retired, which clearly makes a great deal of sense.

For too long we have overlooked the vital importance of Spain in the defense of the free world. General Hittle's statement that the sooner Spain becomes a full-fledged partner in the Western Alliance, the better it will be for all of the free world, is a sound conclusion.

I urge all Members of the House to read this thought-provoking article, which follows:

SUPPLANTS FRANCE—SPAIN TAKES UP MAJOR DEFENSE ROLE FOR NATO

(By Brig. Gen. James D. Hittle, U.S.M.C., retired, director of national security and foreign affairs, Veterans of Foreign Wars)

MADRID.—Spain now has an indispensable role in the defense of Western Europe. This is the direct result of the French military withdrawal from the North Atlantic Treaty Organization.

French President Charles de Gaulle's pullout from NATO took more away from Western European defense than the numerical total of the French forces involved. With France out of the NATO defense structure, NATO lost its strategic depth of position on the continent.

It is this loss of geographical depth that has hurt NATO's military capability even more than the loss of French manpower. It was the hundreds of miles between the Atlantic and the German border that gave to NATO strategy the vitally necessary depth for orderly dispersal of logistic facilities. France also provided an operational rearward space to cushion the impact of a Communist attack from the east.

Take, for instance, the matter of oil pipelines. Oil and gas supply is a major problem of modern war. The amounts required by a force defending Europe against a Russian armored drive would reach astronomic daily totals.

VAST PIPELINE NETWORK

NATO planners foresaw this. The result was the construction of a vast network of oil pipelines and storage facilities extending through France from the Atlantic coast to the German border.

Today, with De Gaulle's pullout from NATO, the status of this huge pipeline system is, at least, doubtful. But it is certain that whatever arrangement might be negotiated for conditional use of the pipeline will not be as satisfactory from the standpoint of military requirements as what existed when France was a full participating partner in NATO.

But the situation in the case of other supply and operational facilities is even worse. Our air units and supply and hospital facilities have their eviction notice.

France, in terms of broad strategy, was a vast and vital base area for the defense of Western Europe.

NEW SUPPLY LINE

NATO forces in West Germany still have to have supplies. Making the best of a bad situation, NATO planners are now running the new supply line from Bremerhaven southward through West Germany. At best it's an expedient. It cannot, for good strategic reasons, be considered a solution. Military history is full of examples of the disasters resulting from running a supply axis parallel to the operational front. And that's just what we are doing by positioning our supply system along the NATO side of the Iron Curtain.

There is long-range peril in such an arrangement. But fortunately there is an answer to Europe's need for defense in depth. That answer is Spain.

With a land mass only slightly less than that of France, protected by the Pyrenees on the north and the seas on the other flanks, and inhabited by a brave people who were the first in the free world to beat back Communist aggression. Spain has what the defense of free Europe needs.

The sooner Spain becomes a full-fledged partner in a Western alliance, the better it will be for all of the free world.

Gov. Nelson A. Rockefeller's Third Inaugural Address

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1967

Mr. SCOTT. Mr. President, on January 2, 1967, Governor Rockefeller, of New York, delivered a most moving address on his concept of a "just society" for all Americans. In this, his third inaugural address, the Governor poses new challenges which are worthy of the Senate's attention and I ask unanimous consent that Governor Rockefeller's remarks be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

Text of the Third Inaugural Address by Gov. Nelson A. Rockefeller, Prepared for Delivery in the Assembly Chamber of the State Capitol, Albany, N.Y., January 2, 1967

Today it is my honor and my promise to to rededicate this Administration and myself to your service for the next four years.

I know from experience the size of the challenges and the weight of the responsibilities of the office of Governor of New York State.

I am well aware that no public official—any more than a private citizen—is or can be infallible.

I have made mistakes.

But one thing I can promise you isthat I shall always try to do my best for all the people.

This is a time of unique opportunity for more complete realization of the people's rights, needs and aspirations—for shaping a future of ever-greater hope, progress and justice.

In the light of ever-changing conditions and new challenges, we must continue to chart an imaginative course.

At the same time continuing to exercise prudence and economy to assure that the course we set is sound and stays realistically within the resources of the people whom the State exists to serve.

The signs of our turbulent times are clear.

Huge and historic human problems are forged by rapidly-changing technology, shifting tides of migration, and drastically altered economic patterns.

These problems come in a vast variety—bad housing, racial discrimination, crime and narcotics, inadequate educational and cultural opportunities, polluted water and air, transport crises and urban disorder.

The paradox is shocking and challenging.

We face such problems on such a scale at a time of record prosperity, a time when employment is the highest in our history, and a time when personal income has risen 42 per cent over the last eight years.

These problems cannot be ignored.

From the urgent tasks of strengthening law and order to the multiple problems of the individual and his environment, they must be the concern of each and every one of us—as individual citizens, as spiritual, civic, business, labor, and agricultural leaders, as well as those in local, state and federal levels of government.

Many of these problems thrust beyond the resources of private action alone or the jurisdiction of local government alone.

It is the peculiar genius of our American Federal system that it is capable of summoning and enlisting resources and initiatives from all sources of creativity in our society—and all levels of public authority—for the single purpose of building a better life for all the people.

Our experience here in New York State demonstrates that this federal system of ours really works—provided always that a state accepts its responsibility and provides leadership.

The federal government collects two-thirds of all the public revenues. It therefore is in a position of great strength to play a crucial role in government action to deal with the people's problems.

But more than 30 years of ever-expanding federal programs have proven that federal authority stands too distant from local conditions to allow efficient use of federal funds by formulas and procedures conceived in Washington.

Moreover, and to an increasing degree in recent years and months, a multiplication of inadequately-financed domestic federal programs has raised aspirations and aroused hopes of many citizens, only to produce grave disappointments.

To criticize federal programs for failing to deliver on their promises, however, is not to disparage the high purposes inspiring many of these programs.

The States cannot nor should they go it alone.

We in New York State quite naturally seek and we deserve a full fair share of these federal funds.

But we do want to see a dollar's worth of work done for every dollar spent.

Our experience in New York shows plainly that federal bypassing of state leadership and ability to act as a guide and a catalyst is both wasteful and self-defeating.

And it is creating an increasingly chaotic condition in the administration of these programs at the local level of government.

Our experience proves that the state has the financial strength and experience to mobilize the resources of all levels while remaining close enough to the people to be responsive to local needs.

In fact, this has been proven over and over again by New York State's experience in developing new programs which have spurred other states and the federal government itself to needed action along sound lines.

For example, our all-out program to clean up our lakes and rivers has finally led to federal action to support the states' initiative against water pollution on a comparable scale across the nation.

This was also true in our land acquisition and comprehensive development program in the field of conservation, parks and recreation—which has been followed by 20 states and the federal government.

In addition, our State's enrichment of our cultural life and encouragement of the arts—with the founding and the work of the State Council on the Arts—has been followed by all the other states as well as the federal government.

This kind of state initiative in meeting the needs of the people along sound and imaginative lines has been traditional in New York State under both political parties.

All such living proof of the capacity for creativity by State leadership offers, I believe, an eloquent argument for federal redistribution to the states of a share of national revenues unencumbered by needless restrictions or bureaucratic regulation.

The red tape and confusion surrounding many federal programs has brought further support to the idea of redistributing federal funds among the States.

Only two weeks ago, the National Governors' Conference endorsed this proposal.

I believe it is high time for the Congress to take at least a first step in providing unencumbered funds to the States—through a procedure such as bloc grants or a partial refunding of federal income tax revenue—in order to achieve more effective solutions of the people's problems under State and local leadership.

But it is not just a question of money alone.

New concepts, new approaches are essential in these times of rapid change.

In the past eight years, through our State programs and assistance to local government, we have sought to provide the leadership for meeting the needs of the people function by function.

In the next four years, the great challenge will be to relate these individual functional programs—both state and local—so we can develop a coordinated approach to maximize opportunity for the individual where he lives and works—whether in the rural areas, the suburban areas, or the big cities.

This demands coordinated planning and effective integration of local, state and federal government action with private initiative and with the people of the communities themselves.

Unless we do so, we will find ourselves choked by our own growth.

We must provide the leadership to cope with the challenge of rapid urbanization and the changed pattern of life in the small towns and rural areas.

We must preserve the best of the past and have the vision and faith to think imaginatively in planning for the future.

This is the heart of the federalist concept:

—The democratic designing of future progress by summoning all levels of government, and all sectors of society, to share in common labor for the common good.

From the federalist approach to our total environment should come broad concepts for the future—a future to be attained through cooperation between individuals, the various groups of individuals in our society, and all levels of government.

It is to the realization of these concepts that I dedicate myself and my administration for the next four years.

Since state leadership is so all-important to the success of the federalist approach, it is vital to assure that it will also be fully effective leadership.

This requires not only responsible, imaginative individuals in government but importantly a structure and tools of state and local government attuned to contemporary problems.

It also demands that we face the hard choices, the controversial issues, as well as the easy ones.

Much can and must be done at the forthcoming Legislative Session.

Much can and must be done by the State Constitutional Convention which opens here in Albany on April 4th.

The Constitutional Convention is of historic importance.

Its work will be vital to our peronal liberties, opportunities, and well-being as citizens of New York.

And it could be as exciting and creative in its own way as those nine months and two weeks in 1776 and 1777 when members of the Fourth Provincial Congress drafted our State's first Constitution.

The 3,000-word Constitution authored by these founding fathers set a pattern of government which guided other state constitutions and the Federal Constitution itself in Philadelphia a decade later.

Delegates to this 1967 Convention, subject to final approval of their work by the people as a whole, must cope with a document now swollen to well over 50,000 words and amended repeatedly, at virtually every general election.

They must decide how best to modernize and clarify the obsolete and contradictory language of the Constitution.

They must make basic decisions on the powers the State and local governments require to plan ahead and to meet today's problems.

They must determine how to remove restrictions where they may hobble vital state and local leadership.

And they must do this without sacrificing necessary safeguards against abuses of these public powers.

They must re-examine the qualifications for voting in New York State—including such questions as residence, literacy and whether to lower the voting age to 18.

The delegates must take a look at our constitutional provisions affecting the concept of separation between church and state, especially in regard to use of public funds.

They must review the procedures for selecting judges and the experience under recent constitutional amendments relating to the structure of our court system.

And they must consider both the threat to personal liberties and the needs of law enforcement (in a period of rapidly rising crime rates) which are involved in wiretapping and eavesdropping.

The delegates must review the desires of local governmental units for expanded fiscal independence.

They must weigh these desires against the confusion and danger to the individual citizen of uncontrolled, ever-increasing and overlapping tax structures—and they must also relate these desires to the needs for statewide fiscal stability, to help expand and attract new job-producing industries—not drive them beyond our borders.

These are but a few of the very difficult issues that will be before the delegates to the Convention.

The potential impact of these and other major issues on the daily lives of all New Yorkers underscore the major responsibilities these delegates must accept and discharge.

It is clear that:

— In this period of ever-mounting urban problems affecting the daily lives and well-being of millions.

— At a time when effective State leadership is vital to the solution or handling of these problems.

The 1967 Constitutional Convention of New York State can and should be a major landmark in the history of effective self-government.

It is urgent that the organization, research and staffing of the Convention be bipartisan, professional and objective—though the great issues themselves must quite properly be hammered out on the anvil of debate.

Of the many pitfalls to be avoided, the most dangerous of all is public apathy.

Without an interested and articulate public, any such Convention might in time be unduly influenced by lobbyists seeking particular advantages or privileges.

It is of over-riding importance that the Convention express the aspirations and interests of all the people of New York State.

To achieve this, we must have a free and open Convention and alert, vitally informed and concerned news media.

Those in charge of the Convention must give the people every opportunity to be heard in advance of their ultimate decisions.

And I urge you the people of this Empire State to take a most active interest in the forthcoming Constitutional Convention,

— To study and judge the issues before they are decided;

— And to make your voices clearly heard by your Convention delegates.

I begin my third term as your Governor with gratitude . . . with pride . . . and with purpose.

I feel pride in our State—its tradition and its people.

We have shown the way of leadership to all others in our great Federal Union.

We have shown that federalism works.

We have shown that we—our State, our Union, our beloved country—have not grown too old still to be pioneers.

For on all frontiers of our life, we know that we pay highest honor to our past by the boldest challenging of our future.

And I sense purpose—high purpose—because I have full faith in our capacity for creativity . . . our common resolve with God's help to build together the dream of free men of all ages: A Just Society.

This is the dream of a society where:
Government is courageous,
Power is benign,
Learning is abundant,
Prosperity is general,
Order is serene,
Law is honored,
Compassion is practised,
And brotherhood is lived.

It is our splendid task to make this society no dream at all—but the world for our children to live in.

Two School Systems in Every School District

SPEECH
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. ROBISON. Mr. Speaker, on January 10—opening day—I reintroduced a bill which I had offered in the 89th Congress, under which 2 percent of the Federal income tax collected from the several States would be returned to them under a formula which endeavors to take into consideration their respective need; such moneys, however, to be earmarked for the general support of educational programs in those States at the elementary and secondary educational level.

My selection of this bill as the first legislative proposal I am submitting to this Congress is indicative of the high priority which I assign to this area of concern. As one who did not vote for the Elementary and Secondary Education Act of 1965, I have felt it incumbent upon me to search for and suggest an acceptable alternative to the benefits provided under that program for I am well aware of the need to find some method for supplementing State and local governmental efforts to finance the ever-increasing cost of education at this level.

Last year, in an effort to ascertain how the Elementary and Secondary Education Act was being implemented in my area, I addressed a rather extensive inquiry concerning it to all the school district superintendants in my congressional district and received back a wealth of information commenting upon the good points, and the bad, experienced to date with this program which is, of course, doing some good but which is also creating a number of administrative problems, as well as questions concerning basic policy.

This inquiry on my part did not produce, as might be expected, any sort of unanimous opinion but it, along with such supplementary information as I have since picked up at firsthand, did show that there was a consensus of sorts developing among school administrators in my area in favor of some sort of Federal tax-sharing plan—of which there are an infinite number of varieties—as representing what might, in the long run, be, a preferable approach to aid to education at this level than that embodied in the Elementary and Secondary Education Act.

Perhaps my own feelings that such an approach should be reconsidered by Congress have been best summed up in a letter from a high school principal in my district which I received only on Monday of this week. It was this letter, as much as anything else, that helped me make up my mind that this bill was the one I first wished to submit to this new Congress.

I would like to share the thoughts of that high school principal with my colleagues, Mr. Speaker, even though I do not have his authority to use his letter in this fashion. He signed off his letter with the phrase, "Your Concerned Educational Practitioner," and I shall only identify him in that fashion, but the pertinent parts of his letter to me, which I now set forth under leave to include extraneous material, were as follows:

> I am so moved by the issues at stake that I wish to communicate these views further to you with the proviso that you clearly understand—these are my personal views and that they do not reflect in any way the official view of my school or school district on this subject.
>
> It is my considered opinion that Federal Aid in its present form is a wasteful hodgepodge of legislation (NDEA-Voc. Ed. Act—ESEA—Impacted Areas—Manpower and Retraining—EOA—and so on and so on). This maze of Federal legislation has led to several significant problems in education and for the society as a whole.
>
> 1. Confusion and bureaucratic red tape is the hallmark of these many laws. The pretext of evaluation via state and national tests along with required records simply reduces the evaluation of aid results to a statistical configuration rather than to a human configuration which is so greatly needed.
>
> 2. The segmentation of education into little packages called "projects" to meet the requirements of individual and specialized aid laws often move our schools completely counter to their overall goal of a unified and balanced educational program sufficiently diverse to meet the needs of almost all pupils. It is my fervent hope that the common or comprehensive school ideal is not dead in America.

The trend of separate accounting, record keeping, organization, and evaluation has in effect created a false schism between "regular" and "federal" programs in the sch[illegible] In effect, we have two school systems in ev[illegible] school district making use of federally-aided projects and it is most difficult if not impossible to properly coordinate the two systems.

3. There is a fundamental threat to the very concept of publicly supported, publicly controlled education in the common interest. As these federal programs erode or eradicate the constitutional provisions of "Separation of Church and State" they inevitably encourage the growth of private schools for private interests at the expense of public schools for the common good. How can we struggle for "integrated" schools on the one hand and "private" schools (publicly supported) on the other? As the old Indian used to say, "White man speak with forked tongue."

4. Federal Aid has brought into being staggering commercial competition and pressure which bears down directly upon the schools. We are hardest hit by the drain on qualified teaching personnel as teachers move into VISTA, Peace Corps, Government positions related to education, Year Institutes made attractive by liberal stipends, and industrial positions with firms who find an ever increasing percentage of their annual business is with schools due to natural growth and the millions of Federal dollars allotted education. In short, the industrial-school relationships have become "Big Business" and "Big Business" is having an ever increasing (though sometimes subtle) voice in the shaping of education itself in America. This is not necessarily bad when private business purpose coincides with the primary purpose of education in a democracy—but this is not always or even frequently the case.

In short, we are attacking social and economic ills in our society through education (this is perfectly legitimate) but we are doing it in such a way as to doom the effort to failure and, even more, to shake the very foundation of our unified, locally controlled public schools.

Let me say that I am in full support of the concept of Federal Aid to *Public* Education but only in terms of a general grant-in-aid to the several states for local distribution on a per-capita basis along lines of a national minimum support level for each pupil in attendance at public schools. I am irrevocably opposed to the kind of hodge-podge, wasteful, and schismatic aid we have been getting. If the trend is not reversed, I believe our educational system is in for some real trauma—perhaps calamity—five or ten years hence.

Your concerned educational
practitioner.

——— ———.

Mr. Speaker, I am well aware of the fact that others have expressed or will be expressing interest in the so-called tax-sharing approach as a substitute for some of the new Federal grant-in-aid programs recently enacted by Congress whether for educational or other purposes, and that there will be other legislative proposals—perhaps better ones—introduced along these lines.

My sponsorship of this bill should not be taken to indicate that I am wedded to its provisions, for I am not. However, I hope it will be taken as evidence of the fact that I believe, as I have often stated, that there are few other domestic concerns which should involve our early and earnest attention than that of seeking still better methods for helping to finance education at the local level than that embodied in the Elementary and Secondary Education Act, if such methods indeed exist, and of my hope that this subject will be assigned the paramount role which I feel it should command in the early days of this, the 90th Congress.

Resolution on the Soviet Russian Imperialism

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolutions adopted at the 12th Conference of the Asian Peoples' Anti-Communist League—APACL—held in Seoul, Korea, November 8, 1966:

RESOLUTION ON THE SOVIET-RUSSIAN IMPERIALISM

(Submitted by ABN; adopted at the 12th Conference of APACL in Seoul Korea, November 8, 1966)

Whereas, the national independence of all peoples of the world is an integral part of the progress of mankind, and

Whereas, the emancipation of peoples in Western dependencies into nation-states, done often with assistance from their former colonial masters, makes the spontaneous realization of the idea of nation-states more evident, and

Whereas, the independent nation-states decidedly furthers the development of original national cultures, thus enriching a cultural diversity of mankind, and

Whereas, regardless of their size, wealth, race or religion, the nation-states, as equal and sovereign, are the best safeguard of peace, justice and international security; because, unlike the multinational empire, they have no means by which to exploit the material and technical resources as well as manpower of other subjugated peoples for the purpose of perfecting and stockpiling their armaments and furthering their expansion, and

Whereas, the exercise of human rights, unlimited creative expression, freedom of religion, social justice, self-determination of social and political systems, and the fostering of traditional cultural values, is possible only in an independent democratic nation-state within its ethnographic boundaries, and

Whereas, the Russian empire—regardless of its ideological basis—is opposed to the progress of mankind and the integral realization of human rights of nations and individuals and becomes a most dangerous threat to freedom-loving mankind, because the possession of the resources of an empire allows it to accumulate massive means of destruction, and

Whereas, the idea of national liberation and struggle for human right is the Achilles' heel of the Russian Communist empire:

Now, therefore, the 12th Conference of the APACL, in the spirit of resolutions approved at previous Conferences of the APACL, resolves:

1. (a) to support the dissolution of the Soviet Russian colonial empire into independent democratic nation-states, whose territories would be determined by ethnographic boundaries, and the destruction of the Communist system in all its forms;

(b) to advocate the dissolution of all forcibly constructed state organisms in Europe into nation-states;

(c) to support the reunification into free nation-states of all forcibly divided nations in Europe and Asia;

2. to support the national liberation revolutions of the subjugated peoples in the Russian Communist empire as a means to its liquidation and as a possible alternative to a nuclear war, and to call upon the governments of the Free World to give wholehearted active support to such an action;

3. to convince the Free World of the necessity to concentrate its attention on the principal enemies—Moscow and Peking—as a precondition of victory in the civil and peripheral wars instigated by these two powers and as the eventual means of preventing such wars in the future;

4. to advocate the concept of a united front of the Free World with the subjugated nations, directed *simultaneously* against *both* tyrannies—Moscow and Peking—and to oppose any alliance with one tyranny against the other, because similar practices in the past led to the victory of the tyranny;

5. to condemn Russian colonialism and imperialism in countries subjugated by Moscow and to call upon the UN, to take the strongest measures in accordance with the decolonization resolution, No. 1514 (XV), against the USSR and its satellites because of the continuous violation of human rights of individuals and nations; to condemn the extermination practices of Moscow in all subjugated countries; to condemn Russification, persecutions, imprisonments and sentencing of cultural workers—authors, scientists, artists and students, for their desire of creative freedom; to protest against and condemn the plan already under way of forced deportation and resettlement in Siberia and Kazakhstan of one and a half million young adults from the subjugated countries in order to weaken the revolutionary struggle of the subjugated peoples against their oppressors in their native lands.

6. The 12th APACL Conference expresses its solidarity with the heroic struggle of the Hungarian people who ten years ago rose in arms against their Russian oppressors; it condemns the Soviet Russian aggression against the freedom-loving Hungarian nation and all other subjugated nations of Eastern Europe and Asia; it calls upon the Free World to support the liberation struggle of all subjugated peoples in their striving for freedom and independence.

Seconded by:
Senator Fethi Tevetogla (Turkey).
Admiral Carlos Penna Botto (Brazil).
Prof. J. Kitaoka (Japan).
Dr. Vibul Thamavit (Thailand).
Mr. Rama Swarup (India).
Dr. Nguyen-Tien-Hy (Vietnam).
Dr. Arvo Horm (Baltic Committee Sweden).
Hon Dato Hussein Bin Mohd. Noordin (Malaysia).
Mr. Z. B. Ahmad (Malaysia).
Mr. Alexander Olechnik (Byelorussia).
Prof. Lev Dobriansky (NCNC) USA.
Mr. Philibert Luyeye (Congo).
Hon. John Okwanyo (Kenya).
Dr. M. Brelvi (Pakistan).
Mr. Nicolas Mihanovich Guerrero (Argentina).
Mr. Shakeeb Amawi (Saudi Arabia).
Prof. Dr. Th. Oberländer (Germany).
Mrs. Suzanne Labin (CIGP).
Hon. Ole Björn Kraft (Denmark).
Hon. Sergie Fernandez Larrain (Chile).
Mrs. C. Errazuriz de Fenandez (Chile).
Hon. Ivan Matteo Lombardo (Italy).

RESOLUTION ON PERSECUTION AND RUSSIFICATION OF YOUTH BY SOVIET-RUSSIAN REGIME

(Submitted by the Ukrainian Youth Association in the United States of America and Canada to the Youth Conference; supported by Mr. Valentine S. Perera of Ceylon and Mr. Anil Norendra of India. Adopted at the 12th Conference of APACL in Seoul Korea, November 8, 1966)

Considering that: the Soviet Russian regime in Ukraine and in other captive nations is carrying out a policy of intensified de-nationalization and Russification of

Ukrainian youth, utilizing for this purpose the entire educational network of kindergartens, schools, universities, and youth organizations; that

No efforts and methods are spared by the Russian rulers to indoctrinate the youth of the captive nations with ideas of materialism and godlessness in order to turn them into a tool of Russian imperialism, which destroys all moral and humanitarian values; that

In spite of all efforts and terror, young Ukrainians and others who grew up under the most difficult conditions of Soviet Russian occupation find courage and ways to combat the Russian practice of colonial exploitation and oppression in captive countries, displaying in a dignified manner a high degree of national consciousness; that there is a community of interests in the efforts of both the captive nations and the countries of the Free World to preserve their cultural identity and national sovereignty, especially in the light of the destruction brought about by the recent "cultural revolution" in Communist China and Communist aggression in Vietnam;

We, the 12th Conference of the APACL do hereby Resolve:

1. to support the aspirations of all captive nations to reestablish their independence and sovereignty as the only way to insure a free development of their religious and cultural life as well as economic and political potentialities;
2. to urge the nations of the Free World to adopt the policy of liberation wars designed to bring about the dismemberment of the Soviet Russian empire into separate, sovereign and independent national states, and the downfall of other Communist regimes without resort to nuclear warfare and direct involvement of major powers;
3. to appeal to the nations of the Free World to join us in protest against recent arrests, trials, and convictions of seventy Ukrainian writers, students, and intellectuals by the Soviet Russians in Ukraine for their expression and spirited defence of Ukrainian aspirations to cultural and political independence and for uncovering the colonial status of Ukraine;
4. to urge people of goodwill everywhere to use every means available to them to end persecution in Ukraine and other captive nations and to demand the release of these already arrested or sentenced.

Resolution on Extending Immediate Help to the Nations Enslaved by Russian Colonialism

(Proposed by Byelorussian Liberation Front; adopted at the 12th Conference of APACL in Seoul, Korea, on November 8, 1966)

Whereas, the Free World believes in the principle of self-determination and independence for all nations and is engaged in a mortal struggle against Communist tyrants in order to uphold and defend the said principle of freedom, and

Whereas, contrary to the International agreements and resolutions on Colonialism, Russia maintains its Empire under the guise of the Soviet Union and enslaves many nations both in Europe and Asia, such as Latvia, Ukraine, Turkestan, Georgia, Byelorussia, Lithuania, Estonia, Armenia and others, and

Whereas, the Russians maintain their propaganda that the said nations are "free and independent", and

Whereas, in reality these nations are nothing more than colonies of Russia, and are being systematically destroyed by the oppressors, and the process of national destruction and Russification is continuing unabated at present, and

Whereas, Byelorussia alone lost more than 2½ millions of its population during less than 20 years of Russian occupation, and many other enslaved nations, Latvia, Ukraine, Lithuania, etc., lost large percentage of their population due to deportations, etc., and

Whereas, no country or nation can indefinitely endure such a methodical and systematic destruction of its national life as practised by the Russian colonialists, and

Whereas due to the said genocide the very existence and survival of the subjugated nations is in danger,

Therefore, the 12th Conference of APACL, being an organization composed of many nations which themselves in the past have experienced national persecution and oppression, fully appreciate the very grave position of enslaved nations by Russia, and in pursuance of the accepted international principles of freedom, resolves to adopt the following measures:

1. Make a concentrated diplomatic offensive by member-nations at all levels, particularly at the international conferences, condemning the practised genocide and, using United Nations' resolution on Colonialism as well as other Charters of Freedom as a basis, demand:
   (a) Immediate halt of the national persecution and Russification in the subjugated countries.
   (b) The right to send an international commission to check and verify the true position on the spot.
   (c) The right to hold free elections under international supervision with a view of early liberation of the enslaved nations.

Resolution How To Support Captive Nations and Peoples in Their Struggle To Regain Their National Independence and Freedom

(Submitted by ABN; adopted at the 12th Conference of APACL in Seoul, Korea, November 8, 1966)

(a) On the 50th anniversary of the birth of the greatest contemporary slave-empire, to publish a "White book" on the nature, goals, and methods of the Russian-Communist colonial empire, which keeps scores of nations imprisoned, and on the continuous struggle of these imprisoned nations to regain independence and freedom.

(b) In 1967, each member-nation of APACL should dedicate *"a week in honour of 50 years of liberation struggle"* of the nations enslaved within the Soviet Union, in its capital and in other major cities. An exhibition on this liberation struggle, lectures by prominent Ukrainian, Byelorussian, Turkestanian, Georgian, and other freedom-fighters, seminars, rallies by members of APACL in support of their liberation struggle, press and radio interviews with prominent leaders of the liberation movements, etc. should be a part of this week. The ABN should be asked to organize a travelling group on behalf of the peoples subjugated by Russian Communists for 50 years.

(c) On the occasion of such a week, APACL members should be requested to establish "an international liberation fund" for the nations held captive by Communist Russian imperialists for 50 years.

(d) Hold a seminar in each member-country (at Universities and special institutes) on the history of Communist-Russian subjugation of nations in the Soviet Union and on the struggle of these nations to reestablish national independent states.

(e) In March, 1967, in the national press of each member-country of APACL, publish articles on the occasion of the 50th anniversary of the downfall of the Tsarist Russian empire and the outbreak of national revolutions of the enslaved peoples. In October-November, 1967, similar articles should appear on the occasion of the 50th anniversary of the rise of the new Russian-Communist slave-empire.

(f) Translate and publish in various Asian languages the works of Vasyl Symonenko, who died in 1963, having been persecuted by Russian colonialists, and is probably the greatest contemporary poet of Ukraine, and of the other non-Russian enslaved nations, he pictured perfectly the whole slave system in all its phases existing now in the Soviet Union.

Fairplay for Hanoi

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. YOUNGER. Mr. Speaker, our prized satirist, Arthur Hoppe, is still writing his column, and the following one was published in the San Francisco Chronicle on Wednesday, December 28:

Fairplay for Hanoi

(By Arthur Hoppe)

Formation of the Fair Play for North Vietnam Committee has been announced by The Rev. Homer T. Pettibone, D.D.S.

"As evidence mounts that our planes, accidentally or not, have been bombing civilians in Hanoi," Dr. Pettibone gravely told a televised press conference, "our Committee demands that the U.S. government yield to the dictates of fair play."

"We assume, Doctor," said a reporter with a yawn, "that your Committee is calling for an immediate end to the bombing of defenseless civilians?"

"Oh, no," said Dr. Pettibone aghast. "A spirit of fair play merely requires that we declare war on them first."

Several reporters who had jotted "left-wing dove" in their notebooks scratched that out to write in "right-wing hawk."

"The Fair Play for North Vietnam Committee wants us to declare war on North Vietnam?" asked a reporter.

"Fair play is fair play," said Dr. Pettibone, nodding. "The rules of war are perfectly clear: You may bomb anyone you wish, as long as you have declared war on him. But to go around dropping bombs on people you are not at war with is sneaky, infamous and downright unfair." Remember, he added with a frown, "Pearl Harbor?"

Practically speaking, inquired a reporter, how did The Fair Play Committee plan to achieve its idealistic goal?

"Well," said Dr. Pettibone esthusiastically, "as a first step all we have to do is select one Congressman to stand up and propose that we declare war on North Vietnam."

Which one had the Committee chose?

"Oddly enough," he said, scratching his ear lobe, "we've run into a little trouble finding one. The doves understandably show little interest in declaring war on the grounds there's enough shooting already."

What about the hawks?

"Well, they support the President. And while they agree that it is the function of Congress to declare war, they don't wish to function unless the President tells them to."

And the President is against declaring war?

"He's against Congress declaring it. You see, this would require a spirited debate in Congress. And the President feels that a debate at this time on whether or not to declare war would seriously interfere with the war effort."

Dr. Pettibone squared his shoulders. "But we of The Fair Play for North Vietnam Committee aren't giving up. Surely, out of our nearly 600 Congressmen there must be one willing to suggest—or perhaps even just drop a vague hint—that maybe we ought to declare war on these people we have so long been at war with. Fair play will prevail!"

At this point, the reporters scratched out "right-wing hawk," wrote in "some kind of nut" and the press conference ended.

Radio Station, KMAN, Manhattan, Kans., Winner of National Conservation Award in Communications

EXTENSION OF REMARKS

OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. MIZE. Mr. Speaker, the National Wildlife Federation has called my attention to the selection of radio station KMAN, Manhattan, Kans., as the winner of the federation's National Conservation Award in Communications in the second annual conservation achievement program.

This is significant recognition to KMAN, its manager, Lowell Jack, and his staff for the outstanding service rendered to Kansas and visitors to the great State. I hasten to add my congratulations.

Under leave to extend my remarks, I include the news release of the National Wildlife Federation announcing the award in the RECORD so that my colleagues will know about this special honor to a Kansas institution. The release follows:

KANSAS RADIO STATION NAMED WINNER OF NATIONAL AWARD

WASHINGTON, D.C.—Radio station KMAN, Manhattan, Kansas, was named today as winner of the "National Conservation Award in Communications" in the second annual Conservation Achievement Program conducted by the National Wildlife Federation under a financial grant from the Sears-Roebuck Foundation.

Managed by Lowell Jack, the station was cited for its efforts in developing interest in outdoor activities, encouraging proper use of recreational facilities at Tuttle Creek Reservoir, and service to non-resident anglers and campers. Included in its outdoor and conservation programs are semi-hourly reports on Tuttle Creek Lake weather conditions, semi-weekly reports from the Kansas Forestry, Fish and Game Commission, weekly programs produced by the Kansas State University Extension Service, reports from the Riley County Fish and Game Association, and weekly state fishing and reservoir reports. The station also helped establish an outdoor church service in the main campgrounds at Tuttle Creek Reservoir, maintains a "locator service" to contact persons needed in an emergency, and annually conducts a fishing clinic. The station also has carried on extensive boating and firearms safety campaigns.

Selected by an impartial review board of professional conservationists, the Kansas radio station will receive the national award during the President's Conservation Achievement Program to be held the evening of January 24, 1967 in the Presidential Ballroom of the Statler-Hilton Hotel here. The award consists of a unique whooping crane statuette symbolic of America's endangered wildlife plus a grant of $1,000.

In selecting Radio Station KMAN for national recognition, the review board and judges considered all individuals or organizations named in 1966 by state affiliates of the National Wildlife Federation as recipients of "State Conservation Communicator of the Year" awards. The station was named in the state program conducted by the Kansas Wildlife Federation.

More than 600 guests have been invited to attend the second annual President's Conservation Achievement Program, including members of Congress, Governors, Cabinet officers, officials of Federal and state government agencies, and national leaders of citizen conservation organizations.

The Indiana Dunes National Lakeshore

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. MADDEN. Mr. Speaker, on the evening of December 1, the Save the Dunes Council of Gary, Ind., gave a victory banquet celebrating the passage of the Indiana Dunes National Park legislation by the Congress in the last session. It was a successful affair and attended by a great number of people who diligently worked in behalf of the successful passage of this legislation to preserve the beautiful Indiana Dunes area for future generations.

Allen T. Edmunds, chief of the Office of Resource Planning from the National Park Service of the Department of Interior delivered the main address of the evening. I am submitting excerpts from the speech he delivered on this occasion:

THE INDIANA DUNES NATIONAL LAKESHORE—SAVE THE DUNES COUNCIL ANNUAL MEETING, MARQUETTE PARK, GARY, IND.

(Remarks by Allen T. Edmunds, chief, Office of Resource Planning, Philadelphia Planning and Service Center, National Park Service, Philadelphia, Pa.)

It is a real pleasure to be here this evening and share with you the accomplishments of your organization over this past year. It is with no small pride that you can point to the passage by Congress of the Indiana Dunes National Lakeshore Act as a result of your consistent and persistent efforts over a great number of years and against most unusual opposition. There have been others who have helped in reaching this success, it is true, but it is this group which has never faltered or failed to press the issue at all times to its eventful conclusion.

The Indiana Dunes National Lakeshore is not a large area by Alaskan or Texan standards. It is interlaced with railroads and highways, and is squeezed in between multimillion dollar industries. But it has quality and charm that need to be preserved and enjoyed by great numbers of the nation's people.

A friend of mine related a story of his admiration for a certain man who was most brilliant in his depth of thought and scintillating in his expressions of these thoughts. He asked his friend where he got his ideas and from whom did he receive this great inspiration. The man invited him to his home one evening and took him into his garden. "Here," he said "is where I work and do my thinking." "But," my friend remarked, "this is only a small plot of land scarcely 20 feet long by 5 feet wide, how can such a small area provide you with these remarkable ideas." "Ah yes," replied his friend, "but it reaches to the sky." He had perspective—and this I claim is what you people have had, lo these many years. You looked beyond the handicaps of this area and saw the true value of what remained, and what is would mean to our nation. This Act was a victory for conservation. If this struggle had been lost, conservation would have suffered a severe blow, not only in Indiana, but across the nation.

One of America's famous preachers is Dr. George Arthur Buttrick, for many years pastor of Madison Avenue Presbyterian Church, New York City. His father was a British Methodist preacher. One of George Buttrick's childhood recollections is that his father, regardless of the weather, used to walk 7 miles every Sunday to fill his preaching engagements. Why did he walk? One reason was that in that horse-and-buggy era, he had no horse. He could have taken a train. Why didn't he? Because he had strict scruples against riding a train, or any other commercial conveyance, on Sunday. He had the attitude toward Sunday that orthodox Jews have toward their Sabbath. His son's comment on this conduct is interesting. Dr. Buttrick once observed about it, "It may have been silly, but it wasn't flabby."

We'd agree with that judgment—most of us. There is "muscle tone" in such action—intestinal fortitude and spinal spunk. The Los Angeles Dodgers' great pitcher, Sandy Koufax, had some of this when he announced before the 1965 world series that he would not be available to pitch on the high holy days of his faith. Persons who are not flabby have a deep conviction that there is a right way to live, and with God's help they intend to live that way. We don't have to be over-scrupulous about petty pious things to be strong inwardly. But we do have to believe that there is a difference between ways of acting and feeling and thinking. One way is not as good as another. This, I believe, to be true about your Council. It is not flabby—its membership does have deep convictions about what is the right thing to do regardless of what this may mean to each one personally.

Two years ago I had the distinct pleasure of visiting, with Mrs. Edmunds, many of Japan's national parks as a representative of our National Park Service, and with representatives of the Japanese Government. I cannot fully express to you how greatly we were impressed at the sight of thousands and thousands of school children visiting their national parks, climbing mountains, peering into volcanoes, studying, photographing and sketching scenic views, native flowers and the wonders of nature. They were completely enthralled at what they were seeing, and they weren't afraid to climb, walk, run, or quietly observe these things either. We in this country have a great deal to learn from the Japanese in the methods used to awaken such interests in our young people. I believe your organization is one that can play a big part in this—and none too soon.

We have a great deal of work to do—you and I—in the next few months. The first hard-fought battle has been won. Not everyone, however, is in total agreement with what has been done and we will be facing many obstacles in establishing the National Lakeshore. But I have no doubts that your Council will be just as helpful in the progress of establishing this area as you were in its authorization.

I would like to close, before the question period, by telling you one more story which, I believe, illustrates the points I have been striving to make. A preacher in a Scotch village went into the home of one of his members who had boldly declared that he could find God on the Sabbath day as well in his garden or in the fields as he could by attending the services in the village church.

The minister sat in silence with his friend before the open fireplace. The man knew that the preacher had come to take him to task for his boastful spirit. The preacher knew that he was expected to give a deserved rebuke. Yet both remained silent. At last the preacher arose from the chair and went to the fireplace. Taking the tongs, he lifted a single coal from the embers and placed it alone upon the hearth. He waited in silence as it quickly burned into a black ash while the fire in the fireplace continued to burn brightly. Then he quietly went back to his place. "You need not say a word," said the man of the house; "I understand what you mean. I cannot live alone. Next Sunday I'll be in my place at the church."

So it is with your organization and with mine. We cannot live alone—but together we can do much to improve life for all people.

Tribute to Dr. William G. Studer, of Atlanta, Ga.

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1967

Mr. TALMADGE. Mr. President, it is with a great deal of pleasure that I take note today of the outstanding accomplishments and ministry of Dr. William G. Studer, of Atlanta, who on January 8 observed his 35th anniversary as an ordained Baptist minister. In these 35 years, Dr. Studer has not missed preaching from his pulpit a single Sunday.

There appeared in the January 7 edition of the Atlanta, Ga., Journal an article about Dr. Studer and I ask unanimous consent that it be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVEREND STUDER TO MARK HIS 35TH ANNIVERSARY

Dr. William G. Studer, who will observe his 35th anniversary as an ordained Baptist minister on Sunday, has not missed preaching on Sunday during this long period of service.

Ordained to the ministry when he was 20, the Rev. Dr. Studer has held four pastorates and has been minister of the Sharon Baptist Church for the past 18 years.

A native of Chattanooga, the Rev. Dr. Studer holds five earned academic degrees and has preached in every state in the United States except Alaska and Hawaii.

As a full-time pastor, he averages more than 400 pastoral calls a year. He also serves as chairman of the mathematics department to Therrell High School and conducts a weekly education program for the 3rd Army's Military Affiliate Radio System (MARS).

Since 1934, the Rev. Dr. Studer has conducted a weekly radio broadcast.

He has served as chaplain of the Georgia Senate and House a number of times and former Gov. Herman Talmadge gave him the rank of brigadier general in recognition of his outstanding achievement as a minister and educator.

He has held many denominational offices and educational offices.

Adam Is of Age

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. BELCHER. Mr. Speaker, under leave granted, I insert in the RECORD the following editorial entitled "Adam Is of Age," which appeared in the Oklahoma Eagle, January 5, 1967:

ADAM IS OF AGE

Congressman Adam Clayton Powell is making headlines again and in these recent years they are not the favorable kind of headlines. Some months back he made bold type copy on a European cruise in the company of several ladies, who by implication, were not exactly taken along because of their unusual efficiency in the matter of government.

Even more recently he created a stir by his endorsement of the Black Power movement and by the newspaper announcement that he planned to call a "Black Power Conference". He broke with the National Association for the Advancement of Colored People, discounted Martin Luther King, called for Sargent Shriver's resignation and in general has raised "old Ned" since the death of John F. Kennedy.

As pastor of Abyssiaian Baptist Church, Adam Clayton Powell has always dared to live dangerously. He courted and married Hazel Scott straight out of the night clubs, divorced her and married again, broke the bonds of matrimony again and wedded the Cuban lady with whom he is now reported to be estranged.

He used the power of his office as chairman of the powerful Educational Committee to whip many hungry colleagues into line in Congress. He has refused to answer the summons of the courts or to pay a judgement handed down in favor of a woman he had called a "bag woman". At this writing he has yet to appear before the investigating committeo of the congress.

You've got ta admit that Adam sure lives dangerously. At the time for the challenge of his right to be seated approaches, there are partisan groups cropping up around the country to take up his cause. The standard cry is that Powell is being attacked because he is a Negro, and white men are anxious to oust him because he is a Negro.

There are groups too, that think that Powell should not be dealt with unless all other congressmen are investigated.

For our part we do not "buy" either of these positions. Undoubtedly there are those in congress who would like to see Powell out because he is a Negro, but the reason that puts him in the spot where his position can be threatened is not because he is a Negro but rather because of his indiscretions.

Likewise, we cannot go along with the argument that every Congressman ought to be investigated because Powell is investigated. Powell, not the other congressmen, is the one on trial.

We point out here that Powell has dared to live dangerously and what's happening to him now is the price he has to pay for living so.

It is our thinking that in this age when our aim is to think of men on the basis of their merit, we ought to want an investigation of any public official if there is occasion for doubt, and when that investigation is launched, let the chips fall where they may.

And really, in Powell's case, there seems to be little call for our defense. In the first place, Powell has not asked for it, and in the second place, up to now, he's been able to speak for himself.

We say, Adam is of age. He dared to get involved, let him speak for himself and get himself out!

Portugal's African Provinces

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. KEITH. Mr. Speaker, reliable reporting on the troubled issues of present day Africa tends to be scarce, the main reason being perhaps that public attention is drawn primarily to Vietnam where the struggle is more dramatic and our national interest more immediate. Yet the latent turmoil and existing conflicts in the African continent south of the Sahara are potentially as explosive. Therefore it is of the greatest importance for us to understand the nature of the confrontation of political forces in the sensitive parts of that continent, and what they may signify.

The magazine, the Reporter, in its issue of December 29, 1966, includes a very well-balanced article by the British journalist, George Martelli, entitled "Portugal's African Provinces," which casts a great deal of light over the present situation in those territories, as well as on the roles of the Congo—Kinshassa—and Rhodesia.

The article is as follows:

PORTUGAL'S AFRICAN PROVINCES

(By George Martelli)

When rebellion broke out in Angola in 1961, it was widely believed that the days of the Portuguese in Africa were numbered. They had been there for nearly five hundred years, and it was high time, so many people thought, for them to get out, all the more so since all the other main colonial powers—Britain, France, and Belgium—had either relinquished their overseas possessions or were in the process of doing so. But after five years of fighting, and in spite of every outside pressure, Portugal's determination to remain in Africa is as strong as ever and its immediate prospects there brighter rather than darker.

To this unexpected result several factors have contributed: the failure of African guerrillas against disciplined troops, the loyalty—or apathy—of the bulk of the African population, the lack of unity among the various liberation movements, the lack of effective support from other African countries, divided as they are and beset by internal difficulties, and the disillusionment of the West with the results of independence.

Independence, in many cases, has led not to a flowering of democracy but to the establishment, sometimes after civil or tribal war, of one-party states or of personal or military dictatorships, the stifling of all opposition, economic stagnation or worse, and increasing dependence on foreign aid. By contrast the Portuguese territories—outside the areas of guerrilla warfare—present a picture of relative economic and social progress.

Furthermore, events in Africa have convinced some western strategists that the ejection of the Portuguese from Africa would be a victory not so much for liberal ideas as for the Communists in the cold war. Among the rebel leaders in Angola, Mozambique, and Portuguese Guinea are men who have been trained in subversion in Algeria, Czechoslovakia, or China, and their arms come from the same sources. There are training camps in Guinea, the Brazzaville Congo, and Tanzania. It is not very likely that the Portuguese territories, if ever they gained their independence, would be allowed to remain under western influence. Much more probably they would become bases for the final assault on the "white redoubt" in southern Africa. This thought has had a softening effect on the policies of Washington and London vis-a-vis Portuguese Africa.

DISARRAY IN THE OAU

Portugal has also benefited from the split in the Organization for African Unity, from the quarrels between African leaders, and the elimination of such extremists as Nkrumah and Ben Bella. The military men who have taken over in Ghana, Algeria, Nigeria, and several other African countries are much more concerned with keeping the peace in their own countries than with helping the war against Portugal, and much more frightened of Communist-backed subversion than of western "imperialism." They may pay lip service to the liberation movements, but they have neither the means—in money, men, or arms—nor the will to assist them effectively.

The same could be said of such moderates as Presidents Jomo Kenyatta of Kenya and Hastings Banda of Malawi. Indeed, Banda is on good terms with his Portuguese neighbors in Mozambique, not only because landlocked Malawi depends for its outlet to the sea on the Mozambiquan railway but also because Dr. Banda and the Portuguese have a common enemy in Tanzania, which provides asylum both for the Mozambiquan rebels and for Dr. Banda's political opponents. Hence he fears that if revolution succeeded in Mozambique it would not stop short at the frontiers of Malawi.

As regards the attitude of the native population of Portuguese Africa, it is largely influenced by the fact that among the primitive peoples of the continent the traditional enemy is not the colonial power but the neighboring tribe, and that they look to the former to protect them against the latter. It was only to be expected, therefore, that when the Portuguese made it clear that they were not leaving them to their fate, tribes not directly involved in the rising should have rallied to the government.

In all three territories the rising took the same form and was confined to one or two tribes—the Bakongo in Angola, the Balantas in Portuguese Guinea, and the Maconde and Nyanja in Mozambique. All these tribes are distributed on both sides of the frontiers, which mostly run through dense bush, and it was thus easy for guerrillas based over the border to infiltrate and persuade their fellow tribesmen, by promises or intimidation, to join them in attacking the Portuguese. If a village refused, it would be pillaged and burned and its headman executed. In this way the rebels have killed many more Africans than Portuguese, whose casualties in five years of campaigning have been relatively light.

To keep out of trouble, hundreds of thousands of Africans have crossed the frontiers of Angola, Portuguese Guinea, and Mozambique to seek asylum in the neighboring countries, where refugee camps have received a large number. It would be a mistake, however, to assume that all these people are running away from the Portuguese. Many left their homes so as not to get involved and to avoid being forced to join the rebels or to work for them.

THE RIVAL REBELS

In Angola and Mozambique less than a tenth of the total area of the territory has been seriously affected, and probably a smaller proportion of the population. In the northern district of Angola, where the rising occurred, the production of coffee, which is important to the economy of the province, has been successfully maintained through all the trouble, while in Mozambique the disturbed area adjoining the northern frontier is sparsely populated and has no economic significance.

Portuguese Guinea is much smaller, and because of the nature of its terrain it is more difficult to defend. When the rebels attacked in 1963 there was a danger of their cutting it in two, from south to north. The Portuguese had very few troops, all black, but the majority of tribes, including the largest, the Fula, who are Moslems, remained loyal and asked for arms to defend their villages. Since then more than ten thousand troops have been enrolled either as native militia or civilian volunteers to fight the rebels. All important villages are defended, and the rebels are confined to hiding places in the bush or to the swampy region south of Bissão, the capital, where it is difficult to pursue them.

Their leader, Amilcar Cabral, president of the African Party for the Independence of Guinea and Cape Verde (PAIGC), is a mulatto, whose family came to Guinea from the Cape Verde Islands and who was once a senior official in the Portuguese administration. He has been an honored guest in several Communist countries and lives in Conakry, the capital of Guinea, conveniently near the base camp for his guerrillas, which is situated at a place called Kindia and is staffed by Algerians. Algeria is also the channel through which the guerrillas receive arms from the Communist countries.

Cabral's party has a rival, however, in FLING (Front for the Liberation of an Independent National Guinea), whose headquarters are in Senegal, and there is little love lost between the two parties. FLING has not attempted to organize subversion inside Portuguese Guinea; but should the Portuguese ever withdraw, it would undoubtedly assert its claim to be more representative of the Guineans than PAIGC, which is largely run by Cape Verdeans. This would bring the two parties into conflict.

The same kind of rivalry, which in Africa is usually inspired as much by tribal as by political differences, has also weakened the nationalist movements of Angola and Mozambique. It was rightly or wrongly believed that Holden Roberto, leader of the Union of Angolan Peoples (UPA), which staged the revolt in Angola, derived his main support from the United States. This led the Communists to give their backing to the Popular Movement for the Liberation of Angola (MPLA), which is based in Brazzaville, across the Congo River from Kinshasa (formerly Léopoldville), where Roberto has his headquarters. The MPLA has the use of Brazzaville Radio and devotes more of its propaganda to denouncing Roberto as the "tool of imperialism" than to attacking the Portuguese. Its subversive activities are limited to sporadic attacks on Cabinda, the Portuguese enclave situated north of the mouth of the Congo.

Dr. Eduardo Mondlane, president of the Front for the Liberation of Mozambique (FRELIMO), has also been under fire from other nationalists. Mondlane is a highly educated man who was employed for several years in the Trusteeship section of the United Nations, has taught at Syracuse University, and is married to an American. He has claimed to be getting arms from the East and money from the West, and as much of either as he needs, but his preference, if he had to choose, would undoubtedly be the West. This and the fact that he appears to live in comparative affluence, with a comfortable apartment and an office in Dar es Salaam, have aroused resentment in some of the other Mozambiquan parties, three of which last year set up a rival organization called Revolutionary Committee for Mozambique (COREMO), with an office in Lusaka, Zambia. Among other charges, they have publicly accused FRELIMO of killing more Africans than Portuguese.

All of these movements depend, of course, on the support of the countries that provide the bases for their subversive operations. As time goes on, this tends to be less willingly given. The presence of poorly disciplined armed bands, along with their dependents, who need to be fed or given land to cultivate, can be an embarrassment to the host government. Generally speaking, the support of revolution in other countries, besides imposing a drain on their resources that they can ill afford, has had the effect of distracting African governments from their pressing internal problems.

THE THREAT FROM THE CONGO . . .

But while the rebels spend much of their time in squabbling among themselves, they are well supplied wtih bases, arms, and money, and there are signs of an increase of rebel activity, especially in Angola and as a result of recent events in the Kinshasa Congo. There President Joseph Mobutu seems to have made a deal with his neighbors in Tanzania and the Brazzaville Congo. These two countries, through which aid has been sent to the rebels in the eastern Congo, would cease such aid, and in return Mobutu would swing his Congo into the "unaligned," or radical, camp of African states. This would explain his quarrel with the Belgians in the summer, the rupture of relations with Portugal in the fall, the virtual expulsion of the U.S. ambassador, G. McMurtrie Godley, and, more recently, plans to resume diplomatic relations wtih the United Arab Republic and the Soviet Union.

As the springboard for all rebel operations in Angola, the Kinshasa Congo is a crucial factor in the situation there. With the exception of MPLA, which is based in Brazzaville, the half dozen Angolan nationalist parties all have their headquarters in Kinshasa. If Mobutu has really decided to throw in his lot with the African extremists, he may give the Angolan rebels better facilities. One consequence of such a policy could be the return of the Communist-backed MPLA to Kinshasa, and a weakening of Congolese support for Holden Roberto's Revolutionary Government of Angola in Exile. The MPLA moved to Brazzaville in 1963 when the Organization for African Unity recognized Roberto's "government." In the last few months, however, Roberto has been losing ground in the revolutionary movement. In October he attended a meeting with MPLA representatives in Cairo, after which it was announced that the parties had agreed to cease propaganda against each other and to co-operate in "military and political affairs." This latest attempt at a reconciliation is unlikely to be any more successful than the others; and it is significant that only a few weeks later the congress of the Congolese Students Union demanded the expulsion of Roberto and his party from the Congo.

The Bakongo tribesmen, who have done most of the fighting in Angola, look to Roberto for leadership and it is doubtful that they would take orders from the MPLA chiefs, whom they distrust because of their better education and strong mulatto element. The MPLA, however, which has had the benefit of Chinese instructors expert in the kind of war waged by the Vietcong, present, in the long run, a serious threat. Until now, it has been handicapped by having its base in Brazzaville and only the unimportant Portuguese enclave of Cabinda as a target; if it is allowed to operate from the Kinshasa Congo, it might prove much more effective.

. . . AND OVER RHODESIA

Another potential source of trouble for Portuguese Africa is the proximity of its white neighbors, Rhodesia and South Africa. The Portuguese railways and ports—Beira and Lourenço Marques in Mozambique and Lobito in Angola—provide the only access to the sea from the land-locked countries of Rhodesia, Zambia, and Malawi. Beira is also the terminus of the pipeline to the Rhodesian refinery at Umtali, while Lourenço Marques handles a large proportion of the traffic bound for the Transvaal, vital to South Africa. Consequently, the attitude of Portugal is of critical importance in any attempt to apply sanctions either against Rhodesia or South Africa, especially an oil blockade of Rhodesia.

The last such attempt, the Security Council Resolution of April 9 authorizing Britain to stop ships unloading oil at Beira destined for Rhodesia, aroused intense resentment that the Portuguese should be involved forcibly in a British internal quarrel. Portugal questioned the legality of the resolution on the grounds that the United Nations had no right to intervene in a matter exclusively of British jurisdiction, as claimed by Britain; that Rhodesia was not a threat to peace; that Soviet and French abstentions invalidated the resolution, which under Article 27 of the U.N. Charter required the affirmative votes of all the permanent members of the Council; and that the resolution violated Portugal's neutrality and the principles of freedom of the seas and free access to the sea of landlocked countries.

Privately, Portugal will try to avoid a collision course by diplomacy. If Britain, however, with the authority of the Security Council, extends the present oil blockade of Beira to Lourenç Marques, the Portuguese reaction may be much stronger. In any case, the restriction of Rhodesian exports and imports as a result of the sanctions affects Portugal adversely by reducing the revenue in foreign currency earned by its railways and ports in Mozambique, thus aggravating the difficulty of financing the defense of the territory and favoring the liberation movement. Generally, the effect of the sanctions must push Portugal closer to Rhodesia and South Africa.

This would seem a strange rapprochement. For what distinguishes Portugal from the other colonial powers, all of which to a greater or lesser extent practiced a color bar, is its declared policy of progressive racial assimilation. The aim of the policy is to evolve multiracial societies in Africa, composed of whites, mulattoes, and Negroes, all speaking Portuguese, sufficiently mature politically and developed economically to be able to stand on their own feet in the modern world. They would then take their place either as equal partners in a Portuguese commonwealth or as independent nations. This at any rate is the theory. Only time can show how it will work out in practice. The big question is whether time will be given in an age that looks everywhere for quick results. The future of Portugal's African provinces will largely depend on the ability of Portugal, itself a poor country, to develop their economies so as to keep pace with the advances necessary in the social, educational, and administrative fields.

Problems of the Post Office

EXTENSION OF REMARKS
OF
HON. MORRIS K. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. UDALL. Mr. Speaker, probably no part of the Federal Government touches the average person so closely and so frequently as the post office. A child writing Santa Claus, a store billing its customer or wooing him with an advertising circular, or a traveler sending a souvenir back home—all use the post office.

As many of us know all too well, the Post Office Department is mired in problems these days. These problems are so acute as to cast doubt on the famous inscription on the central post office building in New York:

> Neither snow nor rain nor heat nor gloom of night stays these couriers from the swift completion of their appointed rounds.

Mr. Jerry Landauer of the Wall Street Journal has written perceptively and knowledgeably of the Post Office's plight. His article appeared in the Journal, December 16, 1966. Without objection, I will insert the article at this point in the Appendix:

POSTAL PROBLEMS—MAIL SERVICE SUFFERS IN MANY LARGE CITIES AS AUTOMATION LAGS—POLITICS, CURBS BY CONGRESS HAMSTRING SYSTEM; O'BRIEN GETS BUSINESSMEN'S HELP—RATE BOOST PROPOSAL LIKELY

(By Jerry Landauer)

WASHINGTON.—To some disgruntled postal patrons, the handsome mosaic map of the world imbedded in the lobby floor of the Post Office Department's headquarters building on Pennsylvania Avenue speaks volumes about why the mail often arrives late: On the inlaid compass medallion that graces the map, the "N" points due South.

Upstairs in cavernous offices (by far the biggest in town belongs to Postmaster General Lawrence O'Brien) top officials reject the implication that the Postal Service, too, is upside down. Frederick Belen, Mr. O'Brien's deputy, dismisses fears of coming chaos. "We're geared up to deliver the mail and we will," he vows.

But other top postmen acknowledge that slow slippage over the years is accelerating dangerously in a number of cities, inviting Christmas collapse if freezing snow should grip New York City, Chicago and other key distribution centers. "Frankly, service is lousy," one of the six assistant postmasters general admits, "and it will probably get worse before it gets better."

POLITICAL, LABOR PROBLEMS

The variety of problems pressing in on the Post Office attests to the accuracy of that forecast. The Postal Service is entangled in politics, hemmed in by Congressional curbs on flexible use of manpower, caught in struggles between railroads and airlines for the mail-carrying dollar. It is scraping the bottom of the worker barrel in a tight labor market while union leaders, appetites whetted by three pay raises in the past four years, clamor for a bigger boost next year. It isn't adequately modernized, mechanized, or prepared for automation.

How well the system functions now no man can precisely tell. For though the Post Office in Detroit is experimenting with optical scanners designed to "read" and sort 36,000 machine-addressed ZIP-coded letters an hour, headquarters has no standards for measuring total performance. Cost analysts profess to know, down to one-thousandth of a cent, average per-piece revenue at different classes of post offices. But the brass doesn't know what percentage of first-class mail reaches the right destination next day.

A long-discussed proposal to combine first-class and air mail into a single new category intended for overnight delivery by the fastest means has been shelved for at least another year. John Gronouski, Mr. O'Brien's predecessor, was too optimistic in 1965 when he said the public could "soon expect" delivery of such priority mail anywhere in the United States.

At the White House, President Johnson knows that poor postal service, because it touches every household and threatens the efficient conduct of every business, could become a potent issue for Republican orators. So he's inclined against the Budget Bureau's desire to cut $175 million from Post Office spending plans for the fiscal year beginning next July 1. "Larry O'Brien came out of the budget hassle very, very well," an Administration source reports.

THE 6-CENT LETTER?

General O'Brien (the top postman is so styled) prefers to put off asking Congress for higher rates until he can improve service. But most indicators point to a request next year for a rise of about $750 million embracing most categories of mail, including a penny rise to six cents for first class. "I fully expect the President to propose an increase," says Chairman Mike Monroney (D., Okla.) of the Senate Post Office Committee. General O'Brien sounds less certain: "It could happen," he says.

The prospect of paying more will surely fuel complaints about the quality of service at current rates, making it harder to wrest an increase from Congress. Near adjournment two months ago, some Democrats seemed more inclined to join Republican cries of "abominable" delays than to defend the unglamorous Post Office. "The American people aren't going to stand for much more of this foolishness and inefficiency," said Sen. Daniel Brewster (D., Md.), a member of Chairman Monroney's committee.

Of foolishness, the critics contend, there is plenty. But most agree that much of the inefficiency lies beyond General O'Brien's power to correct. His sergeants, 34,000 postmasters in places ranging from Los Angeles, Calif., to Hell, Mich., are loyal not necessarily to him but to the Congressmen and Senators who sponsored their appointments. His 700,000 troops, including 95,000 Negroes and 50,000 women, speak through powerful unions direct to the Congressmen who determine their wages and fix his rates.

His key outposts, the big-city post offices, were built mostly as massive landmarks near railroads, often far from the truck terminals or airports that today handle more and more of the cards, letters, circulars, catalogs, newspapers, magazines and sales samples that come cascading in at an annual rate of 80 billion pieces.

When the mail flows heaviest toward nightfall, Mr. O'Brien can't store it overnight as a businessman might warehouse incoming goods. He can't as in Britain where the government owns the railroads and airlines, arrange transportation schedules to mesh with mail flow. Nor can he prescribe specifications for suppliers. Former Postmaster General J. Edward Day has noted that Americans are free to use 700 sizes of envelopes; West Germany permits 12, the Soviet Union 6.

General O'Brien came back from Europe the other day and announced that he'll explore moving the mail within major cities by subway, as London does. Actually this idea occurred to planners in 1961, but a Post Office task force determined that New York's subway trains didn't stop long enough to get the mail on and off. "Right at the time the mail is moving is right at the time everyone else is moving—5 o'clock," Mr. Belen told Congress earlier this year.

Manufacturers can make imperfect products and replace them. Not so if mail handling equipment chews up leters, or if drowsy clerks misplace parcels, or if a Christmas substitute dumps his burden down the sewer. "In our business," says a Post Office official, "you can't call back a mistake."

In many places, to be sure, the mail gets delivered speedily and accurately. In others, service seems abysmal. For example, mail from Chicago generally takes three days to reach Schaumburg, Ill., a community of 7,500 less than 25 miles distant. Recently a depositor in California mailed a check to the Schaumburg State Bank. It was returned with the notation, "No such town in Illinois." The customer was "a little shook up," bank president Ward A. Weaver reports. "He must have thought, 'no such bank in Illinois.' "

Labor-saving machinery is barely noticeable in a system that must cope with more than half the world's mail. In fact, mail-handling methods haven't change much since Pony Express riders rode warily through Indian country. Now as then it takes dozens of hands to collect, sack, unsack, sort, resort, stack and "scheme" mail for other post offices or for local carriers into row upon row of pigeonhole cases. Clerks, flipping 30 or 40 letters per minute into slots, must memorize thousands of departure schedules and carrier routes.

Some hardware is in use: To move sacks, sort letters semi-automatically, unscramble jumbled mail, line up letters for automatic canceling. But the world's most advanced industrial nation, one which sends men flying into space, hasn't developed a mailbox that will stack letters as they drop down.

Skimpy budgets for research and development help explain the absence of the "postal industrial revolution" which several postmasters general have prematurely welcomed. This year the Post Office budgeted $16.1 million for R&D, less than three-tenths of 1% of its total spending; Sargent Shriver's antipoverty warriors spend four times more researching poverty. Moreover, part of the research results get buried in the Post Office bureaucracy. "Valuable data on postal activities is on file in bureaus, but only a few individuals are aware of its existence or importance," complained a headquarters memorandum issued last summer.

BIG-CITY CONSTRUCTION LAGS

Outlays for modernization have been similarly slim. Spending to refurbish postal buildings dwindled from $70 million in 1961 to $17.8 million last year. And despite the enormous growth of metropolitan areas, not one major post office has been built since World War II in any big Eastern city; one in New York is under construction now, the first there in 27 years.

In contrast, the Post Office pampers some rural areas, in part because country Congressmen have long dominated postal appropriation committees. "In my district we're doing everything but opening the mail for our patrons," says Rep. Otto Passman (D., La.). One week before Election Day last month General O'Brien appeared in Oshkosh, Wis., to remind voters that he and Democrat John Race had "arranged to put Oshkosh on our major facilities construction schedule" for a new post office. (Rep. Race lost anyway.)

In certain cities, failure to modernize the postal plant has in turn set back plans to install bulky semi-automatic handling machines. As Deputy General Belen explains, "We've had disastrous experiences trying to put some of this equipment in an old building; by the time you beef up the floors this or that doesn't fit or doesn't work." More often though, mechanizers were required to yield their funds for what higher authorities deemed more pressing purposes.

In 1963, for example, $17.3 million destined for "major mechanization" went for pay raises, leaving $4.5 million for the intended purpose. In the following year mechanizers placed orders for just half the amount Congress supplied, and in 1965 they obligated less than one-third.

JOBS KEEP GROWING

Failure to buy tested machinery even to the limit permitted by stingy Congresses (appropriations committees almost always reduce planned spending for mechanization) contributes to the skyrocketing Post Office payroll. General Day in his 1963 annual report claimed that expert Post Office management "exploded the myth of inexorably rising Federal employment," but since 1963 job slots have expanded to 696,000 from 587,000.

Now General O'Brien wishes to "turn the corner from being almost exclusively a firefighting department, responding to emergencies." He's tapping universities for management trainees, stepping up purchases of machinery and placing orders for what he says will be the world's largest electronic source-data complex. He has also set up a new office of planning headed by Ronald B. Lee, a 34-year-old West Pointer who hopes to apply systems analysis techniques to Post Office problems. Among other notions, Mr. Lee envisages major Post Offices of the future simply as mail processing factories located along highways and close to airports.

To fill another new slot, Assistant Postmaster General for research and development, Mr. O'Brien bagged Leo S. Packer, engineering manager of Xerox Corp. Mr. Packer has a mandate to spend for innovations—computers, automatic handling systems, character reading devices.

Mr. Packer joins two other men in the high command with backgrounds in business—Assistant Postmasters General Ralph W. Nicholson, formerly New York manager of an advertising agency, and William J. Hartigan, an air cargo specialist. Like them, Mr. Packer speaks well of Mr. O'Brien. "He's really an ideal boss. He listens, asks the right questions, encourages me and gives me elbow room. . . . But I can't just snap my fingers, spend a billion dollars and revolutionize the Post Office."

"HUE AND CRY ALWAYS LOUD"

Even if the man from Xerox had that billion, he'd still have trouble pulling the Post Office into the 20th Century. To begin with, the powerful postal unions fear nothing so much as mechanization. "It's in the nature of the job that, whenever I want to make a change, powerful forces inevitably, invariably oppose it," Mr. Gronouski has recounted. "No matter how small the change is, the hue and cry is always loud."

Another obstacle: The headquarters bureaucracy, so mired in routine that one Congressional watcher likens it to a "bull elephant lumbering along, head down." Many third-stringers, having watched a procession of postmasters general take office in high expectations and leave with hopes dashed, ignore the incumbent or resist him when necessary.

An aide to Mr. O'Brien confides: "I can't count how many meetings I've been to where some geezer said, 'Aw, we tried that 20 years ago and it didn't work.' " But a former official sees benefits in the bureaucracy's resistance. "Don't forget," he says, "the old-timers knock down the hare-brained schemes along with the good."

Those in Washington and in the field who view change as the enemy immerse themselves in the four-pound Postal Manual and a vast array of supplemental volumes. A. R. Sabin, a former Post Office statistician, counts 45 regular reporting forms, 26 collateral reporting forms and 38 work forms in one handbook alone, Fiscal Services F-7.

Some handbooks teach how to count the mail. Sample:

"If tertiary volume is not recorded, the tertiary pure distribution standard is weighted by multiplying the percentage of mail from 'feeding' secondary to tertiary by the weighted secondary percentage. This tertiary standard is then added to the secondary standard and applied to the secondary volume as combined 'secondary-tertiary' standard. For example, assume that in the example given in Section 116.51 a tertiary case is added which is fed by 5% of the Illinois' cases' volume. The weighted secondary-tertiary group pure distribution standard is calculated as follows: . . ."

The Green Bay Story

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. BYRNES of Wisconsin. Mr. Speaker, my hometown and its football team is, as you all know, again in the news. For the 10th time the Green Bay Packers are the champions of the National Football League, a record unmatched in professional football history.

It is appropriate that the Packers, who are also the oldest professional football team in the land, should represent the NFL next Sunday in the first playoff between the two major football leagues.

The "Green Bay Story" is an interesting one that has been told many times and bears repetition. A most interesting account appeared recently in the New York Sunday News in an article by William Reel. For the edification of my colleagues the article follows:

PACKERS, GREEN BAY ONE BIG HAPPY FAMILY

(By William Reel)

In the likely event that the Green Bay Packers, the football representative of this frigid Lake Michigan city, wins the National League championship and goes to sunny California for the Super Bowl game next month, the Green Bay fans who accompany them will expose themselves to a hazard never encountered back home—heat stroke.

Here is Green Bay, the name of the game is frostbite. Packer fans are accustomed to enjoying their football in the invigorating fresh air, with a blizzard swirling through the stands to keep the blood circulating. hen the temperature edges up above freezing in Lambeau Stadium, the buffs get to feeling a little close and start loosening their ties.

"Aw, the football weather isn't so cold here," demurs Henry Van Der Heiden, who runs Spookie's Luncheonette on Main St. "Why, I just slip into my bear-skin coat and sit there enjoyin' the game, just as warm as toast! No different than bein' home by the fire."

WRY HYPERBOLE

When teams from the big cities come to this bleak, icy, Wisconsin outpost to play the Packers, the visiting sportswriters amuse their readers back home with wry hyperbole about the bucolic ways of the locals.

"The team got into Green Bay late because the dogsleds were running behind schedule," is one well-worn ribtickler, as is "You can spot the mayor of Green Bay right off—he's the one wearing the clean overalls."

Such cracks elicit supercilious chuckles from the sophisticates back in New York and Chicago and Philly and Los Angeles and San Francisco and the 82,000 proud residents of Green Bay have learned to suffer them with good natured resignation.

But then, they can afford to be tolerant. They get the last laugh on Sunday afternoons when, come hail storms or high water, their beloved Packers usually crush the city slickers on the gridiron.

"They can laugh at us all they want from Monday to Saturday," chortles Howard Blindauer, a local businessman and Packer superfan, "but never on Sunday!"

CITY OWNS FINEST PRO FOOTBALL FACILITY

When you think of Green Bay, you automatically think of football. (Which is probable just as well, since the city is otherwise distinguished by its leadership in toilet paper manufacturing.) That such a small city supports the most successful team in pro football history—the Packers have won a record nine world championships—is an extraordinary civic achievement of which the natives are fiercely, and justly, proud.

More impressive still is the fact that 50,000-seat Lambeau Stadium, which the people of Green Bay voted overwhelmingly to build with their own tax dollars in 1957, is the finest football facility in the business. The field is sunk below ground level, and the fans view the action from bench seats unobstructed by girders. Unlike Yankee Stadium, where many locations are so remote that a football game is only a rumor, there is no such thing as a bad seat in Lambeau Stadium.

What sort of a city is Green Bay? It is a city where, when you call City Hall, the mayor himself is likely to pick up the phone; where people say good morning to strangers on the street; where tall draught beers are a dime and the bar buys regularly; where the big apple is not Broadway, or the Loop, or Sunset Boulevard, but, aptly, Main St.

HASN'T CHANGED

"In many ways, Green Bay hasn't changed much in 50 years," says Mayor Don Tilleman, a soft-spoken, genial native who boosts his city without being overbearingly gee-whiz about it. "Progress has been kind to us. We are thriving economically, but our growth has been gradual and the city remains very much a community, extremely closely knit and civic minded. The Packers, you might say, are our first family. They unite the community."

In many respects, Green Bay and the Packers have grown up together. Mayor Tilleman, for instance, was born in 1919, the same year as the team. He estimates he has missed no more than two dozen home games since he was old enough to understand what all those big guys were doing running around down there on that chalk-stripped field.

Tilleman recalls hanging around the old Hagemeister Park as a small boy, waiting for a sympathetic Packer player to lead him in by the hand. Later he sold candy bars and ushered to gain admission, and now, as mayor, he is entitled to two free tickets to each game.

TICKETS BIG INCENTIVE TO GETTING ELECTED

"Those tickets are one big incentive to get elected," he said laughingly, and he was only half kidding.

All 50,000 seats are sold out for years to come, and the Packer ticket office has a waiting list of 12,000 applicants. If for some reason, such as bronchial pneumonia, a ticket holder can't make a game, he calls the radio station and announces he has a ducat to sell. (At face value, by the way. You go straight in Green Bay, or you get a punch in the nose.) Within minutes, his phone is ringing and a line forming outside his door.

Only major tragedies keep people away from the ball park. Last season a woman slipped on her way into the stadium, and felt a bone snap in her leg. The pain got so bad that, late in the fourth quarter with the Packers safely ahead, she was persuaded to go to the hospital and have the break set.

Ticket possession can be a matter of bitter strife. Last year, when Kathryn Grab of Menasha, a town near Green Bay, won a divorce from her husband, Leonard, the right to the couple's season tickets was a major bone of contention in the property settlement. The judge awarded the ex-Mrs. Grab the pasteboards.

FIRST CITIZEN-FAN

"I'll tell you how tough it is to get into Lambeau Stadium," said Howard Blindauer, a long-time season ticket holder. "The other day, Merrill Knowlton called me and said, 'Howie, I'm in a spot, I've got to get two tickets for Sunday.' Now, Merrill Knowlton is the ticket manager of the Packers. If he can't get a seat . . . well, you get the idea."

Blindauer is probably the most effective unpaid public relations man a city could hope to have. A recent visitor to Green Bay casually asked Chuck Lane, the Packers publicity man, to name the first citizen-fan to come to mind.

"Howard Blindauer," Lane answered before the question was all the way out.

Blindauer owns a sheet metal business which does a brisk trade, but it is strictly an avocation with him during the football season. He watches the Packers practice every day and attends every game, home and away, with his wife, Dorothy.

"My two sons are taking over the business," he explains. "That's how I can get away with all this foolishness. They run the business when Dot and I are on the loose."

HOWIE GLAD TO SERVE AS UNOFFICIAL GUIDE

Like so many citizens one encounters in Green Bay, Blindauer is effusively friendly, forever offering to do whatever he can to help you. When strangers arrive in town and express an interest in the Packers, they are invariably directed to look him up. He considers it a privilege to be unofficial guide.

When actor Robert Preston came to Green Bay several years ago to do a segment for the "This Proud Land of Ours" television show, he was advised to seek an interview with Blindauer. He did, and the following dialogue ensued on national TV.

"How many miles a year do you cover following the Packers, Howie?"

"Oh, about 30,000."

"Does your wife accompany you?"

"Sure, she wouldn't miss a game."

"She certainly must love football."

"No," said Blindauer, not batting an eye, "she just loves me."

"Robert Preston got a great kick out of that remark," Blindauer chuckled.

SOLVES PROBLEM

Blindauer has solved the problem of subfreezing Sunday afternoons in Lambeau Stadium. He starts out with insulated underwear, then adds shirts, sweaters and finally an overall covering of foul weather gear which he providently brought back from his Navy days in World War II. Lumberjack boots complete the ensemble.

He also sports a cap, not to ward off the elements but because he permits himself the superstition that the Packers tend to fare better when he wears it. If the team goes to the Super Bowl, he will be sitting under the Los Angeles sun, wearing that cap.

Blindauer is a typical Packer fan in the sense that his devotion to the team is inextricably tied up with his devotion to the city. In New York, when the Giants suffer their Sunday drubbing, the city does not construe the loss as a black mark on the community. Not so in Green Bay. On Monday morning after a rare Sunday defeat, there is a shortage of happy faces on Main St.

HARD MAKING SALE ON BLUE MONDAYS

"We're a bunch of grouches after a loss," Blindauer says. "I don't even try to sell any thing on a blue Monday. On the other hand, after we win a big one, I always seem to have a good day."

Blindauer bid a visitor goodby, and said he hoped his stay had been a pleasant one.

"Whenever people are good enough to visit us, we like to leave them with a good impression," he said. "Come again."

People have been coming to Green Bay since 1634, when French explorer Jean Nicolet sailed down the St. Lawrence and into the Great Lakes, and docked his birch bark canoe in La Baye Verte, as he called it. The settlement soon became a thriving fur trading center, and was in fact a major base of John Jacob Astor's fur empire.

Today, Green Bay is a major producer of paper products, and exports them all over the United States and abroad. The St. Lawrence Seaway has made the city a flourishing port and, just as Wisconsin is the country's foremost dairy state, Green Bay is its cheese storage capital. The cheese market operates here every Friday.

ETHNIC MAKEUP

"Green Bay is to cheese what Wall St. is to finance," is the way Mayor Tilleman puts it.

The ethnic makeup of the city is mixed, though it includes an abundance of French, Belgian and Polish Americans. As might be expected of an economically stable Midwestern city, the people tend to be sound-money Republicans. Despite the fact that Green Bay is about 75 percent Catholic, Nixon outpolled JFK in 1960. LBJ topped Goldwater in '64, however, "We're not that conservative," a local newspaperman commented.

Mayor Tilleman earns $12,000 a year for administering a budget of $22 million. He is currently immersed in an urban renewal project which will face-lift the city's business district.

"Crime is not much of a problem here," he said. "The police department runs itself on $1 million a year, and its major headache is to convince people to lock their cars. Nobody locks anything in this town."

Tilleman is extremely proud of Green Bay's designation, by Look Magazine and the National Municipal League, as an "all-American City." The award was inspired by a massive, and stunningly successful, civic attack on air pollution. New York could take a lesson from this one.

START AIR POLLUTION FIGHT BACK IN 1950

It seems that back in 1950, a housewife was sweeping her porch, and was appalled by the heavy rug of dust that covered it. She put up a large beef to the League of Women Voters, citing the hazards of dirty air. As a result the City Council adopted an anti-pollution resolution, but was reluctant to enforce it at the risk of offending the paper industry, which was both the city's life blood and the pollution culprit.

"To hell with the paper industry—let them clean up or get out," said Green Bay in unison.

The paper industry cleaned up—at a cost to itself of $10 million—and stuck around. Today, the air in Green Bay is crystal clear, and the paper business is prospering as never before.

Green Bay has never known dire economic straits. The financial history of the Packers is another matter, however. Their fortunes more or less paralled those of National Football League franchises, which never really boomed until the television bonanza of the early 1950s. The Packers do not reveal their assets, but they probably have the highest payroll in pro football, and went for over $1 million in rookie bonuses last year alone. It is safe to say they are rolling in money today.

LAMBEAU STARTED IT

It was not always thus, however. When Curly Lambeau, who had played some football for Knute Rockne at Notre Dame, decided to get up a football team in 1919, he went into the business with flat pockets. He persuaded his employer, the Indian Packing Company, to pick up the tab for uniforms and put up a couple of goal posts.

During the first two seasons the team barely cleared expenses by passing the hat, but was so successful on the gridiron that Lambeau entered the club in the National Professional League that had been formed in 1920. The Packers suffered a lean season at the gate, however, and Lambeau was forced to forfeit the franchise in 1922.

It was then that Green Bay citizens came through with the first of several cash infusions, without which the Packers would be long since out of business. In 1922, the local newspaper rallied businessmen to absorb the club's debt. Again in the 1930s the merchants raised $15,000 to keep the patient breathing, and in 1949 a Wisconsin-wide stock sale netted $125,000 to tide the team over until the TV swag bailed the Packers out permanently.

ONLY COMMUNITY OWNED TEAM IN PRO FOOTBALL

The Packers are thus the only community owned football team in the business. The stockholders, who realize no dividends from their holdings and have only a remote voice in the operation, are content to let a seven-man executive committee administer the team's finances.

Actually the Packers are an autocracy. Vince Lombardi, a Brooklyn boy who was one of the famed Seven Blocks of Granite on the great Fordham teams of the mid-1930s, was imported by the executive committee as coach and general manager in 1959. He took over a team that had won only one game the previous year, and turned it into an NFL champion by 1961. This is conceded to be the coaching achievement of the century, or, in other words, all time.

Lombardi calls the tunes, on and off the football field. The executive committee has given him carte blanche both as coach and administrator. A martinet who demands perfection from the team, he is nonetheless idolized by the players, who revere him for his dedication and personal rectitude. "If you give him 100 per cent—and you damned well better—he will do anything for you," says Jerry Kramer, a Packer guard.

BIG HAPPY FAMILY

Like the city of Green Bay, the Packers are a big happy family. On Thanksgiving Day, for instance, the entire organization from water boy to Lombardi gathered with their families for dinner at a Green Bay hotel. "That sort of thing breeds cohesiveness," says right guard Fuzzy Thurston. When the team is playing on the road, Mrs. Bart Starr, the wife of the Packer quarterback, invites a slew of wives over to watch the game on TV.

What does Mrs. Boyd Dowler say when Mrs. Bart Starr's husband overthrows a pass to her spouse?

"She doesn't say anything," laughs Cherry Starr, a beautiful and vivacious Alabama belle. "I tell her Boyd should have made the catch."

The Starrs, who own one of the thousands of meticulously landscaped split level homes which comprise the outskirts of Green Bay, plan to make the city their permanent home. "Ah just love these friendly people," Cherry exudes.

STARR MOST POPULAR WITH GREEN BAY FANS

And these friendly people love the Starrs. Bart is probably the only man who could take Mayor Tilleman's job away from him. He is the people's choice, the most popular Packer. The spectacular touchdown passes he throws thrill the fans the more because he is one of them, a citizen of Green Bay.

The modest, amiable Alabaman, who came to Green Bay in 1956, claims that the adjustment to the cold climes was less traumatic than the problem of making his drawl intelligible to the natives.

"What I mean is," he explained to a visitor, "did you ever just keep repeating the same thing over and over to somebody, and him just giving you a blank look, not having the faintest idea what you are talking about? It's mighty frustrating, I want to tell you. But after 10 years, I'm beginning to get through to the people."

On the other hand, Cherry Starr points out how a Southern accent can simplify life in a small Midwest city.

"I never bother to identify myself when I call the market to have an order delivered," she said. "I just tell them what I need, and they say, 'Okay, Cherry, we'll send it right over.'

"Now, isn't that just the nicest thing?"

Vice President Calls for New "Partnership" To Meet Public and Private Need

EXTENSION OF REMARKS

OF

HON. JAMES M. HANLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. HANLEY. Mr. Speaker, last December 7, Vice President HUBERT HUMPHREY delivered a most momentous and timely speech before the seventh general assembly of the National Council of Churches. In his message the Vice President laid before the assembly the great tasks involved in aiding our less fortunate citizens. In cogent and forceful language, he profiled the need for greater involvement by our churches.

Mr. Speaker, I am proud to represent a congressional district whose religious community has responded to the needs of the poor, has taken a firm constructive approach to the task, and has become involved. We are aware of the great social ills of our day and we are working diligently toward their alleviation.

I believe the eloquent program outlined by the Vice President is worthy of consideration by every American and wish to include it at the close of my remarks. I also believe the efforts of our combined religious-lay community in Onondaga County are worthy of consideration, and in this context, I wish to include an editorial from a recent edition of the Catholic Sun, the official organ of the Roman Catholic diocese of Syracuse. This latter was written by my good friend, John C. McGuire, one of the most outstanding and dedicated Catholic laymen in central New York.

The material follows:

VICE PRESIDENT CALLS FOR NEW "PARTNERSHIP" TO MEET PRIVATE AND PUBLIC NEED

MIAMI, FLA., December 7.—Vice President Hubert H. Humphrey, addressing the National Council of Churches meeting here, called tonight for creation of a new "partnership" between the public and private sectors to meet demands too large for either to meet alone.

"We are beset by physical and social problems, at home and in the world, which demand a far more efficient and effective allocation or resources than those available either to government or the private sector alone," the Vice President said. "Our pluralism is a source of strength. It must be preserved. But it must be preserved in such a balance that it truly meets the priority needs of the times.

"What is needed is a partnership in which our public and private institutions, working together, can meet public and private need without any one institution becoming a dominant monolith."

The Vice President replied in his text to charges that the Administration had failed in its responsibilities in domestic programs.

"If there is criticism that we must do better, we welcome it," he said. "For we know that what has been done is only the beginning of what *must* be done if we are to reach the state of opportunity we seek."

"We recognize our responsibility to higher levels of effort, creativity and performance," he said. "Yet we recognize other responsibilities, too—and here it is time for some plain talk."

"We have the responsibility to meet our obligations in the world," he said. "We have, too, the responsibility to help keep on a sound footing the economy which underpins everything we undertake. To fail in either of these responsibilities would be the surest way I know to guarantee the failure of the course in America to which we are all so deeply committed."

The Vice President called on church and other voluntary organizations to carry a greater share of meeting urgent community needs.

REMARKS OF VICE PRESIDENT HUBERT H. HUMPHREY TO THE NATIONAL COUNCIL OF CHURCHES, MIAMI, FLA., DECEMBER 7, 1966

Churchmen are accustomed to taking a longer view than politicians. We political leaders often feel we are doing well if we can see to the end of next year—or to the end of our term of office.

But you churchmen look at events in the aspect of eternity.

Suppose we compromise tonight and talk about what is happening in this decade and in this century.

What has happened in the 1960's is a rebirth of American idealism. It has come under this banner: Equality of opportunity.

What has happened in this century is that we have been forced to recognize the interdependence of the human race. And we must one day go beyond that recognition to march under another banner, the one that reads: Community.

We are seeking to make equality of opportunity real—to create the living, vital, available opportunity that is so much a part of our American aspiration.

The author Thomas Wolfe, writing in a time of despair and hopelessness, described it in these words: "To every man his chance, to every man, regardless of his birth, his shining, golden opportunity. To every man the right to live, to work, to be himself, and to become whatever things his manhood and his vision can combine to make him. This . . . is the promise of America."

I have learned from my old friend Reinhold Niebuhr that a more equal justice is a sort of stand-in, a local representative in the area of politics, for the higher ideal of Christian love.

There is another, even farther-reaching implication of the ideal of love: The fact of our interdependence; the need for community. We will be reminded of that if we look at the date tonight—Dec. 7, 1966.

It has been exactly a quarter of a century since we Americans were blasted out of our isolation. We were forced, in a most painful way, to acknowledge what a preacher said a long time ago: That no man is an island, entire of himself . . . that every man's death diminishes me, for I am involved in mankind.

Since December 7, 1941, we Americans have been struggling to define the meaning of our involvement with mankind, in many fields.

The story of our American effort to help the unfortunate and poorer nations is a great one.

But long before there were any government programs, the churches were there. So were volunteer organizations, philanthropic foundations, socially-conscious business enterprises and trade unions.

But the hardest field, of course, is international politics and national security. We have fought two wars since Pearl Harbor: we are now fighting a third.

We are a long way from achieving a world-wide community of peace with justice.

I am sure the members of this conference would disagree about the ways we should exercise our responsibility to work for that world-wide community. But we all now agree that we *must* work for it.

That we do have that responsibility.

That we cannot escape that involvement.

In these fields, most of all we need what one of your most distinguished lay leaders, John Foster Dulles, used to call the "discipline of the achievable."

But alone with that discipline there must also be *vision* . . . the vision of a just and durable peace . . . the vision of the day toward which we should be moving.

In the nuclear age a phrase very familiar to you takes on an almost *literal* meaning: Where there is no vision, the people perish.

That may be true here at home too.

We have come right now to a very important moment in that effort. It is a moment of change, of decision, and of danger.

The question is this: Will the forward movement of the 1960's continue?

When I ask that question I do not have in mind the results of the past election, nor am I predicting what a new Congress will do.

I have in mind something deeper: The mood and purpose of the American people.

What has brought about the remarkable out-pouring of progressive social action in the years just past?

I would want to see due credit given to our political institutions. But the roots lie deeper. One of the most important roots is the work of this organization, of one of its predecessors, the Federal Council, and of all the member churches—shaping the social conscience of America for more than half a century.

To read through the famous old Social Creed of the Churches that the Federal Council took over from the Methodists is to see how visionary and ahead-of-its-time that document was. And a good deal of it is yet to be achieved.

The point is: You have been preparing the way for a long time.

You passed a resolution endorsing an anti-poverty program two years before we enacted it in Washington.

Churchmen have been writing about the moral outrage of abject poverty in the midst of fabulous riches for much longer than that.

And there is a more direct role of the churches in the recent recovery of social idealism than the writing of books and the passing of resolutions.

You have preached, lobbied, marched, carried out bold and difficult programs from the Mississippi Delta to Chicago, from Watts to Roxbury.

Churchmen have stirred the conscience of the nation when they have "put their bodies on the line" . . . and some whom we remember with the deepest respect have paid with their lives.

If we ask what groups in the American public led in the recently renewed commitment to social justice the answer I think would be these: The American Negro; American young people; and American churchmen.

Now, what about the government's role?

It has been one of your chief agents, to carry out the purposes of the American people.

There is one theory that puts government on one side, under a cloud of suspicion, and the action of private and voluntary groups on the other side, as purer, better, somehow more righteous and desirable.

And there is the implication that government action and nongovernmental action are competitive, the more of the one the less of the other.

But I suggest to you that it isn't like that at all. Rather, the two go together. Especially, today, they go together.

We are beset by physical and social problems, at home and in the world, which demand a far more efficient and effective allocation of resources than those available either to government or the private sector alone.

Our pluralism is a source of strength. It must be preserved. But it must be preserved in such a balance that it truly meets the priority needs of the times.

What is needed is a partnership in which our public and private institutions, working together, can meet public and private need without any one institution becoming a dominant monolith.

Finally, I would point out that the periods of great government action have also been periods of venturesome action by churches and private groups.

The days of the doldrums have been static times for both church and state.

Think of the difference between 1956 and 1966.

Back then we were not talking about the subjects on your agenda here this week—the crisis of the cities, the desperate needs of the poor, the next steps in civil rights. Or, if we were talking about those matters, there weren't many listening.

But now the atmosphere has been transformed.

The public has been made aware of the new demands of social justice—by the parallel and cooperating work of church and state; of foundations; private corporations, labor unions, of volunteer groups and individual writers, preachers and leaders; of federal, state, and local governments.

Something important began when in 1955 a young minister in Montgomery, Alabama, organized a moving, powerful and disciplined social protest—a bus boycott.

But the movement became much broader with the sit-ins by college students in the spring of 1960—actions in which student Christian leaders played a larger role than is generally recognized—and with the Freedom Rides of the spring 1961, in which clergymen participated.

The movement has grown and spread since then, in what is really one of the most remarkable stories in the history of American social movements.

It came to great peaks in the Washington March for Jobs and Freedom in 1963; in the passage of the Civil Rights Act of 1964; and in the Selma March and Voting Rights Act of 1965.

Churchmen were of fundamental importance in the passage of the Civil Rights Act two and a half years ago . . . to the point that one of my beleagured Senate colleagues struck his brow and said, "Oh, the Clergy!"

Many veterans of that disciplined effort are here today, I know. All of us who participated in that historic event will be proud that we did so all of our lives.

In 1965, Catholics, Protestants, and Jews marched together down an Alabama road. One nun was asked by an angry citizen, "What are you trying to do to the white race?" She calmly replied, "Educate it!"

That's what you have been doing—educating all of our citizens arousing our conscience, pointing to social injustices that are a stench in the nostrils of God.

But now we have come to 1966. And it turns out—there is still more educating that needs to be done.

The mood of the public has changed. There are two parts in this change of mood, I think—reaction and disillusionment. You are needed to counteract both.

The reaction was there waiting, frustrated, scared.

The American people haven't turned into angels.

There is prejudice, in all sections of the country; there are vested interests; there are fears—some legitimate, most illegitimate.

There is, among some, the age-old "hardness of heart"—the contempt for the poor, the fear of the victim of the ghetto, the grudging attitude toward the woman on welfare.

In 1966 all this has begun to come out in the open again.

And there is also disillusionment.

After all the court decisions and all the laws, most Negro children still go to segregated schools, and twice as many Negroes as whites are unemployed.

Thirty-five million Americans still live in poverty; slum schools still turn out children who can't read the labels on a medicine bottle; many of the children in the Head Start program identify the Teddy bear on the chart as a rat.

And now we learn that for many children the Head Start doesn't stick. Thrown back in a poor inner city school, the early advantage they've had soon washes away.

You can conclude one of two things from that: You could abolish Head Start or you could transform the inner city schools. I vote for the latter—and I know you do too.

But many people, learning how hard it is to overcome slumism, have begun to be cynical and despairing about our efforts. Right now is when we need your leadership most of all.

We are now in stage two of this wave of social reform—the tough, working stage of the follow-through, when we find out how hard the job is, how long it will take, how much money it will cost, how many of our efforts need to be revised and improved.

It is a time when all too many crusaders are inclined to leave the march.

As Thomas Paine said so well: "These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from thhe service of their country; but he that stands it now, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph."

In the Reconstruction period many of the Northern reformers decided after the war and Emancipation that the job was done, and they withdrew, leaving the Negro to the segregationists, and leading to the lost 100 years of civil rights.

Let us not do that again.

In one of the excellent documents prepared for this conference there is a quotation relevant to this point. The quotation, you will remember, comes from Yale historian C. Vann Woodward:

"Americans have developed over the years a curious usage of the law as an appeasement of moralists and reformers. Given sufficient pressure for a law that embodies reputable and popular moral values, the electorate will go to great lengths to gratify the reformers. . . . But having done this much, they are inclined to regard it as rather tedious of the reformers to insist on literal enforcement. Under these circumstances the new law is likely to become the subject of pious reference, more honored in the breach than in the observance, a proof of excellent intentions rather than a means of fulfilling them."

I'm afraid that has often been true. We all now have the responsibility to see that it is *not* true of the battery of opportunity programs we have started in the sixties.

We in government bear a heavy responsibility to provide the funds, the leadership, the programs, and the follow-through that are necessary.

I believe that we in government, during the 1960's can justifiably assert that we *have* provided these things on a scale never before attempted.

Yet if there is criticism that we must do better, we welcome it. For we know that what has been done is only the beginning of what *must* be done if we are to reach the state of opportunity we seek.

We recognize our responsibility to higher levels of effort, creativity, and performance.

Yet we recognize other responsibilities, too—and here it is time for some plain talk.

We have the responsibility to meet our obligations in the world.

We have, too, the responsibility to help keep on a sound footing the economy which underpins everything we undertake.

To fail in either of these responsibilities would be the surest way I know to guarantee the failure of the course in America to which we are all so deeply committed.

Thus, it is more than ever important that institutions and people outside of government meet their responsibilities in building our freer and better America. I think of the opportunities, for example, that confront you.

You can be the shaper of the public conscience in each city, in each Southern county and each Northern metropolitan area, in each town and region. More and more, that is where the battles will now be fought.

You can leap across the political boundaries of our formless metropolitan areas in a way that government cannot.

You can provide the leaders—the pragmatic idealists, who stick to the job—whom we desperately need in every community.

You can encourage those sensitive citizens in the suburbs who care about what is happening in the inner city.

You can pick up the possibilities offered by new federal legislation and make those real in your own community—the housing projects for black and white, poor and not-so-poor; the supplementary educational centers; the community action agencies to fight poverty.

You can help provide (and I know how much of this you are already doing) the teachers and leaders for Head Start and Upward Bound and remedial reading and basic literacy and foster grandparents.

You can take action within your own institutions—to examine your investments, your hiring policy, your budgets.

We have been urged by religious leaders recently to move toward the day when we will devote two per cent of our national income to economic development in the poorer nations.

I'm for that. It raises the question about how the churches spend their money.

One statistic I have seen puts the total of Catholic and Protestant expenditure on services to others outside the churches at about 500 million dollars per year—only 41 cents per month for everyone who belongs to a church in America.

Recently churches have been urging corporations to place the funds they have for investment in socially constructive places such as low and middle income housing. This is a wonderful idea.

But many people have been disappointed at how slow the churches and non-profit groups have been to take up the government offer to make long-term, low-interest loans available under the 221D3 provision of the Housing Act—a provision making possible construction of low rent housing.

How much of its own money is the church investing in community organization among poor people in city and country?

How much of the church's budget is going to experiment with new ways of serving the old, the poor, the sick—ways which go beyond our present welfare practices?

There is much for all of us to do before we reach the day when every man is treated as he should be treated, as a child of God.

What I have been trying to say in this message is the essence of my religious conviction: Namely, that the way you treat people is the way you treat God.

We are bound together in the common faith of the Fatherhood of God and the Brotherhood of Man.

How, then, can we be true to our faith in our daily lives?

To me, religious faith must be more than an exercise in theology, dogma, ritual or doctrine. It must be a part of one's life. And the Christian faith, to be an effective force in the modern world, must have practical meaning in the lives of those who inhabit the earth.

I believe that each of us has an obligation to serve God at each level of his existence and within each institution of his society—from doing honor to one's parents and children . . . to performing his work with dignity and honesty . . . to playing his role within his school, his neighborhood, his church, his community and nation.

The building of a better and more peaceful world will never come from any diplomat's ingenious plan. It will come only from the cumulative acts of men who live their lives in respect for their fellow man, and thus, for God.

I believe it is thus that all men may one day march proudly under the banner: Community.

[From the Catholic Sun]

CHRISTIANS IN ACTION

The Vice-President of the United States in his remarks before the General Assembly of the National Council of Churches at Miami Beach, Florida called for greater effort on the part of the Church to aid the poor.

Specifically Mr. Humphrey stated, as one example, that in the field of low rent housing, under governmental programs religious groups or non-profit corporations could give relief to middle income persons. He reminded those in attendance that the Government cannot solve the social problems of the day, acting alone.

We do not believe that the Vice-President is saying the Christian Churches in America are penurious in their treatment of their respective flocks. Rather we feel in his capacity as Vice-President he is calling for assistance not only from the churches themselves but from the laity, in group action, to provide leadership in tackling the social problems in a fast changing world.

He talks of "low rent housing" and recommends the churches give more support to section 221-d-3 of the Federal Housing Act.

In relating this to the Syracuse Diocese what does it mean?

We remind our readers that as far back as 1962 a segment of the Syracuse Catholic laity was wide awake and attuned to the Community need in low rent housing.

PILOT PROGRAM

This group was familiar with the 1961 Housing Act to which Mr. Humphrey refers. They developed a plan, formulated their program and began to act. Comprised of Syracuse business and professional men this band incorporated under the name "Mount St. James Corporation" set out to construct a 140 unit apartment project on Jamesville Ave., at a cost of approximately two million dollars. This was a pilot program, the first initiated in the State of New York. Today it stands completed and fully rented. The performance of this project by the sponsor has been consistent with the objectives of the program. A notable degree of integration has been achieved without fanfare.

Quite an undertaking for these men with such great responsibility. We believe this is what Mr. Humphrey is talking about.

Supreme Court Justice William E. McClusky, President of Mount St. James Corporation sums it up this way. "Our sole motive is outlined in our Certificate of Incorporation."

"To alleviate the hardship and distress of persons and families residing in the City of Syracuse and its environs due to inadequate and obsolute housing accommodations and related social recreational facilities and services for persons and families of low and moderate income."

Justice McClusky added, "The corporation is not organized for profit and does not have any power to issue certificates of stock or declare dividends. Under its Certificate of Incorporation all income must be used exclusively for charitable, religious, scientific, literary or educational purposes."

DIOCESAN PARTICIPATION

This is fine and noble indeed. But is Mr. Humphrey's call for help to the church answered here?

In order to interest the Federal Government to lend support the sponsor group must stand stringent and lengthy scrutiny by the Washington FHA office before approval is granted. In addition recommendation and endorsement of the objectives must receive approval by the Diocese.

Bishop Foery recommended to the FHA the individual members in the Mount St. James group. He endorsed the objectives outlined. Further in response to a request by FHA and Mount Saint James Corporation he appointed a member of the laity to serve on the Board of Directors of Mount St. James. His letter to FHA in August of 1962 states in part:

"I feel that while this activity is not essentially religious in character, it nevertheless is a most appropriate manifestation of the basic social philosophy of the Catholic Church. We are proud of and we encourage the efforts of Catholic laymen in lending their time and talents toward charitable undertakings whose objectives are the betterment of the economic and social conditions of their less fortunate brethen."

"That the purpose of Mount St. James Corporation is laudable cannot be disputed; that the need exists in the Syracuse area cannot be denied; that the membership of the corporation is responsible and dedicated I am pleased to certify."

Isn't this Syracuse's answer, in 1962 and 1963, to Vice-President Humphrey's call to arms in 1966?

But it does not end here.

In 1964, this same group felt the objective of safe, sanitary and decent housing for persons of low and moderate income was not only meritorious but there was still a dire need for this type of project in our community. Believing that nonprofit sponsorship of such projects need not necessarily be religiously oriented they felt that the objective of such a program was a matter of primary Christian concern. Should not our religious bodies through a dynamic laity be the first to wrestle with (and hopefully solve) one of the great social problems of our time? A mere civic benevolence cannot ever be an adequate substitute in this field for the deep moral conviction which impels all Christians.

Therefore, in a true ecumenical spirit did this Mount St. James group seek to join hands with a similar group of the Episcopal laity, headed by Hon. John Farnham. The purpose was the same, only the site was to be different. The City was seeking help in the downtown Urban Renewal area for this same type project. The arduous task of planning, programming and designing for buildings began for the Trinity House arrangement. The hours of 1964 and 1965 were short indeed as this unique group solicited the support of all interested organizations for encouragement and assistance in the development of this program.

FOUR BISHOPS AGREE

In behalf of the Trinity House concept Most Rev. Walter A. Foery and Most Rev. David F. Cunningham, Bishops of the Catholic Diocese of Syracuse and Rt. Rev. Walter M. Higley and Rt. Rev. Ned Cole, Jr., Bishops of the Episcopal Diocese of Central New York joined together in their statement of collective endorsement. Said the Bishops:

"The Sponsor Corporations, composed of laymen of our respective Communions, have our complete moral support and we appoint representatives to serve on their Board of Directors. . . . We are sure that the members of the Sponsor Corporation will bring to this task all the sympathy, compassion and dedication which have characterized the Christian ethic of the Brotherhood of man under the Fatherhood of God. . . . In addition, the benefits of this program to this community will be an inestimable good, and we hope of great satisfaction to Almighty God. We commend those who stand poised to undertake this task."

Though the Trinity House concept was not selected by the City award committee to develop the downtown Syracuse Urban Renewal

Site, the idea of this unique church union is but a seed, planted, yet to sprout into reality.

However, the grown child of the Mount St. James family, now fully developed and exercising a responsible existence in our community—even now acts in an advisory capacity in other undeveloped areas as far west as Chicago.

This accomplishment would give comfort and cheer to our Vice-President were he aware of this activity in the Syracuse Diocese.

Yes, Mr. Humphrey, we in Syracuse know of what you speak. We are actually working with our Government—both Church and laity—towards alleviating some of our social ills.

This editorial is not written to take credit for the efforts advanced as of this date, but rather to serve as a reminder to both the Church and laity that there is a continuing problem, with many projects to be faced.

—J.C.M.

Admiral Gets Diplomatic Role—"Mr. Seapower" Heads Navy Mission to U.N.

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. SIKES. Mr. Speaker, I take particular pleasure in submitting for reprinting in the Congressional Record an article from the San Diego Union of Sunday, December 18, 1966, which tells of the great work of a well-known and outstanding naval officer, Vice Adm. John S. McCain, Jr. The Members of Congress know and appreciate Admiral McCain's contributions and we, too, take pride in the exploits which are so well described in the newspaper's article.

The article follows:

Admiral Gets Diplomat's Role—"Mr. Seapower" Heads Navy Mission to U.N.

(By Ray McHugh)

New York.—When Vice Adm. John Sidney McCain Jr. was sent to join the U.S. Mission to the United Nations a year ago more than one eyebrow was raised.

The spunky little two-fisted, cigar-chewing sailor who had won the nickname "Mr. Seapower" would hardly be cast as the typical diplomat.

Even his attractive and intensely loyal wife, Roberta, admits: "I didn't know what to expect."

Now everyone knows. McCain has fit into the U.N. picture as easily as into a naval command.

The three-star admiral has been praised by Ambassador Arthur Goldberg as "the cream of the crop." A strong personal friendship has sprung up between the former submarine commander and the former Supreme Court Justice.

UNDERSTANDING ESSENTIAL

"When I came to the U.N. I had my doubts," says McCain with his typical candor. "But I've been convinced. This is a fine organization made up of dedicated people. It has its weaknesses but too often people overlook its strengths.

"If we are ever to have true international understanding it's going to have to start here. It's our responsibility to keep that hope alive."

McCain waved his ever-present cigar at the towering U.N. building and the massed array of flags along First Avenue that were being whipped by a chill autumn wind.

Despite the cold weather, the admiral spurned a top coat. He just jammed a well-worn slouch hat on his greying, close-cropped hair for the walk across United Nations Plaza to the headquarters of the U.S. Mission.

McCain makes the walk every day, sometimes several times, for sessions of the United Nations military staff committee and other business.

As miiltary representative to the U.S. Mission, McCain advises on military matters and serves as Ambassador Goldberg's link to the Joint Chiefs of Staff.

As vice chairman of the U.N. Military Staff Committee, McCain is the American link with U.N. counterparts from Russia, Britain, France, Nationalist China and other countries.

CONTACTS IMPORTANT

The committee was organized in the optimistic early days of the United Nations. Military representatives of the permanent members of the Security Council were to form a sort of high command for peacekeeping operations. There was to be a special U.N. Armed force.

The cold war, however, soon spiked these ideas. Although the committee has not been able to function as originally planned, the high-level exchange with other Security Council nations remains important.

"We establish important contacts," said McCain, "and sometimes we can discuss military matters without political overtones.

"Tangible accomplishments may be few but, like so many things here at the U.N., we are working for tomorrow, trying to keep all the channels open. The opportunity for eventual understanding must be protected."

The patient outlook that McCain has developed at the U.N. surprises some old friends.

The admiral is noted for his energy and his zest for action. He will admit in an unguarded moment that he has tasted frustration at the U.N. But frustration only seems to fuel his determination.

WALKS ACROSS BRIDGE

McCain also escapes the world of diplomacy every day for a few hours with the Navy he loves so well.

In addition to his duties at the U.N., McCain wears the "hats" of commander, eastern sea frontier and commander, Atlantic reserve fleet. He lives in the 1805 frame commandant's house in the Brooklyn Navy Yard.

He begins his work day with a walk across Brooklyn Bridge to 90 Church St., the lower Manhattan headquarters of the Navy in the world's busiest port.

It is late morning before he moves to his fourth-floor office in the U.S. Mission building and puts aside his duties as a Navy commander for those of a diplomat.

Several times a month McCain returns to the Navy by nightfall. He is still the most popular speaker of flag rank and his peppery lecture on America's "four-ocean challenge" is in demand from coast to coast.

Navy experts regard the speech as the strongest, most articulate argument for American seapower that has been heard since McCain's idol, Rear Adm. Alfred Thayer Mahan, was preaching that the nation's future lay on the oceans of the world.

HEADED TASK FORCE

For McCain to be cast in this role is not surprising. His namesake father was graduated from the Naval Academy in 1906. And while the father was on convoy duty during World War I his wife and young son lived in a Brooklyn boarding house—not far from the commandant's house which the son now calls home.

The senior McCain was commander of a task force in the Pacific during the last two years of World War II and won a reputation as "a man who gives only one order: "Attack!"

His exploits won him the Navy Cross and three Distinguished Service Medals. On his death Sept. 9, 1945, he was posthumously promoted to the rank of admiral.

While his father's carrier planes were pounding the Japanese, the junior McCain was making his own reputation as a submarine commander.

Graduated from Annapolis in 1931, the son became a submarine officer in 1933.

He took the USS Gunnell out of the Electric Boat Co., at Groton, Conn., in 1942 and sailed to North Africa. There he carried out hazardous reconnaisance in advance of the allied landings.

Then he proceeded to the Pacific where the Gunnell inflicted heavy losses on the Japanese.

McCain was one of the first submarine commanders to penetrate the Japanese-dominated East China Sea and the Formosa Straits. He was awarded the Silver Star and Bronze Star for heroism.

DIRECTED LANDINGS

Since World War II McCain has held a variety of surface and submarine commands and has served in the office of chief of naval operations. He spent a year at the Pentagon as Navy chief of information and was commander of amphibious forces, Atlantic when he was ordered to the United Nations.

As amphibious commander he directed U.S. landings during the 1965 crisis in the Dominican Republic and was awarded the Legion of Merit.

"You never have to worry about Adm. McCain forgetting the Navy while he's here at the U.N." joked U.S. Ambassador George Killion. "Sometimes I think he's going to recruit everyone here."

"What's wrong with that?" growls McCain.

The fiery little admiral is one of those rare men who can growl and grin and chew on a cigar all at the same time. No wonder the diplomats like him!

National Water Commission

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. ULLMAN. Mr. Speaker, wise use and proper development of our water resources are among the most critical domestic issues that face this Nation and this new Congress. I have today introduced a bill to establish a National Water Commission to provide an effective vehicle to meet our growing problems of water supply and development.

In the 89th Congress we took a significant step forward in the establishment of the Water Resources Council under provisions of the Water Resources Planning Act of 1965. This provides for improved coordination among Federal agencies involved in river planning and development and authorizes the establishment of river basin commissions to help most local, regional, and basinwide planning needs. It is apparent, however, that our water requirements of the future will demand a degree of planning and development that goes beyond the immediate region or basin for which a particular project or solution might appear feasible and desirable. Already we are faced with problems and proposed solutions that have social, political and economic effects of concern to the entire Nation.

The individual water problems of our communities, States, geographic regions, and entire river basins have combined to pose a problem truly national in character. Solutions can no longer be proposed without full consideration of the effects on other areas. I believe a National Water Commission, utilizing the best brains in the Nation in the field of resource planning and river development, would be best equipped to explore all the alternatives in meeting the problems of a particular area; and, by its very nature, would be best able to weigh the impact on other regions and the entire Nation to determine what is in the national interest.

We now have agencies and commissions that are committed to the solution of water problems of individual areas, but there is a need for a body to study these problems without a prior commitment to any region or particular form of solution. A National Water Commission could make these studies objectively and could make appropriate recommendations to the President and the Congress that would be invaluable in meeting the multiple problems of water development.

I would like to quote briefly from a letter by Charles L. Schultze, Director of the Bureau of the Budget, in transmitting draft legislation on the National Water Commission to the Congress:

> We are confronted with critical water shortages in many sections of our country. We are faced with the grim fact that pollution infests virtually every river system. No region is immune—from the Pacific, to the Southwest, to the Great Lakes, to the Northeast. These problems grow more complex and more difficult with each passing day.
>
> Water resource problems do not end at local, county, state, or even regional lines. Their dimensions are truly national in scope. They require intelligent long-term planning and the assessment and development of a whole range of alternative solutions. They require thorough and systematic analysis to assure that the programs undertaken by the Federal government contribute to the soundest long-range water objectives.

Mr. Speaker, the concept of a National Water Commission was proposed to the Congress in the President's message of February 23, 1966, on "Preserving Our National Heritage," and has since been fully supported by the administration through the Department of Interior and the Bureau of the Budget. Legislation introduced by Senator HENRY M. JACKSON to establish the Commission was approved by the Senate in the second session of the 89th Congress. It was considered by the House Committee on Interior and Insular Affairs and was ultimately incorporated, in revised form in H.R. 4671, to authorize the Colorado River Basin project. I objected to its enactment in that form.

I am totally opposed to having National Water Commission legislation clearly jeopardize its essential neutrality and would do violence to the intended purpose of seeking impartial and objective solutions to these problems. It is with the hope that Congress will give separate and thoughtful consideration to the establishment of the Commission that I introduce this legislation today.

Finally, Mr. Speaker, we are all aware of the controversial nature of legislation proposed in the last Congress to meet the growing needs of the Southwestern States to supplement their major water source—the Colorado River. The implications of the proposed solution on national water policy, and the potential impact on other river basins, caused serious concern to many Americans. I think I can say without reservation that the people of the Pacific Northwest were not only alarmed at what was being proposed without their acquiescence but were angered that such a proposal—adopted by a group of other States without their consultation—could be imposed upon the region without first permitting a study of our own water sources and potential future needs.

A National Water Commission, properly authorized and impartially implemented, could avoid in the future any such divisions and conflicts among the major river basins of the Nation. It would better prepare us to get on with the task of developing our water resources in the best interest of all the people of the United States and with special advantage or penalty to none.

Harrison E. Salisbury Sums Up—II

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. RYAN. Mr. Speaker, Harrison E. Salisbury, the distinguished New York Times journalist, has completed his journey in North Vietnam and is now writing a series of articles summing up his impressions. Yesterday I introduced into the Appendix the first of the new series. The second article has been published today. I believe that this article is most important as it details the results of our bombing of North Vietnam and presents a picture which supports those who advocate an end to the bombing.

The article follows:

[From the New York Times, Jan. 12, 1967]

NORTH VIETNAMESE ROADS COME TO LIFE AT NIGHTFALL

(By Harrison E. Salisbury)

HONG KONG, January 10.—At 3 A.M. last Friday morning, across Long Bien (formerly Paul Dourmer) Bridge in Hanoi, moved a procession of women, each with a bamboo pole on a bowed shoulder and burdens balanced on each end.

The women moved silently through the night with a delicate half-step, half-shuffle that carried them rapidly across the bridge. Occasionally they halted to rest. The burdens on the carrying poles, mostly bulk paper, vegetables and wrapped bundles, weighed 50 or 60 pounds.

There was nothing unusual in the sight—nothing for Hanoi and North Vietnam, that is. All through the night, people are carrying heavy burdens on their backs into and out of the city and out along the network of roads and trails that thread through a maze of rice paddies and canals in the Red River delta, moving supplies south and moving food into the city.

CYCLISTS CARRY GOODS

The movement goes on not only on the backs of women with their delicate, swaying bamboo carrying poles. It goes on bicycles. Toward dusk, groups of 100 or 200 cyclists collect at various points in Hanoi and outside.

There the burdens are put on bicycles, up to 600 pounds per bike, and the bicycle caravans start out on their way through the darkness.

With the coming of dusk, olive-drab, jungle-camouflaged trucks, topped with brush and leaves, start rumbling out of Hanoi onto the southward trails, and empty trucks begin moving back into the city, having delivered their goods farther south. At nightfall, the central railroad station of Hanoi comes alive, and trains begin to pull out, laden with people and freight.

To a remarkable extent North Vietnam has become a night country. It is darkness that provides the greatest protection against American bombers. And it is the dark hours when movements of supplies and troops are carried out.

This is a pattern that was first seen by the West in the Korean war. The Chinese "volunteers" supplied themselves and reinforced themselves at night over routes and trails dominated in the daytime by United States airpower. The same practice is being repeated on a vast scale in North Vietnam.

VISITORS MOVE AT NIGHT

The sight must be seen to be appreciated. This correspondent several times was taken out of Hanoi by car either after nightfall or in the early morning hours before dawn. Because of the bombing, the North Vietnamese prefer to move their visitors from point to point under shelter of darkness.

Only during the weekend truce periods over Christmas and New Year's did this correspondent travel over highways in daylight except for brief visits into the countryside outside Hanoi. Even on trips into the Hanoi countryside a few miles beyond the city, the precaution was taken to cover the car, a Soviet Volga, with camouflage net into which branches and leaves were stuck.

It is safe to say that not one vehicle moves on North Vietnamese roads without leafy camouflage on its roof. Trucks are painted olive drab or splashed with camouflage. The same is true of the buses that carry people through the countryside, and of the miniature trains that chug across the rice delta. They are all coal burners, and the engines, freight cars and dilapidated coaches are daubed in gray and dirty brown camouflage.

STREET LIGHTS AT MINIMUM

Hanoi is not blacked out at night, but street lighting is held to a minimum to conserve power, giving an eerie aspect to nighttime travel. The streets become archways of big shade trees with tiny lights burning vaguely in the distance.

Outside Hanoi and its suburbs strick blackout precautions are taken. There are no lights whatever showing in villages although occasionally one catches a glimpse of a glowing cookfire in a thatched house or a tiny candle flickering in a window. From dusk to dawn the countryside is dominated by velvet black shadows vaguely illuminated by the stars or on one trip, by a silver moon that cast a baleful glow over endless rice paddies and clumps of bananas and palms.

Along the highways, columns of trucks, bicycle caravans, men and women with their carrying poles move quietly and endlessly. Alongside the main highways, rail lines usually run, and occasional trains can be heard and then dimly seen moving along in the darkness.

The flow of traffic seems shapeless, but it is carefully organized, planned and controlled. There are sentries at the outskirts of the city who control all movement in and out, both by day and by night.

DETOURS ARE EFFICIENT

Guards emerge from roadside sentry boxes, examine passes and then direct caravans onward. They are not only security guards, but traffic officers.

American bombing daily knocks out segments of road, disables bridges or destroys them, makes detours and diversions of traffic necessary if the flow of men and supplies is to be maintained. Convoys move along detours in a brisk and efficient manner. Road blocks are set up at diversion points and traffic is diverted by roundabouts to a point beyond the blockage.

Not infrequently, traffic streams are split, with southward traffic following one route and northward movement coming along a different route. Sometimes detours may lengthen the route by as much as 10 miles, but they seem to provide no really serious handicap to movement.

PONTOON SYSTEM DEPICTED

American bombers concentrate their attention on bridges, which are numerous in the detal area where highways cross canal after canal and many tributaries of the Red River. Many bridges have been knocked out, some as often as four times. But repair crews work constantly to put them back in order.

Since bridges are generally not very long and of relatively light construction, this is done with a speed surprising to an American who is familiar with painstaking construction tasks on United States highways where bridge building or repair may require many months.

At any given moment a large number of bridges on highways leading south from Hanoi may be out of service. However, this does not halt the traffic flow. The North Vietnamese have the best pontoon bridge system this correspondent has ever seen. It is one that beats the British Bailey bridge system of World War II all hollow.

Alongside every bridge that this correspondent crossed, there were materials available for at least one or two pontoons to be constructed and put into use in an hour's time. The pontoons are made of canal boats lashed together, and the roadway is formed of loose bamboo poles of timbers laid across.

This correspondent crossed dozens of these bridges and watched heavy truck traffic move across them with no more problem than the thunderous reverberation of the loose bamboo roadbed.

Even if the pontoons are destroyed daily, they can be replaced promptly with indigenous materials that cost virtually nothing but the manpower required for assembly and transport.

The efficiency of the pontoons raised the question why the North Vietnamese also employed so much manpower to repair conventional bridges along the highways. There may be a psychological factor involved since the pontoons seem to equal conventional bridges in weight capacity and certainly provide a minimum maintenance problem.

RAILROADS AN OBVIOUS TARGET

The same question arises concerning North Vietnam's railroads. This correspondent did not inspect railroads north of Hanoi since all his trips were southward across the delta. However, according to foreigners who have seen the railroad to the north, in the direction of China, there is not much difference between the bombing destruction and repair program in the north and south.

An enormous effort is expended by the Government to keep the railroads working. They offer a gleaming target for attack, impossible to camouflage, easy to hit. And they are being hit.

Bomb damage and craters pepper the railroad mile after mile, thickening in the vicinity of bridges and villages. Life alongside the railroad would seem to be one of the greatest hazards in North Vietnam. As bombers come in to attack the track, there is inevitable damage to civilian habitations along the rail lines and for a substantial distance away from the rail lines. This is particularly true around rail sidings.

North Vietnam's railroad is a single-track affair. Sidings are therefore necessary to permit trains to pass each other. Bombing of such sidings has been devastating to adjoining villages like Phuly, which, for all practical purposes, has been removed from the map by American bombing.

MINIATURE ROLLING STOCK

The North Vietnam railroad is not to be compared with an American railroad. It uses what seem to an American to be miniature locomotives and freight cars. The total amount of rolling stock isn't known to this reporter, but it would be surprising if it totaled as much as the Erie-Lackawanna Railroad has in its truncated New York commuter service.

Unless there is a factor in the situation that escapes observation, the total tonnage moved by railroad must be a small part of the freight moved by truck or by bicycle or by carrying poles.

Nonetheless the North Vietnamese authorities and the United States Air Force seem agreed that the railroad is vital to the war. It is a principal target of United States attacks and the North Vietnamese exert an enormous effort to keep the railroad going, and with remarkable success.

They keep it running by placing alongside it, mile after mile, enough rail metal, ballast, ties and bridge construction equipment to rebuild the railroad several times over. Rail building materials litter the landscape of North Vietnam.

It would be difficult to estimate the total volume of rails that are on hand, as well as angle iron, steel rods, wire for reinforcement, ties and processed ballast. As far as the labor force is concerned, it is available in the countryside and has often been seen by foreign residents rushing into action.

ENDLESS TUG OF WAR

Labor is thrown into the task in such numbers that even serious breaches of the railroad are repaired in times that seem remarkable to Western observers. Trucks and earth-moving equipment is kept on hand, scattered and dispersed, so that they cannot be wiped out by lucky bomb hits. It was the opinion of this observer that the tug of war between the air force and North Vietnam for maintenance of the railroad could go on indefinitely. The only question was whether the effort was worth it, whether the North Vietnamese might not more economically expend their labor on keeping and improving the highway and truck transport system.

However, there is another factor involved here. To maintain truck movement on highways requires constant expenditure of gasoline and oil. Oil storage depots at Haiphong, have been successfully taken out of operation by United States air attacks. The capacity of North Vietnam to store oil and gasoline thus has been considerably reduced.

The country is dependent on a steady renewal of supplies by freighter and tanker through Haiphong and probably by tank cars on the railroad coming from China.

The railroad runs on coal and probably could run on wood as well. North Vietnam produces its own coal in ample supply from mines in the northeast so that the railroad may provide a guarantee of a heavy freight route in the event that gasoline and oil stocks are interdicted by the United States.

If the railroad is not being maintained as an alternative to truck movement, then the only explanation for the enormous expenditure of the labor force and materials would lie in reasons of morale and prestige. These are not unimportant considerations in a small country that has been heavily attacked and in which there is a common pride in keeping the war effort up against a powerful opponent.

From this standpoint the sight of trains continuing to move along the tracks through the dusk, rails being relaid and reballasted within hours of a heavy air attack, and bridges being restored by one means or another within days must bolster the morale of ordinary North Vietnamese.

MANPOWER PLENTIFUL

It is apparent after even casual inspection that the American air offensive has cost the North Vietnamese heavily. It compels them to commit manpower that otherwise would be available to reinforce the armed services, build up factory production, lift agricultural output or simply convey supplies to the south.

Now hundreds of thousands of man-hours are needed to maintain supply routes. This burdens North Vietnam's war effort substantially. But, at the same time, there is no sign that the task of maintaining supply routes southward is beyond the country's capacity.

Manpower is still plentiful and this kind of task is one with which the North Vietnamese are familiar and have in effect lived for many years.

The investment of manpower in the movement of supplies has been a basic part of North Vietnamese strategy and tactics from earliest times. For example, in setting a trap for the French at Dienbienphu in 1953 and 1954, the North Vietnamese moved in from China, largely by human power, heavy artillery and munitions that enabled them to outgun the French.

They had to move all the rice to feed their forces about 1,000 miles from Yunnan. Every grain of rice moved either on carrying poles or on bicycles. It is estimated that only 10 per cent of the rice eventually reached the encampments on the hills around Dienbienphu. But it was enough for the troops, accustomed to tighten their belts and carry on.

The North Vietnamese undoubtedly will grow leaner and thinner if the war of attrition goes on. But this has been their history for so many years that it is questionable whether it will produce the effect that this policy is designed to produce—a willingness on Hanoi's part to negotiate peace.

SHORTAGES FREQUENT

The effects of the war on the populace are noticeable to foreign residents of Hanoi. They say that the standard of living has gone down in the past year, that clothing is shabbier and harder to come by, that the diet is harsher. This is confirmed by the North Vietnamese themselves.

One of them said: "You should see us in peacetime conditions. We aren't very good-looking now. We are thin and worn and the girls aren't so pretty."

But the North Vietnam living standard has never been high. It probably wasn't as low under the French as the Vietnamese now contend. They insist that under the French many people in the north had nothing more than rags for clothing and one of the regime's bragged-of achievements is that now everyone in the north has a dress or trousers and a shirt to wear.

Still, shortages are frequent. During the fortnight this correspondent was in Hanoi, matches were not to be had in stores. Not long previously cigarettes were scarce for several weeks. Soap has been hard to get. Salt supplies have not always been available in villages.

Meat is scarce for ordinary Vietnamese and chickens are expensive in village markets—about 8 dongs a kilogram (2.2 pounds). The dong is officially valued at 3.53 to the dollar. The average wage is 70 to 80 dongs a month. Women get a ration of five or six yards of cotton cloth a year and men the equivalent in cloth or clothing.

Long-time Hanoi residents say these shortages are reflected in the shabbier appearance of residents compared with the period before the bombing began. The city itself is badly run down. Few buildings have been painted in recent years and bombed wreckage remains, with no effort to repair. Cars are worn and gasoline makes them spit and cough.

But none of this seems likely to have much effect on North Vietnam's war effort. In villages, where houses and huts are bombed, they usually are repaired quickly if the damage is not too serious, or new houses are built. Houses are mostly of simple clay and wattle construction with thatched roofs. If residents survive the attack, they can rebuild houses with their neighbors' help in a short time.

It is different with more substantial buildings. In most villages and towns that this correspondent saw, bigger buildings tended to suffer more damage. Residents contended that bigger buildings were more frequently singled out for bombing attacks. In many towns most bigger buildings had suffered damage. Brick structures, whether damaged or not, had simply been abandoned and residences, offices, schools, artisan cooperatives and hospitals had been dispersed into small one-room huts and houses.

FACILITIES ARE DISPERSED

The dispersal puts an economic burden on North Vietnam and almsot anything that is now hit by a United States bomb is likely to be an institution of some kind. This is particularly true in the environs of Hanoi.

Anticipating heavy bombing of Hanoi, the authoriteis have scattered offices, schools, factories and almost everything moveable into villages and towns nearby. Since the Air Force has been paying more attention to the environs of Hanoi than to the city itself, substantial casualties have been caused in evacuated schools. The authorities admit this but say they are caught in a dilemma. If the United States starts a saturation attack on Hanoi, they do not wish to expose the people to mass casualties. They prefer to risk scattered casualties resulting from the evacuation.

The net conclusion of many foreign residents of Hanoi is that while American bombing has damaged North Vietnam severely, causing heavy material and human losses and compelling the Government to invest men and material in the neutralizing attack, it is not likely to provide a decisive factor in maintaining the fight in the south or in compelling Hanoi to capitulate.

Foreigners in Hanoi believe the North Vietnamese when they say they are prepared to sacrifice Hanoi, Haiphong, all their cities and towns, rather than yield under American bomb power.

Bennett's Know-How Boosts FDLS Plan

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. SIKES. Mr. Speaker, I am very pleased to call attention to a fine editorial from the Florida Times Union, Jacksonville, Fla., January 8, regarding our distinguished colleague, the Honorable CHARLES E. BENNETT. The Florida delegation is proud of the fine leadership demonstrated by Congressman BENNETT during his long service here and we consider it highly appropriate that this outstanding newspaper has given recognition to him in its editorial column.

The editorial follows:

BENNETT'S KNOW-HOW BOOSTS FDLS PLAN

The start of Rep. Charles E. Bennett's 10th term in Congress in Washington today directs attention to one among his several qualifications which will prove particularly advantageous to his constituency during the first session of the 90th Congress now beginning.

In his long service, the Jacksonville Representative has attained a ranking position in the councils of Congress, and a close and trusted consultative relationship with the armed forces, in the making and implementation of national policies in national defense.

His military acumen which fitted him so well for the role he has played as a member of the House Armed Services committee and as chairman of its subcommittee on real estate was acquired in almost six years of service in World War II, including extensive guerrilla combat activity in the Philippines. He stepped down from a political career in which he had already won his first nomination to Congress to enlist, and won several decorations for gallantry in action before his discharge with rank of Captain.

Rep. Bennett's rank and prestige among his congressional colleagues and his close relationships with the military and civilian heads of the defense establishment place him in a strategic position to help advance the cause of the Navy's proposed Fast Deployment Logistic Ships project which would put into effect a completely new global concept of support for instantaneous response to enemy aggression wherever it might occur.

The Lockheed Corp., one of three organizations competing for the assignment of carrying out the long-range, multi-million dollar program, has given assurances that if selected, it will locate the building yard on Blount Island, industrial development property of the Jacksonville Port Authority.

Rep. Bennett has won assurances from the Defense Department that the project will be recommended to Congress in the session beginning today, which he called a "giant step forward" toward success of the program.

The Defense Department's intention to request the program of Congress indicates it has been given assurance of approval by the Budget Bureau, and Rep. Bennett's strategic position, backed by active military service, provides him with the "know-how," tactically and logistically, to guide the project to final congressional approval.

After the formal recommendation is made, hearings will begin early in the year looking toward its incorporation in the Defense Department's budget for the fiscal year beginning July 1.

Leadership at the local community level is already putting forth its best efforts to win approval of the project and to make clear the advantages offered by the local site in carrying it out. It is a momentous project for Jacksonville, in which all must join.

North Vietnam Should Be Bombed

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Ralph McGill recently penned an editorial entitled "A Shabby Piece of False Piety" which appeared in the Evening Star, Tuesday, January 3. It voices my sentiments completely and I commend it to those Members of this body who might have missed it.

A SHABBY PIECE OF FALSE PIETY

(By Ralph McGill)

Protests against American bombing in North Vietnam continue on the basis that civilians are being killed.

They are. Fewer civilians are being killed or injured in this war, even on a percentage basis, than in any other war in ancient or modern history. This is noted not in any effort to justify war. It is a dirty business or, as a knowledgeable man, William Tecumseh Sherman put it, "hell."

It does interest me, though, that some of the reporting from Vietnam and from too many of the petitions from peace groups in this country seem to be disturbed merely because some North Vietnamese civilians are being killed. The writer was in South Vietnam a few weeks through the past September and October. In that time Viet Cong terrorists threw a grenade into a bar in that city, killed seven Vietnamese civilians and wounded two Americans.

In the same period the Viet Cong smuggled a claymore mine onto a bus and killed a number of Vietnamese women and children, plus a few Vietnamese men. The bus carried no Americans. It was an act of terrorism and intimidation. Also within those weeks the Viet Cong descended on a village that was showing signs of becoming pacified—that is removing itself from Viet Cong control—and brutally killed a number of women and children. They also burned the huts.

These and other similar acts of terrorism go on almost daily and have for a number of years. The victims are civilians. They are the victims of the armed forces of North Vietnam, both the regulars of that government and the guerrilla arm, the Viet Cong.

In fact, since the war began the Viet Cong and North Vietnamese regulars have, by grenade, mine, rifle, machine gun and mortars, killed more Vietnamese civilians, in and out of villages, than have the U.S. bombings.

Again, there is no intent here to argue on an eye-for-an-eye and a tooth-for-a-tooth basis. The war is an ugly but necessary one. But it does create an irritation to have all the peace cultists petition, protest and denounce the United States for "killing civilians," and act as if the civilian population of North Vietnam is a deliberation target. It is not.

The further fact is that the Viet Cong and North Vietnamese troops do make civilians of South Vietnam a deliberate target. They are killed not because they happen to live near or work at a strategic oil refinery, a collection of oil storage tanks, an ammunition dump, an arms factory, or so on. The United States command goes to great trouble, and thereby endangers the lives of pilots, to notify through leaflets and/or loudspeakers of impeding air attacks. (The same thing was done well ahead of the drop on Hiroshima.)

Not to bomb the oil centers, the rail yards, the supply lines and any other concentrations of supply that give the enemy more ability to carry on the war and kill American, Vietnamese, Australian and New Zealand soldiers and allies from 15 other nations working as medical or teaching teams is to betray the men committed. It is a tiring bit of hypocrisy to have the protests, petitions, resolutions, and manifestos so worded as to give the impression that this country's bombing is directed at civilians and that only this country is so guilty. This is, in my opinion, a shabby piece of false piety.

There likely will never be another war "won" in the sense that General Lee took his sword to give it to General Grant or that the Japanese envoys came aboard the battleship Missouri in Tokyo Bay to sign articles of surrender.

We are in Vietnam because the power struggles of our time are in that area of the world. They are not struggles confined to Vietnam. They reach far into our future. We can't abandon the war, ugly and harsh though it is.

VA Endangered

EXTENSION OF REMARKS
OF
HON. RICHARD L. ROUDEBUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. ROUDEBUSH. Mr. Speaker, elsewhere in this RECORD I have submitted an article from the VFW magazine, authored by the distinguished commander in chief, Leslie M. Fry. I thought it might be of interest to see the editorial comment concerning this article that appeared in the Stars and Stripes, January 5, 1966. I submit herewith that editorial:

VA ENDANGERED

Is there a plan on foot by the Johnson Administration to entirley dismember the Veterans Administration and relegate the veteran to welfare status?

Leslie M. Fry, commander in chief of the Veterans of Foreign Wars, answers this question with a resounding "Yes." In an article published in the VFW magazine, Fry states without equivocation that the entire structure of veterans benefits chalked up over a period of nearly 200 years is now threatened by extinction.

To justify his claim, Fry points to the fact that National cemeteries are rapidly being closed and no provision is being made for burial of war veterans. He also cites the opposition of the present administration to the pension bill passed by the House of Representatives in the 89th Congress against the President's wishes but bypassed by the Senate in accord with his instructions, Fry says.

The National commander in chief of the VFW is also critical of the provisions of the so-called GI bill patterned to some degree after the legislation approved for veterans of World War II and Korea. Fry labeled it a cut-rate GI measure.

The Veterans of Foreign Wars leader further asserted that the Veterans' Administration itself is in danger of being taken over by some other Federal agency, thereby eliminating the sole Government agency whose purpose is to care for the veteran and his dependents.

There is much to justify the claims made by Fry. Certainly little has been accomplished in the past two and a half years for those veterans who have been adversely affected by the increased cost of living and the threat of inflation.

World War I veterans drawing pensions under old part III of the pension law have not received an increase in benefits since 1954 while living costs have spiraled increasingly higher.

Representative Olin E. Teague, of Texas, chairman of the House Veterans Affairs Committee has declared that it is the intention of his Committee to again bring before the House of Representatives a bill similar to that passed by that body in the 89th Congress. Whether it can be approved in the Senate is highly problematical. It failed there once before and if the Administration maintains its opposition to the bill, it could well fail again.

Veterans feel that Fry is on solid ground in pointing out the deficiencies of the Johnson Administration insofar as favorable legislation for veterans and their dependents are concerned.

We have only admiration for his forthright declarations. He is championing a just and righteous cause.

"Not the Last Tick" and "Friends and Enemies"

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. RIVERS. Mr. Speaker, it is a pleasure for me to bring to the attention of my colleagues in the House two thoughtful and penetrating editorials from South Carolina's most outspoken newspaper, the Charleston News and Courier. The editorials are "Not the Last Tick," which discusses the attempts to make educational progress in the South notwithstanding the present unrealistic attitude on the part of some Federal Government policymakers, and "Friends and Enemies," which discusses the curiously ambivalent attitude of the British Government toward Cuba and Rhodesia.

I would particularly point out one paragraph in the editorial on education:

Responsible Southerners are keenly aware of the need to upgrade the quality of education, especially for those of any race or color who need it most. The new factories need more intelligent workers than once were required on the farm. White or colored—and opportunities abound for both— the economy as well as the social structure must have literate and competent operatives.

We in the South realize that better education for all people at all levels is a must for economic progress and we can only hope that the policies of the Federal Government will be realistic enough to help rather than impede that effort.

The other editorial points out that while the United States is supporting a trade boycott against Rhodesia, the Queen of England is sending congratulatory telegrams to the President of Cuba and the British Government is working out new trade relations with Cuba. Maybe those who worry so much about world opinion can tell us why the world does not worry very much about our opinion and why what is sauce for the goose is not sauce for the gander.

The editorials follow:

[From the Charleston (S.C.) News and Courier, Jan. 3, 1967]

NOT THE LAST TICK

Though 1967 opens with echoes still ringing from year-end demands for total racial integration of classrooms, we predict it still will be a long time coming in any region of the country.

The time has passed, to be sure, when the South can say "Never!" Integrated classrooms are too commonplace for anyone to suggest either that they do not exist, or that they are a passing fashion. Acceptance of interracial education, especially at the upper levels, is an accomplished fact on a basis of realistic qualification. The likelihood is expansion rather than reduction.

Total integration is something else again. In our judgment, neither race would be happy with such an arrangement. If the mass of people reject a theory of government—as they did with National Prohibition—no amount of pressure can overcome them.

We say these things in full knowledge that the present government policy is determined to make an attempt to enforce its aims. In the last days of December, the Fifth Circuit Court of Appeals at New Orleans pronounced these judgments:

"The clock has ticked to the last 'tick' for tokenism and delay in the name of deliberate speed . . . We hold HEW's standards are substantially the same as this court's standards. They are required by the Constitution and as we construe them, are within the scope of the Civil Rights Act of 1964."

The standards which the court thus upheld are the guidelines of the Office of Education, a bureau of the U.S. Dept. of Health, Education and Welfare.

Last month a spokesman for that office, Assistant Commissioner of Education David Seeley, said this:

"I'm hard put to find any place outside the borders of the Soviet Union where a population is as terrorized as our Negro populations in some of these areas."

Apparently "these areas" refer to neighborhoods of the South, which is the region generally meant when federal officials begin to shout with rage. Actually, of course, great areas of Northern and Western cities are segregating along racial lines. As population shifts, this trend will continue.

As to "terror," Mr. Seeley is indulging in extravagant talk that we would take more seriously if we did not realize that he is making political noises for consumption elsewhere. While it is no secret that many Southerners—Negro as well as white—are not eager for total integration of public schools, we have neither seen nor heard of anything that could be called "terror" with any degree of accuracy. The fables about Darkest Dixie simply will not stand up under fair examination.

If we were looking for a comparison with the Soviet Union, we would find certain similarities in the brutal and bull-headed approach of some Washington bureaucrats to the highly complex and personal problems of the people.

Despite all the hostility, nonsense and in our opinion wickedly biased treatment of the South—a policy that is building up deep-seated anger against the guilty politicians—the Southern educational system is striving to provide suitable and effective schooling for all pupils.

Responsible Southerners are keenly aware of the need to upgrade the quality of education, especially for those of any race or color who need it most. The new factories need more intelligent workers than once were required on the farm. White or colored—and opportunities abound for both—the economy as well as the social structure must have literate and competent operatives.

Vocational training in our opinion is one of the pressing needs of South Carolina. We would like to see the federal government join in helping to promote genuine education, and stop shouting angry words about those who, in the long run, have the responsibility of supplying it.

[From the Charleston (S.C.) News and Courier, Jan. 4, 1967]

FRIENDS AND ENEMIES

On the eighth anniversary of Fidel Castro's seizure of Cuba—marking establishment of a communist outpost on the doorstep of the United States—Queen Elizabeth II of England sent this message to Castro's man, President Osvaldo Dorticos:

"With great pleasure I send to your excellency my cordial congratulations and my good wishes on account of the Cuban national festivity of Liberation Day."

"Liberation" has brought death to many hundreds of Cubans before firing squads, imprisonment to thousands, and misery to millions. Cubans are clamoring to escape from an island that once was a jewel of Latin America.

The irony of the Queen's message is intensified in contrast with her Prime Minister's belligerent attitude toward the peaceful regime of Premier Ian Smith in Rhodesia. On the same day that the Queen's message appeared, Mr. Smith broadcast a bitter message about the treatment of his country. Referring to terms of settlement discussed with Harold Wilson on a British warship off Gibraltar, Mr. Smith said the more he reflected "the more I am satisfied that our decision to reject them was correct." He said the British proposals to return constitutional government in Rhodesia had "all the beguiling symptoms of a well prepared and well laid trap."

The day after the Queen's message to Cuba and Ian Smith's comments on Rhodesia became public, Fidel Castro in Havana launched another tirade against the United States. Likewise came word of new British trade relations with Cuba, a country with which Americans are forbidden to deal commercially. Britain trades with a sworn enemy which at any time again may become a missile base for attack on our country.

At the same time, the U.S. Ambassador to the United Nations has supported a trade boycott against Rhodesia, a country at the other end of the world with no belligerent intentions. To us, these foreign policies of the United States make no sense.

As to Harold Wilson's policies in Britain—including a message from the Queen congratulating the monstrous Castro dictatorship of Cuba—we have nothing good to say.

Ten-Point Program To Improve the Social Security System

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. ST. ONGE. Mr. Speaker, a most urgent domestic problem facing the 90th Congress is that of providing an adequate income for our retired citizens living on fixed incomes under our social security system in a time of rapidly rising prices. These people have worked long and have looked forward to comfortable and secure years of retirement. Instead of security, however, they have more and more been plagued by the specter of being unable to provide the minimum necessities of a decent life.

Social security today constitutes the principal or sole income for most retirees. Even after a decade and a half of far-reaching liberalization of the program, its benefits still fall dismally short of the needs of the elderly people. The present act, even considering the new creditable earnings, will not significantly ameliorate the lot of lower-paid workers, their dependents and their survivors. At no level will present social security benefits enable a retiree and his wife to avoid serious reduction in the standard of living they achieved while working.

Our society has the responsibility to provide for our older citizens, the widows, and all those unable to provide for themselves because of old age and disability, so that they may be able to face the future with security and dignity. The Nation owes the retired people a decent standard of living for their past efforts in helping to build the country and achieve its present economic development.

From an economic standpoint it is sound and desirable that this group of citizens receive additional income. Their funds are spent on services or consumer items, and thus the economy as a whole is continuously primed. Even more important is the social and human good that comes from providing a minimum standard of living through the social security program, rather than supplementing inadequate benefits with relief and welfare subsidies.

I am today introducing a bill to amend our present social security system to provide the following increases in benefits:

First. The minimum benefits payable are to be raised from the present $44 to $90 per month, effective January 1, 1968.

Second. There is to be an increase in overall retirement benefits by an average of approximately 50 percent, as of January 1, 1968. The increase will be slightly greater for those whose lifetime earnings were lowest. Thus, persons whose lifetime earnings averaged from $95 to $250 a month will receive a 50-percent increase in benefits, while one who has earned $500 a month during his lifetime will receive an increase of just under 40 percent. In the case of those whose lifetime wages have averaged under $95 a month, they will be entitled to receive the minimum of $90 or $135 a month if there is a wife who is 62 and therefore qualifies for marital benefits. For these low-income persons the benefits will be more than doubled.

Third. Widows' benefits are to be increased under this bill from the present level of 82½ percent of the amount received by her deceased husband to 100 percent. It will allow her to receive her widow's share, as well as any old-age or disability benefits to which she may be entitled.

Fourth. The limitation on the amount of outside income that a retired person may earn is to be raised to $2,400 instead of the present $1,500 while receiving benefits under the social security system.

Fifth. An alternative method is provided for computing benefits, based upon the individual's average monthly earnings during his 10 highest consecutive years of employment. Therefore, benefits will more directly reflect a man's productivity during his best working years, and thus will increase the monthly pension checks for millions of beneficiaries.

Sixth. The amount of time a divorced woman must have been married in order to be considered a wife or widow for social security purposes is to be reduced to 10 years from the present requirement of 20 years. This is intended to help women who were divorced too late in life to be able to work long enough to qualify for adequate old-age insurance benefits based on their own earnings.

Seventh. The payroll tax will be increased from its present level of 3.85 percent, not including medicare, to 5 percent each for the employer and the employee, in order to finanace the additional benefits enumerated above. This is to be done by a series of step increases over the coming years.

Eighth. The earning and benefit levels will be increased to $12,000 upon enactment and $15,000 in 1968, thus returning to the original concept of social security when first introduced; namely, that those contributing to the fund would be doing so on the basis of their full salary. At present, only about 65 percent of those who pay into the social security fund do so on their full salary. To prevent imbalance in the future, my bill provides for the automatic adjustment of contributions and earnings base to reflect changes in national earning levels.

Ninth. A provision for an automatic adjustment of benefits to meet changes in the cost of living is contained in the bill. The adequacy of the social security program in the past has been seriously weakened because the benefits have remained more or less stationary, while the cost of living has risen. Under the bill, benefits will rise 1 percent with each corresponding rise in the consumer price index. The benefits granted by Congress under this bill will therefore continue to keep abreast of inflationary trends, rather than merely make up for what has been lost. The bill does not consider all possibilities for automatic adjustments to keep pace with changing economic conditions. It does not, for instance, provide for additional benefits to reflect the increases in real income that others in the economy receive when productivity rises. This is one of several far-reaching questions which the Congess may want to explore in re-examining the social security program. However, by including automatic adjustment features, the bill will do far more than provide for current needs, and will be responsive to reasonably expected future requirements.

Tenth. Benefits are to be financed partly out of general tax revenues. The bill provides a formula whereby equal amounts will, for the first time, be contributed out of general revenues beginning in fiscal year 1969. By 1977, general revenues will finance 35 percent of the social security system. The partial financing of benefits from general revenue, while a significant new feature, is not a new approach. It was in fact anticipated by the first Presidentially appointed Council of Economic Security, whose deliberations preceded the enactment of the original legislation. Attempting to meet all of the social security costs by means of a payroll tax would be regressive taxation and put a disproportionate burden on those we are trying to help most, and those least able to meet such a burden. Financing cost in part from general revenues would represent progressive taxation, and would take advantage of the broadly based graduated individual and corporate tax structure and place more of the burden on those best able to pay.

These, then, are the 10 essential features and provisions of my bill to revise and improve the social security system. Passage of this bill as soon as possible is essential, in order to provide immediate increases in benefits to the large segment of the population living at or below the poverty level. The bill is also important for its proposed innovations in the use of automatic adjustments to meet changes in the economy, and for financing part of the cost from general revenues. Finally it provides the basis for an intensive and very necessary review of this all-important area of domestic legislation.

The Rewards for Persistence

EXTENSION OF REMARKS

OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. O'HARA of Michigan. Mr. Speaker, all too little is known about the nomadic tribes that roamed this country thousands of years before the birth of Christ. Even the most minute addition to our store of knowledge about North America's earliest inhabitants represents a bright shaft of light into a dark and distant past.

Mr. Jerome DeVisscher of Clinton Township, Mich., a close personal friend of mine and an amateur archeologist with the gift of persistence, located over a period of 5 years a total of four sites where Paleo-Indian artifacts were buried. The sites were all in Sterling Township in my district. These aboriginal tribes lived and hunted in the area in about 9000 B.C.

Mr. DeVisscher was instrumental in getting the University of Michigan to send research teams to comb the area for artifacts and a report on their findings was published recently. I am very proud of Mr. DeVisscher's efforts and I invite the attention of my colleagues to a recent newspaper account detailing his role in weaving together a fascinating addition to the unfortunately meager treasury of information we have on this segment of history and ask that it be printed in the Appendix of the RECORD. The article from the Detroit News of December 25, 1966, follows:

SUBURBIA SPEARHEADED BY A TRIBE FROM B.C. ERA

(By James K. Anderson)

Suburbanites moving into new subdivisions around Dodge and 16 Mile roads in Sterling Township are following a pattern 11,000 years old.

It was about 9,000 B.C. that a group called Paleo-Indians, because of their great antiquity, first inhabited that area.

Then the area, five miles inland from Lake St. Clair, was part of a melting glacier later named by archeologists Lake Clinton. And it was along the shore—called Holcombe Beach—that they made spears which are still being uncovered.

The University of Michigan Museum of Anthropology recently published results of five years' research in that area.

HUNCH PAYS OFF

Had it not been for Jerome DeVisscher, a former Clinton Township supervisor and amateur archeologist, the entire site might have been lost.

DeVisscher discovered the site "on a hunch."

"I work at the Ford Motor Co. plant in Sterling and pass Dodge and 16 Mile twice a day," DeVisscher said, "and I often noticed a small ridge.

"Past experience has shown that wherever there are such ridges, you may find Indian relics."

U-M LENDS AID

"I found a spearhead there, and in a spot that had been partly plowed I found another fragment—of a spear."

Both turned out to be the type made by the Paleo-Indians, he said.

Then DeVisscher and another amateur archeologist, Edward J. Wahla, of Roseville, notified Wayne State University of their findings.

Because of its greater resources, the University of Michigan sent teams to comb the area.

More than 4,000 fragments and tips were found during the five-year study.

While the U. of M. studies were sporadic, DeVisscher continued on his own and located a total of four sites where Paleo-Indian artifacts were buried.

"Every time the wind blew or the rain fell, the ground surface would shift and there would be another concentration of stone flakes," he said.

DeVisscher deduced that the Paleo-Indians camped within a 30-foot circle of where the flakes would be found and that these had been chipped from their spear points.

FINDS NEW SITES

Last summer DeVisscher found three more areas in the vicinity where the Paleo-Indians lived and carried on their industry.

"They would return to this old hunting area, make their tools and repair others," he said.

"They may have come back every 25 to 40 years, staying a dozen days or two weeks, and then moving on as the herds of caribou moved."

"At the original site we found 200 bases of spears and it was significant that the majority were made of material from Ohio—black mercer flint.

"Studies of aboriginal peoples show that they went great distances to get the raw materials for tools and they needed flint for their spears.

LIVE AS NOMADS

"The Paleo-Indians may have followed the caribou for 200 miles. The pattern probably was that, one year they would move 50 or 100 miles, then the next year move further.

"In about 150 years, they probably would have moved 1,000 miles. But they did not wander much in a year because they adapted themselves to an area."

Range of the caribou was from 200 to 500 miles, "and the whole life of the Paleo-Indian depended on caribou."

DeVisscher, who has been collecting arrowheads nearly 40 years, believes the Holcombe Beach finds are worth "a million dollars."

DeVisscher said the type of weapons used by the Paleo-Indians indicates they hunted mammoth and mastodon, as well as caribou.

SPEAR HUNTERS

"They would creep up close on a large animal and jab it over and over again with the spear, he said.

"Later Indians would make spear heads with barbs, so the spear would stay in the animal until it finally died and they could retrieve it.

DeVisscher, Wahla and U. of M. researchers found a caribou bone fragment at one site thought to be where the animals were cooked and eaten.

In a university publication, "The Paleo-Indian Occupation of the Holcombe Beach," DeVisscher, Wahla and James E. Fitting, of the U. of M. Museum of Anthropology, theorize that 20 to 48 individuals traveled in family groups.

"The group which occupied the area of the Holcombe site over 11,000 years ago appears to have been typical of hunting and gathering bands," the authors assert.

OTHER U.S. SITES

The findings at Holcombe Beach here are similar to those in Clovis and Folsom, N.M., sites of some of the most ancient remains of man in North America.

DeVisscher theorizes that about 14,000 years ago, the Paleo-Indians first came to North America, one group going west and another east.

A similar discovery was made recently in Nova Scotia, he noted.

"One of the University of Michigan men worked on the Nova Scotia site and when he came out to Sterling Township, he though he was back in Canada because the finds were so much alike."

DeVisscher said it is now thought that animals such as the mammoth and mastodon became extinct because of the Paleo-Indian hunters, plus the animal's long gestation period.

"The Paleo-Indians killed them so fast that they could not reproduce," he said.

An Invitation To Ski in Pennsylvania

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. SAYLOR. Mr. Speaker, this is Pennsylvania Ski Week, and I should like to advise that the Commonwealth invites everyone to come up and take advantage of the winter wonderland of the East.

The long trips to New England for winter sports thrills are no longer necessary or practical. Pennsylvania is fast becoming the year-around recreation headquarters for the Middle Atlantic States and their neighbors because our ideal topography and weather have been complemented with necessary facilities and equipment to offer the finest weekends and vacations that nature and man can provide.

Forty-five ski slopes, which include 37 with snowmaking equipment, were planned to satisfy beginners as well as veterans. There were only eight slopes in the State in 1962, and the increasing number has been accompanied by the growth of thoroughly modern lodges, motels, dining rooms, and services for total enjoyment. Most of our attractive skiing sites can be reached in 2 to 4 hours of safe driving from Washington, Baltimore, Philadelphia, or New York.

For up-to-the-minute news of weather conditions in Pennsylvania, you may call the Harrisburg Ski Desk of the State's travel department. The number is 717-238-5161, a number every winter sports enthusiast should have on file for use from the middle of December until the latter part of March.

Pennsylvania welcomes you.

Abuse Is a White House Occupational Hazard

EXTENSION OF REMARKS
OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. RHODES of Pennsylvania. Mr. Speaker, President Johnson has been the target of attack by reactionary and irresponsible publishers and columnists and by rightwing extremists who seek to discredit him and raise doubts and suspicion about his character and integrity.

Their campaign of deception has influenced many people, despite the fact that few Presidents have contributed more to the national welfare, progress and prosperity of our country than Lyndon Johnson. Like many good Presidents before him, Lyndon Johnson will be remembered in history as one of our best Presidents.

Under leave to extend my remarks, Mr. Speaker, I include an excellent article by Ralph McGill in the January 9 issue of the Washington Star.

ABUSE IS A WHITE HOUSE OCCUPATIONAL HAZARD

"Politics is such a torment that I would advise everyone I love not to mix with it"—Thomas Jefferson, in a letter to Martha Jefferson Randolph, 1800.

Happily for his times—and his country—Jefferson did not really mean it. He wrote it out of a feeling of bitterness that comes to every President who, on one degree or another, is subjected to the slings and arrows of criticisms, calumny, falsehoods and slanders, much of it incredibly petty and malicious.

President Johnson has his share of it. In his case the malice arises out of a success story.

Franklin Roosevelt was slandered and abused because he initiated a fair employment practices commission. It was called communistic, and worse. It would, said the critics, destroy the free enterprise system.

Harry Truman was excoriated and subjected to the most unreasonable abuse because he advanced the civil rights of some 19 million Americans. Southerners walked out of his convention and formed a shabby Dixiecrat party that nominated Democrat Strom Thurmond, now Republican Senator Thurmond.

Lydon Johnson, and the Congress of the United States, made civil rights, including voting rights a legislative and administrative reality. Resistance, ugly and vicious, retards complete realization of those rights, but it will come.

The President's successful culmination of this struggle has earned him most of the abuse from the more mean and petty critics. There are the liberal cultists who do not like his "style." They complain plaintively that he scratches himself when he itches and blows his nose when he has a head cold.

The cruel necessity of war in Southeast Asia has added to his burden and his critics. There now are those perhaps-too-eager prophets who say Johnson may decide not to run again, that the tides run too strongly against him and his party.

This is the season for speculation. It is likely that at the present only President Johnson knows what he will do. The further odds, based on the knowledge that Johnson is experienced in politics, are that he understands that political tides ebb and flow on no precise schedule governed by a distant moon.

One thing seems to be clear.

No break between him and Senator Robert Kennedy is likely to occur. The cultist critics have hoped for it and have sought to bring it off. They have been licking their chops over the prospect for years. There is no reason for such a break. There is every reason against it. Both men are Democrats, important to the present and future of that party. They fall or rise with it. Each needs the other. The party cannot succeed with them divided. Neither can attain goals unless the party is successful.

Both men are legitimately and properly ambitious. (God help a nation which lives by, and with, a representative system if able men, ambitious for public service, decline to enter politics and endure its cruelties and its rewards.) The off-year-election successes of the Republican party, the burden of the war, and the trauma of the Republican party at the national level weld both men to the Democratic party and its future.

It is good there is not complete agreement between them. Each is a product of widely different environments. Each has been schooled in practical politics—but they did not attend the same classroom.

The national conventions and the elections are months away. The political tides will ebb and flow many times in that period. But neither the President nor Senator Kennedy is lacking in common sense and active sagacity of political reality. They need each other. Both need a viable party. The party needs them.

Edward G. Robinson

EXTENSION OF REMARKS
OF

HON. LEONARD FARBSTEIN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. FARBSTEIN. Mr. Speaker, it gives me great pleasure to insert into the RECORD an editorial written by Abe E. Eisenstein for the East Side News, a weekly publication having wide circulation in my congressional district.

Mr. Eisenstein's article marks the occasion of the 73d birthday of Edward G. Robinson, born and bred on New York's lower East Side, which I have the honor of representing in this body.

Mr. Robinson's long and distinguished career, in a variety of entertainment media, provides outstanding proof of an individual's ability to rise from poor surroundings to achieve fame and fortune in this land of continuing opportunity.

EDWARD G. ROBINSON

(By Abe E. Eisenstein)

On the fifth day of Chanukan, Dec. 12, East Side-New York's Rivington Street alumnus, dynamic, talented, educated, former motion picture producer, art connoisseur, and beloved famed veteran stage and screen "The Whole Town's Talking" super-star actor Edward G. Robinson will be 73 years young.

He is the fifth of six sons born to Morris and Sarah (Guttman) Goldenberg. His family came to the United States from Bucharest, Roumania, when Emmanuel was nine years old. His father opened a candy store on the Lower East Side. This is where Robinson discovered the University Settlement House, there to do his first acting. His Bar Mitzvah speech, it is said, was the longest in the history of the Roumania Synagogue on Rivington Street. For a time, he gave some thought to becoming a rabbi.

Recipient of the American Humane Associations gold medal and the CCNY Alumni's Townsend Harris Medal, Robinson is an alumnus of the famed old P.S. 20 (now P.S. 20-Anna Silver School at Essex and Stanton Streets), Townsend Harris Hall High School, City College of N.Y., Columbia University, and the Academy of Dramatic Arts of N.Y.

Edward G. Robinson served in the U.S. Navy in World War One. During World War II, he entertained the armed forces on a U.S.O. tour and donated $100,000 to their campaign. He also contributed his services to the American Red Cross. He served as a narrator to "We Will Never Die," a mass memorial to the Jews who lost their lives during the Nazi regime.

Prior to his film career, Robinson has reached stardom on the Broadway stage. Some of the plays included: "Samson and Deliah," "Peer Gynt," "The Adding Machine," "The Racket." He appeared in more than forty Broadway plays. He is credited in real life with speaking seven languages. He also was one of the most effective personalities in radio.

In motion pictures since 1923, successful films, Edward G. Robinson achieved international fame having leading roles in numerous (1931) for his interpretation of the title role in "Little Caesar," for his portrayal in the "House of Strangers," and "Dr. Ehrlich's Magic Bullet." He has appeared in more than 100 films. He has just completed two new films: "Grand Slam" and "The Biggest Bundle of Them All."

Friends and admirers everywhere—Congratulate and Salute you—famed East Sider-New Yorker and distinguished character actor—Edward G. Robinson—on your 73rd birthday.

The River of Poison

EXTENSION OF REMARKS
OF

HON. WILLIAM D. FORD

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. WILLIAM D. FORD. Mr. Speaker, the problem of water pollution is recognized as one of the most serious which our Nation faces today. Some preliminary steps have been taken toward an ultimate solution, but the magitude of the problem is such that drastic and immediate measures are a necessity.

The tragedy of polluted water has been described in vivid detail by many writers, and portrayed graphically in photographs.

One of the most impressive descriptions I have ever read was printed December 29, 1966, by the Dearborn Heights edition of the Dearborn Press, which is circulated in my 15th Congressional District of Michigan. It is a firsthand account of a boat trip on the severely polluted Detroit River by members of the Dearborn Heights Provisional League of Women Voters.

The account is so shocking, and so effectively describes the polluted condition of the once beautiful waterway, that I am having it made a part of the CONGRESSIONAL RECORD and brought to the attention of my colleagues in the 90th Congress:

LEAGUE LOOKOUT: THE RIVER OF POISON

(By the Dearborn Heights Provisional League of Women Voters)

We went for a boat ride on the River of poison. It was a lovely day for a boat ride, sunny and warm, with a slight breeze.

We boarded two trim fibre-glass boats at the foot of Southfield Rd. in Ecorse. There were 15 of us, members of the League of Women Voters of Allen Park and Dearborn Heights. The boats were property of the U.S. Department of Health, Education and Welfare. Our guides were officials in the Federal Water Pollution Prevention Program.

We went for a boat ride on the River of Poison . . . it used to be called the Detroit River.

ORANGE WAVES

The powerful motors of the boats raised waves of orange foam behind us as we headed downstream. The waves and foam were orange because the water was orange—with iron and acid flowing out from the E. I. du Pont de Nemours & Co. Industrial & Biochemicals Dept., just upstream from our boarding place.

We were relieved to reach the green water area. "Is this clear water?" we asked our guide, Phillip Taylor. "Not so", he explained, "green water is algae infested from detergents. Clean water is blue water."

We approached the Wyandotte Chemicals Corporation South Side Works, slowing to study a wide, gaping concrete mouth, called an outfall, pouring chlorine into the river. The edges of the concrete were worn and rough from the power of the 2 to 3 million gallons a day torrent of chlorine pouring forth.

We turned upstream, passing a man-made island. It was made of the sludge that is dredged out of the Rouge River. The water turned again to bright orange as we passed the duPont outfall, then turned to murky pale grey as we approached the Great Lakes Steel Ecorse Mill.

Grey water is from filings.

OIL CLARIFIERS

Three huge structures lined the river bank here, resembling huge erector sets, each with an oil tank on top. They are clarifiers, set up by Great Lakes Steel to pull oil out of the water before it empties into the river. Sometimes they work and sometimes they don't.

The boats pulled out farther into the river, slowing and then stopping in brown water. Forty feet below us, the brown water was surging from the City of Detroit Sewage outlet at the rate of 600 million gallons a day. Our boats rocked violently in the turbulence of the force of the rising brown water, and as the sea gulls swooped in, we were glad our sinuses weren't in good operating condition that day.

The City of Detroit does a good job in disinfecting, according to our guide, except during a heavy rainfall; then, the raw sewage overflows directly into the river.

We passed the Great Lakes Steel Strip Mill where gallons of solids are dumped daily, entering the mouth of the Rouge River, its water completely black with oil. The mountain of logs stacked at the Scott Paper Company was awesome; so was the solid stream of organic waste pouring from their outfall. The water was pale grey-white as we passed the Peerless Cement Company outfall. Allied Chemical's Solvay Process Division added a heavy oil scum.

Rounding Zug Island, then, passing another Great Lakes Steel Division, where 500 to 600 gallons of solids are dumped daily from nine industrial waste outfalls, heading back toward Ecorse through the black, gray, green, and orange water.

It was a nice day for a boat ride. We never saw any blue water, though.

[From information compiled by the Dearborn Heights Provisional League of Women Voters Water Resources Committee, using Federal pollution data.]

Ben Barkin: Milwaukee's Resident Humanitarian

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. ZABLOCKI. Mr. Speaker, the people of Milwaukee long have recognized that we have a true humanitarian in residence in our town.

He is Ben Barkin, a man whose volunteer work has extended to practically every major community service project in Milwaukee in the past 20 years.

Now he has received national recognition for his work. In December Mr. Barkin received the national B'nai B'rith award for "distinguished and enduring contributions of a humanitarian nature." It was justly given to Mr. Barkin, the first Wisconsin man ever to win the distinction.

The award was presented at a banquet attended by 800 persons. They included Government officials, business and religious leaders, educators and professional men of all walks of life—testimony to his wide interests and acquaintanceships.

"A special kind of hero in the age of antihero" was the way sculptor-economist, Leo Cherne, characterized Mr. Barkin during the evening. Believing that the life and works of such a humanitarian deserve wide recognition, I am including at this point the citation for Mr. Barkin, given by former Ambassador Philip M. Klutznick, a news story from the Milwaukee Journal on the award banquet, and an editorial of commendation from the Milwaukee Sentinel.

I earnestly commend these items to the attention of my colleagues:

A SPECIAL KIND OF MAN

Ben Barkin is a special kind of man. He possesses not only a pervading love for people, but he practices his philosophy fully in his daily life. The customary Humanitarian Award recognizes broad good deeds in pursuit of the better life. Ordinarily it reflects the dedication of a person to causes and ideas calculated to advance the interests of mankind. This definitely can be applied with utter and unreserved candor to Ben Barkin.

It does not always follow that those who consecrate themselves to the broad principles or ideas addressed to the uplifting of humanity, have the time or inclination to devote to individual people. It is the tragedy of our society that the reality of the predicament of the individual tends to get lost amidst the oratory, resolutions, and programs that advocate the cause of humanity generally. Not all who live in the rarified atmosphere of inspirational idealism equally cope with the ofttime painful experience in the solution of the problems of a single suffering man. Ben possesses that unique capacity of being able to reach for a better world while still remembering that the goal can only be attained through the treatment of the problems of the individual.

This unusual gift is best visible to those who know him as I do and to those countless others who are fortunate to share his friendship. While his heart and mind encompass humanity as a whole, it is to his especial credit that he responds with equal fervor to each of its parts. He is the walking and living truth that to save one man is to save the world—a concept derived from his Judaic heritage, and one which he follows in the American idiom which seeks the universal dignity of man be he an individual or a part of the society as a whole.

Ambassador PHILIP M. KLUTZNICK,
Honorary President, B'nai B'rith.

[From the Milwaukee Journal, Dec. 2, 1966]

BARKIN PRAISED AS HUMANITARIAN

A man who has made a career of polishing the image of others was recognized in his own right Thursday night.

Ben Barkin, Milwaukee public relations man, was praised and applauded by more than 800 friends as he received the national B'nai B'rith humanitarian award at a dinner at the Pfister hotel. Previous recipients were the late Bernard Baruch, Gen. David Sarnoff and Philip M. Klutzneck, a former member of the United States delegation to the United Nations.

"I think you'll have to admit tonight that I'm the richest guy in the country," said Barkin, the first Wisconsin resident to receive the gold medal from the 123 year old international Jewish service organization.

An impressive representation of government, civic, business and religious leaders cited the 51 year Milwaukeean for sparking community projects and for his work with youth. Barkin is national chairman of the B'nai B'rith youth commission.

Said Gov. Knowles: "Whether . . . in art, music or culture—or that wonderful circus day parade—Ben always has contributed a great deal of himself."

Mayor Maier, in a prepared message read by an aid: "No community can hope to achieve greatness unless first of all it can count on great people . . . and on those counts, Milwaukee can have no fear of mediocrity."

County Executive Doyne said that because Barkin had had a hand in so many civic accomplishments, he considered himself one of Barkin's helpers "in ground breaking, ribbon cutting and cornerstone laying. . . . You'd be surprised how many Irish trees are growing in Israel."

Those praising Barkin also included Rabbi Louis J. Swichkow, president of the Wisconsin Council of Rabbis; Father John P. Raynor, president of Marquette university; Bishop Donald H. V. Hallock of the Milwaukee Episcopal diocese and the honorary co-chairman of the dinner, Edmund Fitzgerald, retired board chairman of the Northwestern Mutual Life Insurance Co., and Robert A. Uihlein, jr., president of the Jos. Schlitz Brewing Co.

Rabbi Swichkow said Barkin had the traits "of the ideal American Jew, as I would want to visualize him."

"All of us have been enriched because of his great love and concern for fellow human beings, regardless of race and creed," the rabbi said.

The principal speaker, Leo Cherne, business adviser, sculptor and authority on aiding displaced persons, described Barkin as a hero in an age of the antihero.

Criticizing particularly young persons who have turned to marijuana or LSD in place of worth while humanitarian pursuits—"the thousands of rebels without the slightest cause"—Cherne said:

"Here's how we use Ben Barkin . . . by really looking at what a man can be.

"By recognizing a hero, we realize what we might have been and what we still can be."

Cherne, executive director of the Research Institute of America in New York city, has been a friend of Barkin since their teen years when they were members of Aleph Zadik Aleph, B'nai B'rith boys' organization.

Two other friends, Sam Beber, Park Forest, Ill., founder of Aleph Zadik Aleph, and Frank Glazer, Milwaukee born concert pianist, also took part in the program. Beber presented the award to Barkin.

Dinner chairman Joe E. Smith, Milwaukee insurance executive, said the event raised more than $50,000 for B'nai B'rith youth work.

In accepting the award Barkin praised young persons and the community. He said, however, that humanitarian undertakings have not kept pace with other advances.

"I'm no longer concerned with bricks and stones and steel," he added. "It is the minds and the hearts of the people that make a community great."

[From the Milwaukee Sentinel, Dec. 3, 1966]

UNCOMMON MAN

By definition, a humanitarian is one who works for the welfare of mankind.

We have a humanitarian in our town, Ben Barkin. And Thursday night, before an audience of 800 persons, he was warmly honored. Barkin was given B'nai B'rith humanitarian award for "distinguished and enduring contributions."

We note with regret that there are not many humanitarians and few awards for such endeavors. So we recognize with eagerness the achievements of this man who has taken the Ten Commandments and has made them his guidelines in a career of public service, especially for young people.

Through the years, Barkin has kept the starry eyed enthusiasm and eagerness of youth. He has brought hope, courage and love into many lives and endeavors. Ben Barkin has burned with a bright, soaring flame. He has warmed us all. And his heart has its reasons.

Adam Clayton Powell

SPEECH

OF

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TAFT. Mr. Speaker, I take this opportunity to comment on the position I have taken on the vote on the previous question on the motion of the gentleman from Arizona [Mr. UDALL], as well as upon the substitute amendment of the gentleman from Michigan [Mr. FORD].

I have opposed the previous question and voted for the substitute amendment because this is the only way by which Mr. POWELL can properly be allowed to present his case and the House can properly examine his qualifications. To have permitted Mr. POWELL to have taken his seat would, under the precedents of this House, have limited the examination of his qualifications to his conduct during this particular term of office, or at best, to events occurring after his most recent election on November 8, 1966. Under the procedures provided by the substitute amendment, Mr. POWELL will have a full hearing and opportunity to present his case. He will also be entitled to all pay, allowances, and emoluments authorized for Members of this House. Moreover, the bipartisan committee appointed is required to report within 5 weeks upon this recommendation, and the House should then act promptly. To have ordered the previous question would have prevented forever a full consideration by the House of Mr. POWELL's qualifications and the charges made against him. It would also have prevented Mr. POWELL from having an appropriate opportunity to present his defense to the charges.

The action taken by this House is the responsible and proper action. It stands in strong contrast to the action of the majority caucus which acted only upon a report of the House Administration Subcommittee and stripped Mr. POWELL of his chairmanship.

President's State of the Union Address

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. ST. ONGE. Mr. Speaker, the President's state of the Union message last evening gave the Nation and the world renewed hope and inspiration for dealing with the challenges that lie ahead. It was a brave report which in no way sidestepped the dangers and problems facing this country, and at the same time it proposed solutions free from any partisan flavor.

The course charted by the President is a brilliant corollary to the very impressive accomplishments of the 89th Congress. It provides the means of implementing and extending the vital areas of domestic programs, especially those dealing with the budget, Government organization and efficiency, civil rights, social security, health, and crime. None of us enjoys paying taxes, but all of us understand the need for taxation in order to finance the programs we want at home, and our commitments abroad. The President has proposed a tax measure to meet our increasingly expensive obligations in Vietnam, and at the same time maintain the high level of domestic prosperity.

The President's address focused particular attention on this Nation's involvement in southeast Asia, a problem which overshadows all others at the present time. I believe that the ultimate hope in Vietnam lies in proving conclusively to our adversary that force cannot be tolerated as a means of achieving their goals. At the same time we shall pursue every avenue for an honorable and negotiated settlement.

President Johnson treated with extreme candor the problems that always accompany progress. There may be some squeaks and rattles in the new machinery for social progress and the President calls on Congress to help in correcting them. The best of man's ideas are wasted unless experiments are tried. Fortunately, most of our experiments have been extremely successful and a great benefit to the American people. This President is not going to yield to the harsh criticism of chronic complainers and neither is this Congress.

In particular, we all must remember that to fight poverty is not a simple or easy undertaking. More than any other nation in the history of mankind, the United States is committed to the struggle to eliminate poverty and this may well be the greatest and most elevating experiment ever undertaken.

I call on all our people and their elected representatives in this Congress to put aside factional differences and unite behind our President in securing an honorable peace in Vietnam, and a prosperous, orderly society at home free of the scourge of prejudice and crime.

The U.S. Dairyman and the Need for Adequate Import Controls

SPEECH

OF

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. ASHBROOK. Mr. Speaker, the urgent need for import controls to protect the U.S. dairyman can readily be appreciated when certain factors concerning foreign competition are considered.

Surplus European butter is rolling from churns at an ever-increasing rate. In mid-1965, the Department of Agriculture estimated Western Europe had 200 million pounds in surplus, equivalent to 4.23 billion pounds of milk. The butterfat is seeking a market, preferably in the United States.

The swiss cheese maker was favored years ago when our import controls were established. As a concession to Switzerland, swiss cheese was exempt from quotas. Now seven other countries are producing swiss cheese and sending it into the United States.

The New Zealand dairy industry agreed to a voluntary limit of Colby cheese shipments. But eight other countries quickly moved into making cheddarlike Colby cheese for the U.S. market, so the voluntary limitation has been scrapped. Colby imports are now 10 times greater than the current cheddar import limit.

These, and other factors, illustrate the need for adequate legislation which will protect our dairy farmer from excessive competition from abroad. I will certainly support corrective legislation which will insure an equitable income for those engaged in our all-important dairy industry.

The Hoard's Dairyman, the National Dairy Farm magazine carried in its December 25, 1966, issue an informative article on the present plight of our dairymen. I request that the article, "You Have a High Stake in Effective Dairy Import Controls" be inserted in the RECORD at this point.

The article follows:

YOU HAVE A HIGH STAKE IN EFFECTIVE DAIRY IMPORT CONTROLS!

(By E. M. Norton, secretary of the National Milk Producers Federation, Washington, D.C.)

If we have learned anything in this dairy business during the past 15 years, it is that a small surplus has a drastic effect on the price of milk. And, within the past year, we have seen how milk prices can improve if we bring supply and demand into balance.

What every dairy farmer must realize now is that a pound of surplus butterfat imported from abroad has the same depressing effect on farm milk prices as an extra pound produced here. It does not matter whether the butterfat is imported in the form of butter, butter oil, Exylone, Grapex, frozen cream, Colby cheese or some other product.

To quickly illustrate your stake in dairy imports, let me cite just two figures. This year milk production in the U.S. is down about 3.5 billion pounds. Milk prices are up where they should have been for the past decade. But in western Europe there are 200 million pounds of surplus butter looking for a market. This is equal to 4.23 billion pounds of milk! Imagine the impact on our farm milk price should we import dairy products made from this volume of milk.

It is unjust that our dairymen should be flooded with dairy products from other countries just after having reduced domestic milk production to match consumer requirements.

In a year's time, reduced U.S. milk production has resulted in an increase of about $1 per hundredweight in the farm price. The higher prices, however, have increased the pressure of foreign nations to sell in the U.S. market, and American importers are moving to obtain lower cost butterfat from abroad.

The higher prices also have affected the cost of living in the United States and, thus, many persons within the government are encouraging imports as a means of controlling (reducing) consumer prices.

It is ironic that the dairy industry is plagued with imports in view of the law which supposedly controls such imports as a means of supporting prices to farmers.

Dairy imports have been limited since 1953 by authority of section 22 of the Agricultural Adjustment Act of 1935. Under this legislation, import quotas are established for specific dairy products such as butter, cheddar cheese, Edam and Gouda, blue mold cheese, Italian type cheese, and certain other products. The total allowable imports of these prescribed products presently amount to 11 million pounds of butterfat or the equivalent of 292 million pounds of milk.

The problem lies in the fact that imports are controlled on specifically defined dairy products, such as cheddar cheese or butter. But there is no limitation on other dairy products brought into this country.

Although federal hearings have been requested time and again to further restrict imports under present law, the sad fact is that the amount of dairy products imported has been allowed to grow, and foreign exporters are gaining a stronger foothold in the American market.

FAVOR TO SWISS BACKFIRES

When the import quotas were first established, Swiss cheese was exempted. The amount of such imports from Switzerland was small. It was not long, however, before other nations began producing Swiss cheese for export to the United States. During the past year, Swiss cheese was shipped to the United States, from Finland, Austria, Norway, Sweden, Denmark, Netherlands, West Germany and, of course, Switzerland.

It just isn't logical to import Swiss cheese from all over the world, particularly when we make the best right here at home. The reason for the imports has nothing to do with need or the art of making a specialty cheese. Foreign Swiss cheese simply enters the market at a lower price [because of lower labor costs] than that produced in the United States.

Another case in point, the 1965–66 fiscal year quota on imported cheddar cheese amounts to 3.7 million pounds. Ironically, however, Colby cheese is not subject to limitation. Colby cheese is very similar to cheddar and displaces cheddar in the market. Total imports of Colby cheese during the first nine months of 1966 were 28.5 million pounds—an annual rate of 38 million pounds. This is more than 10 times the quota for cheddar cheese. If there is no restriction on the importation of Colby cheese, what is gained by placing a limit on cheddar?

Importation of butterfat for the ice cream market perhaps has been the most flagrant violation of the intent of the United States import control law. Butterfat, in constantly increasing volumes, has been imported as frozen cream, butter oil, and mixtures of butterfat and sugar.

Frozen cream imports pose a double threat. They displace sales for the domestic cream, thus serving to break the cream market. At the same time, these imports force our own cream into butter, adding to the supply and adversely affecting the market price for butter. Frozen cream is not restricted by present controls.

The butter quota, as established by the Tariff Commission, is 707,000 pounds per year. The butter quota was first circumvented through the importation of butter oil. When this fact was brought to a hearing, the Tariff Commission responded by placing an import quota on butter oil. This butter oil quota was 1.2 million pounds per year, more than doubling the established quota for butter.

Thus, a quota was established on butter oil on the basis of a history of imports, even though those imports were made in circumvention of the butter quota! Once a product has been imported, it is difficult to have it totally excluded thereafter.

After the flow of butter oil was restricted through quota, mixtures of butterfat and sugar appeared in the market for the first time. The product, called Exylone, was used by the ice cream trade, displacing our own butterfat, which then had to be made into butter.

The importation of Exylone as a circumvention of the quota on butter oil was so obvious that, after a further hearing, the Tariff Commission established a zero quota for Exylone. The quota, however, was made applicable only on products containing 45 percent or more of butterfat.

The dairy industry argued that this limitation would merely serve to invite mixtures containing less than 45 percent of butterfat, and this is exactly what happened. Junex—a product containing 44 percent butterfat and 55 percent sugar—promptly made its appearance.

In the first 10 months of 1966, 83 million pounds of Junex entered the United States market. The Secretary of Agriculture, in a recent order under the Sugar Act, limited imports of mixtures of butterfat and sugar containing more than 25 percent sugar. Both the dairy and sugar industries pointed out that this limitation would be ineffective because products containing less than 25 percent sugar would be imported on a profitable basis.

As predicted, the new regulation merely changed the combination of the product again, as mixtures with 44 percent butterfat and 24 percent sugar are now being imported at a lower butterfat cost than represented by the American market.

CHEESE AGREEMENT FAILS

The first imports of Colby cheese were from New Zealand. When the imports reached a volume which made it obvious that something had to be done, a voluntary limit was negotiated with the New Zealand government, and later was extended to Australia and Ireland.

Now expired, this agreement has not been extended. The reason is that, while exports to the United States were limited by some countries, other countries entered the market.

During the past year, Colby cheese has been shipped to the United States from France, Denmark, Belgium, Ireland, Austria, Australia, Bulgaria, and West Germany.

Thus, voluntary agreements are no answer. They merely serve to penalize those countries which are willing to cooperate with us by limiting their exports to the United States.

These are but a few examples of the dilemma which confronts the dairy industry under present law.

The National Milk Producers Federation, after careful study, developed a new import control program which was incorporated into a bill by Sen. William Proxmire of Wisconsin and co-sponsored by 21 other senators. It was introduced in the United States Senate on April 25, 1966, as S. 3273.

Under this bill, all imports would be subject to limitation. The Secretary of Agriculture would be authorized to permit entry of dairy products for any year in amounts totaling not more than the annual quantity imported during the five calendar years of 1961 through 1965. The total quantity would be adjusted, upward or downward percentagewise, with changes in the total size of the market.

In other words, foreign countries would share in the growth of the United States market in the same proportion as United States producers, but their exports could not grow by displacing United States production.

Under the new proposal, the President may authorize the importation of additional quantities of dairy products in the public interest. No such imports, however, would be permitted if the farm price for milk were less than parity, unless the Secretary removed a corresponding amount from the domestic market. This removal would be in addition to purchases for price support and other commitments of the government.

Under the proposed bill, there would be no circumvention of import quotas. The door would be closed to any article of commerce containing any significant amount of butterfat, solids-not-fat, or any combination of the two. It would be necessary for importers to secure permits, and the amounts would be held in check by the total average annual imports during the 1961–65 base period.

Similar bills were introduced in the House of Representatives. Activities in support of the new program in 1966 were preliminary. The big push should come in 1967. Such legislation can be successful only if fully supported by all dairymen throughout the United States. It could be the most important agricultural legislation to be considered by the Congress since passage of the Agricultural Act of 1949.

Representative Cramer of Florida Calls for Accelerated Air and Water Pollution Control Programs by the States

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. HARSHA. Mr. Speaker, on October 31 of last year, Congressman WILLIAM C. CRAMER, of Florida, addressed the 17th annual joint conference of the Florida Pollution Control Association and the Florida section of the American Water Works Association in Hollywood, Fla., on the national problems of maintaining adequate water quality and water supplies to meet the needs of the Nation.

As the top ranking Republican member of the House Committee on Public Works which has jurisdiction over legislation pertaining to the major Federal water pollution control programs, and as the author of several key provisions of the Federal Water Pollution Control Act, as amended, Congressman CRAMER has distinguished himself as one of the most informed Members of Congress on the intricate problems of maintaining adequate supplies of good water.

Through the efforts of Congressman CRAMER and the other Republican members of the Committee on Public Works, many significant amendments to the Federal Water Pollution Control Act were enacted during the last Congress, including amendments providing additional inducements to the States to more fully participate in the program of constructing sewage treatment works, providing additional bonuses for adopting certain basinwide plans and for enforcing certain water quality standards, and providing reimbursement procedures of State and local funds for construction of sewage treatment works in advance of the availability of Federal participating funds.

Congressman CRAMER's analysis of the nature of the water quality and water supply problems, the extent of the Federal effort, the character of Federal legislation and programs, and the need for the States to assume their rightful responsibilities in the area of air and water pollution control is highly perceptive of the genuine needs in this area of water resources development.

The concepts underlying Congressman CRAMER's proposals on what the role of the State of Florida should be in maintaining adequate supplies of good water and in controlling air and water pollution are ones which should be closely examined by all the States for possible application by their respective governmental machinery.

Mr. Speaker, I have unanimous consent that the address to which I have made reference be printed at this point in my remarks, and I commend it to all Federal, State, and local officials involved in water resources development and to all Americans concerned over the pollution of our air and water.

The address follows:

PHILOSOPHIES OF THE NATIONAL WATER RESOURCES PROGRAMS: WATER QUALITY AND WATER SUPPLY

(Remarks of the Honorable William C. Cramer, before the 17th Annual Joint Conference of the Florida Pollution Control Association and the Florida section of the American Water Works Association, Diplomat Hotel, Hollywood, Fla., October 31, 1966)

Ladies and Gentlemen. Since enactment of the historic Federal Water Pollution Control Act of 1956, our Nation's increasing awareness of its water quality and water supply problems has been reflected in the activities of all levels of government to control and abate water pollution and to provide our citizens with a sufficient supply of good water.

Federal, State, interstate, municipal, and intermunicipal agencies have devoted millions of man-hours attempting to solve water quality and water supply problems. Legislative bodies have expanded the authorities of agencies and have broadened the provisions of statutes and ordinances. Hundreds of millions of dollars have been spent on research and development and demonstration projects, water quality control, and the construction of sewage treatment plants, water purification works, and collector and distributor systems. Greater strides have been made to strengthen Federal water pollution control programs during the past few years than ever before, and the government in Washington has similarly addressed itself to the needs for more adequate water supply systems, but the manifold problems of water pollution and inadequate water supply are still very much with us.

THE NATURE OF WATER QUALITY AND WATER SUPPLY PROBLEMS

You are authorities on water pollution control and water supply management. I do not need to discuss with you the startling statistics which reflect the magnitude of our water resoruces problems and which alert us to the great tasks which lie ahead.

You are well aware that our Nation has a critical water resources problem, for there just is not enough water of adequate quality at all the places where it is needed. Our water has been so polluted, in many instances, that taxpayers must pay ever-increasing taxes and user charges to meet the demands for sewage treatment and water purification. As you well know, poor quality water and insufficient water supplies menace public health, reduce property values, raise taxes and water consumer charges, destroy natural beauty and fish and wildlife, drive away existing industry, and discourage the location of prospective industries and residents.

Congress has proclaimed that our water resources problems cannot be ignored; but just because they are national problems, we cannot and should not reply upon the Federal Government alone to correct them. Only by concerted actions on all levels of government can we insure that there will be an adequate supply of clean water. The answer lies in the effective use and reuse of water which cannot be fully achieved without sincere cooperation between all levels of government, without earnest anti-pollution efforts by all present and future pollutors, and without support from all concerned public, semi-public, and private organizations, private enterprise, and aroused citizens.

I will address myself this morning to the present status of the major Federal water resources programs and to what State and local agencies have done and should do to enhance efforts to solve these problems.

FEDERAL LEGISLATION AND PROGRAMS

The Congress has been responsive to the need for controlling and abating water pollution and for enhancing our water supplies. Enactment of the Federal Water Pollution Control Act of 1956, which I cosponsored, better known as Public Law 660, was the first really significant step taken by Congress towards eliminating water pollution. As you know, this Act established a Federal grant program for the construction of waste treatment works and provided for some enforcement procedures for abatement of pollution.

THE WATER QUALITY ACT OF 1965

Additional legislation was enacted in 1961, but the second most significant action taken by Congress was the enactment of the Water Quality Act of 1965.

As you know, last year's Act provided for creation of the Federal Water Pollution Control Administration, through which the Secretary of Health, Education, and Welfare was to administer the Federal Water Pollution Control Act. The transfer of this new Administration in May of 1966 from the Department of Health, Education, and Welfare to the Department of the Interior, as a result of a reorganization act, necessitates my references hereafter to the Secretary and the Department of the Interior.

Under the Water Quality Act, authorizations for appropriations for each of the fiscal years 1966 and 1967 were increased from $100 to $150 million, of which the first $100 million to be appropriated was to be allocated to the States under the formula based on population and income, with all amounts appropriated in excess of $100 million to be allocated on the basis of population alone. The Act provided that 30% project grants could be made from the latter allotment without regard to the dollar ceiling limitations, if the State matched the full Federal contribution made to all projects from such annual allotment.

This provision to encourage State financial participation in the construction of sewage treatment works constructed with P.L. 660 funds is of great importance. Since 1959, I have been in the lead on the House Committee on Public Works urging that increased annual authorizations for the construction grant program be coupled with inducements to bring the States into the P.L. 660 construction program. I offered motions to accomplish this on the House Floor on two separate occasions. Twice my measures were defeated, but at last the States were brought into the P.L. 660 construction grant program in 1965, as far as the additional $50 million annual authorizations were concerned.

Last year's Act doubled the dollar ceiling limitation on grants for construction of waste treatment works for an individual project from $600,000 to $1.2 million and for a joint project from $2.4 million to $4.8 million. As I have indicated, project grants could be made for a full 30 percent of the cost of projects, without regard to the dollar ceiling limitations, if the State matched the full Federal contribution made to all projects in the State from the annual appropriations over $100 million. This was the forerunner of the proposals embodied in the Clean Waters Restoration Act of 1966. The 1965 Act further permitted the Secretary to increase the basic grant by an additional ten percent of the amount of the grant, if the project conformed to the comprehensive plan for a metropolitan area.

The most controversial aspect of last year's Act pertained to enforcement provisions. After extended debate, a change in enforcement provisions was finally arrived at which was acceptable to most and which was the best compromise obtainable. Thankfully, the House position on enforcement provisions was generally upheld in conference committee.

As you know, the 1965 Act provided that if the Governor of a State or a State water pollution control agency filed by October 2, 1966, a letter of intent that such State, after public hearings, would before June 30, 1967, adopt water quality criteria applicable to interstate waters or portions thereof within such State, together with a plan to implement and enforce such criteria, and if the Secretary determined that such criteria and plan were consistent with the provisions of the Act, then such criteria and plan would thereafter be the water quality standards applicable to those interstate waters and portions thereof in that State. All States filed such letters of intent, and Florida was among the first to do so. To me this is an indication that the States will effectively meet their water pollution control problems.

CLEAN WATERS RESTORATION ACT OF 1966

The latest action taken by Congress to improve and make more effective the Federal program was the enactment this month of the Clean Waters Restoration Act of 1966, which now awaits the President's signature.

Inasmuch as you might not yet be fully aware of the many provisions of this year's Act, I would like to briefly discuss its most important provisions with you.

This year's Act authorizes the Secretary of the Interior to make grants to pay up to 50 percent of the administrative expenses of a basin planning agency for a period of not to exceed three years, if such agency provides for adequate representation of appropriate State, interstate, state, local, or, when appropriate, international interests in the basin or portion thereof involved, and if it is capable of developing an effective, comprehensive water quality control and abatement plan for the basin. The grant is to be made only upon the request of the Governor of a State or a majority of Governors when more than one State is involved. The term "basin" is defined with sufficient latitude to encompass most, if not all, areas with clean watersp roblems in Florida.

RESEARCH AND DEVELOPMENT BROADENED

The 1966 Act authorizes the Secretary to make grants to States, municipalities, intermunicipal or interstate agencies, private institutions, and individuals for the purpose of assisting in developing projects to demonstrate new or improved methods of controlling the discharge of untreated or inadequately treated sewage or other wastes from sewers carrying storm water or both storm water and sewage or other wastes; to make grants to those entities to assist in developing projects to demonstrate advanced waste treatment and water purification methods or new or improved methods of joint treatment systems for municipal and industrial wastes; and to make grants for the purpose of reports, plans, and specifications in connection therewith.

The Act further authorizes the Secretary to make grants for research and development projects for prevention of pollution of water by industry, including the treating of industrial wastes. The Act authorizes a total of $60 million annually for these three types of research and development projects for each fiscal year 1967 through 1969.

Of importance to the Sunshine State, the Act authorizes the Secretary, in cooperation with appropriate government, public, and private entities, to make a comprehensive study of the effects of pollution, including sedimentation, in the estuaries and estuarine zones of the United States. The study should result in recommendations to Congress for effective means to control and abate water pollution in our estuaries and estuarine zones.

SEWAGE TREATMENT WORKS CONSTRUCTION MONEY INCREASED

Authorizations for appropriations for the construction of sewage treatment works have been substantially increased. The Secretary is required to submit a report to Congress by January 10, 1968, on the reasonable estimated cost of needed waste treatment facilities, which will reveal to what extent these new monetary authorizations may need to be adjusted. In addition to the $150 million previously authorized for fiscal year 1967, the Act authorizes appropriation of the additional sums of $450 million for fiscal year 1968, $700 million for fiscal year 1969, $1.0 billion for fiscal year 1960, and $1.25 billion for fiscal year 1971. This constitutes additional authorizations of $3.4 billion over the next four fiscal years. Dollar ceiling limitations on project grants have been stricken from the existing law; however, the Federal share of the total cost of projects is still not to exceed 30 percent, unless the State agrees to pay not less than 30 percent of the costs of all projects for which Federal grants are to be made from an annual allocation for the construction of projects in that State, in which event the Federal share can be increased to a maximum of 40 percent of the total cost. Furthermore, if a State agrees to pay not less than 25 percent of the total cost of all projects for which Federal grants are made in the State from an annual allocation for project construction therein and if enforceable water quality standards have been established for the waters into which the project discharges in accordance with the water quality enforcement provisions of P.L. 660, as amended, in the case of interstate waters, and under State law in the case of intrastate waters, the Federal maximum share can be increased to 50 percent of the total project cost. The adequacy of enforceable water quality standards established by the State for intrastate waters shall not be subject to review by the Secretary.

The Act makes provision for reimbursements in varying degrees to State and local entities, under conditions set forth in the Act, for the Federal share of the costs of construction of sewage treatment works undertaken in advance of the availability of Federal funds. This section, however, for obvious reasons, is not to be construed to constitute a commitment or obligation of the United States to provide funds or to make or to pay any grant for such project; and by the enactment of this new provision, the Congress has no intent to create a preferred class of projects that would be entitled to reimbursement at the higher percentages provided for in this year's Act. The section was written into the Act on my motion and is consistent with the separate bill on reimbursement which I had introduced.

ENFORCEMENT OF WATER QUALITY STANDARDS FURTHER STRENGTHENED

Enforcement provisions have been slightly changed also. It shall now be the responsibility of the chairman of a conference to give every person contributing to the alleged pollution or affected by it an opportunity to make a full statement of his views to the conference which may be required to be filed in writing rather than given orally in every instance.

The amended enforcement provisions further provide that at the request of a majority of the conferees in any conference, the Secretary is authorized to request any person whose alleged activities result in discharges causing or contributing to water pollution to file with him a report based on existing data, furnishing such information as may reasonably be requested as to the character, kind, and quantity of such discharges by the person filing this report; however, no one is to be required in such report to divulge trade secrets or secret processes, and all information reported is to be considered confidential for most purposes. If a person required to file a report fails to do so within the time fixed by regulation, he may be subject to forfeiture of up to $100 per day. The House conferees clearly spelled out in their statement on the conference substitute bill that it is their intention that nothing in this new additional enforcement provision shall be construed to require any person to submit a report to the conference if he does not wish to do so; if, however, he agrees to file such a report and thereafter fails to do so, he shall be subject to the penalties provided for in the new provision.

This year's Act amendments on enforcement procedures also declare that it shall be the responsibility of the hearing board to give each person contributing to the alleged pollution or affected by it an opportunity to make a full statement of his views to the hearing board and that in connection with any hearing the Secretary is authorized to require any person alleged to be contributing to water pollution to file a report concerning the character, kind, and quantity of such discharges and the measures taken by the pollutor to abate the pollution. Penalty for failing to comply is $100 per day.

OIL POLLUTION CONTROL

Of interest to our coastal State, this year's Act amends the Oil Pollution Control Act of 1924 by transferring the administration of that Act from the Secretary of the Army to the Secretary of the Interior, by making it unlawful for any person to cause or permit the willful or grossly negligent discharge from any boat or vessel of oil by any method, means, or manner into or upon the navigable waters of the United States and adjoining shorelines of the United States, by increasing fines and penalties, and by establishing certain arrest procedures for oil pollutors.

INDUSTRIAL INCENTIVES STUDY

This year's Act also authorizes the Secretary of the Interior to make a full and complete investigation and study of methods to provide incentives for the construction of facilities and works by industry to reduce or abate water pollution, including possible use of tax incentives. This will be a very important study.

I think from my brief discussion of this year's Act that everyone can see the magnitude of it.

OTHER FEDERAL ACTS PROVIDING WATER POLLUTION CONTROL ASSISTANCE

In addition to P.L. 660, as amended, there are also other Federal financial assistance programs in this area. Federal grants for the construction of water pollution control, water supply, and related facilities can be obtained under the Housing and Urban Development Act, the Public Works and Economic Development Act, the Demonstration Cities Act, the Consolidated Farmers Home Administration Act, and, although not applicable to Florida, the Appalachian Regional Development Act. Loans are also available under the public facilities loan program.

EXEMPTION FROM INVESTMENT TAX CREDIT SUSPENSION

The recognition by Congress of the need for industry to control its pollution was reflected this year in the suspension of the 7 percent investment credit under the Federal tax code. The legislation, as enacted, specifically exempts from this suspension those capital expenditures for facilities, installations, machinery, and equipment which contribute to the elimination, control, or prevention of air and water pollution.

RECENT FEDERAL LEGISLATION ON ADEQUATE WATER SUPPLIES

The increasing awareness of the "water famine" has recently been reflected in the enactment of the Northeast Water Supply Act, the enactment of the Water Resources Planning Act, the creation of a Water Resources Council, the maintenance of full appropriations for the small watershed development program, the provision for Federal grants and loans for basic water supply facilities, and in several other important actions.

THE EXTENT OF THE FEDERAL EFFORT

I have directed my remarks up to this point to the Federal effort to control or abate water pollution and to maintain sufficient water supplies, but I am not trying to make you think that the Federal Government has done, is doing, and will do everything that needs to be done throughout the Nation in this field. That is not and should not be the role of the Federal Government in this program. The Federal Government's efforts have been enormous, but, in my opinion, we are probably very close to the maximum extent of the Federal effort.

There are several philosophies on the Federal role in controlling water pollution and in insuring adequate water supplies. There are those who say the Federal Government should do everything, and there are those who say it should do nothing. There are those, like myself, who say that the Federal Government does have a responsibility in these areas, but I also say the programs will be a success only if all levels of government assume their proper responsibilities.

In my opinion, the Federal Government is largely meeting its responsibilities in the construction of sewage treatment works and pollution abatement enforcement. You have seen in the Water Quality Act and in the Clean Waters Restoration Act several distinct trends which, I am sure, are obvious to you. They are trends toward greater State participation; toward full cooperation among all levels of government; toward bringing the largest single source of pollution—industry—into the picture through incentives; and toward greater reliance on the States to enforce water quality standards.

The recent increase in the Federal effort is not a sign that the Congress is permitting the Federal Government to take over responsibility for the entire program. Rather the intent runs, in my opinion, in the opposite direction. As one of the drafters and principal supporters of workable Federal water pollution control legislation, I say to you that the non-Federal interests must now assume their rightful responsibilities and fully implement effective programs.

THE NEEDED FLORIDA EFFORT IN THE FUTURE

My purpose here today is not only to tell you what the Federal Government has done but also to leave with you some thoughts on what the future role of the State of Florida should be in these programs, if Florida is to meet its responsibilities.

Toward such an end, I offer the following proposals for your consideration in the course of this week's conference:

1. *I propose the creation by the next session of the Legislature of a Florida State Natural Resources Commission,* headed by a person with Cabinet rank and with full responsibility for air and water pollution control and natural resources development programs. It is time to elevate these programs from the bureaucratic jungles of Florida boards to their proper level in responsible State government.

2. *I propose State and Federal tax incentives* for any industrial facilities, installations, machinery, or equipment, which contribute to pollution treatment and provide for the elimination, control, or prevention of air and water pollution, provided those units meet certain standards established by the appropriate Federal and State agencies.

3. *I propose the appropriation by the Legislature of adequate funds* to permit the State to meet its responsibilities under Federal law and to take maximum advantage of the Federal grant program to abate water and air pollution and also to permit the State to take such other action as may be needed to attack air and water pollution, including the training of additional State technical personnel, provided such trainees agree to remain in the State's employment for at least a minimum specified period of time.

4. *I propose the requirement by State statute that all county, metropolitan area, or regional planning agencies must provide for minimal air and water pollution control and abatement requirements.*

5. *I propose that all developers of industrial parks and housing developments of specified size to be constructed in the future by required to construct adequate waste treatment works to treat the discharge from such industrial facilities and residences.*

There are, of course, other proposals which could be made, but I consider the ones which I have just enumerated to be the most important, although their relative importance is not necessarily in the order in which I presented them. Unfortunately, I cannot be with you for the duration of your conference, but your consideration of these and other proposals should be a worthwhile effort. Although the realization of my proposals will require a substantial expenditure by the State, I am confident that the benefits which would accrue to the State, if these proposals are carried out, would more than offset the expenditures. Furthermore, I think these programs should have a higher priority than some of the items we now find in the Florida budget.

IN CONCLUSION

The Federal Government has done much to control and abate water pollution and to provide measures to insure against inadequate water supplies, but the responsibility lies now, more than ever before, on the State and local governments, public and private organizations, industries, and concerned citizens.

It will be groups like the Florida Pollution Control Association and the American Water Works Association and citizens like yourselves on whom will rest the ultimate success of this effort. Like any governmental program, the realization of the goals envisaged in the enactment of statutes and ordinances to rectify our critical water problems ultimately rests with the people in a free society.

Hon. John E. Fogarty

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, I wish to join with my colleagues in paying tribute to the late JOHN E. FOGARTY who so ably represented his native State of Rhode Island in the U.S. Congress for the past 16 years.

Those of us who served with JOHN were well aware of his determination to make this country the world leader in all facets of health. I am sure that many of the great advances this country has made in the research on the causes of many of our killer diseases can be attributed to the determination of JOHN FOGARTY in seeing that sufficient moneys were made available to our doctors and scientists.

JOHN FOGARTY was every inch a gentleman, and a most unassuming man; in spite of the many hundreds of awards which were conferred upon him by grateful private health organizations. His presence in this body will be missed, and it is hoped that the many excellent research programs which he nurtured will be carried on by future Congresses.

Policy Statement, American Israel Public Affairs Committee

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD the policy statement of the American Israel Public Affairs Committee, adopted at the Tri-State Regional Conference on December 18, 1966. This organization is one which concerns itself with maintaining the friendship and good will between the United States and Israel.

POLICY STATEMENT

(Adopted at the Tri-State Regional Conference of the American Israel Public Affairs Committee, Roosevelt Hotel, New York, December 18, 1966)

We welcome continuing evidence of the United States Government's commitment to strengthen Israel's defenses, to preserve Israel's sovereignty and to oppose aggression in the Near East.

But we note with deep concern the continuing Arab preparations for war against Israel, the intensification of guerrilla terrorism directed against her people and the costly and dangerous escalation of the arms race.

Thus, we deplore the UN resolution of November 25 which censured Israel while ignoring the provocative Arab terrorism against her. We fear that this resolution, which was supported by our Government, has encouraged Arab aggressors to prepare for new murderous assaults.

To meet the growing danger, we call for a stronger and more dynamic U.S. policy in the Near East in order to reverse the present drift towards war and to transform the UN armistice agreements into an Arab-Israel peace.

1. We recommend that our Government now seek cooperation of the Soviet Union to bring about a relaxation of tensions in the area, specifically by an agreement to reduce the flow of arms and to create a climate which will foster direct negotiations between the Arab states and Israel. Pending such an agreement, we urge our Government to ensure maintenance of the arms balance in the region.

2. We urge a Congressional inquiry to study and recommend legislative and administrative measures to curb the efforts of the Arab states to boycott American business interests.

3. We reaffirm the conviction that the only logical solution of the Arab refugee problem is resettlement in Arab lands. We submit that the United Nations should censure continuing efforts by Arab leaders to mobilize the refugees into an army to wage war against Israel. It is intolerable that UNRWA funds, contributed for refugee relief and rehabilitation, should be diverted to subsidize the Palestine Liberation Army, which is organized for the destruction of Israel.

4. We support continued economic aid for Israel and the Arab states, stressing assistance which will develop agriculture, water resources and the employment and settlement of refugees.

5. We believe that all outstanding issues between Israel and the Arab states can be swiftly resolved by direct negotiations and we urge our Government, in concert with

other great powers, to summon the Arab states to the peace table with Israel. There is no effective alternative.

The United States Should Get Out of Vietnam

EXTENSION OF REMARKS
OF

HON. THEODORE R. KUPFERMAN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. KUPFERMAN. Mr. Speaker, with the war in Vietnam escalating, and with the President's announcement in his state of the Union message that we now have nearly 500,000 troops there—see CONGRESSIONAL RECORD of January 10, 1967 at page H 29—more questions are being raised, as I have previously raised them, about whether the U.S. presence in Vietnam serves a useful purpose.

A recent statement in the December 23, 1966, issue of "Commonweal: A Weekly Review of Public Affairs, Literature and the Arts," published in my district by that well-respected lay-edited Catholic Journal of Opinion, deserves analysis, and I bring it to the attention of my colleagues:

GETTING OUT

The United States should get out of Vietnam: it should seek whatever safety it can for our allies; it should arrange whatever international face-saving is possible; and, even at the cost of a Communist victory, the United States should withdraw. The war in Vietnam is an unjust one. We mean that in its most profound sense: what is being done there, despite the almost certain good intentions of those doing it, is a crime and a sin. At a moment when claims of military victory are drowning out quiet admissions that the war cannot be settled for years, this conclusion must be affirmed and reaffirmed.

We have not reached this conclusion because we are pacifists. The moral problem of warfare is bound up with the moral problem of the existence of evil. And the almost incredible apparitions of evil mankind has witnessed within the last half-century, in this nation as well as others, convince us there are moments when force must be met with force.

Nor do we believe there is nothing at stake in Southeast Asia. Vietnamese—on both sides—are fighting for their lives and for their right to live unmolested in their homeland. The threat presented by China, swiftly adding nuclear weapons to its chauvinist ideology and cult of the will, is a real one, not the product of anti-Communist imaginations. To measure these stakes against one another, and against the horror of the war, is a miserable and difficult task, but it is not "blasphemy, while the killing goes on," as a few have maintained. It involves surveying a host of often contradictory political and military reports; it involves numerous subjective judgments; but it remains the only way we know for men to make moral decisions in an ambiguous world.

Measured not by declared intentions but by past performance, a Communist victory in South Vietnam would most likely mean a rigorous dictatorship, bloody liquidation of dissenters, and a certain amount of social and economic reform. By the same standards, a Saigon victory will probably mean a looser form of authoritarian government, suppression of radical dissent rather than its liquidation, and little alteration in the status quo. On the level of world politics, a U.S. withdrawal could lead China to tragically miscalculate American determination in some "eyeball to eyeball" nuclear confrontation of the future. But to be honest, one must admit that any nearly total success of American policy in Vietnam is as likely to lead to a tragic miscalculation on our side. Already some dismiss all too cavalierly China's willingness to fight beyond its borders. However important the fate of the Vietnamese people and the balance of power in Asia, it seems they are but ambiguously served by American policy.

In brief, the outcome in Southeast Asia will make a difference. But not the decisive difference needed to justify a war which may last longer than any America has ever fought, employ more U.S. troops than in Korea, cost more than all the aid we have ever given to developing nations, drop more bombs than were used against the Japanese in World War II, and kill and maim far more Vietnamese than a Communist regime would have liquidated—and still not promise a definite outcome. The disproportion between ends and means has grown so extreme, the consequent deformation of American foreign and domestic policy so radical, that the Christian cannot consider the Vietnam war merely a mistaken government measure to be amended eventually but tolerated meanwhile. The evil outweighs the good. This is an unjust war. The United States should get out.

But is there not a "third way," a negotiated compromise which means less than total success and less than total failure for both sides? Indeed over the years numerous "third ways" have been proposed. An independent South Vietnam joined to the North (and to the U.S.) in a great Mekong River development project was one such conception. Today many contemplate a neutralized Vietnam with a coalition government in Saigon including the National Liberation Front—another "third way." But none of these proposals has become a reality. And none appears likely to do so. More and more doubts surround the expressed willingness of Washington to negotiate a settlement; but there is even less evidence that Hanoi has wanted to talk, at least since 1965 when near-victory slipped out of Vietcong fingertips. To demand a negotiated settlement, supporting the war only in the meantime and only to this end, makes sense if a negotiated settlement is truly in sight. Otherwise, the "meantime" stretches out into five, eight, ten years. One's moral and political judgment is rendered hostage to the fanaticism of Washington and Hanoi.

This does not mean that opponents of the war should cease to point out and encourage every move toward settlement. They should simply make clear that the basic injustice of this war consists in things other than whether it is the fault of Hanoi or Washington that an attempt at negotiation may break down. There are things that Washington could do, even within the narrow range of its present policy, to bring the Vietnamese war closer to an end:

The holiday cease-fire should be prolonged as long as possible. The bombing of North Vietnam should be halted, and the Russians assured there will be no threat of renewing it if they apply all their influence to bringing Hanoi to the negotiating table.

The Saigon military regime tail must cease to wag the U.S.—or for that matter, Vietnamese—dog. There is currently much talk about a "new" war in Vietnam, one in which U.S. troops are winning the day militarily. If only, adds a weak, small voice, social and political reforms can now get under way! That weak, small voice has been repeating the same message for years. And despite the current burst of enthusiasm for retraining and redeploying the South Vietnamese army for "pacification" purposes, there is little hard evidence that this latest effort will be different from past ones. Saigon must dedicate itself to a genuine land reform benefiting the peasants, pledge the maintenance of land distribution carried out by the Vietcong, and develop an honest administration.

At the least, measures such as these will benefit the Vietnamese people; at the most, they might strengthen the Saigon government to the point where the Vietcong would decide it had better negotiate quickly before all is lost, and where Saigon itself would consider a coalition government a possibility.

Saigon need never take such steps, of course, as long as it knows the United States will stay no matter what. Washington should privately warn the Ky administration that it had better produce results soon lest the U.S. reconsider its commitment. Rumors of such a warning might indeed delay negotiations while the Vietcong and Hanoi waited to see whether Saigon could do the job, but at present it looks as if the Vietcong and Hanoi are doing exactly this anyway. Furthermore, such rumors could prepare U.S. public opinion for greeting any eventual withdrawal as justified, not because "our boys" couldn't win but because the Saigon government didn't do its share.

Finally, the United States must de-escalate its settlement demands. So must Hanoi. But de-escalation on the American side would mean a frank and open willingness to negotiate with the National Liberation Front. It would mean acceptance of the fact that there must be a recognized role for organized left-wing and Communist forces in the political life of any post-settlement South Vietnam.

These suggestions are not new nor are they at all surefire. Should they fail, they do not justify going on with this immoral war. They are simply the very least that can be done.

Tribute to Charles Burchfield

EXTENSION OF REMARKS
OF

HON. RICHARD D. McCARTHY

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. McCARTHY. Mr. Speaker, on Monday, January 9, 1967, the world lost a blazing talent with the death of Charles Burchfield. It was my honor and privilege to count this master watercolorist among my constituents in the 39th District of New York State and to assist in the dedication last month in the opening of the Burchfield Center at the State University College of New York at Buffalo.

Charles Burchfield was a reticent, bespectacled man who lived and painted in a modest little studio at an unspectacular address in Gardenville, N.Y. He never grew a beard, or abandoned his family to expatriate to Europe, he took buses when he had no car, he raised five children during the great depression and he worked 9 years in a wallpaper factory.

Yet this man has left us an ecstatic, flamboyant wealth of painting. He was a original, an artist of singular vision, a wandered, an explorer, a paitent watcher when he undertook his mission of painting—the first frond of a wood fern, the black terror of a half-iced grotto in March, the irridescent dragonfly's arch through the summer's languor were his ardent obsessions.

His vision of our world, be it the streets of the city, the barren unknown of the "north" beyond the woods, a sagging melancholy house, the terrifying power of the searing sun at high noon in September, or the gentle fantasy of the wondering child with his check on the fragile network of a half-spun spider web were where the real world lay for him.

Charles Burchfield has given his inner visions back to us; we the myopic inhabitants who can see when we are shown, and can remember when one of us can retain his child's eye and endure the tortures of a visionary.

He said last year:

> If I could be assured of a fairly good physical condition and a sound mind, I think I would like at least another half century in order to carry out some of the ideas fermenting in my brain.

The world has been the beneficiary of his 73 years of awakening and recreating. I wish he could have had that additional 50, for with his death comes the profound realization that there will never be another Burchfield painting.

Phase Out Veterans Programs?

EXTENSION OF REMARKS

OF

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. ROUDEBUSH. Mr. Speaker the distinguished commander in chief of the Veterans of Foreign Wars, Leslie M. Fry, has written an article which appeared in the current issue of the Veterans of Foreign Wars magazine expressing concern about the administration's opposition to certain veterans' programs. I believe the Members are especially conscious of veterans' programs at this time because of the Vietnam conflict and I would like to commend to their attention this article by Commander Fry:

PHASE OUT VETERANS PROGRAMS?—JOHNSON SAYS "YES"—CONGRESS SAYS "NO"

(By Leslie M. Fry, VFW commander in chief)

Winston Churchill once said that he had not taken office to preside over the liquidation of the British Empire. Churchill stated a position normally taken by a leader charged with responsibilty for the success of a mission.

There are examples. however, of the opposite view and it is possible to point to an example of a national leadership and an administration that has made a beginning toward liquidation of a major federal responsibility that touches the lives of over a third of our citizens: namely, the Veterans Administration and its programs.

The recent adjournment of the 89th Congress did more than put a stop to the deliberations of the Senate and the House of Representatives for the year 1966. The adjournment brought a temporary halt to the Johnson Administration's two-year drive to tear down the structure of veterans programs and set the stage for the gradual elimination of all veterans benefits and programs.

This is a serious charge but let us look at the general orders the Great Society has laid down concerning veterans programs. Taking the results of what the Johnson Administration has done over the past two years, or attempted to do, it is possible now to go back and reconstruct a 1965 White House directive that could have read as follows:

1. Close down veterans hospitals and VA regional offices.
2. Launch a major attack on veterans employment preference in certain federal agencies.
3. If you have to give the Vietnam veterans a GI Bill, keep it strictly "cut-rate."
4. Begin dismemberment of the Veterans Administration by placing administration of any GI Bill in the Department of Health, Education and Welfare.
5. Oppose any improvement in veterans, widows and orphans pensions.
6. Close the national cemeteries. (Note: 1966 amendment to this instruction—keep them closed no matter how many men die in Vietnam.)

This indictment of the Johnson Administration has been drawn on the basis of its actions over the past two years. There are, unfortunately, no compensating actions or declarations that would soften in any way the harsh outlines of this reconstructed directive to liquidate veterans programs. In fact, since passage of the 1966 GI Bill, the Congress and the veterans world have been subjected to chronic complaints from the White House over its cost.

There have been saving factors but they have not come from the Administration. They were the result of actions by Congress. Congressional pressure made it impossible for the Johnson Administration to proceed with its VA hospital closing program.

The Senate refused to approve the Hays Bill, which at the request of the President would have eliminated all veterans preference from United States agencies having international responsibilities. How bad was this bill which the President and his Secretary of State fought to have passed? A noted Washington reporter called it "a stench in the nostrils of the nation."

The GI Education Bill recommended by the President was a pitifully cut-rate attempt to limit the application of benefits to a few thousand of today's GIs. And the general tenor of the Administration's attitude with respect to veterans was clearly seen in its recommendation that responsibility for administration of veterans' education be placed in the Department of Health, Education and Welfare. This effort was consistent with the Administration's intent to depress veterans' programs below the level of the general social welfare programs of the Great Society as a preliminary to eliminating them.

And what about veterans, widows and orphans pensions? Some 56,000 widows of Spanish-American War veterans, whose average age is 84, receive the princely sum of $65 a month. The Johnson Administration killed a House-passed pension bill that would have raised this pension to $70 per month.

Did the Administration see any merit in the pension program? A total of 188 bills were introduced in the House to provide increases in veterans pensions. Most of these dealt with needed technical improvements in the program and increases in payments necessary to keep pace with the increasing cost of living.

Was there any merit in any of these bills? Not to the Johnson Administration. The Administration's spokesman went before the House Veterans Affairs Committee, reviewed all 188 bills, and opposed every last one of them. When the House Veterans Affairs Committee saw fit to improve a minimum improvement in the pension program, the bill was passed in the House over the opposition of President Johnson.

But this minimum bill was never taken to a vote in the Senate, principally because Senator Russell B. Long of Louisiana, rather than pressing for action as Chairman of the Senate Finance Committee, wore his "Majority Whip cap" in the final days of the 89th Congress and the lack of a veterans leader in the Senate prevented the bill from coming to a vote.

Although the Bureau of the Budget had sought for years to effect the closing of our national cemeteries, President John F. Kennedy was the first to make this a Presidential policy. This 1961 policy decision was reaffirmed by President Johnson. Several months ago he had a review made of the policy of closing our national cemeteries and, despite the fact that men killed in action in Vietnam are being denied burial in our national cemeteries, the President has not seen fit to make a change in policy. In fact, the Administration fought attempts initiated by the Veterans of Foreign Wars in the Second Session of the 89th Congress to appropriate $250,000 to reopen Beverly National Cemetery in New Jersey and Fort Rosecrans National Cemetery in California.

The actions of the Administration speak for themselves.

In the light of the Administration's dedication to the suppression of veterans programs and benefits, the coming session of the 90th Congress takes on significant meaning. It is necessary to take a long view. The coming battle of veterans versus the Administration will encompass a two-year period that has already begun and will extend through two Congressional sessions and up to election day 1968.

But the significant clashes will come in the first session of the 90th Congress. As the election of 1968 draws nearer, the Johnson Administration may be expected to become more pliable—if the pressure is kept on it.

Three matters loom large at this point. They involve the proposed Senate Committee on Veterans Affairs, the reopening of the national cemetery program, and passage of equitable compensation and pension improvements. These are way stations on the road that veterans must take to blunt the Administration's efforts to reduce the scope of veterans' programs as the first step in their gradual elimination. It must be borne in mind in this struggle that we cannot expect to have the advantage of facing an Administration effort in which all the cards are placed on the table.

The intent to eliminate veterans' programs will never be acknowledged. What will be sought, however, will be development of a climate which will eventually lead to general belief that the veteran can be better taken care of through participation in social programs designed to benefit all of our citizens.

The question in 1967 is what can be done to halt this process of erosion of veterans benefits and reverse it? First, each veteran must decide whether this whole process or any part of it is of any moment to him or to his buddies.

There is much that can be done if these issues are of concern to you. If they are, or if even a single of these issues is important to you, the eventual reversal of this administration's policy becomes simply a matter of communication.

Communicate first with the President, who sets the policy. Communicate secondly with the Administrator of the Veterans Administration, but remember he's only carrying out orders from the Budget Bureau planners and the President.

But your most effective communication will be with your senators and representatives. When they speak in sufficient numbers they can make even the President listen.

In the coming months I will outline specific issues as they come up for decision in the Congress.

The immediate task however is to fire a broadside that will put the Administration on notice that a reversal of its policies is in order.

Who Owns the Deep Blue Sea?

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. PELLY. Mr. Speaker, in view of America's vast and immensely valuable stake in the resources of the ocean, I am introducing legislation to establish an extended fishing zone beyond the present 12-mile boundary. The seaward boundary lines under my bill would follow the 200 meter depth contour, except that in no case would such boundary be less than 12 miles from the coastal shore. In other words, the new fishing zone would include control of the fishery above the Continental Shelf—resources of which shelf under international convention belong to the United States.

Edward W. Allen, chairman of the American Bar Association's Committee on the Law of the Sea, in an article which appeared in the January 8, 1967, Seattle Post-Intelligencer, reviews history and suggests the importance of offshore research and protection of coastal fisheries from foreign raiders.

Under unanimous consent I include the text of the article by Mr. Allen which points up the need for passage of my bill:

WHO OWNS THE DEEP BLUE SEA?

(By Edward W. Allen)

Seattle can truthfully boast that there is no more suitable area in the world than Puget Sound for an oceanographic research center.

Here are protected fresh and salt waters, and beyond is a continental shelf which in turn slides off into the biggest and deepest of all the seas and stretches from the Arctic to the Antarctic and a third of the way around the world.

Here a great university has already pioneered the way with its Department of Oceanography, its College of Fisheries, its many engineering branches and a School of Law now active in the international field.

Still one may pertinently inject the question: Is the research worthwhile? Who will reap the profits?

Worthwhile? Yes, the stakes are big enough to fight for.

Consider three categories: the continental shelves, the deep sea bottoms and the waters over both.

On our nation's continental shelf it is reputed that 8,250 oil wells have already been drilled, that oil companies have expended over six billion dollars in the field, much of it into the coffers of state or federal treasuries, and oil companies know their business pretty well.

Referring only to one item of deep sea bottoms, it is estimated that more than one and a half trillion tons of manganese nodules await the miner, with more continually forming. Knowledgeable firms like Westinghouse and General Electric are spending huge sums devising means to exploit the depths.

In the sea itself there are 166 million tons of solids in each cubic mile of water. Some articles, bromide, for instance, are already being economically extracted, and the cost of making sea water drinkable is steadily being decreased. There are also millions of tons of edible life swimming or floating in the sea.

Thus the continental shelves, the deep sea bottoms and the waters over both entice the researchers and the prospectors, but it must also be noted that each of the three general areas has its legal as well as physical problems.

As to the continental shelves, the Truman Proclamation of 1945, asserting ownership of our shelf, was followed by the broader Geneva Treaty of 1958. This met with practically universal approval so that it is now recognized that each coastal nation owns its adjacent continental shelf.

This has given a sense of security to the oil companies in the areas where they are drilling, but there still are two unsolved legal problems: 1. Determination of the relative rights of navigators, fishermen and oil or other bottom operators, and 2. How far does the continental shelf extend?

The treaty provides "to a depth of 200 meters or, beyond that limit, to where the depth of the superjacent waters admits of the exploitation of the natural resources of the said areas." Where is that?

As to the deep sea, it begins where the continental shelf leaves off, wherever that may be. That may or may not be a minor matter, but one which unquestionably is major is what and how rights can be obtained or maintained as to deep sea bottoms.

For generations lawyers have argued whether the oceans belong to everybody or to nobody. And what about under the sea? Some able mining lawyers contend that sea bottoms should be subjected to location claims analogous to miners' practices in the Old West. It has been suggested that citizens of a nation should make claims and certify them to their own government which should defend them.

So here are enormous potentials with no present solution as to how advantage can be taken of many of them. Appropriate law organizations are being appealed to to solve these problems and it is hoped will produce answers.

Next come the fish. And here lie more legal complications. A few hundred years ago there was no such thing as "freedom of the seas." By Papal Bull, modified by treaty, Spain purported to own the Pacific Ocean and Gulf of Mexico, while Portugal claimed the South Atlantic and the Indian Oceans.

When Queen Elizabeth ruled England the British privateers (some called them pirates) like Sir Francis Drake, laughed at Spain's exclusive claims, while the Dutch sought to break into the Portuguese monopoly of the East Indies spice trade and at the same time to maintain their own practical monopoly of the herring fishery off the British and Scottish coasts. So in the time of Elizabeth's successor, up rose a great Dutch lawyer and proclaimed freedom of the seas for both navigation and fishing.

It is as desirable today as then that there should be the greatest freedom of navigation, but though in the days when vessel propulsion was only by oars or sails fishing was naturally limited in scope, today's remarkable mechanical progress enables huge high-powered fleets of one nation to raid and largely destroy the coastal fisheries of any other nation anywhere in the world. The Pacific Northwest knows this only too well.

This is not "freedom," it more nearly resembles "piracy." One wonders whether it is impotence or indifference which leads some to say that there is nothing we can do about it, it's the law.

Certainly such raids are in violation of the conservation commitment which the Geneva fisheries treaty does call for, regardless of otherwise wordy weakness. Besides, international law is more flexible than statutory law. Assertion, firmness and justice can play important parts in its interpretation and making.

Unfortunately, our government authorities ignored the fact that the two Truman proclamations which were issued at the same time were correlated. The continental shelf proclamation, while asserting title to adjacent shallow sea bottoms, avoided interference with navigation but did not govern fisheries, whereas, the concurrent fisheries proclamation, while similarly avoiding interference with navigation, was designed to protect our fisheries in these same areas.

Some people think that the reason for this oversight is that there were certain of our own American fishery interests which were as anxious as the Japanese or Russians to raid coastal fisheries of other nations.

The Truman fisheries proclamation was not, as its opponents pretend, a mere conservation gesture. The accompanying White House release asserted that it would now enable the government to protect Alaska's salmon, yet Mr. Truman's Secretary of State not only failed to utilize the proclamation but also refused to follow Cordell Hull's assertion of historic rights and provide fishery protection in the peace treaty with Japan.

To be sure, there was a subsequent fisheries treaty with Japan and Canada (still in effect). It is better than it was feared it might be but still it does not adequately include the rights to which this country is entitled. Much of the difficulty lay in the persistent refusal in certain quarters to recognize the basic distinction in principle between facilitating navigation and maintaining ocean fisheries.

In this situation, the American Bar Association a couple of years ago adopted a resolution pointing out the distinction between freedom of the seas for navigation and management of the sea for the protection of fisheries. Now, however, the government itself, in connection with the recent 12-mile bill in Congress, has given this important recognition.

It is to the interest of the Pacific Northwest that the distinction just pointed out should be developed and the valuable coastal fisheries off these shores should be protected against being raided from abroad regardless of distance.

Oceanography is an enticing subject, it has many facets and the resources of the seas are enormous. All phases of the subject should be subjected to exacting research, and in this connection neither the important legal questions nor the other problems should be left wholly to government office holders to consider.

United States Gives Poland Plan To Cut Debt

SPEECH

OF

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. ASHBROOK. Mr. Speaker, the Cleveland Plain Dealer on December 30, 1966, carried an interesting item which is illustrative of the present U.S. policy to kill the Communist countries of Eastern Europe with kindness. While Poland actively aids Ho Chi Minh in North Vietnam to kill and cripple American servicemen and Vietnamese in his campaign of terror, the United States looks the other way and cancels several million in Polish debt payments, due the United States in the coming year.

This much is certain: a review will be made in the 90th Congress of the many facets of this insane policy with a view to providing for the American voter a compelling argument for changing such policy by changing administrations in 1968.

I ask that the item, "United States Gives Poland Plan To Cut Debt," be inserted in the RECORD at this point:

UNITED STATES GIVES POLAND PLAN TO CUT DEBT

WARSAW, POLAND.—U.S. Ambassador John A. Gronouski handed Poland yesterday a plan to cancel several million dollars in debt payments, due the United States in the coming year, by spending the money in Poland.

Gronouski presented the proposal to Deputy Foreign Minister Jozef Winiewicz and Foreign Trade Minister Witold Trampczynski.

A U.S. Embassy spokesman said Gronouski had received a go-ahead from Washington to discuss the financing of "mutually beneficial" projects with Polish obligations.

The nature of the projects, requiring eventual approval by Congress, and the price tag, were not disclosed. There was no immediate reaction from the Polish government.

The proposal was described as an American initiative within President Johnson's policy of building "bridges of understanding" to Communist nations of East Europe.

Gronouski has been holding informal talks here searching for mutually beneficial projects to help Poland work off its debt to the United States. Heavy 1967 installments fall due starting Monday.

The plan was said to be a "package" of projects including some buildings and public works such as hospitals or a nursing institute, some technical equipment, and some research projects.

Technical equipment under discussion has included tape-recording studios for the teaching of English.

The Late Representative John E. Fogarty

EXTENSION OF REMARKS
OF
HON. WILLIAM L. ST. ONGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. ST. ONGE. Mr. Speaker, the sudden and untimely death of our beloved colleague, Representative John E. Fogarty, of Rhode Island, was a grievous shock to those of us who knew him personally and worked with him in the U.S. Congress.

He was an ardent and conscientious worker who, in his 26 years of service in the House of Representatives, gained great stature as a leader and much prestige as a statesman. Many of us in the Congress looked to him for guidance and advice on vital problems facing the Nation. Only 2 days before his death, I came down to Washington with him on the plane from Providence, R.I. He seemed to be in excellent spirits and looked forward to the new session of Congress with much expectation and high hopes.

Congressman Fogarty was a man of humble origin, a great humanitarian, and a true servant of the American people. His services to the Nation in the fields of health and education are well known and have earned for him universal recognition.

The Nation has lost a great patriot, a capable leader, and a fine citizen. Rhode Island has lost a very able and devoted son, a man known for his honesty and integrity. I was privileged to know John Fogarty for a number of years and regarded him as one of my closest friends and advisers. Now I have lost this very sincere friend and shall miss him, his wise counsel, his good judgment, for many years to come.

To his wife Louise and to his daughter Mary I extend my sincerest condolences in these moments of their bereavement. We share their sorrow and their great loss.

Mr. Speaker, I wish to insert into the RECORD the text of a statement issued by the Honorable John M. Bailey, chairman of the Democratic National Committee, on the death of Congressman Fogarty. His statement follows:

STATEMENT BY DEMOCRATIC NATIONAL COMMITTEE CHAIRMAN JOHN M. BAILEY ON THE DEATH OF CONGRESSMAN JOHN E. FOGARTY OF RHODE ISLAND

The sudden passing of Congressman John E. Fogarty of Rhode Island will be felt as a great void among those in our country who care about the health and welfare of people everywhere.

As an individual, Congressman Fogarty believed that his government should care about people who lacked access to good health and adequate opportunity. As Chairman of the Congressional subcommittee that appropriated funds for the Departments of Labor and Health, Education, and Welfare, he provided the leadership that gave his fellow man the opportunity to live a healthier and richer life. His only regret was that he could not do more.

Congressman Fogarty was a Democrat. He was a man of such great integrity and personal courage that he made all of us proud that he served as a member of the Democratic Party.

We shall miss his presence. But his work will live on in those millions of people who have a better life because of his outstanding efforts in the Congress.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

What Makes Frank Sullivan Run?

EXTENSION OF REMARKS
OF
HON. BIRCH E. BAYH
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1967

Mr. BAYH. Mr. President, an outstanding Hoosier—Frank Sullivan, of South Bend, Ind.—has been elected president of the 1967 Million Dollar Round Table. The youngest person ever so honored, Frank has made an outstanding record in the life insurance field and in the many other endeavors which he undertakes with enthusiasm and dedication. He has been president of the South Bend Life Underwriters Association, chairman of the board of editors of the CLU Journal, a panelist on the Practicing Law Institute, a bank director, and guest faculty member at different universities.

However, it is not Mr. Sullivan's success as a businessman but his remarkable personal attributes to which I wish to invite the attention of the Senate. For many years I have known this man and have admired his strength of character and moral fiber. He has committed himself to a self-disciplined life with well-defined goals, and he has the courage and will to follow those commitments.

The November issue of the Fielder, which is published by American United Life Insurance Co., contained a feature article entitled "What Makes Frank Sullivan Run?" which well described these qualities. I ask unanimous consent, Mr. President, that certain selected excerpts from the article be printed at the conclusion of my remarks.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

WHAT MAKES FRANK SULLIVAN RUN?

Frank E. Sullivan, CLU, might be compared to football's "man in motion," the halfback on the move as others are still poised at the line of scrimmage.

Why this is true can be answered in two ways. First, Frank Sullivan, at 42, has been elected President of the 1967 Million Dollar Round Table, and is the youngest man ever to serve in that capacity.

For the second answer, you would have to see Frank in action during his "must" commitments of the day.

What are these commitments? One is that Frank devotes at least one hour a day, six days a week, to a physical fitness program, the highlight of which is the running of a mile a day. Some men might call a daily mile a way of "keeping in shape." But those who know Frank Sullivan best recognize it as another manifestation of his dynamic self-discipline.

The stress he places on this commitment is reflected in the widely scattered places in which it has been carried out in the past few months—from the beaches of Cape Cod, Maine, and the Mediterranean, to YMCA's and athletic clubs in Boston, New York, Chicago, Indianapolis, New Orleans, and South Bend.

Frank's other "must" commitment—and he considers it to be the more important of the two—is a daily visit to church, usually at 6 a.m.

Of his "must" commitments, Frank says: "I'm not an evangelist, but if I make certain I get my mind and my values in order at church each morning, and keep my body in the best shape possible, I find that my ambitions, desires and self-discipline force me to do the rest. The physical fitness program gives me the stamina to get about three more hours of work done each day than the average person does."

"Self-discipline"—there's no better way to describe the motivation of a man who, besides his dramatic career as a life insurance salesman, and extensive personal contributions to the leadership and direction of the MDRT, has achieved the following:

He has served as president of the South Bend Life Underwriters Association; as chairman of the board of editors of the *CLU Journal*; and as a participating panelist for the Practising Law Institute; as a guest faculty member at Purdue University and the University of Puerto Rico; as a director of the St. Joseph Bank and Trust Co., in South Bend, Ind.; and as a lecturer very much in demand on insurance subjects and estate planning matters all over the U.S. and Canada. He was the first life underwriter ever to address a main session of the American Institute of Certified Public Accountants at its annual meeting.

In addition, he has written a book, "Selling Life Insurance for Deferred Compensation," now in its third printing and considered perhaps the most definitive work on that subject.

SELLING GUIDES

His 12-part series in *The Fielder*, "Sales Trail to Switzerland," offers a valuable guide to all who aspire to MDRT membership, as did a previous 12-part series on salesmanship which appeared in *The Life Insurance Salesman*.

Frank Sullivan arrives at the top of MDRT at a time when the prestige and membership of the organization are at the highest in its 40-year history. In his year in office, more than 5,500 persons will qualify for 1967 membership, representing more than 300 companies, and at least 24 nations.

As for Frank himself, the Presidency of MDRT is a fitting highlight in his life and career—and it will be climaxed next June when he presides over MDRT's 40th anniversary meeting at Lucerne, Switzerland.

Using time to best advantage is the key to Frank Sullivan's success, and he would be the first to tell you that. He is quite open with his "secrets" of success and gives them freely to younger men whose membership in MDRT is in the dreaming stage.

The Frank Sullivan story began to take its present course in 1946 when the Massachusetts-born Irishman arrived on the University of Notre Dame campus at South Bend, with a 4-year Navy hitch and one year at Boston University behind him. The 22-year old youth enrolled as a sophomore and by 1949 he had earned his degree.

As important as his academic career, at that stage, was his association with Frank Leahy, coach of the Fghting Irish football squad which in that era was in its finest hour of gridiron glory.

Frank became private secretary to Leahy and remained in that job for three years after graduation. Besides assisting Leahy in various duties, Frank ghost-wrote the famed coach's nationally syndicated football column, and organized material for two Leahy books, *The T-Formation and Defensive Football*.

It was from Leahy that Frank Sullivan developed his attention to work habits and self-discipline.

By 1953, Frank had ended his association with Leahy to devote all his time to his practice as a general agent for American United Life. The next year, he qualified for MDRT and has continued to qualify every year since.

How did Frank build up his business to the point where his sales achievements rank him as the alltime leader of 89-year-old American United Life, and in the top five percent of all MDRT members? As you might expect, it was a combination of good organization and self-discipline.

Guided by all the beliefs and practices discussed above, Frank Sullivan has propelled himself and his American United Life agency to an impressive sales record. At one time or another he has led the entire company in all aspects of individual sales. His firm, though small in size, has been consistently among the top five of all A.U.L. agencies. It is the only such agency of any company in Indiana which has three men (Bob Barkley, Jim Brennan and Frank) who not only are all C.L.U.'s but also have met volume requirements for the 1967 MDRT.

MILLION DOLLAR ROUND TABLE

Frank's career with The Million Dollar Round Table is just as distinguished as the sales records which put him in the organization. After serving on numerous MDRT committees, he was elected to the governing Executive Committee in 1964, and now begins the fourth of five consecutive years of service on the Executive Committee. Although his MDRT duties require enormous amounts of time and effort, Frank has continued to meet each year the strict production requirements of MDRT. In fact, the current year is the best year of production for Frank and his agency.

As first vice-president of the 1966 MDRT, he carried the responsibility for organizing the annual meeting in Boston last June, largest and most inspiring in MDRT history. Nearly 1,800 MDRT members heard 48 speakers on a four-day program packed with information, ideas and aids to improve the salesman's abilities to serve the insuring public.

In Frank Sullivan, this commitment to his life work is balanced by a strong family life and a deep interest in community service.

He and his wife, Colette, whom he married June 11, 1949, have four children: Frank, Jr., 16; Mary, 15; Anne, 14; and Robert, 12.

"In one way we might be called a 'togetherness' type family because we enjoy certain things together," Frank says. "However, we're pretty independent individuals who don't subscribe to togetherness as a total way of life."

In the field of community service, Frank Sullivan does not believe in volunteering for everything just for the sake of prestige, but rather in giving his time and efforts to those ventures and organizations where he can truly be of service.

He has held one of the major assignments in charitable drives which have raised more than $12 million. He gave 10 active years to the United Fund and United Community

Services and currently serves as honorary chairman on the St. Joseph Hospital Board and is giving as much time as is needed to the Mayor's Committee on Economic Action.

No one who was there will ever forget the spell-binding talk on "The Making of a Sale" by New York Life's Ben Feldman. While Frank Sullivan, as presider, popped questions from the speaker's rostrum, Feldman moved back and forth on a long platform in the middle of the Statler-Hilton ballroom, answering the questions. It was an interchange between two of the best and most articulate minds in life insurance today, and it left a lasting impression on all who witnessed it.

It was Frank who, with the guidance of the 1964 Executive Committee, made the decision to hold next year's MDRT Annual Meeting in Switzerland—the first meeting to be held abroad. He also was instrumental in dawing up the current MDRT converter form to streamline and simplify the calculation of eligibility credits.

Obviously, such performance within MDRT—often termed "not just an organization, but a way of excellence"—is evidence of one's own philosophy towards business, personal and community service, and life in general. In Frank Sullivan's case, personal philosophy is based on a deep sense of personal responsibility.

THREEFOLD OBLIGATION

He operates on a theory that a successful businessman has a threefold obligation to be a material success in his chosen field, to make major contributions to the industry in which he makes his living, and to make continuing contributions of consequence to the community in which he lives and raises his family.

That he is a business success goes without saying, as his sales records indicate. In contributing to his own industry, he says:

"You have a duty to help others. I believe without a single reservation that it is the deepest moral responsibility of every person who succeeds as a life insurance agent to try to help others who want to succeed. I know of no one in the business who would have made it as a successful salesman without a helping hand from an established agent. Therefore, it is mandatory that anyone who gets on his own two feet should reach out to help as many men as he can. I would not be where I am today if it weren't for Bill Earls of Cincinnati helping me. I'm committed to the fact somebody will say the same of me someday."

"Just an encouraging word, perhaps taking the time to explain a presentation, can work wonders in helping another agent.

"Most of us know our jobs, to be sure; but from time to time we stray off our own 'Critical Path'—and all it takes to turn us in the right direction is an experienced hand.

"I'm amazed at the number of times I've listened to a troubled agent talk for 10 or 15 minutes, and then come back with answers that send him away completely happy and enthusiastic, once again on the road to success.

"Bringing this general philosophy a little closer to home, I can assure you that with the exception of my Round Table presidency, nothing has been so satisfying to me as seeing the growth of my associates, Jim Brennan and Bob Barkley, since they first walked into this office."

As is apparent from the evidence, Frank Sullivan is a success in every way that the concept can be defined. And this success has come to him because of his intense self-discipline.

"You must work at this concept of self-discipline until it comes as automatically as pulling up your socks," he says.

"What's more, you have to keep working at it even when you've attained the goal you may have set some years before. I'll admit that once in a great while I find myself thinking that perhaps it *is* getting easier. Then I remember that tomorrow morning I have to meet a client at 7 o'clock to try to prove why my policy is better than that of another agent who brought one in with a lower rate than mine. (17 cents better on $1,000 over 43 years) This is our challenge. A good salesman is like a good racehorse—he must go to the post every day. What he did yesterday is of little consequence today.

"Sacrifices?" "Sometimes I wonder if that word is ever used correctly. Over the years I've heard many men say, and particularly when rationalizing to their wives, that they don't want to work as hard as guys like Sullivan. They *could* do it, but they don't want to leave the house that early or work on Saturdays, or work at night and deprive themselves and their families of many pleasures. To me the most amazing thing about the so-called sacrifices is that they really aren't—they are just disciplines—once you force yourself to do them they become a habit and actually become enjoyable. And the payoff is that after these so-called sacrifices have become habits, they permit a person to maximize his talents to such a tremendous degree, that he ends up having far more time for himself, his family and for the things he enjoys doing, than does the man who didn't want to work that hard.

"It is as true as it can be, that the disciplined man is the happy man. If he knows where he's going then he knows what he's doing. If he knows what he's doing, then he does it very well. When you do things very well, you derive the greatest of all rewards—that is, personal satisfaction that comes to a person when he himself knows that he has done his job well."

That's what makes Frank Sullivan run.

Transfer of Veterans' Administration Hospitals

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, the "Washington Report on the Medical Sciences," dated January 9, 1967, makes reference to a secret report given to Secretary Gardner of the Department of Health, Education, and Welfare. The report was prepared by Dr. John Corson, of the Brookings Institution, at the request of Secretary Gardner. Added weight is given to the recommendations of the Corson group because of the recent recommendations made by the same committee which led to a reorganization of the Public Health Service.

What concerns me, Mr. Speaker, is the following paragraph:

> HEW should—focus health efforts in a Department of Health; include in the new Department an environmental health bureau made up of FDA, the Division of Biologics Standards, and PHS environmental health activities; take over successful Office of Economic Opportunity demonstration health programs after 3–5 years; develop stronger regional offices with authority to approve state health plans and award funds; simplify HEW grant structure; make the PHS bureau of health manpower a key part of the new Department; and consider at a later date absorbing health programs in other government agencies such as Veterans Administration and Agriculture.

In view of the unfortunate recommendations of the administration in the last Congress concerning the closing of Veterans' Administration hospitals, I am shocked that any further tampering with the operations of the Department of Medicine and Surgery of the Veterans' Administration would be considered by any other Federal agency. I am also constrained to make the observation that in view of the magnitude of the operations of the Veterans' Administration, if there is to be any transfer of medical functions, logic would dictate that the health functions of the Department of Health, Education, and Welfare would go to the Veterans' Administration.

Why Economic Sanctions Against Rhodesia?

EXTENSION OF REMARKS
OF
HON. HARRY F. BYRD, JR.
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Rhodesia?" published in the Bedford, Va., Bulletin-Democrat of January 12, 1967. The editorial was written by the copublisher, Mrs. Mary Lee Harvey.

Many persons are asking the same question as does the Bedford Bulletin-Democrat: If the United Nations wants to boycott someone, why not boycott North Vietnam?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY RHODESIA?

Just before Christmas, Senator Harry F. Byrd, Jr., issued a statement opposing support by the United States of economic sanctions against Rhodesia. He pointed out that during the past 11 months, 70 ships from Free World Nations have delivered cargo to the North Vietnamese ports and asks the pertinent question:

"President Johnson this week is expected to sign an Executive Order to prohibit American trade with Rhodesia. Would not this be a good time for him to demand that our allies immediately cease trading with a nation which is killing United States' soldiers in Asia?" It does not make any more sense to us than it does to Senator Byrd that "the United States Ambassador to the United Nations voted for and vocally endorsed economic sanctions against Rhodesia, yet no such sanctions have been sought against North Vietnam."

As a matter of fact, Ambassador Goldberg's reasons en toto for turning in this manner against Rhodesia make no sense to us. If Rhodesia wants independence from Britain, it's not our business, nor that of the United Nations to interfere in what is obviously a family matter between her and Great Britian.

Rhodesia has not done a thing to hurt us; North Vietnam is killing our soldiers every day, right this minute. North Vietnam is an aggressor nation and don't let us forget it. There are some people both here and abroad that yell bloody murder when we bomb them, but conveniently forget that our people, civilians and soldiers, have been bombed in hotels in Saigon long ago in this war, in some of the sneakiest and most treacherous attacks imaginable.

If the United Nations wants to boycott someone, let them boycott North Vietnam. As for our helping to boycott peaceful Rhodesia, we think it's a disgrace. We are pleased with the stand that Senator Byrd is taking on this and hope that he can muster enough support to put a bug in the Ambassodor's ear. (Or put a new United States Ambassador in the United Nations; we could use one.)

Johnson on the Hill: An Unhappy Tuesday

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. YOUNGER. Mr. Speaker, it occurred to me that James J. Kilpatrick's column giving his views of the President's state of the Union message is an independent opinion well worth considering. His column "Johnson on the Hill: An Unhappy Tuesday" appeared in the Washington Star as of Sunday, January 15. His column follows:

JOHNSON ON THE HILL: AN UNHAPPY TUESDAY

(By James J. Kilpatrick)

Lyndon Johnson motored up to the Hill on Tuesday night ready to play a few hands of consensus with old friends of the House and Senate. His face was aglow with brotherly love; his heart was filled with kindness. As it turned out, he might better have stayed home in bed. As State of the Union messages go, this one went on four flat tires.

In retrospect, it seems unlikely that the President might have said much of anything constructive in the field of civil rights. After all, his leadership had produced the Civil Rights Act of 1964, the Voting Rights Act of 1965, the school desegregation guidelines, and a host of executive orders intended to promote the Negro's interest. But the tendency of any constitutency is not to inquire what their leader has done, but to ask what he has done for them lately. Mr. Johnson had the misfortune to arrive in the House chamber only six hours after the explosion over Adam Clayton Powell. He stood in the bitter fall-out of that eruption, smiling benignly, and favored his anguished Negro followers with precisely two sentences in an address that ran on for 69 minutes.

The President did not even renew his request for home rule in the District of Columbia. He did not even avow, in the conventional rhetoric, that broad solutions must be found. "We should continue to seek equality and justice for each citizen," said the President, "before a jury, in seeking a job, and in exercising his civil rights. We should find a solution to fair housing, so every American, regardless of color, has a decent home of his choice." And that was absolutely all he said.

He had nothing more for Walter Reuther than he had for Martin Luther King. "I now propose," said the President, "that we establish a new Department of Business and Labor." It was a footless proposal, and manifestly not new. For 10 years, from 1903 to 1913, a Department of Commerce and Labor functioned under such forgotten secretaries as Cortelyou, Metcalf, Straus and Nagel. On the day that Wilson came into office, the one department split into two. Mr. Johnson has no more chance of getting them back together than he has of suppressing the Kennedy brothers. In this proposal, he asked for a needless licking.

Yet the address caused no raptures in conservative camps. True, the President did not call for repeal of Taft-Hartley's section 14(b); he did not demand vast expansion of welfare programs, but neither did he ask, as he asked a year ago, for legislation to curb strikes that threaten irreparable harm to the national interest. The business community, already harassed by the paperwork of existing laws on job discrimination, will writhe at the prospect of a new law prohibiting discrimination by reason of age. A six percent increase in corporate income taxes is hardly a joyous prospect. The President's request for a fat boost in Social Security benefits is bound to be reflected, sooner or later, in higher payroll costs.

The country's intellectuals, groaning with dyspepsia, are drowning their sorrows these days in Bromo-Seltzer on the rocks. Nothing the President might have said could have relieved their acid indigestion, but Dr. Johnson's bedside manner managed to make bad matters worse. In terms of prose style, his address was Middle Harding; he came no closer to the arts than beautification of the roadsides; he exhibited no charisma.

Turning to foreign affairs, the President left his sophisticated critics mumbling in discontent. Just a year ago, in his State of the Union address of 1966, Mr. Johnson had been full of ideas for giving "new and daring direction" to foreign aid. He had proposed an International Health Act and an International Education Act. Only a faint echo of this remained on Tuesday night. To be sure, the President spoke warmly of expanding East-West trade; he took an advanced position on world population control; he expressed a properly pasteurized view on Africa. But when he got to Vietnam, Mr. Johnson offered his academic mentors merely kindergarten stuff. Arthur Schlesinger Jr., commenting on TV, very nearly died.

To judge from the solid, spontaneous applause that greeted his pledge to stand firm in Vietnam, Mr. Johnson pleased his listeners in the Congress; and the support of the House and Senate, though it seems blasphemous to say so, may count for more in the President's view than the support of Mr. Schlesinger. Even so, as the Senate demonstrated last year in adopting the Byrd-Pastore resolution censuring West Germany, the Congress is not enchanted by expanded East-West trade. There is small sentiment on the Hill for differing "quietly and with courtesy" with the Communist world. Sen. Everett Dirksen already has made known his opposition to the pending consular treaty with the Soviet Union, and the Illinois Republican will not stand alone.

So beginneth the 90th Congress deep in discord before it has really tuned up. The fight over Powell left some bloody wounds behind, and Mr. Johnson's unguent speech did little to soothe the pain. It was not the happiest Tuesday in the history of the Hill.

Progress of the War in Vietnam

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1967

Mr. MONRONEY. Mr. President, the Reader's Digest has published in its January 1967 issue a condensation of an article entitled "The Three-R War in Vietnam," written by Miss Ruth Sheldon Knowles, and originally published in the magazine U.S. Lady.

In this timely and interesting account, Miss Knowles points out the high priority which education and learning are receiving in Vietnam alongside our military efforts in that unfortunate part of the world.

We can all agree that education is a principal and basic need in all the underdeveloped areas of the world. In Vietnam, as Miss Knowles points out in her article, the United States is attempting to train the Vietnamese to operate their own educational system, to upgrade their own economic system, to improve their own government, and to broaden and strengthen through knowledge the very foundation of a revitalized nation. No part of our struggle in Vietnam is more important.

This is one aspect of our commitment in that part of the world which needs more publicity. Miss Knowles' article is of such significance that I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE THREE-R WAR IN VIETNAM

(By Ruth Sheldon Knowles)

"Human history becomes more and more a race between education and catastrophe."

—H. G. Wells.

The paradox in Vietnam is that to win the war, we must first win the peace. And the peace can be won only at the "rice roots," among the rural people in the small hamlets of South Vietnam.

On a recent trip throughout Vietnam, I found that we are winning this peace—by means of an unsung and practically unknown program of education drawn up at the request of the Vietnamese people. Indeed, I found the big news of the war's turning tide not just at the battlefront but in hamlet classrooms where for the first time thousands of Vietnamese children have the opportunity to go to school.

In South Vietnam, parents are as eager to have their children in school as you or I. Education is so highly prized that on opening day hundreds of fathers and mothers gather to see if some child fails to show up—in which case their child may get a seat. Nine years ago, there were only 600,000 children in school. Today there are more than 1,700,000. Since 1963, the U.S. Agency for International Development has helped build 8500 hamlet classrooms, trained approximately 8000 teachers and distributed 7,500,000 textbooks. The U.S. military is also helping to build classrooms, and any large increase in U.S. troops sent to Vietnam is based on the expectation that one third to one half of the men will spend part of their time in similar "nation-building" projects.

All this is being accomplished despite Vietcong bombing and burning of schools, despite the kidnapping of teachers and control of roads. Regrettably, almost a million children are still out of school; but by the end of 1970 there will be enough additional schools and teachers to cut that number in half.

One of the major driving forces behind the hamlet-school program is an American woman, Mrs. Gladys Oakes Philpott. A former professor of education at Northern Illinois University, she arrived in Vietnam in 1957 as a teacher-education adviser for AID. Her first two years were devoted to training teachers for urban centers and setting up a demonstration elementary school. She traveled all over the country steeping herself in Vietnam's history and customs, and meeting province education chiefs.

In 1962, an AID survey found that the one service that rural Vietnamese wanted more than any other from their government was education for their children. This insatiable desire can be understood in terms of the educational vacuum which existed when the French left in 1954. Ninety percent of the people were illiterate—more than when France took over in the 1890's. The French cut back the free-education system of the Vietnamese emperors, under which learning had been accessible to poor and rich alike and was the path to mandarin office, which was neither hereditary nor for sale. Under the French, only a few were educated, for jobs that the French wanted them to have.

When Vietnam became independent, the educational attitude was still so French-oriented that in 1960 a study made for AID reported that "few persons in government positions at the ministry level consider elementary education important." Until 1958, all instruction was in French, which effectively prevented rural education. The chief aim of education officials seemed to be to keep the majority of children from attending school, and to concentrate on producing an elite who would administer the country.

The Vietcong made the situation worse by murdering teachers and sabotaging buildings. By 1960 they had forced 200 South Vietnamese primary schools to close, depriving 25,000 students of schooling. When Mrs. Philpott and a team of education advisers took hold, everything was lacking, schools, teachers, books, money, plans.

Where to begin? Mrs. Philpott initiated the idea of sending small groups of provincial education chiefs to the United States for six weeks' training at the University of Illinois, with tours of community-development programs in Detroit and of Berea College, the celebrated self-help school in Kentucky. The education chiefs returned to Vietnam with heightened prestige, held seminars, wrote and published papers, gradually upgraded the education system. By 1963 a framework existed for launching the rural hamlet-school program.

Mrs. Philpott went to the education chief of Binh Dinh province, which had the most difficult problem of all because its 700,000 population had been swollen by 100,000 refugees. "He was a particularly good education chief," Mrs. Philpott relates. "And I wanted the leadership of the program to come from that group. I asked him to make a survey of provincial needs and the ability of the villages to support schools. I also asked him how he felt the program should be developed. With a committee which he chose, we worked out the first year's program. A master plan for all Vietnam evolved from this."

Thousands of people in the hamlets constructed their own school buildings—altogether one third of all the new classrooms—under the U.S. AID Self Help program, which supplies materials and food for those working. Vietnamese and U.S. Army units helped on the projects together. Americans naturally don't consider a school complete without a playground. Members of the famed Green Berets, who used their jungle-warfare ingenuity to build playground equipment, told me how much they enjoyed doing it—they discovered that Vietnamese children had never seen swings or seesaws before!

In the Central Vietnam highlands, where the fiercest battles were being fought during late 1965, the school program had equal priority with the military. Every military supply plane carried at least 75 bags of cement, enough to build one classroom. Armed convoys delivering food to beleaguered hamlets always carried cement for schools also.

"The big push of 1965 was due to Gladys Philpott's unremitting efforts," a U.S. AID official stated. "She spends approximately 95 percent of her time in the field, living under dangerous conditions." Mrs. Philpott's many Vietnamese friends warn her in advance when they consider an area unsafe, but safety in Vietnam is never predictable. In one area which she was told was "95-percent safe," 25 people were killed by a mine on a road along which she travels frequently.

In the beginning, the Vietcong warned hamlet officials that they would destroy anything the government gave them. In one hamlet, when the government built a school, the Vietcong blew it up the next day. The people themselves immediately built another school. The Vietcong did not touch it, realizing that they had turned the hamlet against them. Recently, school bombings and kidnapping and harassment of teachers have been decreasing. Vietnamese and U.S. officials attribute this to the success of the school program in rallying the people to the government side.

One of the outstanding achievements of the program has been among the Montagnards ("mountain people") in the Vietnam highlands, 800,000 members of a racial mosaic of primitive tribal groups. Montagnards live in a world of hunger, cold, fear, ignorance and disease. Both the French and the Vietnamese treated them somewhat as strange animals. But the war has made them important, because geographically they occupy almost half of South Vietnam—the mountainous jungle highland area between North Vietnam and the great rice bowel of the Mekong River Delta.

Because of the remoteness and small size of Montagnard communities, boarding schools in central areas were the only feasible means of education. U.S. AID had sparked the first one in 1958. "Fifteen- and sixteen-year-olds started in the first grade," Mrs. Philpott recalls. "They came in beech cloths and sarongs, and with no idea about combing their hair. They were from seven tribes, and the first year we just taught them a common tongue so that they could understand one another. Within two years you wouldn't have known they were the same young people. They knew how to wash and to eat with chopsticks. They were eager to learn."

To the rural people, the greatest miracle of the education program is that for the first time the children have textbooks. Before, there were only slates, and teaching was entirely by rote. A joint Vietnamese-American educational committee has designed modern, attractive, illustrated textbooks which, in addition to the "three R's" teach greatly needed health principles, science, history and geography. The textbooks, in Vietnamese, bear the message on the back cover: "This is a gift to the Vietnamese people from the American people."

To meet the need for skilled industrial workers, AID has sponsored the establishment of four coeducational polytechnic schools. Today, approximately 10,000 students are enrolled in technical and agricultural schools. Seven rural trade schools are in operation for youths who might not be able to continue education beyond elementary school, and another seven will be opened later this year. More are planned.

"The Vietnamese children are truly bright," Mrs. Philpott says. "This accelerated education is helping to prepare them for self-government. Democracy *needs* mass education."

I learned how eager the Vietnamese are to fill that need when I stopped at a hamlet in the mountains where avery able-bodied person was working on a one-classroom school. When I asked the hamlet chief what the rush was, he explained that the province education chief would be there in a few days to dedicate it. "This is the most important thing that ever happened to our hamlet," he said proudly.

In the long run education is the only way in which freedom can be achieved. The base for freedom in South Vietnam has already been laid. Textbooks don't make flashy headlines today, but the cumulative effect of the educational effort in Vietnam will create the headlines of tomorrow.

Economic Sanctions and Those Wicked Rhodesians

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. DERWINSKI. Mr. Speaker, the Polish American is an independent weekly publication with readers principally located in the Chicago metropolitan area but its columnists and editorial writers cover the international scene.

One of the most penetrating and provocative columnists is a young educator, Harry E. Dembkowski, who in the January 14, 1967, edition of that publication provides a very penetrating and certainly provocative commentary on the question of Rhodesia:

ECONOMIC SANCTIONS AND THOSE WICKED RHODESIANS

(By Harry E. Dembkowski)

UN Ambassador Arthur Goldberg's recent announcement that the United States is joining an economic boycott of Rhodesia, while not unexpected, nonetheless represents an amazing action on the part of our government—from almost any aspect of the question one seeks to examine. Space permits us to point out only a few of the many absurdities involved . . .

When the Rhodesian government of Ian Smith—which had been elected in accordance with the colony's constitution—unilaterally declared its independence from Britain more than a year ago, Britain, lacking the military power to force it back into submission, resorted to an economic boycott. That still failing, it requested the UN to vote mandatory sanctions against Rhodesia so the former colony would be economically isolated from the rest of the world and forced to capitulate.

(This, despite the fact that Britain, advocating "world trade" as one cure for the world's ills, insists upon trading with the Communist dictatorships including Cuba, Red China, and North Viet Nam . . .)

The UN, which supposedly dislikes delving into the "domestic affairs" of sovereign nations (except for the Republic of South Africa of course) immediately took up the challenge. American troops are fighting in South Viet Nam and bombing North Viet Nam; Fidel Castro continues to plot the subversion of Latin America; China, is in the midst of a purge which borders on civil war . . . But none of that is important, nor even discussed. Rhodesia constitutes a "threat to the peace," or so decrees the mighty UN—that "Last Great Hope On Earth"—and economic sanctions—the first in the history of that international organization—were quickly voted against the government of Ian Smith.

This resolution failed to satsify many member-states of the UN who, although critical of U.S. "aggression" in Viet Nam, clamor for a British-led invasion of Rhodesia. But it does succeed in preventing vitally-needed Rhodesian products from reaching American ports. The loss of our chrome ore supply, for instance, so vital in the production of stainless steel, may now be dependent for its replacement upon—Russia!

The U.S. participation in anti-Rhodesian economic sanctions—which, in itself, constitutes the real "threat to the peace"—is opportunistically inspired and fraught with cynical hypocrisy. The opportunism is clear: cater to the whims of the irresponsible and immature Afro-Asian majority in the UN at the expense of the only truly civilized and stable elements left in sub-Sahara Africa. The demogogic excesses of the UN may be excused, or at least explained, on the basis of its domination by the over-represented, under-civilized Afro-Asian bloc, but how does one begin to justify such irresponsibility from the U.S., the supposed leader of the Free World?

Some observers, advocates of the sanctions, claim it is a false analogy to compare the Rhodesian attainment of independence with the American Revolution of 1776—the two being the only successful revolts against Britain on record. Yes, there are some major differences. But not in the manner those observers believe.

While the early Americans colonized the North American continent through a genocidal policy of exterminating the native aborigines (i.e. Indians) or relegating them to various concentration camp-enclosures known as reservations, the white settlers of Rhodesia are approaching the problem of nation-building quite differently. The African tribes of Rhodesia, rather than being exterminated or driven off their ancestral land, are being educated in the ways and means of economic and social development. (Ian Smith, in contrast to General George Washington, owns no slaves.)

Yes, there are differences between Rhodesia's attainment of independence and our own. But in contrast to the granite certainty of an Arthur Goldberg, this columnist is not at all certain that we have any right to point an accusing finger at our southern African counterparts in the type of democracy they possess or in the manner they are dealing with the "racial problem." (Anyone asking the average American Indian or Negro our right to be the moral judges of the world risks hearing some earthy and uncomplementary replies.)

Rhodesia, for all of its faults, remains one of the few bastions of calm, order and progress in that turbulent and still-primitive continent of Africa. For the nation's white minority to relinquish its position of leadership to the tribal groups who happen to form a numerical majority, would be tantamount to inviting another Congo—years of strife, misery, and a descent to savagery. And for the U.S. to risk such a calamitous possibility, merely to please Britain's pride and the irresponsible demands of the Afro-Asians, would be an abdication of America's supposed position as guardian of Western Civilization and leader of the Western Alliance.

Eastern Europe remains Communist, the Soviet Union is a prisonhouse of many nationalities, Stalinist purges sweep China, and war decimates Viet Nam . . . Yet, we are assured, it is Rhodesia which constitutes the real "threat to the peace," a threat which must be liquidated by UN action.

Nonetheless, despite the torrents of venom which continue to be directed against Rhodesia by the demagogues of the UN, it is here predicted that the sanctions will fail; that Rhodesia will survive the crises to merge, in time, with the Republic of South Africa, in some form of union;—and the U.S., by the unbridled opportunism it has displayed in this matter, will emerge with diminished stature and tarnished reputation.

Score another victory for those "Liberal" principles displayed since the days of Yalta and before, principles which were examined some years ago by James Burnham in a book most aptly titled—"Suicide of the West."

Burlington, Vt., a City for a Career

EXTENSION OF REMARKS

OF

HON. WINSTON L. PROUTY

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1967

Mr. PROUTY. Mr. President, the New York Times of last Thursday, January 12, 1967, published an advertisement entitled "Burlington, Vt.; Great Place To Ski, but Could You Build a Career There?" The advertisement was sponsored by the International Business Machines Corp.

Burlington is unquestionably recognized as the Queen City and it may truly be said that throughout its history it has been one of the foremost intellectual and cultural centers of New England. It has continued to prosper because of its constructive and progressive industries, its skilled workers, a large professional population, fine hospitals, colleges and an ever-expanding university, and the dedicated and conscientious efforts of its citizens.

I recommend a reading of the advertisement to all recent and prospective graduates who are seeking employment opportunities, and I ask unanimous consent that the advertisement be printed in the Appendix of the Record.

There being no objection, the advertisement was ordered to be printed in the Record, as follows:

February and June 1967 Graduates—Burlington, Vt., Great Place To Ski, but Could You Build a Career There?

Chances are you could if you're an engineer or technician. With IBM.

Especially if you have your eyes on the slopes and your mind on a challenging, fulfilling career.

IBM's Burlington facility gives you the best of both possible worlds—a meaningful career at one of IBM's fastest-growing locations, and an unequalled living environment for you and your family.

CONSIDER OUR OPENINGS

Engineers—electrical, mechanical, industrial, materials, process, facilities.

Systems Programmers & Analysts, Chemists, Physicists, Accountants, Procurement Specialists (semiconductor field), *Technicians*—electrical, mechanical, industrial, materials, process.

Positions in these areas are available to February or June 1967 graduates who are completing Bachelor's, Master's, or Ph. D. programs, and qualified technicians.

If this sounds like a "deep powder" opportunity to you, write today. We'll contact you in a week regarding employment opportunities in Burlington.

Please outline your qualifications and interests to W. T. Rochford, Dept. ME–A2H, IBM Corporation, Box A, Essex Junction, Vermont. IBM is an Equal Opportunity Employer.

If you'd like a personal interview during a weekend while skiing in Vermont, call collect to arrange a convenient appointment, W. T. Rochford (802) 769–0111, Ext. 2282.

—IBM.

Poor Standard of Values: The Case for Tax Sharing

SPEECH

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. LAIRD. Mr. Speaker, a recent editorial in the Wausau Record Herald in my congressional district entitled "Poor Standard of Values" cites specific examples of why the tax-sharing approach is a better way for Americans to do things than the discredited approach of Federal grants-in-aid. The experience of Stevens Point, Wis., with regard to its application for a storm sewer expansion program as contrasted to Racine County, Wisconsin's probability of qualifying for Federal aid for its first county golf course dramatizes, I think, the way in which federally established priorities often defy logic.

Under unanimous consent, I include the editorial, entitled "Poor Standard of Values," in the Record at this point:

Poor Standard of Values

The priorities which the Johnson Administration assigns to various federal aid programs continues to be unbelievable.

For example, from Stevens Point comes a recent report which indicates that an inquiry to the U.S. Department of Housing and Urban Development has indicated that the City of Stevens Point will not qualify for federal aid for its storm sewer expansion program now or in the immediate future. This is a shock, considering the Administration's voiced concern for the pollution problem and the acknowledged public sentiment to get the job done.

While Stevens Point can't get money to separate storm from sanitary sewers, Racine County is quite certain it will qualify for federal aid for its first county golf course. In fact, a federal application asking $107,000 toward purchase of property for the golf course has already been submitted.

A recent news story from a Democratic senator in Washington revealed that a northern Wisconsin electric cooperative had qualified for funds to extend an electric line at a cost of several hundred thousands of dollars.

This federal grant which will assist no more than 250 families, is made at the same time that federal highway funds, which affect all of Wisconsin's millions of people, are being cut in half.

We read in the Washington Post that nearly $12 million of Poverty War gold was dropped in Mississippi just before the November elections in five hasty and hectic give-away days, some even before applications were made. Rust College, a small Negro institution, was reported to have been granted $1.2 million before the college's president had completed the application showing how it would be spent.

The crowning blow to Marathon County will come if it does not qualify for federal funds to construct a new county hospital to replace one which a state official has described as "no longer fit to live in." Yet the preliminary indication to county officials is that the county may not qualify for federal funds for this worthy purpose.

Where are those who say Washington can do the job better?

The Attack on Rule XXII

EXTENSION OF REMARKS
OF
HON. HARRY F. BYRD, JR.
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rule XXII Under Fire," published in the Charlottesville Daily Progress of January 14, 1967.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RULE 22 UNDER FIRE

The annual effort is on in the Senate to change Rule 22, the cloture rule which permits closing of debate on pending legislation by the vote of two-thirds of the Senators.

The attack on Rule 22 this year is being led by a group of liberal senators, one of whom wants to allow a simple majority of 51 to cut off debate, or to end a filibuster. The other, and smarter, approach by Sen. McGovern (D-S.D.) would reduce the two-thirds requirement to three fifths. In other words, with all senators present, 60 could invoke debate-limiting cloture instead of the 67 now required.

While battered Rule 22 is considered now to be a civil rights issue, a liberal vs. conservative issue or a labor vs. capital issue it has not always been that way. It has been employed in the past by liberal and conservatives and by supporters of labor and capital to do just what it was designed to do, which is to provide some protection for the rights of minorities.

While Rule 22 has been used by opponents of civil rights legislation, the fact remains that virtually all civil rights proposals have been enacted. What is wanted badly enough by the majority in the Senate is usually obtained. A vast number of bad measures, paid lip service by the majority, have gone down the drain as the result of extended debate and discussion protected by Rule 22.

The so-called liberal bloc of the Senate used Rule 22 several years ago in an attempt to defeat the communications satellite legislation. Rule 22 was employed last year to defeat repeal of state right-to-work laws, a repeal ardently sought by labor leaders who forget that a few years ago, the two-thirds debate cutoff permitted a filibuster to prevent the drafting of striking railroad workers into the Army.

Senate liberals also enjoyed the protection of Rule 22 to continue an educational filibuster against legislation designed to override the Supreme Court ruling on reapportionment.

If cloture is a matter of concern for liberal senators today it should not be forgotten that it has as often been a matter of concern for the conservative bloc.

The two-thirds vote applies not only to debate, but to impeachment proceedings, expulsion of a member of Congress and to ratification of treaties by the Senate. It is not an unreasonable requirement.

Rule 22 was designed to provide protection for all sides on all matters. It has been demonstrated time and again in the Senate that where there is sufficient public interest, support and demand, legislation will be passed. But there is no harm in providing the means for a cooling off period of long debate and discussion that might prevent Congress from being stampeded into the passage of legislation of dubious value to the nation.

The Honorable Lester G. Maddox, of Georgia

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. FLYNT. Mr. Speaker, most of us are familiar with the successful candidacy of the Honorable Lester G. Maddox for Governor of Georgia because Georgia's 1966 election story has received extensive coverage throughout the Nation and abroad.

On January 11, 1967, accompanied by Congressman G. ELLIOTT HAGAN and Congressman W. S. STUCKEY, JR., I was a platform guest at the inauguration of Governor Maddox when he took the oath of office as Governor and delivered his inaugural address.

I would like to share this speech with my colleagues in the Congress because it gives a keen insight into the personality and views of Governor Maddox. Its message is one of tolerance and responsibility, advocating strength and progress for Georgia. Above all, it reflects the desire of a great misunderstood man to serve as the Governor of all the people of his State and to promote progress, peace and tranquility. It should serve to dispell the doubts in the minds of many.

At this point in the RECORD, on behalf of my colleagues, Representative HAGAN and STUCKEY, and myself, I include a text of the inaugural address of the Honorable Lester G. Maddox, Governor of Georgia, delivered in Atlanta, Ga., on January 11, 1967:

Text of Inaugural Address delivered by Gov. Lester Maddox at noon, Wednesday, Jan. 11, 1966, at the State Capitol.

Governor Sanders, Lt. Gov.-elect Smith, Speaker Smith, distinguished members of the General Assembly, distinguished jurists and state officials and my fellow Georgians:

The emotions of this moment are many and mixed.

But that which is uppermost in my heart . . . is a deep sense of humility.

I am humbled by the honor you do me . . . by the magnitude of the task you have entrusted to me . . . by the gravity of the responsibility you have vested in me and—most of all—by the confidence you thus have demonstrated in me.

For this I shall be eternally grateful . . . But, more than gratitude . . . I pledge to you my fullest energy and every effort for the next four years . . . to measure up to your honor . . . to fulfill your trust . . . to discharge the responsibility you have delegated to me . . . and to merit your confidence.

And in setting out this noon . . . to labor toward those ends I do so with the prayer of Solomon of old:

"O Lord my God . . . Thy servant is in the midst of Thy people whom Thou has chosen . . . give Thy servant therefore an understanding mind to govern this Thy people, that I may discern between good and evil; for who is able to govern this Thy great people?"

A LONG TRAIL

We meet today at the end of a long and tortured trail . . . from the political platform, to the ballot box, to the courts and into the legislative forum. It has been a journey which has tried the public patience and has tested the procedures of democracy.

There were issues which divided us and there were inconclusive results . . . which brought us several times to the brink of despair.

But because of the vitality of our institutions . . . because of the adherence of our people to the processes of law and order . . . and because of the faith of Georgians in the ultimate triumph of their will . . . continuity of government has been maintained and an orderly transition of leadership effected.

We have reason to be proud of the restraint of the partisans of all sides . . . of the forebearance of the electorate as a whole . . . of the dispatch and dignity with which the courts resolved the points at issue . . . of the statesmanship of our able and respected outgoing governor, the honorable Carl Sanders . . . and, most particularly, of the courage and responsibility with which the members of this General Assembly faced up to and discharged the difficult duty imposed upon them by the Constitution of our state.

ONE STEP REMAINS

One step yet remains to bring a satisfactory conclusion to our year of searching and indecision.

And that, my friends, is for all of us—those gathered here and the remainder of Georgia's four and one-half million citizens who are elsewhere—to unite in the cause we all hold in common.

That cause is the building of a greater and more prosperous Georgia with expanded horizons of opportunity for all.

That is a cause which is greater than any one or group of us.

That is a cause which transcends all differences of philosophy and politics.

That is a cause which requires the help and support of all Georgians—young and old, poor and rich, farmer and city dweller and Democrat and Republican regardless of race, creed, color or national origins.

I seek that help.

I ask that support.

JEFFERSON QUOTED

The great architect of our democracy—the revered Thomas Jefferson—faced division when he assumed the presidency. And the words with which he dealt with that subject in his inaugural address are as vital and as apropos to our situation now . . . as they were to his then.

"Let us," he declared, "restore to social intercourse that harmony and affection without which liberty and even life itself are but dreary things. And let us reflect that having banished from our land that religious intolerance under which mankind so long bled and suffered . . . we have yet gained little if we countenance a political intolerance as despotic . . . as wicked . . . and as capable of as bitter and bloody persecutions."

Mr. Jefferson then went on to state that "difference of opinion is not a difference of principle." And he concluded that "error of opinion may be tolerated where reason is left free to combat it."

More than a century and a half have proved the Jeffersonian concept of government—that the people, when given the facts and the opportunity to act upon them, can be counted upon to decide public matters wisely.

EMPHASIZES UNITY

I subscribe to the principles of Jeffersonian democracy with its emphasis upon unity in the pursuit of common goals . . . upon the free interchange of ideas in areas of differing opinion . . . and upon final determination of issues by the people themselves.

That is the American way.

That is the Georgia way.

That will be the way of the Maddox administration.

Much has been said and written about there being no mandate for anyone in our primaries and election of last year.

I dispute that.

I consider the people to have spoken loudly and clearly . . . not only about what they want and expect from their new administration . . . but also about what they do not want and will not tolerate from it.

They want a public school system equal to the best in the nation . . . and they want every child regardless of his circumstances or where he lives to be prepared to compete on an equal basis . . . with every other child in the country.

HIGHER EDUCATION

They want a system of higher education adequate to the needs of today and of the 21st century just ahead . . . and they want that education made available to every youth capable of profiting by it.

They want swift completion of our interstate highway system . . . a solution to the traffic and transit problems of our cities . . . and an end to the slaughter on our highways.

They want dignity, comfort and adequate facilities and treatment for the mentally ill . . . the retarded and the aged . . . and they want a decent, modern correctional system dedicated to rehabilitation.

They want training for the unskilled and unemployed . . . and they want a vigorous, effective industrialization program to assure jobs now and in the future . . . for all who can and will work.

They want aid for our strangling cities and our struggling smaller communities and they want to be allowed to solve local problems on the local level.

They want all citizens to be safe in their homes and on the streets . . . and for private property to be protected from the thief . . . the hoodlum and the mob.

BUSINESSLIKE BASIS

They want their state government to continue to be operated on a sound, economical, businesslike basis . . . with morality and honesty scrupulously enforced in all its agencies and activities.

Those are the positive aspects of the people's mandate.

On the other hand, we have been told:

The people do not want any undue change in the direction or policy of their state government.

They do not want a single school closed or the right of a child to be educated or a teacher to teach to be impaired.

They do not want riots in the streets or breaches of the peace in public places or institutions.

And, above all, they do not want any extremist organization or group to have any voice or influence in any state programs.

These points, my fellow Georgians, constitute the mandate I read into the returns from the ballots you cast in 1966.

It is a mandate for progress and responsibility . . . which I accept wholeheartedly and without reservation . . . as your servant and as the instrument of your will.

It is a mandate which the Maddox administration will follow as the chart for its course over the next four years.

It is a mandate which will be carried out in accordance with the advice from the best wishes of the people as expressed through their elected representatives.

No one realizes more than I that the administration of four years of multi-million-dollar budgets . . . and the formulation and implementation of complex policies . . . is not a one-man job.

Immediately following this ceremony, I will announce my appointments to the key offices of the Executive Branch. I have called upon people I believe to be capable, competent and committed to no interest except that of Georgia and its citizens . . . to serve you in these jobs. I have impressed upon all of them that I shall expect their services to be in accordance with the yardstick set by Henry Clay when he said:

"Government is a trust, and the officers of the government are trustees, and both the trust and the trustees are created for the benefit of the people."

As soon as possible, I will name a number of task forces to make specific recommendations for legislative and administrative action in fields of major interest and concern.

I will call on leaders in all areas of endeavor throughout the state—women as well as men—to serve on these groups.

These men and women will make thorough studies of all aspects of our problem areas. In some cases they will hold hearings to ascertain public thinking and to get citizen recommendations. And in all cases they will be requested to present detailed programs dealing with how as well as what . . . for my consideration in time for presentation to the 1968 Session of the General Assembly.

TASK FORCES

There will be task forces in the fields of education, mental health, highways and highway safety, industrialization, corrections and law enforcement and perhaps others where the need for studies in depth is evident.

We will take steps to avoid any further repetition of the confusion and controversy caused by the primaries and general election last year.

First, during the coming months, . . . I will study and evaluate the State Election Code in light of our experience since its adoption in 1964 . . . consulting election officials as to means of strengthening and improving our election machinery in Georgia . . . and such changes that might be needed will be prepared for submission to the earliest possible session of the General Assembly.

And, second, I will ask the General Assembly to submit to the voters for ratification in the 1968 General Election a constitutional amendment to require a run-off election for Governor between the top two candidates . . . in the event no candidate receives a majority in the general election.

The people have made it very clear that they want to do the electing of their governors themselves. That this is their right is a conviction I have long held and expressed often . . . and the assurance of that right under all circumstances is a priority goal of the Maddox administration.

The Maddox administration will not shirk its responsibility in the matter of legislative reapportionment.

RIGHT TO APPORTION

Georgians believe, as I do, that the states should have the right to apportion one House on the basis of population . . . as in the United States House of Representatives . . . and the other on the basis of geography . . . as in the United States Senate.

But Georgia is under federal court order to reapportion the General Assembly in accordance with the "one man—one vote" principle by May of this year. The only alternative to acting ourselves is to let the federal courts do the job for us. And such a course is wholly unacceptable to all of us who believe in states' rights and states' responsibilities.

It would be unwise to complicate the deliberations of the regular session of the General Assembly now under way with this complex and controversial task. Therefore, I have decided to call a special session next spring for that sole purpose. And, at an early date, I will confer with the lieutenant governor and the speaker of the House to reach agreement on a date for a special session.

Believing . . . as I do . . . in the separation of powers of government, I will make no recommendation as to how reapportionment should be accomplished . . . unless it becomes evident . . . that a majority of the members of the General Assembly cannot agree on an acceptable plan. I am confident they will meet their responsibility in this regard and will enact a plan the federal courts will approve.

A NEW CONSTITUTION

The Maddox administration will address itelf to another grave need of our state—that of a new, modern state Constitution.

It is all too obvious that we cannot expect our state and its government to continue to be responsive to the demands upon them under our present patchwork Constitution. The multiplicity of amendments on which we had to vote last fall was proof of its failure.

We cannot legislate at the ballot box so we must have effective home rule and social self-government for our cities and counties. And the only way we can get them is through writing a new Constitution attuned to a modern, growing Georgia.

I will ask the reapportioned General Assembly to call such a Constitutional convention. This will be done with a view toward submitting a new Constitution to the people before the end of this administration.

We will not hesitate to meet head-on these and whatever other problems subsequently may arise and endeavor to resolve them in the best interests of the people.

Of this one fact, all Georgians may be assured: We will solve Georgia problems in Georgia and channel change to the benefit of the people of our state while Lester Maddox is governor.

There is no necessity for any conflict to arise between federal-state authority. We should—and we can—solve any disagreements under the framework of the Constitution . . . respecting the authority of the national government . . . and being ever-mindful of protecting the rights of Georgia and Georgians.

WILL DO UTMOST

That will be true because the Maddox administration will do its utmost here at home . . . within the framework of law and order . . . to solve those issues and problems which must be solved at home.

I say this to you: I will keep my eyes fixed awarely on the proper conduct of state business and service of all the people of Georgia. Our single goal is that of restoring the voice and involvement of the people in determining their own destinies through solving local problems on the local level.

The Maddox administration will support and provide increased financial assistance to cities and counties . . . in solving their own problems locally, or, where those problems are statewide in scope or beyond local capacity to solve . . . we will act promptly on the state level to deal with them realistically and effectively.

Law and order will be upheld in Georgia during the Maddox administration.

The first responsibility of government is protecting the lives and property of all its people. That responsibility will be met!

No person need counsel others to engage in riots and disturbances because there will be no need for any person or group to take grievances or problems into the streets.

Should any person or group in the state of Georgia have any problems or grievance, the place to take it is to duly-constituted authority on the local level, if a local matter, or to me, as chief executive, on the state level, should it require a state solution.

There will be no place in Georgia during the next four years for those who advocate extremism or violence.

Peace and tranquility will prevail in this state while Lester Maddox is governor.

COMPASSION, CONCERN

The Maddox administration will be one of compassion and concern. Those Georgians who cannot help themselves will have a friend in the governor's chair for the next four years.

That goes for the school child who will be the product of the kind of education we give him.

That goes for the bright youngsters with the potential of greatness who cannot afford a college education.

That goes for the unfortunate victim of mental illness and for the forgotten and abused inmate of a correctional institution.

That goes for the poor fellow who has lost his job and would work if only he could find another or learn another skill.

That goes for the high-minded mother of the slum family who would inspire her children to a better future if only she could break the chains of poverty that bind her and them.

My friends, you now have a governor who knows what it is to be poor . . . to want an education and be denied one . . . to toil for a living and to meet a payroll the hard way.

I will not forget those lessons of the past but rather will do everything possible to apply them in a constructive way so as to spare the children who come after us some of those agonies and hardships.

In this moment of beginning and dedication, I would emphasize my total commitment to the proposition that there is room enough for everyone in our great State of Georgia.

There is room enough for every faith, every ideal and every shade of opinion—and room enough for full freedom to express them by the individual citizen . . . as well as by the press and communications media.

There is room enough for the right of dissent as well as the right to conform.

There is room enough for the right to pursue one's honest livelihood without fear of oppression, for the right to live at peace with one's neighbor and for the right to be left alone, secure and unafraid, by one's own fireside.

There is room enough for honest, effective, efficient government at all levels, . . . each acting within its proper sphere of authority . . . and for the right of each person to speak out and to act when, in his own conscience, he feels there are things which must be set to rights.

Liberty!

Freedom!

Those are the watchwords of American democracy and the foundation stones of the Georgia philosophy of government.

LOVE FREEDOM

Georgians love their freedom and they believe with Daniel Webster that:

"God grants liberty only to those who love it, and are always ready to guard and defend it."

Thus, on this solemn occasion, I pledge myself, and your new state administration . . . not only to the protection and preservation of these inalienable rights we hold so dear . . . but also to the responsible exercise of them.

My deepest and most heartfelt desire to weld all Georgians together into one unified force to improve our state and the opportunity it affords our people, particularly our children.

Georgia belongs to all of us.

She belongs to every citizen.

Her interests and welfare are the interests and welfare of all.

As I promised you as the people's candidate, I promise you as the people's governor, ours shall be a people's administration.

Accordingly, the governor's office shall set aside specifically the first and third Wednesday afternoons of each month for the people to meet their governor and for their governor to confer with them.

As I had the opportunity to shake the hands of Georgians during the campaigns of last year, so I look forward to having this twice-a-month opportunity to shake them again during my administration as your governor.

When the record of this administration is written four years hence, let it be said that in the conduct of daily affairs of the office of governor the people's interests were protected first, last and always.

Let it be said that bold, courageous leadership was offered.

Let it be said that in all state dealings, they were handled honestly.

Let it be said that the rights of the state and her people were guarded jealously and protected fully.

Let it be said that in these four years emphasis was put on the true values of government and of life.

Let it be said that those who worked in this administration did so with sweat, toil and prayer in dedication to get the job done.

Let it be said that there was full citizen participation in the state government during these years.

Let it be said . . . notwithstanding the fact that the goals set at the outset were high . . . that they were achieved in the realization . . . that no worthwhile accomplishments can be attained without setting great goals.

Let it be said that we did not seek things merely because they were easy to accomplish.

Let it be said that we recognized the challange and met it.

Let it be said that we were not content with being average but rather sought and achieved nothing less than leadership in all areas.

The task is before us.

Our duty is clear.

Georgia's destiny is in our hands.

Toward its realization I ask for your advice, your support, your help and prayers . . . and, in turn, pledge to you my best and my all.

National Community Senior Service Corps

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MACHEN. Mr. Speaker, I am introducing today a bill that would establish a National Community Senior Service Corps.

This bill would authorize grants to States which establish part-time employment programs for senior citizens in projects of value to the community. Small salaries could be paid in amounts that would not interfere with full social security benefits and short-term training may be provided.

Modern medicine has prolonged the productive and useful years of Americans to the extent that retirement age often catches them by surprise. Consequently, many an alert and capable older person finds himself banished to the rocking chair on the front porch long before he is ready to go.

This often results in a feeling of discouragement so intense that physical health begins to deteriorate, to say nothing of the psychological damage that is done.

Although compulsory retirement may sometimes be a mixed blessing, involuntary unemployment is always a frightening experience and many, many senior citizens, facing discrimination on the job market because of their age, eke out an inadequate living because they are unable to secure employment.

At the same time, every community and neighborhood has unmet manpower needs. There are never enough hospital workers, or helpers for working or invalid mothers. There are many cultural and civic projects that are stalled because they need the touch of enthusiam and the time that the fully employed work force is not able to provide.

Therefore we are faced with the paradox of available jobs and willing manpower that simply have not been brought together.

The National Community Senior Service Corps would provide the catalyst for bringing the two together. The small salaries that could be paid under its auspices would make the difference between poverty level living and modest comfort for many. For the discouraged and unwilling idle, it can return a sense of usefulness and of being needed that all humans must have.

Above all, no amount of schooling and sophisticated training can substitute for the wisdom and understanding that comes with years of living. Our Nation cannot afford to disregard the importance of these two qualities.

I hope that we will see the early passage of this sensible and compassionate legislation.

Two Articles by Columnist Arthur Hoppe

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. YOUNGER. Mr. Speaker, during the congressional recess, Columnist Arthur Hoppe placed two articles in the San Francisco Chronicle which are of interest. The first appeared on November 1, and the second on November 3. His columns follow:

GEORGE HAMILTON DESERVES OUR HELP

(By Arthur Hoppe)

I trust all of you kindhearted folks out there who believe in happy endings will give generously to our latest do-good crusade—The National Fund-Raising Drive to Support George Hamilton's Mother.

You can see how, if successful, this fund-raising drive will happily resolve all the complexities of the warm story that is second only to Peyton Place in the Nation's heart.

For Mr. Hamilton has been telling reporters for years over lunch at Sardi's, El Morocco and 21 that he'd love to march off and fight for his country. But he can't. He can't because his darned draft board keeps deferring him on the grounds that he's the sole support for his sainted mother—Mrs. Anne Something Something Hamilton Something Spaulding.

Can he march gaily off to war leaving mom all alone in their 39-room Hollywood mansion, down to her last Bentley, trying to eke out an adequtae staff of upstairs maids on an Army allotment of $95.20 a month. Of course not.

Worse yet, though Mr. Hamilton is far too much a gentleman to admit it, this is obviously what has kept him and Miss Lynda Bird apart. Can a young man who is the sole support of his sainted mother run off and get married? What a cruel and heartless thing that would be to do.

It's no wonder Miss Lynda Bird has gone to work, hoping to add her pittance to Mr. Hamilton's $300,000 a year so as to build a nest egg—a nest egg with which to buy Mrs. Spaulding an annuity so that some day these two young people can wed.

Think of the unhappiness this tragic situation has caused. Think of the President. There can be no doubt that every time he picks up a newspaper mentioning his daughter, Mr. Hamilton and the draft in one paragraph, he gets all choked up.

But now is our chance. For next Monday Mr. Hamilton once again reports for his physical examination. Once again his draft board will consider his plight.

And if only we can be there, friends, with a big bundle of money for his mother, they will accept him at last!

Then Miss Lynda Bird can give up her job! They can get married! Hand in hand, they will stroll off into the sunset to basic training!

And as for the President, he won't be losing a daughter, he'll be gaining five points in the polls.

So give. Give till it hurts. Give to the National Fund-Raising Drive to Support George Hamilton's Mother.

She'll thank you. Miss Lynda Bird will thank you. The President will thank you. And if you don't hear from Mr. Hamilton, remember:

We don't do these things for gratitude. We do them because we love happy endings.

Elbie Jay Travels In Great Circles

(By Arthur Hoppe)

Howdy there, folks. How y'all? Time for another tee-vee visit with the rootin'-tootin' Jay Family, starring ol' Elbie Jay—an energetic feller ready to travel half way 'round the world to make friends. If'n he can't make any at home.

As we join up today with ol' Elbie, he and his pretty wife, Birdie Bird, have just collapsed in the parlor of their big white house amid a heap of suitcases and souvenirs. That's their cute tad, Myna Bird, asking 'em questions. She's on her lunch hour.

Elbie (with a happy sigh): I guess that was just about the most interesting, rewarding, enriching trip anybody ever took. My, we sure did learn a heap and get a heap done.

Myna Bird: I want to hear all about it, Daddy, minute by minute. In about (glancing at her watch) 37 minutes.

Elbie: Well, now, we started out in . . . Where'd we start out, honey?

Birdie Bird: Honolulu, dear.

Elbie: That's right. Then we went on down to . . . Well, I know we went to Australia, 'cause that's where your ma had a passle of fun digging up old pots and things.

Birdie Bird: No, dear, that was in the Philippines. Australia's where they threw paint on our car.

Elbie: You sure? Well, anyway, Malaysia was mighty nice, excepting it rained a lot so we couldn't do much but sit around the lobby writing postcards and . . .

Birdie Bird: Excuse me, dear. But I think it was Thailand where it rained. And a little bit in New Zealand.

Elbie: New Zealand? You certain we . . . Oh, sure enough, that's where I took that farmer in a funny hat for a helicopter ride. Fine place, New Zealand.

Birdie Bird: South Korea, dear.

Elbie: Yep, and then I snuck off from there for the afternoon to visit our boys in Vietnam. "Come home," I told them in my ringing words, "with that coonskin on the wall."

Myna Bird (puzzled): I thought our soldiers called them gooks.

Birdie Bird: That was Manila, Elbie.

Elbie: What do you mean? Our boys are fighting in Vietnam. Or is it Thailand? Or is it both? It's hard to think straight.

Birdie Bird: I mean you snuck off from Manila. Remember, that's where you had your conference?

Elbie: Conference? Say, I plumb forgot! That's where I got a real lot done and made a heap of fine friends I'll never forget, like . . . Like . . . Hand me my address book there, Birdie Bird.

Birdie Bird (sighing wearily): You know, Elbie, I'm not saying it wasn't a great trip, seeing all those countries. But, my, all that traipsing around! Next year, let's just pick the country we like best and spend the whole two weeks in one place. Seems to me, you'd accomplish just as much.

Elbie (snorting): Accomplish what? You think I could keep those Republicans off the front pages by spending two weeks in Texas?

Well tune in again, friends. And as you mosey down the windin' trail of life, remember what Elbie's ol' granddaddy used to say:

"When skies are grey, when you haven't got a friend, when the whole world's down on you—look busy."

Space and the Free Society

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, the April 1966 issue of the Aeorspace Industries Association of America, contained an analysis by Mr. Karl G. Harr, Jr., president of the association, which was presented before the annual meeting of the American Astronautical Society. Mr. Harr has provided an incisive description of the place of our national space program in our society, examining closely the reasons why our Nation must establish and maintain preeminence in space.

It is interesting to note that he has identified our space program as part of our society and a major impetus in its vitality rather than an adjunct to our national need. Mr. Harr's thoughtful article clearly identifies the challenge of space as a part of our need as a growing society in the years ahead. The article follows:

Space and the Free Society

All of the men and women professionally involved in our national space program strive constantly, and with spectacular and meaningful results, to broaden the application of their efforts. In this way, scientists, engineers, businessmen, teachers, government officials and many others seek to fulfill their aggregate role as the human embodiment of the national space effort. They do an excellent job.

I suggest that this is not enough.

I suggest that, in a free society, a man's work is not done unless he has fought for and achieved recognition of the true nature and importance of his work to society as a whole.

As a spokesman for the aerospace industry, I have been able to proclaim "all's well" with respect to most of the key aspects of our national space efforts and industry's role in it. The achievements of 1965 certainly have demonstrated the effectiveness in depth of this nation's overall space activities.

But there remains one very disturbing aspect of our space effort: The close relationship between this effort, with all its ramifications and implications, and our total national growth and posture is almost completely unappreciated by our society.

The responsibility for this lack of understanding must fall primarily on those of us in government, industry and private scientific research who are engaged directly in carrying out the national space programs. For even we who are most closely connected with this effort are often guilty of defensiveness, justification on negative grounds, and an air of apology about our national space commitment.

Such attitudes are wrong. The most important thing we can do is to recognize our responsibility to reverse them. Our national space effort is not a boondoggle, a toy, a gimmick, a camouflaged military venture, a luxury, or anything of the kind. It is, rather, a multi-faceted national adventure with great scientific, technological, economic, spiritual and political connotations and components which go to the very core of our national character and posture. The impact permeates all aspects of our society.

Until this fact is popularly recognized and appreciated, our space effort will proceed on a false premise. And we who are most closely connected with it will have failed in our responsibility to our society.

Part of the price of a free society is that its members understand the premises upon which they are called to act. Despite the many successes we have enjoyed in our space program, we cannot count such an *understanding* among them.

By virtue of the technological and scientific advances of recent years and the political and economic strength of our nation, the challenge of space exploration was offered to us on terms within our national reach. The challenge fell on virtually every aspect of our society. No scientific discipline, no capacity for technological innovation, no political institution, and no aspect of our national, regional or local economic life lay wholly beyond its impact. Most were substantially affected. As a result no consideration of this nation's future could be made independently of our national decision as to the nature and scope of our space commitment.

To put it simply, we could choose either to accept the space challenge or to reject it. However, there was no choice about accepting the effects of that decision. Whichever way we decided would to a large degree determine the measure of the greatness of our society in the years ahead. For the decision and its effect were and are inseparable, and were and are essentially a decision as to the dimension of our future.

It follows that no one need be defensive or apologetic about our nation's commitment to the exploration of space. On the other hand, leaders, both governmental and private, would have been hard put to justify a decision *not* to accept this challenge with all of its attendant ramifications. As proof, one should test the attitudes in those national societies which, by choice or necessity, have decided not to be part of the space adventure. For the impact of such an option is as dramatically pervasive as is the impact of assuming the challenge. Rest assured that those nations who have not wanted or been able to accept this challenge are not unaware of what it has cost them in many ways.

Our society cannot remain free and viable by choosing to reject the major challenges with which it is faced; nor can it arbitrarily amputate areas of scientific and technological advance without cauterization of the whole. It cannot turn its back on technological advance, because so many of the solutions and so much of the dynamism available to a great democracy is associated with technology. Technological advance is not separable. You are either in the technological flow of the times or you are not. A great society allocates human and material resources to its space effort commensurate with the challenge, not because the space effort is more, less, or equal to medical research, for example, in importance, but because it believes its chances of improving its research are better if the space effort is undertaken. A great society does not apologize for its speace effort as depriving school systems of a measure of resources, but rather proceeds in the strong conviction that its school systems will be better because of the space effort.

The heart of the matter is the inseparability, on the one hand, of advancing where advance beckons and, on the other hand, overall national advance.

It is a narrow and specious contention to justify America's space effort in terms of competition with the Soviet Union or any other nation.

If we were the only nation in the world that had the capability to proceed into this new dimension, we should do it.

We should do it because of the difference it will make in the scope and depth and nature of the opportunities to be afforded our boys and girls ten years from now.

We should do it so that we will be a stronger and richer country in the future in *all* ways.

We should do it to preserve and refresh the spirit of innovation which has been so singular a factor in our national greatness. We should do it as part of a national renaissance on all fronts; for a great society, like a great university, cannot confine its attention to certain challenges selected under past conditions, but must, to sustain its greatness, move comprehensively to accept the challenges of the future.

Elements of our greatness are interrelated and interdependent. The advance of one helps the advance of every other. The attitude and climate of pursuing advance on all fronts greatly advances the whole. As the huge challenge of space generates and consumes and then regenerates our material and human resources, so does it widen the scope of the environment in which our citizens will exist and make their contribution in the years ahead. We will not have denied the future; we will not have fixed rigid horizons; we will not have tried to call a halt to technological advance; we will not have forfeited serendipity. We will continue to move forward as a free and greater society.

These are the real reasons we should proceed positively and proudly to seize this national opportunity—*not* because of the Soviet space effort, important as that is in some political and perhaps military contests; *not* to climb any mountains just "because they are there"; and *not* to create a Christopher Columbus syndrome. We are heavily involved in the space adventure because it is good for the country across the board.

This means we have a job to do in patiently and carefully establishing this proper perspective about our national space effort.

A free society does not tolerate silence, inattention, or neglect of responsibility in such matters. In a free society, you can't retreat to, or hide behind, your expertise. Just as the national space effort permeates all aspects of our national life, to that same extent does every member of our society have a responsibility toward it. It is everyone's business. But everyone must understand it. In a free society, people are not generous enough to assume your case. That case must be argued and reargued in the marketplace of ideas. And such a function can neither be delegated nor purchased.

Space is indisputably a key element in our national future. If we are to remain great, we must continue to accept this challenge with a commitment commensurate to its size and nature. If we are to remain free, we must also move ahead in accordance with the tenets of a free society. Thus, engineers, scientists, busiessmen, teachers, and government officials, whose aggregate contribution is the national space effort, have not finished their job until they have convinced our free society of the true nature of the great idea and purpose which they represent.

Hanoi Is Not Talking Yet

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. DERWINSKI. Mr. Speaker, there is a great deal of emotional and wishful thinking which enters into conjecture on the situation in Vietnam. I felt one of the most rational and timely editorial analyses of the situation appeared in the Wednesday, January 11, 1967, Chicago Daily News, which I insert in the RECORD trusting it will be closely scrutinized by the Members:

HANOI ISN'T TALKING YET

A detailed study of Premier Pham Van Dong's statement to a New York Times representative last Monday reveals little real basis for suspecting any important shift in North Vietnam's attitude toward negotiations.

True, the premier put a somewhat different face on his previous proposition when he said that the oft-repeated "four points" should "not be considered 'conditions,' . . . merely truths." Of itself that might seem to indicate some withdrawal from the position that even negotiations are impossible unless the four points—including withdrawal of all foreign troops from Vietnam—are honored. And on the basis of this seeming shift a new wave of hope swept across the world, that Hanoi might be nearing a willingness to accept President Johnson's offer for no-strings talks.

But what needs to be borne in mind is that Pham Van Dong, a highly intelligent, subtle and articulate man, could have made it crystal clear that Hanoi would come to the conference table without prior fulfillment of the four points. Not only did he not do so; he added a fifth point. ". . . that the United States put, unconditionally and for good, an end to the bombing and all hostile activity against the North."

The imposition of fresh conditions hardly supports the picture of a nation softening its previous stand.

The new condition, moreover, was in the same martial key as most of the balance of his statement, which contained such remarks as these:

". . . We are determined to fight this war and win this war. . . .

". . . We are fighting a just war. That is clear and that is the explanation of our victory. . . .

". . . We are preparing for a long war. How many years? Ten, 20—what do you think, about 20?"

And a further official statement issued on Tuesday declared: "The four-point stand of the Democratic Republic of Vietnam constitutes the basis of a settlement of the Vietnamese problem."

There are those who say the problem is largely a semantical one—that if each side better understood the meaning of the other's words, a solution would be easier to reach.

As to the conditions for merely talking it over (as contrasted with the conditions for U.S. withdrawal from Southeast Asia) the American proposition of "unconditional negotiations" could hardly be clearer. The obfuscation is on the other side, and with so keen a man as Pham Van Dong this can hardly be laid to the inscrutability of the Oriental mind. When his country is ready to sit down and talk, he will find a way of saying so.

Harrison E. Salisbury Sums Up—III

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. RYAN. Mr. Speaker, last week I brought to the attention of my colleagues the 15 articles filed from Hanoi, North Vietnam, by Harrison E. Salisbury, the Pulitzer Prize-winning assistant managing editor of the New York Times.

After leaving North Vietnam, Mr. Salisbury began a series of articles summing up his experiences and observations.

On January 13, the New York Times published the third article of the new series. In this article Mr. Salisbury takes up the question of what targets the United States is bombing. According to Mr. Salisbury, while military targets are being bombed, nonmilitary targets are also being bombed.

Mr. Salisbury reports:

What are the nonmilitary targets that can be seen to have been bombed? They are several residence areas in Hanoi, substantial areas of mixed housing, small shops and miscellaneous buildings in the suburbs of Gialam, Yenvien and Vandien in the Hanoi metropolitan area, several schools in the Hanoi area, villages and hamlets along highways leading south from Hanoi, large areas of housing and shops in towns like Namdinh and Ninhbinh and in the Phatdiem village complex, and a variety of other objectives, including cemeteries.

The article follows:

[From the New York Times, Jan. 13, 1967]

BOMB CONTROVERSY: VIEW FROM THE GROUND—UNITED STATES SAY ITS TARGETS ARE ALL MILITARY—HANOI DISSENTS

Following is the third of a series of articles by an assistant managing editor of the New York Times summing up observations on his visit to North Vietnam.

(By Harrison E. Salisbury)

HONG KONG, January 11—The most controversial subject concerning military operations in Vietnam is the United States air bombardment, what the United States is seeking to bomb and what the bombs are hitting.

President Johnson has stated American policy in simple terms. He said that the United States was bombing "steel and concrete" and that he was convinced American pilots were carrying out those orders.

The North Vietnamese contend that the United States is pursuing a deliberate policy of terror bombing, with civilian population and nonmilitary objectives as the target.

Wherein lies the truth? After two weeks of painstaking observation and inquiry on the ground in North Vietnam, this correspondent can report only what he saw and what he heard. Many bombs have fallen on targets that unquestionably are military objectives by any definition. Many bombs have also fallen on targets that are not military targets.

What are the military targets that have evidently been bombed? Foremost are the railroad and the railroad bridges running south across the delta from Hanoi and Haiphong. Foreigners in Hanoi report that the railroad north from Hanoi has also been bombed.

Highways running south and bridges along them have been bombed.

Other targets that this correspondent saw and that had been bombed are railroad sidings, antiaircraft gun sites, the Yenvien railroad yards and the so-called Vandien truck park in the Hanoi metropolitan area, several factories, and several buildings that probably served as military barracks.

In addition, Westerners in Hanoi confirmed that oil storage depots in Haiphong were destroyed in the initial United States attack last June 29.

What are the nonmilitary targets that can be seen to have been bombed? They are several residence areas in Hanoi, substantial areas of mixed housing, small shops and miscellaneous buildings in the suburbs of Gialam, Yenvien and Vandien in the Hanoi metropolitan area, several schools in the Hanoi area, villages and hamlets along highways leading south from Hanoi, large areas of housing and shops in towns like Namdinh and Ninhbinh and in the Phatdiem village complex, and a variety of other objectives, including cemeteries.

MISSILES MISFIRED

When Hanoi officials first reported that American bombs and aircraft-fired rockets had struck the city Dec. 13 and 14, United States officials contended that the damage might have been caused by the misfiring of one of the surface-to-air missiles used by the North Vietnamese to protect Hanoi against American air attack.

Later one American airman who had participated in the attack said he had seen two missiles misfire and had observed the missiles hitting the earth in open areas outside Hanoi.

The possibility of misfiring of missiles is not excluded by this correspondent. But no person with whom he talked in Hanoi, either official or unofficial, either North Vietnamese or foreign, either Western or Eastern, believes that the major areas of damage in the attacks of Dec. 13 and 14 resulted from missiles. Rightly or wrongly the opinion in Hanoi is that the damage was caused by the Americans, not the North Vietnamese.

THE ISSUE OF THE DIKES

There is also the question of dikes and levees. Are they legitimate military targets? That seems to be a matter of definition. If they were to be destroyed, the richest areas of North Vietnam would be devastated with a heavy loss of life. The United States contends that the dikes have never been cleared as targets and in fact have never been bombed.

However, North Vietnamese officials charge that the levees have been attacked repeatedly, particularly last summer during the high-water stage, when a breach in the dike system could have been catastrophic.

This correspondent has seen craters in and around dikes where bombs have fallen. Other Westerners have seen bomb hits on dikes and strings of craters along a line of levees.

Whatever the reason for the bombs falling on dikes, the effect was the same as if the bombing had been intentional. The North Vietnamese authorities regard the attacks with such seriousness that they have mobilized thousands of laborers to throw up auxiliary walls and dikes to hold back the water if the main system is breached.

CARRIER BRIEFINGS REPORTED

It is easy to establish that widespread harm has been done to civilian housing and nonmilitary institutions and that civilian casualties have been extensive during the United States bombardment of North Vietnam. It is not so easy to determine the cause of the damage and the casualties.

This correspondent has talked with two non-Americans who have been present at Seventh Fleet carrier briefings on the bombing of North Vietnam. According to these witnesses, pilots are assigned precise targets. They are warned against jettisoning bombs on civilians or at random in the countryside.

The instructions for attacks on North Vietnam differ radically from briefings for attacks on the demilitarized zone between North and South Vietnam, the witnesses said. In the demilitarized zone, pilots are given wider latitude.

"They are permitted to fire on anything that moves," one witness said. "Man, woman, child or goat. But they do not have permission to bomb at random in the North."

Those on the ground in North Vietnam cannot tell whether pilots jettison bombs at random despite instructions, but in the view of at least one Western military observer in Hanoi the fliers undoubtedly do.

A pilot en route back from a mission may "lighten his load" by disposing of remaining bombs or letting off a rocket or two for causes that cannot always be precisely ascertained, according to this view. And if bombs or rockets hit civilian targets, who is to know?

There is a good deal of speculation among Westerners in Hanoi about United States target selection. Some Westerners believe United States target specialists tend to pick imposing buildings as military objectives without necessarily precise information.

This line of speculation is stirred by the consistency with which buildings of more than one story seem to have been hit in town after town and hamlet after hamlet.

The North Vietnamese like to point to Roman Catholic churches that have been damaged, some severely. There are also bomb-battered Buddhist temples. Despite North Vietnamese contentions that churches and pagodas have been deliberately attacked, few Westerners accept this explanation. It sems more likely that churches are damaged accidentally in attacks directed at adjacent buildings, even if they are nothing more than ordinary stores or houses.

Damage to school buildings, hospitals and other public institutions, which is also readily visible, may be attributed to the same tendency to attack buildings of prominence and to the fact that hospitals and schools inevitably are situated in built-up areas.

LIKELIHOOD OF ERROR

Another factor that cannot be ignored in an examination of American bombing is pilot error, bombing error and error in target selection.

In the opinion of those who have witnessed attacks on Hanoi and Haiphong, errors are more likely than the United States defense authorities may recognize.

"It is not easy to bomb around Hanoi," one Westerner said. "Hanoi and Haiphong are heavily defended. This is where the Vietnamese have concentrated their air-defense missiles, their MIG-21's and other MIG's. This is where there is a heavy concentration of conventional anti-aircraft guns.

"For United States planes to slip through all these defenses, precisely place bombs on a small target located amidst nonmilitary objectives and think that pilots can carry out a mission without bombs splattering over nonmilitary targets just is not realistic."

As described by foreigners who have watched Americans come over Hanoi, the planes appear suddenly, often simultaneously with or ahead of an air alert. They achieve surprise by approaching from the sea, where the North Vietnamese lack radar stations, and they come up the Red River flying low to avoid radar detection.

The Americans are said to possess a healthy respect for the air-defense missiles and for this reason avoid coming over the city at high altitudes where the missiles are effective. But by coming in low, the Americans expose themselves to conventional antiaircraft guns and to small-arms fire that Hanoi residents send up in volume as soon as a plane whisks into sight.

MIG's are seldom used in actions directly over Hanoi or Haiphong, it was said, because they cannot be employed together with ground fire, at the risk of being shot down along with the Americans.

The air defense of the Hanoi-Haiphong triangle is regarded by foreigners as effective enough to present a problem for attacking American bombers. How many batteries are in the Hanoi area, this correspondent would not guess. They opened up only twice during his fortnight stay in Hanoi. On other occasions, gunfire was desultory or at such a distance that it was impossible to judge the volume.

COMPARISON WITH LAST WAR

The only standard of comparison for this correspondent is World War II. The titanic crash of modern air-defense missiles is a sound new to his ears. It is very impressive. The conventional antiaircraft guns, however, sound as they did in London during the Blitz or during occasional experiences in North Africa or the Soviet Union.

Hanoi's conventional air defense did not impress this correspondent, either when the guns were firing or when judged by the number of emplacements observed or suggested during trips out of the city. Its antiaircraft guns do not appear to be in a class with the defenses of London or of German cities during World War II.

Of course, the raiders sent to attack Hanoi and Haiphong also are not to be compared in numbers with World War II offensives. For what it may be worth, the opinion of one non-Western military observer in Hanoi is that North Vietnam's defenses are far from first class.

"I don't like to say this," he commented, "but our Vietnamese comrades simply haven't got the experience and the technical ability to man their defenses as well as they should. They insist on running their own radar and, as soon as they get basic instruction in missiles, they insist on manning these, too. It would be more difficult for the Americans to attack Hanoi if the crews manning the defenses were more skillful in handling the advanced equipment they now possess."

A Western resident in Hanoi said the comparatively light losses suffered by the Americans supported the contention that North Vietnam's defenses were not very efficient, at least by World War II standards.

If the defenses in the Hanoi area are not regarded as being first-class what about the defenses in the countryside?

Conventional antiaircraft emplacements are visible near bridges, crossroads and towns. One American pilot estimated that there were 500 installations in the Namdinh area. Based on what this correspondent saw, 500 would overstate the number of installations in the entire Hanoi-Haiphong complex by a wide margin.

Many North Vietnamese batteries are mobile and are evidently moved from place to place to make the task of American aircraft more difficult. The North Vietnamese also use false gun emplacements in which dummy wooden guns are mounted to divert American attention from camouflaged emplacements nearby.

Americans also employ ruses to confuse North Vietnamese defenses. For example, United States robot planes are sent over Hanoi, both to touch off radar systems and to communicate back electronic data on the defenses. The robot planes bring guns into action as vigorously as piloted planes. Some foreigners think the Americans put robots into the air at the same time as bombing missions to confuse North Vietnamese ground defenses.

American statements justifying damage to civilian targets on the ground that Americans are seeking to silence adjacent antiaircraft batteries arouse indignation among Hanoi residents.

"What are we supposed to do," one North Vietnamese exclaimed, "sit with hands crossed when American bombers come over to bomb us? It seems to us a curious philosophy to justify an attack on the ground that the person being attacked is trying to defend himself."

GUNS FAR FROM TARGETS

Actually, the North Vietnamese do not seem to place their antiaircraft installations especially close to civilian housing or nonmilitary installations. There are many guns in open rice fields on the approaches to Hanoi. This correspondent saw installations defending the railroad and crossroads emplaced at some distance from the potential targets.

In Hanoi itself, it did not appear that guns had been installed next to civilian objectives, but in a big city ordinary people are never far away. Even if guns are installed in parks, as was the case in London, civilians are right alongside.

It seems certain to Hanoi's foreigners that as long as Americans attack targets that are physically small and situated in a great metropolitan Asian complex where residential and industrial areas are not clearly defined, there will inevitably be a toll of civilian damage and casualties.

INTENT IS QUESTIONED

Justly or unjustly, there is a persistent feeling among foreigners in Hanoi that the United States attacks of Dec. 13 and 14 had a psychological motivation as well as military.

"I can't help but feel that the United States was trying to tell Hanoi something during that bombing," a Westerner, friendly to the United States, said. "The actual targets that they seemed to be aiming for were so small, in fact, almost trivial. It seemed to me that the United States was exposing its pilots to enormous risks and dangers for very small military consequences."

This Westerner thought that the United States might be trying to demonstrate to Hanoi its ability to attack more important targets in Hanoi if orders were given.

"I am still puzzled by bombs and rockets dropped on the Hanoi side so close to the Long Bien [Paul Doumer] bridge," this Westerner said. "Of course, it could simply have been a mistake. Pilots were up there for three-quarters of an hour and ack-ack fire was really intense.

"A pilot may have been in trouble and simply jettisoned his bombs to get out of the neighborhood fast. But that wouldn't explain the rocket fire in Pho Nguyen Thiep Street or the rocket fired in the embassy quarter. I keep thinking that the United States wanted Hanoi to understand what could happen if the signal were given."

Although the bombing occurred at both ends of the two-mile-long Long Bien bridge and causeway, most Westerners are not convinced that this was the actual target of the American planes.

"If the Americans had wanted to take out the bridge," said one military man who is not from the West, "I would have expected them to attack it in the middle of the river, where presumably it is more vulnerable. Attacks at either end seem rather puzzling."

BRIDGE A MAJOR TARGET

Hanoi residents regard the Long Bien bridge as the most shining target in town. It is the only rail and road link with the east side of the Red River. Traffic moves in two lanes, going east on the left side and west on the right side while a railroad runs in the middle.

While the bridge is long and seemingly vulnerable, it is also heavily defended. Unless a plane scored a lucky hit, it might prove a costly target to attack.

However, American planes in the raids of December 13 and 14 attacked targets that were just about as well defended and had only minimal military value, in the opinion of Westerners. Thus diplomats reached the conclusion that the primary objective of the December bombings must have been in the nature of a threat of worse to come.

What has the North Vietnamese bombing offensive cost the United States in planes lost? The American official total now runs to more than 500. The North Vietnamese place the losses three times higher, about 1,500. The North Vietnamese insist that they are conservative in listing kills and that President Ho Chi Minh has revised claims downward when the army is unable to provide positive evidence of a downed plane.

Past wars have demonstrated that the defending side overstates kills and the attacking side understates losses. It is known that the North Vietnamese total includes robots while the United States total does not. While American losses on a percentage basis are low by World War II standards in terms of missions flown, the losses are beginning to mount to a considerable figure and the cost in plane replacements is not small.

DATA ON BOMB TONNAGE

The weight of the bombs dropped in the North has been estimated by the Pentagon at more than 300,000 tons, a high figure in relation to the kinds of targets attacked. North Vietnam is not a built-up, industrialized nation. It is essentially a peasant country. Most of its people are peasants and they live in poor villages. Even if every town in the country were destroyed, the total urban destroyed area would hardly equal that of one big German industrial target of World War II.

It is apparent that most American bombs are falling in mud and wattle villages, on dirt roads, on rice fields or around gun sites that are more often set in fields than in towns.

Based on cost calculation, it seems likely that bomb expenditure per enemy soldier killed or enemy installation destroyed must run higher than in any previous war.

Some North Vietnamese, in estimating the net tonnage of bombs dropped on particular villages or areas near the demarkation line, use figures of several hundred or even several thousand tons per acre.

American bombs are apparently being replenished at a rapid rate. The North Vietnamese are impressed when they pick up bomb fragments and find they bear assembly dates sometimes less than a month earlier.

The American arsenal includes a number of technological innovations that makes World War II bombs seem outmoded. There is less reliance on conventional high explosive bombs in North Vietnam than there was in strategic air force bombings of World War II. Incendiary bombs and napalm have been little used in the North.

High explosive weapons are usually 1,000- or 2,000-pound bombs and they are employed against large industrial installations and bridges. Sometimes they are delayed-action bombs. In one effort to knock out a particularly important bridge, the North Vietnamese contend, naval mines were floated down river but were intercepted before they could take effect.

A particularly destructive weapon against light Vietnamese structures is rocket fire from planes. A rocket can knock down or damage a whole block of houses on both sides of a narrow street. The Americans also use air-burst bombs that explode over structures by the use of proximity fuses.

Two terms often on North Vietnamese lips are "Bullpup" and "Lazy Dog", expressions not yet in the vocabulary of most Americans.

These are new developments in American military technology. The Bullpup is a guided missile fired by a plane. It has a range to four miles, according to the North Vietnamese. The pilot feeds distance data into the missile's memory bank, then fires it.

The missile is capable of changing direction up to 90 or more degrees, can dive, bank and turn if so instructed by the pilot. The Bullpup carries a heavy charge and samples of damage attributed to it by the North Vietnamese were impressive.

The Lazy Dog is an advanced anti-personnel weapon introduced last spring. It consists of a mother bomb made of light metal that bursts over a target at low altitude or on the ground. Within the mother bomb are 300 metal balls about the size of a baseball that roll out across the ground.

They have a delicate time fuse that enables them to scatter over a widespread area and then explode, sending a rain of murderous steel splinters in all directions. One Lazy Dog is supposed to cover an area of 300 square yards with lethal fragments.

United States authorities say that the Lazy Dog has never been used on civilian populations and that it is designed primarily for use in attacking antiaircraft installations and other manned military posts.

It is evident from examining this weapon that it is indeed designed for antipersonnel use and, judging from its effects on civilians, the casualty rate among exposed troops must be considerable.

The problem that is posed by the use of this type of weapon in North Vietnam is that if it is dropped over gunsites, for example, there is no real assurance that a small pilot error will not cause the explosion to include within its effective area some civilian foxholes or even peasant huts where there may still be children or adults.

The bombs scatter so deadly a hail of steel fragments over so large an area that they can easily encompass segments of the terrain that the bombardier may not aim for at all.

These bombs are plummeting out of aircraft that may be moving at speeds of 600 miles an hour or more. A fraction of a second's delay in release may make a difference of hundreds of feet in the landing point.

PINEAPPLE ANOTHER WEAPON

A considerable number of Lazy Dogs have not exploded for one reason or another and the North Vietnamese now possess a collection of them that they display to visitors before taking them to hospitals to see children wounded by Lazy Dog fragments.

The Lazy Dog with its cargo of what the North Vietnamese call guavas has begun to replace earlier antipersonnel weapons called "pineapples," with which the North Vietnamese are also familiar. The pineapple is a small cannister, about the size of a large tuna fish can, to which aluminum vanes are attached. It is filled with steel pellets and has a sensitive pressure trigger that is set off by impact. Sometimes pineapples fall into trees where they may hang undetonated.

The North Vietnamese have a collection of these weapons, too. They say that in South Vietnam undamaged pineapples are widely used as lamps in huts, either standing on up-ended vanes or swinging from bamboo poles and fitted with wicks and kerosene.

So many American bombs of all types have fallen on North Vietnam that collections are found almost everywhere. They are to be seen in peasant cottages and in government offices. The metal from downed American planes is beginning to be put to a variety of uses. At first it was largely used for souvenir cigarette cases, lighters and rings. Now it's beginning to turn up fashioned into kitchen articles and even surgical instruments.

One Hanoi resident commented on the American bombing that "when the war is over, the North Vietnamese will have the foundation of a good little steel industry. They will have more scrap iron available than any other Asian country."

The appearance of new kinds of military technology in North Vietnam causes its people to charge that the United States is using the country as a field laboratory for testing armaments. Visitors to North Vietnam are likely to hear many expressions of outrage on this subject.

So that Children May "Breathe Free"

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. ROGERS of Colorado. Mr. Speaker, on the opening day of the first session of the 90th Congress, I introduced a joint resolution authorizing the President to proclaim "National CARIH Asthma Week," beginning May 1, 1967.

Although the Children's Asthma Research Institute & Hospital is located physically in my district, it presently is caring for 165 children from 118 different congressional districts. And in a very real sense, it is serving all mankind. I would therefore like to tell you something about this remarkable institution and to solicit your support for my resolution.

CARIH is a free, international center, open to all races and creeds. Its research program is the only one in America dedicated solely to finding the causes of asthma and other allergic diseases. It is recognized as the leader in the treatment, care, and rehabilitation of the intractable asthmatic child. Only children with intractable asthma are eligible for the free care and treatment offered at CARIH.

The colorful history of this unique institution is set forth in its descriptive booklet entitled "A Child, a Disease, a Challenge."

It tells how, at the turn of the century, Denver became a mecca for people suffering from tuberculosis:

> Hundreds of families migrated to this mile-high city with its pure, dry mountain air. As parents went into sanitariums for treatment—and sometimes died there—their children, unafflicted, were left destitute, wards of the Denver community.
>
> Moved by their plight, a small group of philanthropic Jewish women in 1907 opened the Denver Sheltering Home. Its child population grew from an initial 20 to 103, and within a few years of its founding it had attracted nationwide support as the National Home for Jewish Children.
>
> By 1939, in the wake of new knowledge, drugs and treatment techniques, local communities were better equipped to care for their own tubercular patients. Hence, there was no longer the same need for the National Home's unique services.
>
> The Board of Trustees, realizing that the sheltering home was no longer an imperative need, accepted an unmet challenge and a new use for their facility: the development of a home for the tragic little victims of asthma.
>
> Today the former sheltering home is known as the Children's Asthma Research Institute and Hospital, a name that truly defines its purpose and function as a unique and total treatment-care and research center for asthmatic children. Its goal being the abolishment of a disease that afflicts thousands of children each year. In its more than a quatrer of a century, CARIH has rehabilitated thousands of asthmatic children from every state in the Union and several foreign countries.

I commend to your favorable attention "National CARIH Asthma Week" and the splendid work of the institution which it deservedly salutes.

The Future of the Great Lakes Waterways

EXTENSION OF REMARKS
OF
HON. J. EDWARD ROUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. ROUSH. Mr. Speaker, I take great pleasure in submitting to the RECORD a fine speech by our distinguished junior Senator from Indiana, Senator BIRCH BAYH. His speech before the Great Lakes Commission's annual meeting concerns a subject of interest to all of us in the Midwest—the future of the Great Lakes Waterways.

The speech follows:

THE FUTURE OF THE GREAT LAKES WATERWAYS

(Speech by Senator Birch Bayh, of Indiana, before the Great Lakes Commission annual meeting, Indianapolis, Ind.)

I am pleased to have this opportunity to speak to you tonight on a subject of particularly vital importance to the continued economic prosperity of the Midwest—and therefore a subject of great importance to the nation's economic health as well—the future of the Great Lakes Waterways.

It is especially fitting, it seems to me, that today the Great Lakes Commission is meeting in Indianapolis. For, as you know, Indiana was the only state bordering the Great Lakes which, until recently, did not have a deep-water public harbor. During the 89th Congress, however, we were fortunate in passing a measure authorizing the construction of the Burns Waterway Public Harbor. I am happy to report that work has already begun on this project. As a result, Indiana is now a full-fledged partner in the development of the Great Lakes Region.

The Great Lakes Waterways provide economical transportation for an immediate area of 300,000 square miles, and extend their facilities to a tributary region totaling over 1 million square miles—or about one-sixth of the North American continent. Living within the Great Lakes complex are more than 70 million people; one-third of the total combined populations of the United States and Canada. It is a region producing 50 per cent of all U.S.-Canadian manufacturers, including 70 per cent of the steel output, and over 40 per cent of the agricultural produce. The Great Lakes States alone provide the Federal Government with more than 40 per cent of its tax dollars.

The opening of the St. Lawrence has transformed the Great Lakes from a poorly-connected waterways network into a prized fourth seacoast for the United States.

In 1960, the St. Lawrence carried a meager 20 million tons. In 1965, tonnage had jumped to 43 million, and in 1966, it is expected to handle almost 48 million tons. Grain traffic along the St. Lawrence has increased 80 per cent since 1961.

In the State of Minnesota alone the Seaway is directly responsible for a 75 per cent increase in farm exports since 1959. In 1965, Minnesota's foreign trade jumped 32 per cent. And in previously land-locked North Dakota, foreign trade has increased 50 per cent since 1960. Similar increases were reported for South Dakota, Wisconsin and Iowa.

The Chicago Board of Trade estimates that the opening of the Seaway has resulted in a savings of $60 million on grain shipments from the Midwest. The total savings in reduced transportation costs for all Seaway traffic exceeds $200 million.

The St. Lawrence Seaway is the key to the economic development of the previously land-locked "Bread Basket" of America. The Seaway is the Midwest's window on the world, providing us with access to the all-important markets of Europe and beyond. Naturally, we in Indiana would like to share in this tremendous expansion for which the St. Lawrence is largely responsible. The importance of the Seaway to Indiana's economy is pointed up by the fact that 22 cents of every dollar's worth of farm products sold by Indiana farmers originates from export sales.

Our future economic development as a region, as you can see, depends upon the ability of the St. Lawrence to retain, and exploit, its competitive advantages.

In conjunction with the expansion of the Seaway, the individual Great Lakes States have undertaken extensive programs to develop the full potential of their ports. The success of these programs is seriously threatened, however, by a proposed 10 per cent toll increase on the Seaway. According to Commerce Department officials, the increase is necessary in order to retire the Seaway Corporation's debt.

To tamper with the toll rates at this point, it seems to me, is dangerous, too dangerous for the continued growth of the Seaway. As a 1965 report by the Stanford Research Institute pointed out, "important traffic patterns are still in a state of flux. . . . a long run pattern has not yet been established." This was particularly true with respect to grain shipments, the Report concluded. And grain shipments, it should be pointed out, constitute the single most important item in Seaway tonnage.

The present toll, in terms of cost per bushel of wheat, is approximately one cent—a 10 per cent increase would neutralize the Seaway's natural advantages, and result in the loss of shipments to the Gulf ports whose outlet would otherwise be the St. Lawrence.

It seems fairly certain, then, that a toll increase now would disrupt emerging traffic patterns. It would curtail our foreign trade at a time when we already have a delicate balance of payments problem.

The Stanford University Study on which the Commerce Department has based its recommendation for an increase points out that "in general, it appears that the routing of grain shipments for export is responsive to fairly small differences in the shipping charges on alternative routes." It went on to say, however, that "While it appears that routing of marginal grain shipments would be influenced by changes in the present level of tolls, moderate toll rate changes probably would have only a small influence on total tonnages moved via the Seaway." It seems to me that this is having the best of both possible worlds—in most cases a toll increase would very definitely affect traffic, but in this case it doesn't!

What the Stanford Study doesn't say is probably just as important as what it does say. It fails to point out, for example, that the Seaway would have even greater competitive advantages if, in the first instance, it was not required by statute to set relative high toll rates. The lag in Seaway revenues is due, for the most part, to gross miscalculations on projected tonnage. For the period 1959 to 1966 traffic is approximately 52.5 million tons lower than the original estimates. Could excessively high toll charges have been responsible for this failure to live up to expectations?

The St. Lawrence Seaway is the only public waterway in the United States to bear the original costs of construction and operation. I repeat—the Seaway is the only public waterway in the history of the United States whose traffic must bear the total cost of construction and operation, with repayment due in 50 years.

Why has the St. Lawrence been singled out for such a dubious distinction? What was the economic rationale behind a self-liquidating Seaway? These are questions to which I have no answers.

Recently, in discussing the Seaway's unique financial arrangement with the man directly responsible for administering the nation's transportation system, Under Secretary of Commerce for Transportation Alan Boyd, the Secretary offered this observation: "It is my understanding that the policy of the Congress today is that transportation plans generally should be paid for by the user as a matter of policy, but as a matter of implementation, except in the case of the Seaway and the sum of the user charges on the passengers and freight of airlines, the Congress has not implemented this policy." In short, there is no logical explanation as to why the St. Lawrence alone must bear these burdens.

It was a costly mistake for the supporters of the Seaway to have succumbed to political expediency. Selling the St. Lawrence on the basis of self-liquidation was wrong. The Seaway was, and continues to be, an economically justifiable undertaking.

Remove its financial straight-jacket—let the Federal Government treat the Seaway the same way it treats the New Orleans Industrial Canal, which has already received $100 million and which charges no tolls; or the Delaware River Basin, in which we have invested over $170 million, and which is toll free—treat the Seaway in this manner and we will have a prosperous St. Lawrence and an economically healthy Midwest.

I do not ask that these projects bear the burden of construction costs. Our tax dollars invested in these waterways have resulted in substantial public benefit. But I do ask that the St. Lawrence be included in this category. It is no less a national, and no more regional, waterway than the Houston Ship Canal or the Delaware River Basin.

While I sympathize with the Seaway Corporation in its present predicament—at the end of 1965, the outstanding balance was $141.7 million, or about $8.2 million more than the original cost with one-seventh of the repayment period already elapsed—I do not agree that the proposed toll increase is the solution. The Seaway's current indebtedness is evidence enough that the repayment scheme is not feasible.

Faced with the prospect of a toll increase, the bipartisan Great Lakes Conference of Senators supported a measure introduced by our colleague from Minnesota, Senator Mondale, which was designed to relieve the St. Lawrence of the onerous and discriminatory financial burdens imposed upon it by the Seaway Act of 1954.

The Mondale Plan, with which many of you are undoubtedly familiar, proposed to refinance the Seaway Corporation debt by converting the outstanding principle and interest owed to the Treasury into interest-bearing capital stock owned by the Federal Government. Under this proposal the Seaway Corporation would save $1.8 million annually, and at the end of 60 years will have paid into the Treasury a total of $285.5 million.

The Great Lakes Conference of Senators is the first to admit that the "recapitalization" formula is not the only possible solution. It is only a beginning. In fact, as I mentioned during the hearings on the Mondale bill, "I just wonder if, maybe, we are not asking for too little."

Another possibility which has often been suggested is the imposition of a nominal "user charge." Of course, I see no reason for singling out the Seaway for a "user charge" when other federal waterways remain toll free. But this is a possibility that needs to be explored. Hopefully, a comprehensive review would result in a uniform federal waterways policy.

With the tragic death earlier this year of Senator Pat McNamara, we lost a valuable public servant whose efforts in behalf of the Great Lakes States, I'm sure, are well known to all of you here tonight. He was Chairman of the Senate Public Works Committee, which has major responsibility for navigational problems. Now with his passing, only Senator Steve Young and myself represent the Great Lakes States on this all-important Committee.

For this reason, in recent months I have focused more of my attention on Seaway problems than ever before. I would like to list some of the trouble spots, in addition to the toll question, which continue to plague the operation of the Seaway and the Great Lakes Waterways. And I would like to offer, what I feel, is a very definite step toward solving these problems.

From the standpoint of operations, we have a problem which has only recently come to light. In testimony before the Senate Public Works Committee, the Seaway Corporation admitted for the first time, publicly, that the Eisenhower Lock was built to faulty specifications, and as a result, the Seaway's operations are being hampered. This requires immediate attention, and it should be repaired with Treasury funds, for the Army Corps of Engineers is solely responsible.

The Great Lakes Ports, as I am sure you know, have not engaged in as extensive a promotional campaign as they should. The Port of New York spends over $1 million annually for advertising and promotion. How much are the Great Lakes States spending? Is it $100,000 or $200,000? Whatever the exact figure is, we need to do more—substantially more.

The Seaway Development Corporation, of course, is limited in its promotional activities because it is an official government agency. But this restriction does not extend to the individual port authorities and the Great Lakes Task Force, who should be joined together for their mutual benefit.

Then there is the pilotage problem. Increasing the tolls 10 percent is not going to help ships experiencing delays because of the difficulties in securing pilots.

And who knows how much traffic has been lost to the Seaway because of the discriminatory rate schedules of inland carriers. Some of the trunk lines servicing the Great Lakes ports have improved their service—but most of them have not.

Finally, there is the problem of United States flag-vessels on the Great Lakes—or, more appropriately, the lack of U.S. vessels. Why can foreign carriers operate so profitably plying the Seaway and American shippers find they can not. Is it profit or expedience that keeps them from serving the Great Lakes.

This lack of American flag ships, naturally, has resulted in a tremendous loss of government cargo. Government purchased goods produced in the Midwest are being diverted from their natural outlets along the Great Lakes. The cheapest and shortest way to ship Kaiser Corporation products produced in Toedo, provided there is adequate rail service, is through the Port of Toledo. Not the Port of New York or Baltimore—as is now being done.

In January, 1962 a Defense Department task force published a report entitled "Study of Surface Movement of Export of the Department of Defense to Europe and the Mediterranean Area." Behind that lengthy title, which was probably designed to scare away prospective readers, was a recommendation that the Military Sea Transportation Service begin providing service to the Great Lakes Ports with controlled ships if the U.S. flag carriers continue their de facto boycott of the Lakes.

This recommendation was based upon the fact that American flag service was so poor that the Department of Defense was not able to take advantage of reduced transportation costs on the Seaway.

I am sorry to report that the Defense Department has not acted on this recommendation. It is an area that merits further study.

These are problems that require immediate attention, as does the toll question. Hopefully, this matter can be brought to the attention of Congress, and the necessary remedial action taken before the Seaway is strangled.

Harrison E. Salisbury Sums Up—IV

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. RYAN. Mr. Speaker, in the fourth article of his recent series summing up his observations in North Vietnam, Harrison E. Salisbury discusses the program of industry dispersement being carried out by North Vietnam. The article appeared in the January 14 edition of the New York Times. The article follows:

[From the New York Times, Jan. 14, 1967]

HANOI'S INDUSTRY BEING DISPERSED—PLANTS CONTINUE TO OPERATE WITH REMAINING MACHINES

(By Harrison E. Salisbury)

HONG KONG, January 11.—The main hall of the March 8 Textile Factory in Hanoi has a lopsided appearance. To the right stand row of looms, busily weaving cotton yard goods. To the left is open cement flooring, broken by patches where machines have been wrenched out.

The factory is typical of North Vietnamese industry. About two-thirds of its equipment, in the estimate of the assistant director, Mai Uan But, has been moved out to villages and towns in a radius of 40 to 60 miles from Hanoi.

The assistant director described the work of his factory over cups of steaming green tea in a chilly office at about 6 A.M., an hour that North Vietnamese officials favor for interviews. This is the hour Government offices begin work. It is also the hour the day shift goes to work in factories.

The factory, whose name derives from International Women's Day, celebrated in the Communist world on March 8, normally employs about 7,000 workers, of whom more than 70 per cent are women, mostly young women.

Mr. But contended that despite the evacuation of much machinery, the plant continued to produce close to normal levels. It operated on three eight-hour shifts—seven and one-half hours of working time and a half hour off for a meal.

The office was decorated with a portrait of President Ho Chi Minh, before which was placed a vase of salmon-colored gladiolas, a feature observed in almost every Hanoi office. There were also a small panorama of Moscow's Kremlin, a colored photograph of Peking's Tienamen Square and three Chinese silk embroideries.

On a tour of the plant, the assistant director said the cultural and social activities of the plant; the workers' club, the library and kindergarten had been evacuated.

CLUB NOW A DRILL HALL

He did not say what the workers' club across across an open square from the main plant was now being used for. Judging from a throng of workers moving in and out in a fairly orderly fashion it seemed a reasonable guess that it was now being used as a drill hall.

Drill halls and defense training fields were a feature of most factories that this correspondent saw in North Vietnam. Each factory has its own civil defense unit to which rifles and helmets are issued.

Despite air defense training, civil defense work, military training, life goes on in Hanoi. Women visit the beauty parlors to have their hair waved, children play in the streets, couples visit the lakeside cafes, shoppers throng the stores, strollers pause to look at newspapers posted on the walls or inspect exhibits of news photographs, and the eternal cyclists course through the streets, some pausing to have the bicycles repaired.

When an alert sounds the workers take their guns and tin hats and rush for the roof or posts in the open beside the air-raid shelters. There they stand with guns at the ready, scanning the sky for sight of an American plane. If one comes, they open fire.

A diplomat's wife in Hanoi whose residence was next door to a factory said she was in almost more fear from the rifle fire than the bombs, so intense was it when the planes came over.

In Namdinh, a textile town south of Hanoi that has been heavily bombed, workers in a rice-flour mill had guns beside them or stacked on nearby walls.

GIRLS RUN OBSTACLE COURSE

Outside the mill an obstacle course had been set up with hurdles and jumps. Young factory girls carrying rifles were running the course—about 100 or 150 yards and hurling themselves at its end full-length on the concrete, aiming their guns at an imaginary enemy.

Guns seemed to be everywhere in North Vietnam. Sometimes it appeared that every other person walking down the street had a rifle or a submachine gun slung across his or her back.

In World War II guns were not so evident among the civilian populace. This is another kind of war and everyone in North Vietnam, whether schoolteacher, textile weaver or housewife, is enrolled in civil defense.

The North Vietnamese are aware that it is unusual, especially in a Communist country, to find so many ordinary persons with guns in their hands.

"Where else have you ever seen this?" one asked. "Can you imagine the regime in the South giving guns to its people? They would never dare. Here you can see for yourself that the people support their Government. If they didn't they have the weapons in their hands with which to change it."

The March 8 textile factory suffered a small hit in an air attack Dec. 13. A rocket exploded over the main building or might even have hit the roof. Large sections of broken glass roofing were replaced with oiled paper.

There were still shards of glass on the cement floor and the factory director, like other North Vietnamese enterprise managers, had a stack of bomb fragments piled on a table next to a display case where the factory's cotton print goods were being exhibited.

WORK ON DEFENSE CHORES

One of the principal products of the plant was black sateen cloth, from which North Vietnamese women make their trousers. Workers in the textile plant are expected to devote one-third of their time to work, one-third to defense chores and one-third to their home and family.

They have drills several times a week, and several times a month they are rounded up for road building, rubble clearing, digging of gun sites, repairing bridges or other defense tasks.

It could hardly be said that they were overexerting themselves in the textile plant. The work force seemed small by the standards of similar establishments in Mongolia or Bulgaria. But it did not seem to be overworked.

Girls were gathered in twos and threes giggling over their private talks. They looked up when the assistant director and a foreign visitor came by, but hardly paused in their personal preoccupations.

North Vietnam's economy, in general, is organized along the lines of other small Communist countries. All industry and commercial establishments are run by the state. However, small private trade is permitted—sellers of cakes and buns, repairers of bicycles, street venders of soft drinks, peasant women selling flowers, bootblacks, sidewalk brazier cooks, and similar one-man ventures.

Two kinds of industrial establishments exist.

The larger factories are owned, organized and run by the state. The textile factory is an example of this type of industry. Its production quotas are fixed by a state plan, its wage scale is set by the state and its price structure is state-controlled. Workers are paid a small minimum wage and the take-home pay is determined by output.

In the textile plant they earned 70 to 80 dongs a month. The dong is nominally valued at 3.53 to the dollar. Workers receive a 20 per cent premium for night work. Their minimum base pay is 2 dongs a day. The factory director estimated their cost of living at one-third their base pay. He said rent cost about 1 percent of wages and health and medical services were free.

The other common type of enterprise is the cooperative handicraft shop. Workers in the cooperatives share the profits of their enterprise and work under conditions closely resembling those of private enterprise.

Agriculture has been collectivized, with farming put in the hands of cooperatives or communes that seem to resemble the Chinese commune more than the Soviet collective farm.

It was difficult to determine how well the system worked since all efforts, both industrial and agricultural, were geared to the war effort. However, it was evident that the country had not proceeded far along the path to industrialization when war hit.

The most serious effect of the war on industry, outside of physical destruction of plant, seemed to be the extensive evacuation and decentralization program.

The evacuation of the textile plant began in February, 1965, at the start of the American bombing. In conversations with directors of other institutions, it was disclosed that a general evacuation program got under way at that time and was still in progress.

One problem was that while institutions could be moved out of Hanoi, people had a tendency to drift back. Many offices and plants were scattered in suburban villages and towns, producing heavy traffic in and out of Hanoi over the weekends.

Husbands who are working during the week in an office 10 miles away are likely to hop on a bicycle and go to the city for Saturday and Sunday. If the man cannot leave his job, his wife in Hanoi gets on her bicycle, puts the two children on behind, and pedals out to visit him.

The roads in and out of Hanoi, already cluttered with vehicular traffic moving south and empty trucks coming back, thus are even more jammed.

The national treasures in the Museum of Fine Arts began to be evacuated in the winter of 1965, largely to caves in the north. Much remains to be moved and there were packing boxes and valuable buddhas disassembled and awaiting removal in several museum halls one evening in late December.

The evacuation of schools from Hanoi and Haiphong began about the same time, on the theory that, whatever the United States might say, the utlimate targets were Hanoi and Haiphong and the two cities would ultimately be hit hard.

"Our calculation was very simple and I think it was correct," one of North Vietnam's editors said. "First, the bombing was extended from the 17th parallel to the 19th. Then to the 20th and 21st, then to the northwest part of the country. Then to the extreme north along the Chinese frontier. And after that to the northeast. Finally to Hanoi and Haiphong.

"Now all the provinces of the North are being bombed. Don't you think it is reasonable to expect that Hanoi and Haiphong will be attacked more strongly? All our preparations have been based on that expectation."

At the same time, according to North Vietnamese calculations, the weight of the United States attack has steadily increased. The North Vietnamese say that 1,700 missions were flown in the North in January, 1966. This rose to 2,300 in February, to 3,300 in April and more than 5,000 in September 1966.

The total missions dropped in October and November to 2,500 and 2,000 because of bad weather. Figures for December, 1966, are not yet in. The North Vietnamese said nearly 30 per cent of the missions were now being flown at night.

What this kind of bombing means at the provincial level was explained by Nguyen Xuan Luong, deputy editor of the provincial newspaper of Ninnbina, the capital of Ninnbina province south of Hanoi. He said Ninhbinh Province, with a population of 500,000, had been badly damaged by repeated United States attacks.

Up to Dec. 15, 1966, provincial authorities calculated that 2,338 missions had been flown against the province, including 303 night missions. They contended that 24 raids had been on military targets, 31 on economic targets and the rest at random, including populated areas.

Of 123 agricultural cooperatives in the province, 96 were attacked, and 24 towns and the provincial capital as well, the authorities reported. They added that 13 dikes, 10 sluices and 20 markets and other agricultural facilities had also been struck as well as five hospitals and 10 churches.

The provincial authorities said 6,347 bombs had been dropped in the province. As of Dec. 1, the province claimed 41 United States planes, including four unmanned reconnaissance planes. Three were said to have been brought down by rifle fire.

It is against this scale of bombing that North Vietnam's dispersal effort must be viewed.

All of Hanoi's schools have now been evacuated from the city. The move began in the late winter and early spring of 1965. The entire Polytechnic University, the highest educational institutions in North Vietnam, was evacuated at the same time. Its 2,500 students were dispersed in half a dozen provinces. The 5,000 students of the teachers' college were also moved out.

These steps have not prevented casualties among students and schoolchildren nor the destruction of schools in outlying regions. Many classes are now being conducted in village huts quite indistinguishable from the air or from the ground from ordinary peasant habitations.

For example, the Polish Friendship School, which is situated in the Hanoi suburbs, in the same general area as the Vandiem truck depot, was first hit in a bombing raid Dec. 2, according to Nguyen Van Huyen, Minister of Education.

Mr. Huyen, a long-faced serious educator who wore a blue serge suit, discussed the problem of evacuation and protection of children over endless cups of China tea.

Because the Polish Friendship School was located in the suburbs, it had not been evacuated. But on Dec. 2, Mr. Huyen said, 10 bombs fell around the school. The pupils and teachers were in shelters. One shelter caved in from the blast. Six pupils and two teachers were trapped, but were rescued with minor injuries. The bulding was again struck Dec. 13–14 and damaged so badly that it can no longer be used.

"We have great anxiety about the loss of life among our children," the minister said, "and about their nervous systems. The first thing we teach our kindergarten children now is how to get quickly into a shelter and how to maintain the shelter in good order."

The shelters are, in fact, foxholes dug right under the children's wooden desks so they merely have to slip down into them.

"We have no real way of protecting our schools," the minister said. "If bombs drop right on the school or beside them there is little chance for the children. We can't protect them against a direct hit."

The schools that this correspondent saw in small towns and suburbs were generally equipped with earthen blast walls to protect doorways. They had intricate trench systems connecting each hut in which classes were held so that children or teachers could move from one to another under some cover.

While all of Hanoi's schools have been evacuated, far from all of Hanoi's children are out of the city. Some are still there because the parents have no one to whom to send the children. Some are there because parents are unwilling to part with them.

The Hanoi authorities said the toll of child casualties in the raids of Dec. 13–14, which they placed at 14, was unusually high because many were small children left unattended at home while their parents were working. The youngsters either did not know how to get into shelters or did not realize that the attacks were in progress.

The same factor was cited by municipal authorities in Namdinh and by village authorities. They said the most difficult task was in coping with small children, big enough to be left alone but too small to understand the bombing danger.

The problems that the war has created for North Vietnamese health authorities are as great as those in the educational field. According to Dr. Nguyen Dan Tin, Deputy Minister of Health,, 180 medical institutions were badly damaged or destroyed in United States bombing between February, 1965 and June, 1966. Among these institutions were six provincial hospitals and 10 district hospitals.

The most important target of United States bombers, according to Dr. Tin, was the North Vietnamese leprosarium at Quynhlap on the coast in Nghean Province. The question of whether the United States attacked the leprosarium and, if so, why, has become a matter of controversy.

The institution was a comprehensive center for careand treatment of leprosy and included 160 buildings with accommodations for 2,000 patients. The North Vietnamese contend that the United States, in a series of attacks from July, 1965 to May, 1966, methodically destroyed the institution. The United States position is that only military targets were attacked.

The health official said the lepers had been dispersed in a number of small makeshift hospitals in other rural areas.

The Health Ministry has concentrated on building up small secondary hospitals in villages, evacuating nurses, doctors and patients from city institutions. However many Hanoi hospitals remain fully staffed to handle victims of any mass raids that may occur.

American Seapower: Where Are We and Whither Are We Tending?

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. MAILLIARD. Mr. Speaker, on Tuesday evening, January 10, we heard the President of the United States report to the Nation on the state of the Union. At the very beginning of his address, the President stated:

> I have come here tonight to report to you that this is a time, a time of testing for our Nation. * * *
>
> As President Abraham Lincoln said, we must ask "where we are, and whither we are tending."

Well, to paraphrase the President's words, when can we expect to receive an answer to the question: "American seapower: Where are we and whither are we tending?"

No mention whatsoever was made in the President's latest state of the Union address concerning the American merchant marine. Yet, on January 4, 1965, in an earlier state of the Union address, the President said:

> I will recommend . . . a new policy for our merchant marine.

Two years now have passed since that earlier Presidential promise of a new policy for our merchant marine and we are still waiting. Neither wishful thinking nor academic debate will cause the perplexing problem of the plight of the American merchant marine to miraculously disappear. But, this is all we seem to have witnessed over the past 2 years. How much longer, I ask, must we wait?

Meantime, through inaction we are abdicating our former position as a major world seapower to none other that our foremost cold war competitor—Russia. The Soviet Union is placing increasing and effective emphasis upon the development of a modern and well-balanced fleet of merchant and naval ships.

In February of last year when speaking before the Commonwealth Club of California, I forewarned:

> The Soviet Union, I assure you, is not as apathetic as we to its merchant marine. It recognizes the rewards of sea power. It acknowledges the need for ships to obtain these rewards. It has faced up to the fact that such rewards are not without cost. Once considered a non-maritime nation, Russia is rapidly becoming a major maritime power.

Again, in July of last year when addressing the Republican Associates of San Diego County, San Diego, Calif., on the topic, "American Seapower—Where Are We Going?" I made the following observation:

> What is really most disturbing about this generally unfavorable direction being taken with American sea power is that while we appear to be "fiddling and declining," Russian sea power is modern and growing at a fantastic pace. Two years ago, Hanson W. Baldwin noted in his article, "Red Flag Over the Seven Seas," and I quote: "If to vast Russian land power is added major maritime power, the problem of deterrence becomes formidably difficult. If we lose control of the seas, it becomes impossible." Yet, this is the very real danger that now stares us in the face.

Because of this growing threat of the Soviet Union at sea—both commercially and militarily—I am inserting in the CONGRESSIONAL RECORD today the following copy of an editorial which appeared in the San Francisco Examiner of December 29, 1966, requesting that my colleagues pay particular heed to its concluding sentence:

> GROWING SOVIET POWER AT SEA
>
> The authoritative British publication Jane's Fighting Ships—a periodically updated compilation of naval strength throughout the world—has come up with a sobering estimate of Soviet sea power. The USSR, "Jane" notes, is now second only to the United States as a naval power, and possesses the biggest submarine fleet in the world.
>
> The Soviets, moreover, are inching closer to Japan—now the world's leading merchant shipping nation—and may soon be challenging the Japanese for supremacy in the vital field of civilian maritime tonnage.
>
> The Soviets steadily outbuild the United States in merchant tonnage. Last year the USSR accepted delivery of 129 ships; this country took 16. At the beginning of this year, the U.S. had 41 ships on order, the Russians more than 100. At the beginning of 1967 Russia expects to carry 75 percent of its trade in its own bottoms; the U.S. will carry 9 percent.
>
> Thus we are served with timely notice that the Soviet Union is not only the huge land military power everyone knows it to be, but is also ominously strong at sea.
>
> It will be a long time, however, before the Soviets can match the United States as a naval power. The USSR is considerably behind the U.S. Navy in the nuclear-powered field; the U.S. Navy, in fact, is aiming for total nuclearization of its vessels by the 1970's, and is thought to be far ahead of anyone in this aspect of naval technology. But the Soviets are making prodigious efforts in the nuclear field, too.
>
> Both the naval and merchant shipping aspects of Soviet sea power are no doubt receiving close and appropriate attention in the Pentagon and the Congress. So they should and not one whit of relaxation in this surveillance must be permitted. No budgetary or other consideration must prevent the U.S. from maintaining its position as the world's leading sea power.

Milwaukee Jewish Conference on Soviet Jewry

SPEECH

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. LAIRD. Mr. Speaker, on December 11, 1966, in Milwaukee, Wis., the Milwaukee Conference on Soviet Jewry held a mass protest rally to express their strong protest against the discriminations leveled at the Jewish community of the Soviet Union. A resolution was unanimously approved calling upon our Government to exert its effort and influence to bring about an amelioration of the plight of Soviet Jewry.

Under unanimous consent, I include the resolution in the Record at this point.

The full text of the resolution follows:

Resolution of the Milwaukee Jewish Conference on Soviet Jewry Mass Protest Rally, December 11, 1966, Milwaukee, Wis.

Whereas, three million Jews in the U.S.S.R. are threatened with spiritual and cultural extinction because of the denial of their rights to develop a religious, cultural and community life; and

Whereas, there has been an official use of anti-Semitism to scapegoat Jews for the social and economic ills of the U.S.S.R.; and

Whereas, it has been the policy of the U.S.S.R. to refuse to allow the reunification of Jewish families torn by the Nazi holocaust; and

Whereas, Jews have been denied equality with citizens of other religions and nationalities in the U.S.S.R.; Now, therefore,

Be it Resolved: That we, the representatives of the Milwaukee Jewish Community, assembled here today, call upon the government of the United States to urge the government of the U.S.S.R. to permit fully the free exercise of religion and the pursuit of culture by Jews, and all others, within its borders.

I Am Frightened Because

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I am enclosing a portion of a letter from C. V. Hallenbeck, of Eckert, Colo., which deserves the study of every American and which is in part as follows:

I am frightened because—Our last claim to freedom, America's, yours, mine, is too near the point of no return. Our Republic seems fast turning into a dictatorship. It must be turned back. You are one of the 500 plus persons throughout this nation picked by its people to make our laws and spend our money. If you fail to carry out your every responsibility, then you will have let yourselves, this nation, its freedom, and our future, down.

I am frightened because—We have sent our boys, spent thousands of their lives, spent money by the billions throughout the world, and in too many places are being paid in disrespect and disdain.

I am frightened because—Workers of America are geared to our economy, and the rug is being pulled out from under segments of their source of revenue to use that money for many foreign and domestic uses where it is unappreciated, contains grafts, waste, or rewards laziness.

I am frightened because—Our dollar is being measured in numbers and not by value. Who is he that should waste, or devalue, our exchange for man's efforts? Who is he that should change man's ownership of government to government's ownership of man? We can only look to our Congress to make necessary corrections before it is too late.

I am frightened because—I see coming federal control of our educational system. Parents, towns, and cities can best handle the raising and education of our children. There is no need to send a dollar to Washington to receive in return a part in money and the rest in brainwashing. Of course, Washington (as yet) does not dictate, but simply says "Do as we say, or we'll keep your dollar." Let our educational system grow throughout the land; don't have it narrowed down by political edicts from Washington.

I am frightened because—Part-truths, waste, debt and taxation, each with a lethal punch of its own, are running wild and have been so popularized and become so monstrous and integrated that action must be taken now. Will raising taxes be to control inflation, or will it be for more foolish spending? Facts must be used freely. No nation in the past has and no nation in the future can endure under such throes.

I am frightened about many other problems—But I am frightened most because, as I have seen it, our past Congress had "yesses" instead of sound legislation and deserted its leading role in the government of the United States. These things our 90th Congress must not do. Our Republic can only be kept by a powerful Congress, honestly elected by a free people.

Compassion and Toughness

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. WHITENER. Mr. Speaker, the crime rate in the District of Columbia is of great concern to everyone in the United States. The people in my congressional district were greatly disappointed when the President vetoed the omnibus crime bill enacted during the second session of the 89th Congress. The concern that my constituents have for adequate law enforcement in the District of Columbia is ably set forth in an editorial which appeared in the January 5, 1967, edition of the Shelby Daily Star, Shelby, N.C.

I feel that my colleagues will find the editorial to be of great interest, and I insert it in the Appendix of the Record:

Compassion and Toughness

Superior Court Judge Frank M. Armstrong's statement that there is "too much social doctoring in the administration of criminal justice" should be read in full to the assembled members of Congress as that body again in 1967 grapples with what to do about rampant crime in the District of Columbia.

The President and the Justice Department might also profit from copies.

Judge Armstrong's remarks are particularly timely, coming as they do on the heels of President Johnson's recent veto of an omnibus crime bill for the District, the long-awaited report of the President's District of Columbia Crime Commission and an ever-deteriorating law and order situation in the District.

What Judge Armstrong calls for is nothing more or less than equal protection of the recognition of the rights both of criminals and of law abiding citizens who are the victims of criminal acts.

How does this directly relate to the District of Columbia?

The District is gripped by a fantastically high crime rate (up 116 per cent over 1959) and serious differences between Congress and the administration as to what can and should be done, a fact dramatized by the President's veto of a crime bill which passed the House 208 to 79 and the Senate without a roll call vote.

It was an intricate bill. It contained a questionable section or two, which might eventually have required judicial review, as did the Voting Rights Act of 1965, which the President did not choose to veto. But, in the main, it was a reasonable piece of legislation which could have been immediately effective against a crime rate which has climbed to new heights every month for something like 60 consecutive months.

The bill would have authorized police to question suspects for up to four hours without an arrest if there was probable cause that he was involved in a crime. It would also have allowed six hours of questioning, exclusive of interruption, after an arrest if the individual waived his rights. Other provisions were for a form of precensorship to ban obscene literature, a provision to set stricter terms on which insanity pleas could be used and stricter mandatory minimum sentences.

Over-all it was a get-tough bill.

For example, there was one section which provided that where a person is convicted "more than once" of having committed a crime of violence in the District when armed or having available any sort of dangerous weapon, the court might not then suspend the sentence or grant probation.

Herbert J. Miller Jr., a former assistant attorney general and chairman of the President's district crime commission and a man who supported the omnibus crime bill said in support of this section: "Since over 30 per cent of those convicted of a felony in the District in fiscal year 1965 had a prior conviction for a crime of violence, this seems an eminently proper decision."

President Johnson justified his veto, however, on grounds that "it (the bill) does not strengthen law enforcement in the District and does not meet the needs of the fight against crime, but rather introduces confusion and uncertainties into police and judicial practices."

Once again, the District was left without improvement of its crime-fighting tools.

Now the President's anticrime group has filed a 1,800-page report on the District situation and backs it up with more than 200 suggestions for improving things.

As yet, we have not had an opportunity to read the full report or to evaluate the recommendations individually. However, we detect in news reports of the document a continued preoccupation with the socioeconomic aspects of the problem when the crying immediate need is for tightening up on enforcement and prosecution, and prevention in the process.

Commission recommendations include more control of guns, tougher bail laws, creation of a youth commission to deal with juvenile offenders, construction of a new city jail, release of more policemen from administrative work and a study of the city's courts.

Since the commission found—as have others before it—that high-crime areas are those of low income, high unemployment, family instability, poor housing, etc., heavy stress is laid upon the need for better education and housing and enhanced employment opportunities.

If past experience is a guide, we fear it is this angle that will continue to get the major play. What the District badly needs is a blend of the commission's approach and the 89th Congress' get tough policy.

Only a fool would argue that "social doctoring" is the District's major weakness or that toughness can solve every problem. Just as absurd is to contend that "social disorganization" caused the problem and that environmental juggling will resolve it.

"It'll take compassion—and toughness.

Home to Roost

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. YOUNGER. Mr. Speaker, shortly the Congress will be called upon to consider the proposed budget for fiscal 1968 as presented by President Johson. The Wall Street Journal, on Friday, December 9, 1966, had an excellent article on this subject, which follows:

HOME TO ROOST

Budgetary trickery sometimes comes home to roost. That's the message, we think, implicit in President Johnson's announcement that he will seek a supplemental appropriation of $9 billion to $10 billion for the Vietnamese war.

For in preparing the fiscal 1967 budget the Administration assumed—as conceded by its spokesmen when the budget was released last January—that the war would end on June 30, 1967. Thus Defense Department expenditures were provided to prosecute the war through the end of the fiscal year, but not to prepare to carry it beyond that. The huge supplemental request is an eloquent commentary on the baselessness of this assumption.

It would not greatly matter, we suppose, if the budget could be finally dismissed as an exercise in political fiction, or if it concerned merely the mundane task of Government bookkeeping. Unfortunately, the budget is also a tool, indeed a foundation, of economic planning.

"This is a classic example of a bad budget document," University of Michigan economist Paul W. McCracken told a Tax Foundation Inc. meeting on the day the President announced his intentions on the supplemental appropriation. Professor McCracken observed that the defense spending figures "were bad estimates even at the time." And since economists must rely on budget figures in their projections, "it was pretty hard to make the case" for the especially stringent anti-inflation measures which obviously should have been employed.

The upshot is that no anti-inflationary fiscal measures were taken—no really significant budget cuts, not even the much-discussed temporary tax increase. Indeed, the Great Society expenditures were allowed to mount. As they added themselves to the necessities of supporting troops in the field, inflation inevitably resulted.

By now the rising prices are far enough out of hand, if we understand Professor McCracken's analysis, that it may be too late for effective Government policies to take hold any time soon. The Government allowed a "demand-pull" inflation to develop. Despite the possibility that business may now turn down, the higher prices stemming from that phase increase business costs and make unions restless. A second "cost-push" phase of the inflation is almost certain to run its dreary course.

No one can be sure, of course, that all this would have been prevented by less heady estimates of defense spending. Even given the best information, economists are far from infallible. Anyway, there's many a slip between the most correct economic analysis and the political will to apply it. Because of the faulty estimates, however, neither analysis nor application was given a fair chance.

Why, then, did the Administration make such a colossal budget blunder? Certainly, it had no indication the war in fact would end by the close of the fiscal year—or for that matter, soon enough to lend credence to Secretary McNamara's official explanation that the assumption was made to guard against accumulation of surplus stock. Rather, the error seems rooted in the fact that if budget-watchers had known in January what they officially learned the other day, expansion of the Great Society would have been enormously difficult.

We do not necessarily mean to say that the Administration consciously underestimated defense costs to facilitate passage of further social-welfare appropriations. But it is plain that the wishful thinking displayed in the Defense Department estimates could have resulted from intense pressures to hold military estimates to a minimum for domestic political reasons.

Ironically, the wishful thinking proved bad politics for the Democratic Party, as the recent election shows. More seriously, the connection between the budget estimates and the inflation the public now suffers convicts the Administration of one or the other of two grave sins.

Either it wasn't entirely honest with the public, or perhaps even more frightening, it wasn't entirely honest with itself.

Automation in Burlington

EXTENSION OF REMARKS
OF

HON. FRED SCHWENGEL

OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. SCHWENGEL. Mr. Speaker, in recent years the First District of Iowa has experienced unprecedented economic growth. New industry has brought jobs to hundreds of people in southeast Iowa.

Burlington, Iowa, has been one of the cities in the First District which attracted a number of new industries. General Electric established a plant in Burlington January 1, 1961, while I was in the Congress. It gave me a great deal of pleasure to help the people in Burlington present their proposal to General Electric.

Recently, the editor of the Burlington Hawkeye, John McCormally, wrote an article about the operation of the General Electric plant in Burlington. He points to the phenomenal technological advances which have been made in recent years and their impact on industry.

The article follows:

[From the Burlington (Iowa) Hawkeye, Jan. 9, 1967]

MEMO FROM MAC

(By John McCormally)

An engineer in Philadelphia is on the phone to a production chief in Burlington, Iowa, explaining a design change in a component of a piece of electrical equipment.

The production man in Iowa can't quite understand how the engineer wants the whoozit attached to the refstrum. He asks for more explanation.

"Wait a second," says the engineer, "I'll show you." He presses a button on his phone and out of the phone base in Burlington comes a copy of either a photograph or a drawing, which shows the production man instantly what the change looks like.

Twenty-first century stuff? Not on your life. It happens every day at the General Electric plant in West Burlington. It is one of the ways the plant here keeps in touch with other GE operations in the country.

"It's cheaper than airmail," says Finance Manager Dick MacDonald, with a shrug.

This photo-telephone is symbolic of what impressed me most in my informal visit to GE the other day. I went out for a tour of the plant, after a jovial lunch with Bill Hauck, the new, jovial manager of Burlington GE.

Burlington is rightly proud that it has branches here of several internationally famous organizations such as GE. But, what I realized for the first time, is that this connection is not merely a matter of our plant wearing the same trade mark emblem as plants elsewhere in the world.

It's more than that. The fact is that they are actually, physically in contact with one another.

Across the hall from MacDonald's office, in the communication room, all sorts of IBM machines are whirring all the time. Computer punch cards are slithering along under their aluminum guides, carrying production commands or change orders which have come almost instanteously from Schnectady or Philadelphia.

You see all this automation—all this science fiction stuff—in operation and you worry a little about why, in the community, we're not as advanced as those who use our community for their home base.

Out among the assembly lines—and there's seven acres under one roof—Bob Burt, the shop manager, an absolutely unperturbed fellow, shows you around, explaining all sorts of complicated things you don't understand, but pretend you do.

A member of a somewhat disorganized profession, you marvel at the precise organization, the orderly flow of raw materials through the various stages to completion of the product.

Burlington is the home of GE's switch gear plant and it was Bill Hauck who finally explained to me what a switch gear is. It may be an overly-simplified explanation, but I'm satisfied with it.

"You know that fuse box you have in your basement," Bill said. I nodded knowingly. "Well, he continued, "in a big industrial plant, these units we produce serve the same function. They take the huge amount of electrical power which the power company sends into the plant, and they switch it to the various places and the various uses within the plant, which the plant work calls for. That's all it is."

I thanked him, and walked down the assembly line, noting the carcasses of switch gear units, with tags on them saying they were going to DuPont in Delaware, to Buick in Michigan and to the U.S. Navy in Guam. It made me kind of proud of Burlington.

Bill Hauck is obviously not worried about his 400 and some people filling the orders that come into that communication room. He has other worries. Basically, they're Burlington's worries.

He needs more people and Burlington hasn't the housing to attract them. Some 200 more will be needed to man the still dormant assembly line in the latest addition to the plant. Other additions are possible if enough people can be found. But he's worried about losing several score of his present workers when new industries open up in neighboring towns.

"What are you going to do," I asked Bill, "when you're ready to put these additional lines into operation?"

"Oh," he said cheerfully, "I hope the war will be over by then and we'll get some people from the Ammunition plant."

It gave me a thrill. I'd heard so much about the peace scare—how awful it would be for business if we suddenly settled Vietnam. Bill was the first businessman I'd met who would enjoy peace. I even offered to buy him lunch next time.

Harrison E. Salisbury Sums Up—V

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. RYAN. Mr. Speaker, I wish to bring to the attention of my colleagues the fifth article in Harrison E. Salisbury's series summing up his experiences and observations in North Vietnam. In this article Mr. Salisbury indicates that the bombing of that country has strengthened the resolve of North Vietnam. The article, which was published by the New York Times on January 15, follows:

[From the New York Times, Jan. 15, 1967]

NORTH VIETNAM SPIRIT FOUND HIGH

Following is the fifth of a series of articles by an assistant managing editor of The New York Times summing up observations on his recent visit to North Vietnam.

(By Harrison E. Salisbury)

HONG KONG, January 11.—"I know that you will not understand what I am going to tell you," Premier Pham Van Dong said, "but I must say it anyway because it is the most important thing."

And the Premier proceeded to talk with earnestness and intensity of the spirit of the North Vietnamese people that is such an important aspect of their war effort.

The Premier said he had tried hard to explain that spirit to close friends in Europe and had failed. It seems to be a combination of natural vitality and intense patriotism, a determination to run Vietnam for and by Vietnamese and an element of teen-age cockiness and daredeviltry.

There are other elements, too. A middle-aged English visitor to Hanoi said after a few days: "Somehow the spirit of these people reminds me of the days of the Spanish civil war—a civil war without the International Brigade."

Last week almost every movie house in Hanoi was jammed with youngsters going to see the newest hit. It was the story of Nguyen Van Troi, a Saigon teen-ager who was executed after having been convicted of an attempt on the life of Defense Secretary Robert S. McNamara during a visit to Saigon in 1964.

This episode suited the ideals of the North Vietnamese. It represented a heroic effort by a single youngster against the symbol of an enormous enemy who gave his life in battle against great odds.

The would-be assassin of Mr. McNamara has become the object of a virtual cult in North Vietnam. There are books and biographies and fictionalized versions of his story everywhere. The North Vietnamese were amazed to meet an American visitor who not only had never heard of the Saigon youngster, but only vaguely recalled the incident.

The Vietnamese are a warm, direct people. They tend to glorify martyrs to their cause. Often mentioned in North Vietnam is the name of Norman R. Morrison, who burned himself to death in front of the Pentagon in November 1965 to protest United States policy in Vietnam.

The fierce independence of the North Vietnamese is a source of anecdotes in the Hanoi diplomatic colony. Premier Dong, in speaking with this correspondent, went out of his way to deliver a homily on North Vietnam's independence of its foreign friends. He had in mind the persistent view in the United States that North Vietnam was a "puppet" of the Soviet Union or China or both.

No one in Hanoi's diplomatic colony believes that the North Vietnamese are anyone's puppets. In fact it is their determination to be independent of both the Soviet Union and China that often drives their closest friends to despair.

A Westerner was talking recently with an East European diplomat. They were discussing a military matter and the East European criticized certain North Vietnamese tactics.

"Why don't you tell them your views?" the Westerner asked.

INTERFERENCE IS RESENTED

The East European laughed.

"You're joking," he said. "Even the Russians don't dare give the Vietnamese advice on military subjects."

The gossip in Hanoi is that the Russians are not pleased at the way the North Vietnamese handle Soviet-made air-defense missiles and MIG–21 jet fighters. But there is nothing they can do about it.

"Do you know how the Vietnamese handle the SAM's [surface-air missiles]?" one Westerner said. "The SAM's arrive in crates and packing boxes. A Russian procurement officer and a Vietnamese procurement officer check over the shipment. They exchange the signed papers and the Vietnamese take the SAM's away. That's the last the Russians know of them. If they learn where the SAM's have been emplaced, it is only by accident."

True, Soviet specialists were assigned to instruct the North Vietnamese in the use of missiles and of MIG–21's. But as soon as the elementary operational techniques was imparted to the North Vietnamese, it was said, the North Vietnamese thanked the Russians and said that henceforth they would be capable of training their own teams and using the equipment on their own.

Easterners confirmed that the North Vietnamese insisted on handling all materials themselves. They are quick to resent anything that they interpret as interference in their internal affairs.

North Vietnam's independence even affects its relations with the Cubans. Psychologically the Vietnamese feel drawn to Cuba, and vice versa. Many Cuban delegations come to North Vietnam, and friendship is pledged with great emotion.

"But can you imagine?" one Cuban said. "They are very polite, but they decline our help."

This attitude saddens the Cubans, In fact, they find it hard to comprehend. They regard themselves as experts in fighting against the United States and are certain they could be of assistance to North Vietnam. But the North Vietnamese thank them warmly and say they prefer to do it themselves.

North Vietnam's spirit seems to consist of strong elements of nationalism and patriotism engendered in years of struggle for independence against the French. The struggle against the French is now cited as merely the opening phase of the war against the United States.

Official propaganda blurs the line between French and Americans by contending, for example, that 80 percent of the arms and matériel used by the French at Dienbienphu was provided by the Americans. Dienbienphu was the site of a major Vietnamese victory in the Indochina war that led to French withdrawal from Vietnam in 1954.

In this capsulized version of the struggle against the French, the Americans appear at an early stage and as the French fade out of the picture, they take over the war against the Vietnamese.

In the fusing of the national spirit, the full panoply of Vietnamese national heroines is employed. The first were the Trung sisters, Trung-Trac and Trung Nghi, who raised an army against Chinese garrisons that occupied Vietnam in the year 40 A.D. The sisters defeated the Chinese and established a joint queenly regime.

But the Chinese returned, the sisters were defeated and they commited suicide. Thereafter they were elevated to godhood in the Vietnamese iconostasis. Their heroic deeds are glorified in Hanoi as the first step in Vietnam's passage to nationhood.

By a bizarre coincidence that goes unnoted in the North, the Trung sisters were venerated by Mrs. Ngo Dinh Nhu, sister in law of the late President Ngo Diem of South Vietnam. After his downfall, a great statue of the Trung sisters that Mrs. Nhu had ordered set up in Saigon was pulled down.

BATTLES AGAINST MONGOLS

Vietnamese battles against the Mongols and the Chinese of the Ming dynasty (1368–1644) play an important role. They are constantly discussed by North Vietnamese as indications of the ability of the Vietnamese to defend their independence.

Mongol invasions and Ming invasions are mentioned in terms almost interchangeable with those employed in discussing the present war against the Americans.

A central role in the current self-image of North Vietnam is provided by Dienbienphu. That victory against the French burns in Vietnamese memory and is constantly refurbished. It is memorialized in paintings and poems.

Dienbienphu is the name of one of Hanoi's principal streets. It is the name of a brand of cigarettes. Exhibits associated with the battle occupy special sections in the Museum of the Revolution and in the Army Museum.

There is probably not a single North Vietnamese youngster who cannot tell in glowing detail about the defeat of the French (or the Americans—sometimes the two are confused) at Dienbienphu. In the national ethos the battle has assumed the importance of a combination of Waterloo, San Juan Hill and the surrender of Cornwallis at Yorktown in 1781.

As the war against the United States continues, new epics of heroism are elaborated and woven into the fabric of national patriotism.

ISLAND BATTLE GLORIFIED

One of these revolves around the defense of Conco Island. Few Americans, except possibly some in South Vietnam, have ever heard of Conco Island. But few Nort Vietnamese have not. It has assumed a role in their war similar to that of Corregidor in the Pacific war of the United States against Japan in 1941.

The island is a small one, about a mile off the coast near the demarcation line. Judging from a film glorifying its battle, it bristles with antiaircraft defenses and presumably serves as an important radar installation.

The battle of Conco Island goes on day after day and week after week in newsreels, newspaper articles and radio talks. The theme is the one that is constantly stressed in North Vietnam—of the struggle of a small determined band of men and women against the enormous material superiority of the United States.

A documentary film shows Conco defenders manning antiaircraft guns and firing rifles at wave after wave of attacking American fighter-bombers, holding their posts through violent bombardments and repeatedly shooting American planes into the sea.

Premier Dong conceded that many of North Vietnam's friends did not see how such a small, poor country could stand up against the Americans' superiority. But he added that North Vietnam offered a practical demonstration of what an inspired populace could achieve.

Another epic that has been publicized concerns Hamrong Bridge across the Ma River at Thanhhoa. This bridge, on the main supply route to the south, has been attacked hundreds of times by the Americans, but by some quirk remains intact though badly battered. The bridge is defended by strong antiaircraft batteries.

SPEAK SIMPLY OF HEROISM

Its defense has been publicized as a demonstration of what bravery and determination can achieve against determined American air attacks. The defenders of Hamrong Bridge are pictured as models for other North Vienamese to emulate.

North Vietnamese speak simply and often about heroism and their willingness to die for their country. They say that they are no more willing to die than anyone else, but that, if they must die, the best way is to die fighting for Vietnam.

"We do not fear death," an official said. "We try to stay alive and to fight the enemy. We do not wish to die unnecessarily. It is important to stay alive because we have so much to do. We have to grow rice and we have to fight at the same time. We think heroism is both courage and creation."

A Communist visitor who had visited a North Vietnamese air force unit said he could not imagine other people carrying on under similar conditions.

"Imagine!" this man said, "Their pilots get up at 4 a.m. They go out into rice paddies and work for three or four hours standing in cold water up to their hips. Then they come in and fly their planes against the Americans. I have never heard of such people."

PATRIOTISM AVOWED

It was impossible to finish any conversation, even with a family that had been bombed out of a house or a mother who lay on a hospital cot with a youngster wounded in the bombing, without winding up with a patriotic declaration.

At first it seemed as if all these people must have been coached to make little patriotic speeches testifying to their anger against "United States aggressors" and to their determination to fight to the end for "independence and sovereignty."

But finally it began to appear that no one had to do any coaching. This spirit has been dinned into the people so that it comes naturally. Or perhaps it was always there and is just brought out by their long-odds war. Whatever the cause, a priest even could not conclude a discussion of the Roman Catholic position under a Communist regime without a soliloquy along the same lines.

One official contrasted what he thought was the attitude of American youth with that of North Vietnamese youth.

"We don't underestimate American youth," he said. "If American youth had to fight and defend the United States, it would fight well. But American youth has been sent over here to fight a war that they do not understand and is not a just war. So they do not fight like our youth. Americans have good weapons, but they cannot cope with our fighters because they do not have the kind of spirit that we possess."

One Communist observer who has been in North Vietnam for two or three years said he had noted a steady growth in the intensity of nationalist feeling as the war went on. He said nationalism had been particularly strong since the launching of American air attacks on the North. He said that while the attacks had confronted the regime with serious economic problems and had made the support and supply of the south more difficult, they had stimulated mass patriotism among the people, who, in his opinion, now felt that they were all in the war together.

"I think something like this happened in England in the blitz," this diplomat said. "As a Communist I have been interested to see ideological propaganda gradually replaced by national patriotic appeals. Maybe you remember this in the Soviet Union during the critical days of the German attack."

Patriotic fervor in North Vietnam is also lashed by one of war's most frequent handmaidens—atrocity propaganda. The kind of atrocities that are ascribed in the most casual manner to Americans and their South Vietnamese allies are blood-curdling and revolting.

They are recited daily to the North Vietnamese populace. Whether people take them at face value is difficult to say, but history suggests that it is easy to believe anything terrible concerning an enemy.

Nevertheless this correspondent did not experience the slightest sign of ill will, unfriendliness or hatred because of being American. Other Westerners said they had never noted any animosity from Vietnamese.

North Vietnamese officials attributed the lack of ill will toward ordinary Americans to the Government's propaganda line that draws a distinction between "American aggressors" and the mass of the American citizenry, which is pictured either as friendly to Vietnam or as kept in ignorance of the true state of affairs.

However, the North Vietnamese do particularize some propaganda targets, Chief among these are President Johnson, Secretary of Defense McNamara, Secretary of State Dean Rusk and Gen. William C. Westmoreland, Commander of United States forces in South Vietnam.

All four are caricatured savagely and are the object of vituperation and ridicule in the press and radio. President Johnson is probably the most frequent subject of wall caricatures in North Vietnamese towns. They are drawn in chalk directly on walls of buildings.

It should not be supposed that the North Vietnamese go about the war scowling and grim. On the contrary, teen-agers in the army, in transport brigades and construction teams seem to be full of jokes, judging from their chatter mixed with outbursts of laughter.

Youngsters throng to the movies and concert halls. There they devour a fare that is about 90 per cent patriotic propaganda, such as the story of a girl sharpshooter who brought down a United States plane or of a truck driver who got his cargo through in spite of being wounded in an air raid.

THE FEAT OF FEATS

The feat of feats is the shooting down of a United States plane. Everyone who has a rifle participates if planes come into sight. If by chance one is brought down by rifle fire—and the North Vietnamese say this occurs several times a month—villagers for miles around rush to the scene to share in the glory.

The only thing that tops the downing of a plane in popular esteem is the capture of an airman. Legends of such captures are legion and generally involve an unarmed villager who spots an airman coming down by parachute, grabs a hoe or pitchfork and captures the airman, who is armed to the teeth with survival weapons.

Or the story may be a band of villagers who see pilots coming down and manage to surround the field and head them off before they can escape into the jungle.

Such feats are the subjects of popular ballads, music-hall skits and songs. The shooting down of Untied States planes has become a kind of national contest. Papers print the official North Vietnamese figure on downed planes daily, now 1,600 by Hanoi's count. Commemorative postage stamps have been issued to mark important milestones—500, 1,000, 1,500.

It is all of these factors taken together that fuse into North Vietnam's spirit. Probably there are other factors that have been overlooked. But one thing appears certain: it is a powerful force and there is no doubt that this, more than anything else, is what keeps North Vietnam in the battle.

New Politics and New "Societies"

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mrs. GRIFFITHS. Mr. Speaker, everyone will enjoy reading witty Will Muller's insight into the new politics and the new "societies." The following article is an excerpt from the Detroit News of January 6, 1967:

GOP "GREAT SOCIETY" WOULD ALSO BECOME "JUST" AND "CREATIVE"

(By Will Muller)

A seven-letter word once never recognized by the politician replaced an old five-letter favorite in weekend inauguration speeches.

The word is "society." In earlier, shagbarked America it referred to the select few, with table silver and hanging lamps, who could afford to hire chapped-handed menials to groom horses and empty commodes.

The word it replaced is "unity." Any vacant-eyed press agent with a hangover in times past could whip up an inaugural speech after New Year's midnight on the theme of binding up old wounds and marching toward a common purpose behind a united front.

This season New York Gov. Nelson A. Rockefeller announced he was starting something on the East Coast called "the Just Society." As he explained it, it is a state of mind in which everyone lives in intellectual brotherhood with radiant heating.

Fr. Charles E. Coughlin had somewhat the same idea in the '30s when he edited a magazine called Social Justice. At the time the Royal Oak radio priest thought of the Rockefellers as just more international bankers.

Out on the West Coast, Gov. Ronald Reagan moved into the California executive office with promises of a Creative Society. He quoted some statesmen, now ashes, who said if an office holder carried with him the principles of the Prince of Peace and put them into effect, he would change everything.

Reagan said it would be presumptuous of him to indicate he was the man to emulate the Prince of Peace, but he would be willing to try. After all, he has had some success playing Western sheriffs.

Reagan's inaugural left the younger set fogged on what was going on, but the older generation caught it. Reagan's new Creative Society is going to be something in the format of Christian Endeavor.

ROMNEY SHUNS LABEL

Between East and West, Michigan's Gov. George Romney steered his customary course of independence.

"We refuse to be neatly packed and labeled into economic, religious, racial or ethical blocs to be used by political brokers," he said.

"We will not be deceived by any promises of group favoritism and social privilege."

He then importuned his listeners to shun big government in Washington with all its gifts and red wines and rely on the unlimited human spirit and imagination. Any literate politician recognized that right away—transcendentalism.

It first broke out in New England under Ralph Waldo Emerson. A transcendentalist, says the dictionary, is one whose mind goes beyond matter.

Society long has frowned on four-letter words. It has now outmoded one—"deal." There was President Franklin Roosevelt with his New Deal and President Harry S. Truman with his Fair Deal and all manner of Republicans arguing for what they called a "square deal."

In a brief transition period, the late President John F. Kennedy originated "the New Frontier." It died with his passing for obvious reason. The rhetorical sequel to "the New Frontier" is "the Last Frontier" as any reader of historical novels knows. Democrats wanted no part of that.

IS IT A CONSENSUS?

So President Johnson came up with "the Great Society." What does "the Great Society" have to do with "the Creative Society" and "the Just Society"?

That's like asking what relationship there is between the state medical societies and the American Medical Association. The local societies can elect their own officers and make their own speeches—as long as there is what used to be called unity but which now is called consensus.

VFW Commander in Chief Fry Speaks Out on Our Veterans Programs

EXTENSION OF REMARKS
OF
HON. JAMES H. (JIMMY) QUILLEN
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. QUILLEN. Mr. Speaker, I wish to point out to my colleagues and the Nation an article in the January issue of the Veterans of Foreign Wars of the United States magazine by that great patriotic organization's commander in chief, Leslie M. Fry of Reno, Nev.

Mr. Speaker, we here in this body have been watching the steady erosion by the present administration of the rights of a vast group of our citizens and their families. I speak of the more than 26 million veterans. These men and women, who offered their lives to our Nation in its time of need, have through bureaucratic fiat of the administration, been made second-class citizens when, by the sole light of their personal sacrifice, they should be constantly honored.

Commander Fry's article points out in succinct detail the manner in which the administration has gone about to liquidate veterans programs. This is a harsh charge but Fry substantiates his charges. On the GI bill of 1966, he says:

> The GI Education Bill recommended by the President was a pitifully cut-rate attempt to limit the application of benefits to a few thousand of today's GI's. And the general tenor of the Administration's attitude with respect to veterans was clearly seen in its recommendation that responsibility for administration of veterans' education be placed in the Department of Health, Education and Welfare. This effort was consistent with the Administration's intent to depress veterans' programs below the level of the general social welfare progrgams of the Great Society as a preliminary to eliminating them.

The Fry article has been acclaimed by leaders in and out of the veterans world. One of the leading spokesmen for all veterans, is Roy Chittenden, editor of Stars and Stripes-the National Tribune. An editorial in the January 5, 1967, issue acclaims the Fry article and points out:

> We have only admiration for his forthright declarations. He is championing a just and righteous cause.

Mr. Speaker, so that my colleagues and the Nation might have a chance to read this editorial, I include it in the RECORD:

[From the VFW magazine]

PHASE OUT VETERANS PROGRAMS?

(By Leslie M. Fry, VFW commander in chief)

Winston Churchill once said that he had not taken office to preside over the liquidation of the British Empire. Churchill stated a position normally taken by a leader charged with responsibility for the success of a mission.

There are examples, however, of the opposite view and it is possible to point to an example of a National leadership and an Administration that has made a beginning toward liquidation of a major federal responsibility that touches the lives of over a third of our citizens: namely, the Veterans Administration and its programs.

The recent adjournment of the 89th Congress did more than put a stop to the deliberations of the Senate and the House of Representatives for the year 1966. The adjournment brought a temporary halt to the Johnson Administration's two-year drive to tear down the structure of veterans programs and set the stage for the gradual elimination of all veterans benefits and programs.

This is a serious charge but let us look at the general orders the Great Society has laid down concerning veterans programs. Taking the results of what the Johnson Administration has done over the past two years, or attempted to do, it is possible now to go back and reconstruct a 1965 White House directive that could have read as follows:

1. Close down veterans hospitals and VA regional offices.
2. Launch a major attack on veterans employment preference in certain federal agencies.
3. If you have to give the Viet Nam veterans a GI bill, keep it strictly "cut-rate."
4. Begin dismemberment of the Veterans Administration by placing administration of any GI bill in the Department of Health, Education and Welfare.
5. Oppose any improvement in veterans, widows and orphans pensions.
6. Close the National cemeteries. (Note: 1966 amendment to this instruction—keep them closed no matter how many men die in Viet Nam.)

This indictment of the Johnson Administration has been drawn on the basis of its actions over the past two years. There are, unfortunately, no compensating actions or declarations that would soften in any way the harsh outlines of this reconstructed directive to liquidate veterans programs. In fact, since passage of the 1966 GI bill, the Congress and veterans would have been subjected to chronic complaints from the White House over its cost.

There have been saving factors but they have not come from the Administration. They were the result of actions by Congress. Congressional pressure made it impossible for the Johnson Administration to proceed with its VA hospital closing program.

The Senate refused to approve the Hays bill, which, at the request of the President, would have eliminated all veteran preference from United States agencies having international responsibilities. How bad was this bill which the President and his Secretary of State fought to have passed? A noted Washington reporter called it "a stench in the nostrils of the Nation."

The GI education bill recommended by the President was a pitifully cut-rate attempt to limit the application of benefits to a few thousand of today's GIs. And the general tenor of the Administration's attitude with respect to veterans was clearly seen in its recommendation that responsibility for administration of veterans' education be placed in the Department of Health, Education and Welfare. This effort was consistent with the Administration's intent to depress veterans' programs below the level of the general social welfare programs of the Great Society as a preliminary to eliminating them.

And what about veterans, widows and orphans pensions? Some 56,000 widows of Spanish-American War veterans, whose average age is 84, receive the princely sum of $65 a month. The Johnson Administration killed a House-passed pension bill that would have raised this pension to $70 per month.

Did the Administration see any merit in the pension program? A total of 18 bills were introduced in the House to provide increases in veterans pensions. Most of these dealt with needed technical improvements in the program and increases in payments necessary to keep pace with the increasing cost of living.

Was there any merit in any of these bills? Not to the Johnson Administration. The Administration's spokesman went before the House Veterans' Affairs Committee, reviewed all 188 bills, and opposed every last one of them. When the House Veterans' Affairs Committee saw fit to approve a minimum improvement in the pension program, the bill was passed in the House over the opposition of President Johnson.

But this minimum bill was never taken to a vote in the Senate, principally because Senator Russell B. Long, of Louisiana, rather than pressing for action as chairman of the Senate Finance Committee, wore his "Majority Whip Cap" in the final days of the 89th Congress and the lack of a veterans leader in the Senate prevented the bill from coming to a vote.

Although the Bureau of the Budget had sought for years to effect the closing of our National cemeteries, President John F. Kennedy was the first to make this a Presidential policy. This 1961 policy decision was reaffirmed by President Johnson. Several months ago he had a review made of the policy of closing our National cemeteries and, despite the fact that men killed in action in Viet Nam are being denied burial in our National cemeteries, the President has not seen fit to make a change in policy. In fact, the Administration fought attempts initiated by the Veterans of Foreign Wars in the second session of the 89th Congress to appropriate $250,000 to reopen Beverly National Cemetery in New Jersey and Fort Rosecrans National Cemetery in California.

The actions of the Administration speak for themselves.

In light of the Administration's dedication to the suppression of veterans programs and benefits, the coming session of the 90th Congress takes on significant meaning. It is necessary to take a long view. The coming battle of veterans versus the Administration will encompass a two-year period that has already begun and will extend thru two Congressional sessions and up to election day 1968.

But the significant clashes will come in the first session of the 90th Congress. As the election of 1968 draws nearer, the Johnson Administration may be expected to become more pliable—if the pressure is kept on it.

Three matters loom large at this point. They involve the proposed Senate Committee on Veterans' Affairs, the reopening of the National cemetery program, and passage of equitable compensation and pension improvements. These are way stations on the road that veterans must take to blunt the Administration's efforts to reduce the scope of veterans' programs as the first step in their gradual elimination. It must be borne in mind in this struggle that we cannot expect to have the advantage of facing an Administration effort in which all the cards are placed on the table.

The intent to eliminate veterans' programs will never be acknowledged. What will be sought, however, will be development of a climate which will eventually lead to general belief that the veteran can be better taken care of thru participation in social programs designed to benefit all of our citizens.

The question in 1967 is what can be done to halt this process of erosion of veterans benefits and reverse it? First, each veteran must decide whether this whole process or any part of it is of any moment to him or to his buddies.

There is much that can be done if these issues are of concern to you. If they are, or if even a single one of these issues is important to you, the eventual reversal of this Administration's policy becomes simply a matter of communication.

Communicate first with the President, who sets the policy. Communicate secondly with the Administrator of the Veterans Administration, but remember he's only carrying out orders from the Budget Bureau planners and the President.

But your most effective communication will be with your Senators and Congressmen. When they speak in sufficient numbers they can make even the President listen.

In the coming months I will outline specific individual issues, as they come up for decision in the Congress.

The immediate task, however, is to fire a broadside that will put the Administration on notice that a reversal of its policies is in order.

VETERANS' ADMINISTRATION ENDANGERED

Is there a plan on foot by the Johnson Administration to entirely dismember the Veterans Administration and relegate the veteran to welfare status?

Leslie M. Fry, commander in chief of the Veterans of Foreign Wars, answers this question with a resounding "Yes." In an article published in the VFW magazine, Fry states without equivocation that the entire structure of veterans benefits chalked up over a period of nearly 200 years is now threatened by extinction.

To justify his claim, Fry points to the fact that National cemeteries are rapidly being closed and no provision is being made for burial of war veterans. He also cites the opposition of the present administration to the pension bill passed by the House of Representatives in the 89th Congress against the President's wishes but bypassed by the Senate in accord with his instructions, Fry says.

The National commander in chief of the VFW is also critical of the provisions of the so-called GI bill patterned to some degree after the legislation approved for veterans of World War II and Korea. Fry labeled it a cut-rate GI measure.

The Veterans of Foreign Wars leader further asserted that the Veterans Administration itself is in danger of being taken over by some other Federal agency, thereby eliminating the sole Goverment agency whose purpose is to care for the veteran and his dependents.

There is much to justify the claims made by Fry. Certainly little has been accomplished in the past two and a half years for those veterans who have been adversely affected by the increased cost of living and the threat of inflation.

World War I veterans drawing pensions under old part III of the pension law have not received an increase in benefits since 1954 while living costs have spiraled increasingly higher.

Representative Olin E. Teague, of Texas, chairman of the House Veterans Affairs Committee has declared that it is the intention of his Committee to again bring before the House of Representatives a bill similar to that passed by that body in the 89th Congress. Whether it can be approved in the Senate is highly problematical. It failed there once before and if the Administration maintains its opposition to the bill, it could well fail again.

Veterans feel that Fry is on solid ground in pointing out the deficiencies of the Johnson Administration insofar as favorable legislation for veterans and their dependents are concerned.

We have only admiration for his forthright declarations. He is championing a just and righteous cause.

Right of Privacy

EXTENSION OF REMARKS

OF

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. CORMAN. Mr. Speaker, the question of invasion of privacy has become a controversial matter, especially with the use of new "bugging" devices which present a substantial new threat to individual privacy.

I am pleased that the President, in his state of the Union message, expressed concern about the use of wiretapping, electronic "bugging" and "snooping," and shall await with interest his proposals to deal with the issue.

In the interest of congressional study of this problem, I call the attention of the House to the following editorial in the Los Angeles Times of December 13, 1966:

RIGHT OF PRIVACY IN PERIL

The extraordinary public quarrel over responsibility for FBI bugging practices again points up the lack of restraints upon official invasion of privacy.

FBI Director J. Edgar Hoover contends that Sen. Robert Kennedy (D-N.Y.) knew of electronic eavesdropping by the bureau while the senator was U.S. attorney general. Kennedy replies with equal vigor that he was not aware of such activities and did not sanction them.

Who is right in the Kennedy-Hoover dispute is far less important, however, than what must be done to clarify the confusion surrounding the use of devices that permit law enforcement officials—or anyone else—to monitor virtually any private conversation.

Basic federal legislation was enacted in 1934 when Congress made wiretapping illegal in the Federal Communications Act. The Justice Department circumvented the law, however, by insisting that federal wiretapping is permissible so long as the information gained is not used as evidence. Although California forbids wiretapping, some other states permit its use under various forms of restraint.

The problem of protecting the right of privacy was greatly magnified with development of electronic eavesdropping devices that require no tapping of telephone lines. Only certain Federal Communications Commission rules govern the use of such devices in the absence of any statutory regulation by Congress.

Specific authorization for the employment of wiretapping in cases affecting the national security was first given by President Franklin D. Roosevelt and reaffirmed by succeeding Presidents.

In June, 1965, President Johnson reportedly continued such authorization but banned all other forms of eavesdropping by federal officials. Unfortunately, the contents of his confidential order have never been made public.

In the confusion of circumvented laws and confidential memos, abuses of the right of privacy by official agencies are almost inevitable. Abuses by individuals acting outside of the law have become commonplace.

This dangerous situation obviously cannot be allowed to continue.

Congress should act without delay to define what is meant by "national security" when used as a justification for official eavesdropping.

As a start, President Johnson should divulge the details of his June, 1965 order. For unless the terms of such permission are clearly and openly stated, the public will never know to what extent their rights have been abridged.

After Congress determines the circumstances when the national safety should take precedence over the rights of the individual, then, and only then, should such conditions be enacted into law.

The Times believes that so essential and basic a right should be pre-empted only in those cases where the security of the nation is endangered.

To surrender that right in lesser cases would be to invite an intolerable proliferation of official eavesdropping.

The Amtorg Trading Corp.—Soviet Spy?

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. LIPSCOMB. Mr. Speaker, today's New York Times, the January 16, 1967, issue, carries a two-page Soviet advertisement soliciting interest of American businessmen in trade opportunities in the Soviet Union.

Interested firms are invited to get in touch with the Amtorg Trading Corp. in New York. The Amtorg Trading Corp. acts as agent for most of the foreign trading organizations of the U.S.S.R. in transacting and carrying out operations in connection with the import of goods from the U.S.S.R. into the United States, and with the export of goods from the United States to the U.S.S.R.

When Mr. Hoover appeared before the House, State, Justice, Commerce, and Judiciary Appropriation subcommittees last session on February 10, 1966, I asked Mr. Hoover about Soviet trading organizations and about the need for American businessmen to be alerted to the great care that must be exercised in dealing with Soviet organizations such as Amtorg because of their espionage activities.

I am sure that the membership of the House and the public will be interested in our colloquy on this matter and under leave to extend my remarks submit it for inclusion in the RECORD:

Mr. LIPSCOMB. Mr. Director, there seems to be an increase in the contact that American businessmen are having with Soviet trade missions. You, upon other occasions, have warned and alerted American business that they should be careful in dealing with trading organizations such as Amtorg and other Communist trade organizations.

Are these trade organizations working now, do they still conduct and fit into the espionage picture?

Mr. Hoover. Amtorg fits into it 100 percent. It is the main trade organization of the Soviet Government in this country.

Mr. Lipscomb. American business, in their interest to expand trade with the Communist countries, should still be very careful?

Mr. Hoover. I think they should be particularly alert and keep their guard up.

I wrote an article for the Harvard Business Review some time ago on that very subject, on the businessman and the spy. It concerned efforts to obtain information through businessmen and their concerns, that would be of value to the Soviet bloc in their activities in opposition to this country.

Mr. Lipscomb. I think it is important they keep alert.

Mr. Hoover. I think it is highly important they keep alert, that they know what is going on.

Mr. Lipscomb. This is like so many other things. They fail to realize that the Soviets are still out to "bury us" and that is economically and militarily.

Mr. Hoover. Some forget that and think we can live in peaceful coexistence, which I think is a complete fallacy.

Mr. Lipscomb. Again, Mr. Director, my thanks to you and to your associates for the dedicated job you are doing.

Mr. Hoover. Thank you, Mr. Lipscomb.

In the article referred to by FBI Director Hoover in his testimony, entitled "The U.S. Businessman Faces the Soviet Spy," Mr. Hoover discusses efforts and methods of the Soviets in their attempts to obtain information from businessmen and their firms that would be of value to the Communists.

Under leave to extend my remarks, I include a section of the article which contains Mr. Hoover's comments and recommendations on how to meet the threat:

The American businessman, previously scorned as a warmongering capitalist exploiter, is now being assiduously courted by the Communists.

What is the answer? What are the implications for corporate action?

First of all, the threat must be met within our democratic tradition. True, Soviet-bloc personnel, in making personal contacts, in purchasing government documents, in visiting conventions, are exploiting our freedoms in a free society. They take advantage of our system of government to advance their own interests.

Yet this should not scare us into rash and intemperate action. Any response to the Communist threat based on hysteria or alarmism will do more harm than good. Just as no successful business is run on emotion, so too the campaign against this conspiracy must be a sustained, intelligent effort. This Communist attack can be defeated without compromising our free institutions.

The businessman can do much in a *positive* way to help in the fight not only against Soviet-bloc espionage but also in the nation's over-all struggle against the Communist enemy. Being a highly respected, influential, and farsighted individual, he has the imagination, ingenuity, and aggressive thinking which will help us find successful ways of combating the threat. He has a heavy responsibility—one which cannot be performed by any other segment of our society. This entire problem should not be of auxiliary or minor concern but of deep and continuing interest—for him and for all other members of his organization.

KEY STEPS AND POLICIES

What steps should management take? Let us examine the most important ones.

1. *Immediate Plant or Industrial Security.* Industrial security programs, of course, vary from company to company, depending on size, materials manufactured, and whether government contracts are being handled. This is as it should be. However, experience teaches us something about what to emphasize.

Where applicable, the industrial executive should give priority attention to perfecting immediate plant security, involving such items as the control of documents (classified and nonclassified), the identification of visitors, access to restricted areas. Many plants already have effective security programs. However, experience teaches that they must be constantly evaluated, analyzed, and reviewed.

Actually, plant security is our last line of defense. Business executives probably do not realize how carefully the Russians scrutinize their industrial security setup, looking for loopholes and weaknesses. If one can be found, it will be exploited; if not, they will move to another company. By constantly evaluating its security program, the company can often find places where it can be strengthened.

If the business manager wants the very best security in his plant, he must make certain that he employs competent and experienced people for the job. And he must see to it that they have adequate facilities, that their recommendations are carefully considered by their superiors, and that adequate funds are available to meet their needs. A dollar spent in protection is a dollar well spent.

2. *Long-Range Educational Programs.* Industrial executives can do much to effectively educate their employees to the problems involved in Soviet espionage and communism. Many companies have provided lending libraries, published articles in their company magazines, secured qualified guest lecturers, and shown movies and training films. Special training sessions, especially for supervisory personnel, can be most productive.

The question of security should not be something which is taken for granted or left exclusively to the security officers. In today's business world, the responsibility belongs to each employee. The Russians may contact an executive officer of a company, a salesman, an engineer employed in the plant, or an exhibitor at a technical convention. They are not restricted by inhibitions! To illustrate:

In one instance, a Russian official had the audacity to go to a company's front office and ask for an employee to be called off the job. The diplomat, not identifying himself, was a complete stranger to the engineer. During a luncheon conversation, the Russian attempted to secure the engineer's cooperation as a "consultant." When the American determined that the stranger was actually a Soviet national, he immediately broke off the conversation and reported the incident to the proper authority. The vigilance of that engineer is commendable. His information was of great value to the FBI.

Every employee should know his responsibility in the field of security and to whom to report factual information he possesses.

3. *Reporting of Pertinent Security Information.* The FBI is the governmental agency charged with investigating espionage, sabotage, and subversive activities. The FBI is *not* interested in legitimate business dealings of Soviet-bloc officials with American business firms. If, however, there is an indication that the Soviets are abusing the right, in ways indicated in our John Smith story, the FBI should be immediately advised.

Many times a businessman may think that a piece of information in his possession is insignificant or nonpertinent. Resolve that doubt by reporting it to the FBI. Many times a small scrap of data, when coordinated with information we already possess, may help us solve a case. In one instance, a photographer called the FBI headquarters in Washington and reported that a client was very much interested in securing an aerial map to be taken at extremely high altitude. We quickly identified this individual who, by a ruse, was trying illegally to secure a map of military value. Based on this report, the Russian diplomat was declared *persona non grata* by the Department of State.

The manager should not attempt to conduct his own investigation. This is a job for the FBI, which has experienced, specially trained agents. If a private citizen tries to conduct his own investigation, he may unknowingly jeopardize other counterintelligence operations of the FBI.

Never should an individual think it is too late to contact the FBI to supply information! A person may have been contacted by the Russians, even given them sensitive data—but this should never mean he is irrevocably "lost." His patriotic duty is to come to the FBI promptly. This is the best way to overcome previous mistakes and to serve not only his own personal interests but also the welfare of his country.

4. *Public Service and Community Programs.* In our society the progressive businessman can no longer think only of his own business, his own product, his own operating techniques. He has an obligation not only to his immediate community but to the entire country. Through public service and community programs, advertising, and general public relations, companies can do much to encourage Americans to be better citizens, to take a deeper interest in the affairs of their community and nation. We need today a deeper awareness of what American freedom means, of the positive role the American competitive business system is playing, and of the importance of the individual in a free society.

Americans are often too apathetic in understanding their duties and responsibilities. Businessmen can perform a valuable service by reawakening in our citizens those historic values which have made our country great—personal initiative, service to others, a willingness to do one's share.

Our approach toward communism must not be negative or defeatist. We are against communism, but that is not enough. *We must stand for something*—the moral and spiritual forces which make for decency, honesty, and understanding. These ideals are what give strength to America.

This means that businessmen must be willing to do their share in supporting programs to eliminate problems such as unemployment, corruption in public life, juvenile delinquency, organized crime, poverty, and discrimination. These are weaknesses which the Communists seek to exploit. By making a more healthy nation—economically, socially, and spiritually—we will illustrate to the entire world that free man can outproduce, outlive, and outthink Communist man.

Oshkosh and Chilton Cited for Efforts in Traffic Safety

EXTENSION OF REMARKS

OF

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. STEIGER of Wisconsin. Mr. Speaker, each year traffic accidents take a tragic toll in human lives. In the State of Wisconsin alone, in fact, some 1,000 lives are lost annually in traffic accidents and the economic loss is almost $200 million yearly.

One of the chief causes of such accidents is faulty mechanisms. Many automobiles are being driven that need repairs and do not belong on our highways.

Two cities in the Sixth District of Wisconsin were cited last week for their programs to combat highway accidents by conducting voluntary vehicle inspections.

I would, at this time, like to join the citizens of the Sixth District, Mr. Speaker, in expressing our thanks and our congratulations to Oshkosh and Chilton, Wis., for their fine efforts toward making our highways safer.

A. J. "Dutch" Bergman

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 10, 1967

Mr. TEAGUE of Texas. Mr. Speaker, it was my honor and pleasure to attend the 32d annual awards dinner of the Touchdown Club of Washington, D.C., Saturday evening and view my good friend "Dutch" Bergman receive a special award from the club which he founded.

"Dutch" truly is a special kind of person, a wonderful human being who spends virtually all of his time in doing things for other people. I am proud to be able to say that he is my friend. The program for the 32d annual awards banquet contained a brief sketch of "Dutch" which I include in my remarks:

MEET "DUTCH" BERGMAN

Almost 32 years ago, Arthur J. "Dutch" Bergman, then coach of the Catholic University football team, was invited to be the principal speaker at the New York Touchdown Club.

Dutch was intrigued with the camaraderie and the close association between men in the football world and the fans. "Why not this for Washington?", he thought. Upon his return, the energetic Bergman set the wheels in motion, wrote the charter and the bylaws and launched the Touchdown Club of Washington.

Appropriately, Dutch was the Club's first President. Since the modest beginnings of the Club, it has far outstripped the parent Touchdown Clubs throughout the nation. Today, our Club is known from coast to coast for its unparalleled sports banquet each January and, in particular, for its promotion of the American game of football and its dedication to the welfare of the youth of the city.

Dutch Bergman was a great athlete at Notre Dame. He was one of three famous brothers who attended Notre Dame, a family that won more athletic honors than any other family in Notre Dame's history.

Dutch participated in football, baseball and track. In football he was named on many All-American teams. In the field of track he was known at Notre Dame as the "Flying Dutchman." He tied the world's record in the 40, 50, and 60-yard dashes.

World War I interrupted his career, both as a student and athlete at Notre Dame, when Bergman became a pilot in the American Expeditionary Force. After service in France, Captain Bergman returned to Notre Dame in 1919, and played the other halfback with the immortal and fabulous George Gipp, who was also Bergman's roommate.

Dutch had a most interesting and successful career as a coach at New Mexico State College, the University of Dayton, the University of Minnesota, Catholic University and coached the Washington Redskins to win the Eastern Division title in 1943. He has been elected to the Touchdown Club Hall of Fame and the Helms Foundation Football Hall of Fame.

At present Dutch is Manager of the D.C. Armory Board, which operates D.C. Stadium and the National Guard Armory.

Harrison E. Salisbury Sums Up—VI

EXTENSION OF REMARKS
OF

HON. WILLIAM F. RYAN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. RYAN. Mr. Speaker, in his sixth article in the series summing up his observations in North Vietnam, Harrison E. Salisbury reports today on the differences between North Vietnam and the National Liberation Front. This article is most important as it discusses a little known facet of the Vietnam situation. The article, published in the New York Times on January 16, 1967, follows:

[From the New York Times, Jan. 16, 1967]

HANOI DENIES AIM IS TO ANNEX SOUTH—PROGRAM OF NORTH IS FOUND TO DIFFER FROM VIETCONG'S

(By Harrison E. Salisbury)

HONG KONG, January 11.—About 10 days ago Le Duan, First Secretary of the North Vietnamese Workers' (Communist) party, made a speech to army cadets, outlining the basis of party policy.

The party, he said, stands for "socialism in the North, democracy in the South."

His declaration was the talk of Hanoi, not because he had enunciated a new line, but because he had found it essential to restate the policy at this particular moment.

The party secretary's name is not well known outside North Vietnam. But there, it is regarded as quite possibly even more important in party circles than that of Premier Pham Van Dong.

There are some who believe that if President Ho Chi Minh were to die, he would be succeeded either by Mr. Le Duan or another figure equally little known in the West, Truong Chinh, a Politburo member, who heads the Party Control Commission.

ALLIES HAVE DIFFERENT PROGRAMS

The fact that North Vietnam and its southern ally, the National Liberation Front, possess basically different foreign policies seems to have gone almost unreported in the Western press. It came as a surprise to hear their representatives talk in casual terms of these differences, which are of long standing, and in a way that made it apparent that neither side expected an early change.

The existence of different programs raises a question that has hardly been studied in the United States. It is whether the differences are so large that even in the event of a victory for the North Vietnamese and for the Liberation Front, which is the formal name for the organization that most Americans call the Vietcong, a coalition and unification of North and South would not automatically occur.

PROPAGANDA PERVASIVE

Both the Northern regime and the Liberation Front are committed to reunification and the creation of a single Vietnamese state Northern propaganda for reunification is pervasive. The old Metropole Hotel in Hanoi has been renamed Thong Nhat (Reunification) Hotel. A new park built by young people around the lake adjacent to the Polytechnic University is called Reunification Park.

No speech by a North Vietnamese politican is complete without a demand for reunification. No official, even when presenting statistics on health or education, would think of concluding his presentation without putting on record North Vietnam's insistence upon reunification.

Yet, when the question of when and how is posed, the answers begin to become vaguer and vaguer. Premier Dong, in speaking with this correspondent, emphasized the insistence of North Vietnam on reunification. But as to when this might be accomplished, that he said, was for North and South to work out "as between brothers."

ANNEXATION AIM DISAVOWED

In discussing the same question, the spokesman of the Liberation Front in Hanoi, Nguyen Van Tien, said reunification was a matter that would require substantial time and a careful working out of details.

Premier Dong rebuked those who, he said, mistakenly credited the North with a desire to annex the South. The North has no intention of doing such a "stupid, criminal" thing, he asserted.

Most Americans have assumed that the Liberation Front is a puppet of the North, that was created by the North, that it is the creature of the North and that it is directed by the North.

This was not the impression given by representatives of the Liberation Front or of the North.

But, it may be asked, aren't the North and the Front just putting on an act? Won't they drop the mask and eliminate all their supposed differences if they win the war?

There is no way of telling, but if the published programs of the two groups are genuine reflections of attitudes, there seem to be sufficiently wide differences to make rapid unification difficult.

REGIONAL PERSONALITIES

Specialists in Vietnam have also noted marked differences of temperament and personality between natives of the South and of the North. These regional differences have been evident in the governments of Hanoi and Saigon, both of which include natives of the two parts of Vietnam. Saigon residents seem to possess a certain sophistication and big city gloss not found in the average Northerner. The Southerner seems to be more a man of the world. The Northener is simpler, more direct, blunt and forceful.

These differences could be put aside for the sake of the common cause of Communism. But in other countries it has been demonstrated that Communism does not necessarily eliminate regional conflicts. This has been noted in the Soviet Union and in some of the Eastern European countries.

The front has now been in existence as a separate quasi-governmental organization for six years. In that period of time its leaders have acquired vested interests.

In the last few years they have established quasi-diplomatic missions in each of the Communist countries and in some other African and Asian countries. However, no foreign governments are represented at Liberation Front headquarters in South Vietnam. Only North Vietnam maintains a permanent representative in the South.

Who conducts the war in the South? The Front insists that it does, that all military operations are under its command and under its direction. Its representative in Hanoi was asked whether this meant that any forces sent south by Hanoi were put under Front command. He insisted that this was true.

TROOP JURISDICTION AN ISSUE

Diplomats in Hanoi are dubious about this. They doubt that regular North Vietnamese army units sent to the South are taken out of the North Vietnamese command. There have been rumors of disagreements between North and South regarding the employment of troops and the tactics to be followed in combatting the Americans.

The basic difference, the diplomats said, lies in a desire by Hanoi to engage the Americans in large-scale battles whereas the Front, with years of experience and confidence in hit-and-run tactics, is reluctant to commit large units.

Some Hanoi diplomats also contended that while the North Vietnamese were splendid combat troops, they had not proved as capable as the Front in carrying out guerrilla operations since their basic training had been for normal military service rather than special combat.

Neither Northern nor Southern representatives said in so many words that the North was sending regular combat troops to the South. But no one said that this was not the case. In two weeks in Hanoi, this correspondent never heard a denial of the presence of Northern forces in the South.

INDEPENDENCE IS AVOWED

On the contrary, the idea that the North was rendering aid to its Southern allies was stressed repeatedly.

The Front insisted that one reason for its success in the South was the independence of its leadership. It stressed its independence in contrast to what it called the dependence of Premier Nguyen Cao Ky and his Saigon Government upon American backing.

On one point both the Front and the North were agreed. This was that the Front was the only legitimate representative of the people of the South and that no settlement of the war could be expected without direct United States dealing with the Front.

"Anyone who has anything to discuss in connection with South Vietnam" said Mr. Tien, "must discuss it with the Front. The North cannot speak for the South."

Premier Dong said the same thing and asked how the United States expected to settle the war unless it was willing to negotiate with the Front.

"The National Liberation Front must be represented at the conference table," Mr. Tien said. "Later on, the Front and the North will have to have discussions of reunification on the basis of equality."

DIFFERENCES ILLUSTRATED

Neither North nor South suggested any means for reconciling the divergent economic and political platforms on which they stand. The North stands for a system of Communist organization of the economy in which industry and commerce are run and directed by the state and agriculture is organized on a collective basis.

The South stands for a mixed economy in which there would be both socialized, or state-run, elements and private and cooperative elements, something on the order of the systems of Cambodia and Burma.

The political policy differences are equally marked. The North bases itself on membership in the so-called camp of socialism, the Communist world bloc.

The South proposes a policy of nonalignment, without adherence to any bloc, either Communist or non-Communist. It seems to envisage itself as a possible member of a neutralist bloc of states that would include Cambodia, Laos, Burma and Indonesia.

How these two policies could be reconciled in a reunified Vietnam is difficult to imagine. Either one or the other presumably would have to be given up or the two segments of Vietnam could not be rejoined.

The party basis of North and South is also different. The North has a tightly integrated Communist party. True, there are a few so-called nonparty men in government posts, but the leadership of the Communist party is supreme.

The Front represents a coalition of Communist and non-Communist parties and groupings in which the Communists are a minority. It is believed, however, that because of superior ability, cohesiveness and leadership the Communists dominate the Front. They say, however, that they do not intend to pre-empt political leadership of the South and that the Front will go on after the war with a diversity of membership.

REDS MAY SEIZE POWER

This, too, would seem to make a coalition difficult unless the Southern Communists simply seized power for themselves as has happened in past coalition governments, particularly in Eastern Europe immediately after World War II.

In population the South has 14 million people, the North 19 million. Both areas are mixed, however, since possibly one million Northerners took refuge in the South after the Communists came to power in Hanoi. Many thousands from the South went North at that time.

The North and South have been separated politically for 12 years now. Contact between the two areas is physically cut not only by the war but by restrictions established by both sides. Persons from one region are not permitted to visit the other. No direct mail service is provided between South to North.

The only way families can communicate is through third countries. The only way members of separated families can be reunited is by being smuggled across the frontier or arranging a meeting outside either North or South—a difficult matter in wartime.

In these circumstances the first step proposed by both the Front and the North is the restoration of trade, visits, travel, mail and similar facilities between North and South.

No steps beyond that have been publicly proposed by either side. If a well thought-out or coordinated plan for reunification existed, it would undoubtedly be publicized. Both the North and the Front insist no such plan has been drafted.

TERRITORIAL CLAIMS

The Front's picture of its political power and dominance in the South differs from what most Americans believe.

The Front has prepared maps that purport to show that four-fifths of the total area of the South is now in its control and that more than 10 million of the region's 14 million people live in "liberated" areas. It contends that even in Saigon large city areas are for practical purposes under secret Front control.

It insists that underground Front organizations exist in all communities of the South and that when Front forces "liberate" a region the underground groups simply come to the surface and begin to carry out publicly functions that previously were accomplished secretly.

Even if only part of the contentions of the North Vietnamese and the Front are founded in fact, it would seem evident that the question of what would happen in Vietnam when peace comes is far more complex than is generally realized.

It is difficult to imagine a powerful, self-centered group like the North Vietnamese Communist party sharing power in any coalition rule, even if the other group is Communist or Communist-dominated. The possibility of open divergencies between the Front and Hanoi is a subject of speculation among Hanoi diplomats and is discussed seriously by Eastern European Communists.

Message Concerning the Death of Representative John E. Fogarty

EXTENSION OF REMARKS

OF

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. BINGHAM. Mr. Speaker, at the request of Mrs. Sylvia N. Rachlin, executive vice president of the Myopia Research Foundation of 415 Lexington Avenue, New York, N.Y., I include herewith the following message from the board of trustees of that foundation, to be added to the multitude of statements and messages expressing universal grief at the death of our distinguished colleague from Rhode Island, Representative John E. Fogarty:

> The Board of Trustees of the Myopia Research Foundation is deeply grieved over the untimely passing of Congressman John E. Fogarty. He was a devoted friend and humanitarian. Millions of Americans are indebted to him for his foresight and understanding in proposing and developing splendid programs for the improvements of the Public Health facilities of the nation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

Appendix

Settling the Archives Dispute

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. MACHEN. Mr. Speaker, I have been requested by Maryland Gov. J. Millard Tawes to take legislative action to settle a dispute that has been running between the Maryland Hall of Records Commission and the Librarian of Congress for about 30 years. It involves eight documents now in possession of the Librarian of Congress.

The Maryland archivist is convinced that these documents are of Maryland origin and are authentic Maryland records and thus belong in our State's archives. However, the Librarian of Congress has steadfastly refused to surrender these documents to our Maryland officials.

The joint resolution I am introducing today directs the Librarian of Congress to turn the eight documents over to the State hall of records commission. I sincerely hope that it will serve to settle this dispute once and for all. Under leave to extend my remarks I wish to include the following letter from Governor Tawes and newspaper article from the Washington Evening Star:

EXECUTIVE DEPARTMENT,
Annapolis, Md., December 2, 1966.

Hon. HERVEY G. MACHEN,
Hyattsville, Md.

DEAR HERVEY: The Hall of Records Commission, at its last meeting on November 10th, asked me to broach the subject with you of the possibility of introducing a joint resolution in Congress which would have as its purpose the return of certain Maryland records now in the custody of the Librarian of Congress. We have made every effort to persuade the Librarian of Congress to return these records without congressional action, but the present Librarian, and his predecessors, beginning in 1936, have consistently refused. They give as the reasons for their refusal, first, that they are not confident that the records actually once were official archives of the State of Maryland, and second, that they lack authority to return these records without declaring them surplus.

The first concerted effort to have these records returned was made by Dr. James A. Robertson, the first Archivist of Maryland, by George L. Radcliffe, at that time the Junior Senator from Maryland, and by Judge Carroll T. Bond, Chief Judge of the Court of Appeals and Chairman of the Hall of Records Commission. The present Archivist, Dr. Morris L. Radoff, has appealed directly to Dr. Mumford, the Librarian of Congress, and he has also attempted to negotiate the matter through Congressman Mathias.

I am convinced, as are the other Commissioners, that these records of which I am sending you a list herewith (1), created by agencies of Maryland, originally did belong among the archives of the State and should be returned. I am also convinced that the Librarian of Congress, if he so wished, might return them without the intercession of the Congress. However, since he has refused to do so, we have no other choice.

I am sending you some examples of the restoration of records by the Librarian of Congress and others (2), and the text of Manning v. Georgia (3), which is constantly referred to in the matter of title of public records and which I think you will find interesting as well as relevant.

I shall be very much obliged to you for any action which you take pertaining to this case, and I shall be glad to furnish you with any additional information which you might need.

With kindest personal regards, I am,
Sincerely yours,
J. MILLARD TAWES, *Governor.*

[From the Washington Evening Star, Dec. 12, 1966]

TAWES AIRS STATE FIGHT WITH UNITED STATES ON ARCHIVES

ANNAPOLIS.—A battle of archivists, fought discreetly for the last 30 years between Annapolis and Washington, has now flared into the open.

It involves some records in the Library of Congress which Dr. Morris L. Radoff, the Maryland state archivist, claims properly belong in the State Hall of Records here.

Dr. L. Quincy Mumford, librarian of Congress, has steadfastly refused to surrender them, as did his predecessors.

At one point—some five years ago, according to the correspondence—Radoff threatened Dr. Mumford with a "friendly suit" or, worse yet, "publication of our exchange of correspondence."

Mumford's reply to this letter is not revealed, but Gov. J. Millard Tawes decided it was time to bring the dispute itself into the open.

SEEKS CONGRESSIONAL AID

He had written a letter to Maryland's two U.S. senators and eight congressmen urging them to bring pressure on the librarian, perhaps in the form of a congressional resolution. Tawes released a copy of the letter to the press along with some photostats of background information from the Hall of Records, for which Tawes, as governor, is a commissioner.

"I am convinced, as are the other commissioners, that these records of which I am sending you a list herewith, created by agencies of Maryland, originally did belong among the archives of the state and should be returned," the governor said.

"I am also convinced that the Librarian of Congress, if he so wished, might return them without the intercession of the Congress."

"FUGITIVE ARCHIVES" LISTED

The records cited by Tawes include two journals of the Maryland legislature, dated 1778–81 and 1778–85; the account book of Thomas Harwood, treasurer of the Western Shore, 1781–83; Rough Letter Book of the intendant of revenue, 1785–87; Journal of (Hugh Lyle?), accounts with military officers, 1781; record of the Vice-Admiralty Court, 1754–75; record book of the Committee of Observation of Baltimore County, 1774–76; and record book of William H. Brown, notary public, Anne Arundel County, 1799–1802.

According to official sources here, these records apparently found their way in the last century into the Peter Force collection, which was later acquired by the Library of Congress. They are referred to in one memorandum as "fugitive archives of Maryland," and state officials think there may be others in the Washington institution.

The state began trying to reacquire them in 1936, shortly after the Hall of Records was established as a depository for all public documents.

Tawes noted that the early efforts were led by Dr. James A Robertson, the first archivist of Maryland, and Radoff's predecessor who died in 1939; by George L. Radcliffe, when he was the junior senator from Maryland; and by the late Carroll T. Bond, chief judge of the Court of Appeals of Maryland from 1924 to 1943.

"We have made every effort to persuade the Librarian of Congress to return these records without congressional action," Tawes told the congressmen. " But the present librarian, and his predecessors, have consistently refused."

"They give as their reasons for the refusal, first, that they are not confident that the records actually once were official archives of the State of Maryland, and, second, that they lack authority to return these records without declaring them surplus."

Gust Skordas, the assistant state archivist who has inspected the records in Washington and compared them with others in Maryland's possession, says, "There is no question about the authenticity."

He said the Hall of Records has, for example, ledgers of the legislature that correspond to the Maryland journals in the Library of Congress and are companion volumes to them, and that it has also verified the other documents as missing links in Maryland records.

To Cure Asthmatic Children

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1967

Mr. JAVITS. Mr. President, asthma is a disease which afflicts more than 5,400,000 Americans, of whom more than 2 million are children aged 16 and under. Only recently has this affliction become the focal point of national attention, despite the fact that the disease itself has been recorded as a medical problem for at least 1,800 years.

The November 1966 issue of McCall's has an interesting article on asthma as it affects children by a distinguished specialist in the field, Dr. C. J. Falliers, medical director of the Children's Asthma Research Institute and Hospital (CARIH) in Denver, Colo., the country's largest facility for the total care of child asthmatics.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CURE FOR ASTHMATIC CHILDREN?

Every mother of a severely asthmatic child knows the frightening symptoms of an acute attack. The child's mouth gapes open. His nostrils distend as though screaming for air. A blue haze around his mouth shows he is suddenly without oxygen. Striking somewhere along the vast network of air tubes of the bronchial tree, a muscle spasm has caused a strangulating asthma attack. When there is release from this spasm the child can breathe normally again—only to live in fear of the next major attack.

Fortunately for most asthmatic children, these life-threatening attacks do not occur very frequently. According to estimates of the U.S. Department of Health, Education and Welfare, more than two million children aged sixteen and under have asthma, and a relatively small quarter-of-a-million of these children have asthma that is considered chronic and intractable, i.e., resistant to conventional treatment. But last year close to five thousand adults and children died from asthma attacks like the one described above. At best, children with bad cases of asthma live highly restricted lives, are kept home or sent home from school for long periods and exist in constant fear of major attacks.

Can such severe asthma ever be fully controlled or eliminated? Specialists at several excellent centers which treat asthma believe that the disease indeed can be conquered. To this end, at CARIH, we continuously select the worst cases we can find among children aged six to fifteen, anywhere in the United States, and admit them to our resident "family" of 165 boys and girls. They live with us free of charge, attend the Denver public schools and remain here for about two years.

During this time we use every known means to rehabilitate them, and in a high percentage of these cases we are totally successful. While "rehabilitation" does not mean "cure," eight out of every ten children who have been admitted and discharged during the nine years I have been at CARIH can lead completely normal lives through management of the disease—about half of them without depending upon continuous medication. Our patients comprise only a tiny fraction of the country's afflicted children, but their case histories provide an ever-growing research file which is available to all doctors and health organizations everywhere. It is our hope that these findings will help eliminate asthma as a serious problem.

A child comes to CARIH after his case history—prepared by his physician, a social agency and his school—establishes that he is seriously in need of help and that nothing more can be done for him in his home environment. Upon arrival at the Denver airport he is greeted and brought to CARIH by a carefully trained houseparent, who will be caring for him as well as for the other fifteen to twenty children in the cottage where he will live. The 17½-acre grassy campus, with its hospital, research and recreation buildings and eight bright cottages, is deliberately planned to seem as uninstitutional-looking as possible. Our professional staff of medical specialists, psychologists, researchers, dieticians, nurses, physical therapists, recreation leaders and houseparents generate a congenial and informal atmosphere.

From the beginning we purposely set a pace for the children that leaves little time for pining and homesickness. Besides regular attendance in the Denver public schools, it includes a supervised year-round recreation program, psychotherapy, continual medical testing and observation and group living with other asthmatic children. During the first twelve weeks of a child's stay we make a comprehensive rundown of everything contributing to his asthma. Continual checks are made of his blood, respiratory system and the foods and medications to which he may be allergic. The child's dependence on cortisone-type drugs (which almost all have used prior to admission) is assessed, and a program set up to wean him from the drugs. In addition, each youngster's abilities and emotional problems are analyzed by the cottage psychologist.

With the insight gained from this initial twelve-week period, intensive planning for the child's rehabilitation begins, and from here on his case is under continuous review until his two-year stay is finished. Participating in these conferences are the members of the senior medical staff, the psychologist assigned to the youngster's cottage, houseparents, the chief of the nursing service and the public school's principal.

For the children, living at CARIH is much like going to school while living at camp. As students they walk to and from the nearby public schools, do homework and get report cards—which are inspected carefully by the houseparents. Once their treatment has begun our children have school attendance records equal to those of other Denver children, even though they may have missed previously as much as three months or more of school per year because of asthma. Should a child begin to feel ill at school, the school nurse may provide medication. Or, if the child shows any indication of becoming seriously ill, we are called immediately and a houseparent picks the youngster up.

Like campers, the children eat, sleep and play together and are responsible for keeping their rooms in order. Enjoyable activitties—overnight hikes, talent shows, barbecues, swimming, horseback riding, arts and crafts—are frequent, but the children participate only if they wish to and only with medical approval. Living with and competing against youngsters with similar handicaps play an important role in the self-reliance and independence we foster in each child.

In the course of our research, we analyze the asthma attacks during their "peak" periods by subjecting them to special analyses—breathing, bloodgas and biochemical—on a minute-to-minute basis. During these tests we study the effectiveness of various approaches to inhalation therapy and physical therapy. We examine the relationship of psychological factors to asthma and the degree to which psychological techniques can be used to prevent them. We also study the effects of asthma on a child's personality and family life. Attention is given to the effects of asthma and drugs on the growth rates of children with intractable asthma, as well as to the long-term effects of all types of prolonged drug therapy.

The role of foods, the questions of how and why the course of asthma varies in children and a method for creating immunity to asthma are studied.

Although each child's two-year course of treatment costs an estimated twelve thousand dollars, no charge is made to any child's family. Admission to CARIH is based entirely on the severity of the child's affliction and the degree to which he can be helped better at CARIH than at home. We are a non-profit organization, and the funds which make our treatment and care of asthmatic children possible are contributed as a result of direct mail appeals, the activities sponsored by 140 CARIH Auxiliaries throughout America and the solicitation of professional and business groups. The U.S. Government and numerous philanthropic foundations also contribute generously to our resources.

"Credibility Gap" Impedes L.B.J.

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. YOUNGER. Mr. Speaker, while spending our vacation in Portugal and Africa during the month of December, I ran across an article in Newsweek, which I believe was published in Europe, and one of their articles was on the credibility gap, which gives one a good idea of the information which is being given to the readers of that publication.

The article follows:

"CREDIBILITY GAP" IMPEDES L.B.J.

Down on the L.B.J. Ranch, where a dry November turned the purple sage brown and produced a dismal harvest of election returns, Lyndon Johnson was reported by friends to be in a blue mood last week.

The President was discouraged, they said, not by the seeming insolubility of some of the problems he faces, such as the war in Vietnam, but by his apparent inability to get a fair shake in the Press.

The problem, very simply, is that Mr. Johnson lives with a credibility gap. Like his bodyguards, the Presidential Seal and the nuclear-strike code book—like the "little shadow that goes in and out with me" of the nursery rhyme—it moves with him wherever he goes.

In Manila, as well as Johnson City, wary newsmen are inclined to look for "the angle," to wonder whether the President is "on the level" whenever he speaks or acts.

The gap began as a mere earth fissure three years ago when the President led reporters to believe he couldn't possibily keep his budget below the 100-billion dollar mark, and sapped them with a look-how-good-I-am 97.9-billion dollar figure. Now it has reached wide gulch proportions.

That was evident last week in Texas, when as many White House reporters were willing to believe the A.P. as the White House on the speeding story.

By 1968, the way things are going, the Republicans will be making the credibility gap a major issue.

But the credibility of the President is a problem not just for Lyndon Johnson, the politician, but for Lyndon Johnson, the leader of the free world.

So far, the chasm has been more apparent at home than abroad. Yet if the President isn't believed in Manila or at the United Nations when, for example, he says he is willing to discuss peace in Vietnam "anywhere, anytime," then he may increasingly be doubted in London, Bonn, Rome, Seoul and Canberra.

WHOPPER

Unlike most of Mr. Johnson's problems, it is one of his own creation.

If the President doubts this, then I invite his attention to a few jottings from my notebooks. In them is a compendium of deceptions that makes Dwight Eisenhower with his occasional lapses and John F. Kennedy with his artful dodges look like congenital undeviating truthtellers.

First there was that 1964 budget whopper. How the President made himself look like a frugal Sir Galahad, slaying the 100-billion dollar budget monster dutifully erected by a trusting White House Press corps, is still a bitter page in history to his instant historians.

White House correspondents were glad he saved the money, but not that he did it at their expense.

Then came that word through U Thant that Hanoi was willing to talk with American representatives at Rangoon about peace in Vietnam.

This message came—and we have the word of both Thant and the late Adlai Stevenson that it came—at a time when Mr. Johnson was telling us at every opportunity that he was watching for "any signal", that he would walk the last mile to sit down with anyone for "unconditional" peace talks on Vietnam, but no one over there was signaling.

We might never have heard of the Hanoi offer if Thant had not made a speech in February, 1965, stating that the American people were not getting all the facts about the Vietnam war.

Then the Administration's story that Hanoi had shown no interest in talking peace began to crumble. We still don't have a straight story from Lyndon Johnson on why those two Hanoi gestures, one in 1964 and one in 1965, were rebuffed.

One typical enlargement of the credibility-gap occurred back at the ranch in November 1964, at L.B.J.'s first Press conference after his landslide election victory.

At that time the President ridiculed reporters for "premature" speculation about his intention to escalate in Vietnam.

The Vietnam speculation came true in 3-D, living colour a few months later.

In February 1965, when the Vietnam speculation materialised in the form of a U.S. Navy carrier air strike on Dong Hoi, north of the 17th parallel, White House reporters who were routed out of bed to get the news inevitably asked: was the President escalating the war?

No. It was a "reprisal" raid answering a Viet Cong mortar attack on the American barracks at Pleiku the day before, they were told.

This might have been defensible as a mask for the next day's air strike. But in the weeks that followed, President Johnson stubbornly refused to admit escalation. He had not changed strategy, only tactics, he insisted, as he changed the entire character of the war.

Just two months later, in April 1965, the President ordered 2,500 paratroopers into the Dominican Republic. The sole purpose of his intervention in the Dominican revolution, he solemnly announced, was to protect the lives of some 2,500 Americans living there.

When after 1,100 Americans had been evacuated and the President had escalated the U.S. troop commitment to 21,500 (nearly 20 times the number of Americans remaining to be saved), he was asked whether this was still just a life-saving mission. The answer, unbelievably, was "Yes."

Not until the next week did L.B.J. acknowledge that he had intervened to prevent a communist takeover in Santo Domingo. Then, the following month, in what is sometimes excused as Texas hyperbole, the President told a news conference that "some 1,500 innocent people were murdered and shot and their heads cut off"—an assertion that has yet to be verified by anybody.

HALF TRUTHS

The list of outright prevarications, half-truths, concealments and misleading denials by the Administration is almost as long as its impressive list of achievements.

The record, in fact, once got so murky that Mr. Johnson's own U.N. ambassador, Arthur Goldberg, declared a "crisis of confidence."

Some of the questions involved are important, some trivial. In the latter category, no one can find a record of a great-great-grandfather L.B.J. recently claimed as an ancestor who died at the Alamo.

There are also nagging doubts about the authenticity of his "birthplace" recently opened to tourists with his blessings.

Plain-spoken cousin Oriole has said he wasn't born there.

Johnson aides once cautioned a TV network against showing pictures of a bed in which the President said on camera, that he was born. "It may not be the ACTUAL bed," an embarrassed Johnson staffer explained gingerly.

The list is long enough to suggest that the problem of credibility ought to be high on the President's agenda—along with Vietnam, the future of the Western Alliance, his legislative programme for 1967, his own prospects for 1968 and his ultimate place in history.

His believability is intertwined with all those other problems. But unhappily the problem of an incredible White House cannot be solved by a task force or a Johnsonian burst of cyclonic energy. It has to be a quiet, soul-searching operation.

In such an undertaking, it has been suggested, President Johnson could not have a better helper than the one ordained minister on his staff, the Rev. Bill D. Moyers, who is in a unique position to argue that truth, like tapioca, is good for you.

This week, however, Mr. Moyers said he was resigning as L.B.J.'s Press Secretary.

Tax Haven in the Virgin Islands

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1967

Mr. AIKEN. Mr. President, on January 12, 1967, there was published in the Evening Sun, Baltimore, Md., an article by Jonathan Cottin, entitled "Business Men Finding Tax Haven in the Virgin Islands." On January 13, 1967, the Evening Sun published a second article by Jonathan Cottin entitled "Government Cost Hits Zenith in Virgin Islands."

Mr. President, inasmuch as Mr. Cottin in these articles makes reference to the good work of Peter A. Bove, a Vermonter who is now serving his 10th year as comptroller, I ask unanimous consent to have both of these articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Baltimore (Md.) Evening Sun, Jan. 12, 1967]

BUSINESSMEN FINDING TAX HAVEN IN THE VIRGIN ISLANDS

(By Jonathan Cottin)

ST. THOMAS, V.I., January 12.—The United States Government comptroller here has strongly hinted that this American-owned island paradise is fast becoming a tropical tax haven for business men weary of Internal Revenue Service agents.

Peter A. Bove, the comptroller, says tax-free status is granted often "to businesses in full operation . . . These businesses clearly did not require the stimulus of such benefits for their establishment."

The islands, owned by the United States since 1917, have authority to excuse incoming businesses from paying all local taxes. Seventy-five per cent of the income tax and 90 per cent of the Federal customs impost can also be forgiven a company by the local government.

LITTLE ECONOMIC GAIN

The Bove audit offers strong evidence that the tax subsidy program provides little permanent economic gain for this trio of palm fringed isles washed by the sun-dappled Caribbean.

Tabulating the incentive program, Mr. Bove found 23 of 27 companies that were tax exempt "ceased operations" when their special grants ran out.

He adds: "Most exempt businesses, excluding hotels, cease operations either before, or shortly after, the termination of their grant."

OTHER BYPRODUCTS

The tax forgiveness system has also produced these developments:

1. Although geared to promote employment of islanders, the incentive program permits tax-exempt firms to hire aliens.

2. Stateside watchmakers, up in arms over competition for the American market from tax-sheltered island rivals, have prevailed on the United States Treasury Department to impose an import quota on V.I. producers.

The island Government has granted refunds and abatements to more than 125 firms since the incentive program began in 1949. One of its first awards backfired ten years after the grant was made.

ISLAND EMBARRASSED

The Van B. Hooper grant so embarrassed the local Government that it was forced to bypass its own attorney general and ask the United States attorney to seek recovery of more than $1,000,000 given Mr. Hooper from the island treasury.

Mr. Hooper was publisher of a Stateside magazine. He moved down to St. Croix to pursue his publishing career.

A key factor in his decision to move was the islands' pledge to return 75 per cent of his income tax payments. He had no such break on the mainland.

In return for this boon, purpose of which was to stimulate a then-lagging economy, Mr. Hooper took these steps:

1. He hired a native housekeeper at 25 cents a day.

2. He hired his daughter to come down from the States to be his secretary.

3. He continued to publish his magazine, Ideals, in the States.

AWARD CHALLENGED

Mr. Bove, a frugal Vermonter, challenged the incentive award in 1961 and again 1964. By that time, the Government in annual installments had refunded more than $1,000,000 to Mr. Hooper on his income tax payments.

"This case . . . in our opinion, does not and never did come within the category of cases worthy of consideration for tax exemption," said Mr. Bove.

"We all know that the basic philosophy of tax exemption is to give employment and to do something of a substantial nature to improve the economic conditions of the community," he added.

"How can we justify this givinng away of money that could be used for so many things of a more beneficial nature?" asked the comptroller.

The United States Third Circuit Court of Appeals in Philadelphia wondered the same thing. It found the incentive grant illegal.

The Supreme Court in its October, 1966, term, upheld the lower court's ruling.

Virgin Islands Attorney General Francisco Corneiro, who twice found the incentive award was legal, now is trying to recover the money from the Hooper estate.

REFUNDS OF $5,500,000

The incentive award law has meant traceable tax refunds of more than $5,500,000 to 126 firms since 1950, according to the audit.

But the Government comptroller says the $5,500,000 subsidy figure is only part of the tax exemption story.

Because of "serious weaknesses" in the collection of taxes, says one audit report, companies enjoying tax incentive status, as well as those without such privilege, escape payment of local taxes in large numbers.

Six firms whose exempt status expired were not paying any local gross receipts tax, although required to, said the audit.

PROPERTY TAXES

One company with a plant valued at $1,500,000 was excused from paying $20,000 annually in property taxes, even though it did not own the property for which taxes were forgiven, an audit disclosed.

Another business which did not own the land on which it operated has been excused from more than $7,400 in property tax payments.

The owner in each case was also excused from the payments.

In another case, the auditor discovered that a hotel operation obtained more than $64,000 in income tax subsidy payments after the exempt status had been switched to another firm.

VARIATIONS OF THEME

Another variation of the theme involved a firm which asserted part of its cost of doing business was $310,000 it paid in customs duties.

It failed to report that the customs payments were repaid by the island Government because of a tax exemption. Thus, when it filed its income tax return, it escaped payment of about $69,000 by omitting mention of the customs reimbursement.

The comptroller said the customs charge "may not be properly claimed." The matter is now in the hands of the islands' attorney general.

Administration of the incentive program also includes the basic decision to make the award. On this score, the comptroller argued.

NOT REQUIRED

"The Board has granted tax exemption and subsidy to businesses in full operation at the time of application. These businesses clearly did not require the stimulus of such benefits for their establishment," he said.

In reply, the board chairman merely says his "minutes were in such form that the application or discussion of the need test may have been inadvertently omitted."

Board chairman Albert J. Prendergast says the board must be "ultra conservative" in the award of subsidies and exemptions.

Mr. Pendergast, Boston-bred business man who holds a doctorate in management, concedes there is trouble in the program.

GROWTH OF ALIENS

To him, one of the most bothersome developments is the fantastic growth of aliens in the Virgin Islands.

Current estimates place their number at more than 11,000, better than one-fifth of entire 50,000 population.

The aliens, mostly from nearby West Indian islands, pose a threat to the Virgin Islands economy, says Mr. Pendergast.

They must be bonded by their employers before they set foot on the United States territory. But they must leave when the bond expires. Mr. Pendergast calls the situation "unhealthy" since one-fifth of the work force can be "taken away at any time."

TWENTY-FIVE PERCENT ALIENS

Under the law, no tax-exempt firm can have more than 25 percent aliens on its work force.

The Government limit was imposed to stimulate hiring of natives.

Mr. Pendergast reports twenty companies with exempt status have Government authority to exceed this quota.

Still another quota system is developing on these islands as a result of the special tax shelter enjoyed here.

The Stateside watch market was put on guard after twelve rivals settled in the islands. Four of them received incentive awards. The eight others do not require incentives, says Gov. Ralph M. Paiewonsky.

SHIPPED TO STATES

All of the island firms import parts from foreign lands, assemble them, then ship them to the states.

All the island companies have escaped duty payments because of a special Federal law. In addition, the four with incentive awards are forgiven 75 percent of their income taxes.

The duty-free status keeps prices for island-made timepieces below those manufactured on the mainland.

When Stateside manufacturers began to feel the pinch, they called for help from the Treasury Department.

QUOTAS DUE

Early this year, that agency will impose quotas on island-made watches. The action will insure a substantial portion of the market for mainland producers.

Governor Paiewonsky, a Kennedy appointee, says the tax incentive program is no giveaway.

He maintains the needs test for companies to qualify for tax bonuses is "difficult to administer."

But Mr. Paiewonsky was brought up short on the issue last year by the chairman of the Senate Committee on Interior and Insular Affairs.

After the portly millionaire governor recited a list of economic growth indicators, reflecting the recent boom on his islands, Senator Jackson (D., Wash.) exclaimed: "You are doing so well down there that maybe we will have to take away these tax advantages."

There was no response from Mr. Paiewonsky.

GOVERNMENT COST HITS ZENITH IN VIRGIN ISLANDS

(By Jonathan Cottin)

ST. THOMAS, V.I., January 13.—The high cost of Government has reached its zenith on the United States Virgin Islands, where spending has jumped 800 per cent in ten years.

The money involved—about $44,000,000 in the last fiscal year—is a drop in the bucket by Maryland standards.

But by the same yardstick, the American territory in the Caribbean, where nearly 25 per cent of the homes are without modern plumbing, spends four times as much as the Free State on each resident.

$800 PER PERSON

The $44,000,000 in revenue collected last year, spread over the 50,000 islanders, breaks down to about $800 per person.

In contrast, the Maryland Government last year expended less than $900,000,000 on its 3,500,000 inhabitants, or less than $260 per person.

More than 75 per cent of the cash supporting the Government is derived from levies that Uncle Sam allows the islands to keep. The Federal income tax is kept in the island treasury. And Washington returns, with no strings attached, all of the liquor taxes collected on island-produced liquor.

RUM TAX TAKE

Last year, the rum tax amounted to $10,400,000, according to the United States Interior Department.

The islands, which spent only $5,800,000 ten years ago, use a substantial portion of the Federal largesse to pay Government employees.

The Government was unable to provide annual salary costs, but did reveal that the number of Government employees has nearly doubled in just three years.

In 1963, there was 2,413 on the island payroll. In 1966, that number jumped to 4,026, making the Government the biggest employer, with paychecks going to almost 10 per cent of the entire population. Only 1 per cent of Maryland's residents work in State government.

Moreover, the number of political appointees in Government service has jumped almost 100 per cent in one year.

Gov. Ralph M. Paiewonsky increased the number of unclassified jobs to 654 last year, up from 380 the previous year.

ACKNOWLEDGES WASTE

The island executive, who speaks in a lilting Galypso accent, condones the massive growth in Government workers and acknowledges there is waste.

"I could run the Government with less people and more efficiently with people from the United States," he told a visitor.

"But what would happen?" he asked rhetorically. "As soon as the Americans leave, we are back where we started."

The Governor said he "must start building up a permanent staff of trained people" who are native islanders.

State-siders who come to work for his Government rarely stay very long, Paiewonsky said.

The island Government has made every effort to make Government service attractive, using a high wage for the bait.

WORKS DIRECTOR'S SALARY

The public works commissioner, for example, earns $19,300 a year. Albert P. Backhaus, Maryland's public improvements director, whose assignment is much like the public works director's, was authorized $14,300 last year.

The social welfare director on the islands earns $17,200 a year to administer a program for 2,200 persons. Raleigh C. Hobson, who directs Maryland's welfare program that serves more than 80,000 residents, earns $21,600.

Two of eight assistant attorneys general on the islands are paid $15,000 each, more than several assistant attorneys general in Maryland who earn between $10,000 and $13,000.

What happens to the money left over after salaries?

According to United States Government Comptroller Peter A. Bove, there is considerable waste.

Bove, whose audits produce Paiewonsky's wrath, is America's lone Federal watchdog on the islands. At one point, Paiewonsky said he should have power to name the man who audits the Government, but the Senate turned the idea aside, noting the American financial state involved.

Some of Bove's findings:

1. About $2,000,000 was wasted on a dredging project designed to deepen the harbor of Charlotte Amalie so that big ocean liners could come into thriving tourist port.

2. Poor planning of a low income public housing development which forced the cost of the project up by about $600,000 over estimates due to a series of costly work change orders.

3. Highway construction programs authorized as long ago as 1959 are still not completed, despite the Governments' acknowledgment that the roads are inadequate.

The Government's half-hearted attempt to dredge Charlotte Amalie harbor failed from "a complete lack of coordination between the Department of Public Works and Commerce," Bove said.

SEQUENCE OF EVENTS

The Commerce Department didn't know of the dredging project until the dredge "actually arrived," the comptroller's audit said.

Under the law, Commerce is assigned supervision of harbor improvement.

The sequence of events by Bove's account:

August 19, 1963: Paiewonsky sends off memo to agency heads stressing importance of coordination.

August 19, 1963: Dredging began in the harbor to deepen port for big ships.

August 28, 1963: Dredge left the area, "leaving the most important part of it undredged."

DREDGE RETURNED

September 5, 1963: Dredge returned after deficiency discovered, but removed only "one third of the 300,000 cubic yards required to deepen the entire maneuvering area."

Public Works Commissioner James W. Huston asserts deep draft ships, wary of a "narrow" harbor mouth, would not enter the harbor no matter how deep it is.

But spokesmen in New York for two big steamship concerns said they would "love" to move their vessels into the bustling port if only it were the proper depth.

HOUSING PROJECT

The housing project was designed to clear an unsightly community of sewerless, ramshackle hovels on the main road between the airport and Charlotte Amalie on St. Thomas.

Initially, the local Government was intent on obtaining the slum-strewn flatland along the main road for the $1,100,000 renewal. But the owners of the valuable land balked at selling.

RETAINING WALL WASHED AWAY

Instead of resorting to condemnation, the Government bought less expensive land on steep hillsides several hundred yards above the slums.

During construction, a heavy rainstorm washed away a retaining wall. One home was destroyed and two others severely damaged.

The Government repaired the two homes and spent another $400,000 on retaining walls.

A change order went through providing for a central water collection cistern, rather than equipping each house with its own. Additional cost: $100,000.

More connecting water pipes were required when the switch was made to a central cistern. Added cost: $90,000.

Fences were installed to protect life and limb along the steep hillsides. Added cost: $20,000.

Home buyers still paid an average of $9,400 for their "low income" dwellings—estimated cost per unit before change orders.

ABSORBS ADDED EXPENSES

But the Government was forced to absorb the added expenses, which are expected to bring the total cost above $1,600,000. Initially, the project was figured at $1,100,000.

Moreover, only 16 of the more than 100 shacks below the development have been cleared, partly because the Government controls little of the flat land on which the slums fester.

The comptroller complained that many highways are too narrow for safe passage of two cars.

COMMISSIONER'S RESPONSE

Huston's response:

"Our experience has been that the wider the roads are, the more violations by speeding there are."

Bove also noted the poor conditions of the highways on St. Thomas, where in some sections there is more mud than asphalt.

Huston blamed the condition on the "ultra-violet rays of the sun," which, he claimed, force rapid collapse of the highway surface.

DENIED BY INSTITUTE

But the International Asphalt Institute said in Washington it "never heard of such a thing." Asphalt stands up in the 140-degree sun of the Sudan and should have no trouble on St. Thomas, where temperatures rarely exceed 90 degrees, the institute said.

Huston said that while no new roads were built on the islands last year, he repaired ten miles of highway.

Veterans' Administration Hospital Is a Center for Surgery by Freezing

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. DULSKI. Mr. Speaker, just recently I had the opportunity to visit the Veterans' Administration hospital in Buffalo, N.Y. The director of this hospital, Dr. Herbert Fineberg, led the inspection tour and a number of important areas were discussed.

I was greatly impressed with the amount and type of research done at this hospital, as well as the medical services available to our veterans. The staff is dedicated to the highest ideals of public service, and is making a significant contribution in the area of research and development of new techniques.

Under leave to extend my remarks, I wish to bring to the attention of my colleagues an article which appeared in the Buffalo Courier-Express, Buffalo, N.Y., on January 8, 1967, describing the Buffalo Veterans' hospital's treatment of benign and malignant tumors by an actual freezing technique, referred to as "cryosurgery" or "cryotherapy." The article, written by Clare Allen, follows:

RESEARCH ON THE NIAGARA FRONTIER—VETERANS' ADMINISTRATION HOSPITAL IS A CENTER FOR SURGERY BY FREEZING

(By Clare Allen)

Few persons are aware that the Veterans Administration Hospital on Bailey Avenue, in addition to providing medical and surgical care for former and present members of the armed forces, is also the center for some very interesting and important research. The primary function of the facility and its professional staff is patient treatment. However, these same people also devote considerable effort in the exploration and development of new techniques and equipment for the treatment of human ailments. Currently 78 people are working on 40 research projects at the hospital.

One of the most interesting and encouraging of these studies involves the actual freezing of localized cancers, which, in some instances, has proven more successful than surgery or treatment by irradiation. Known as "cryosurgery" or "cryotherapy" ("cryo" from the Greek "kryos," meaning cold or frost), the technique and equipment have been used in the treatment of benign and malignant tumors in more than 100 patients in the hospital in the past three years.

Basic experimental and clinical work with this technique has been done by Doctors Andrew A. Gage and Fred G. Emmings, who have frozen various tumors in several areas of the body, and by Doctors Maurice J. Gonder and Ward A. Soanes, who have treated prostatic disease and bladder cancers at the Millard Fillmore as well as the Veterans Administration Hospitals. In association with the clinical investigators, Dr. Sidney Shulman of the University of Buffalo has conducted experiments on immunologic responses to tissue freezing.

Cryotherapy is relatively simple to apply. The principal instrument is a probe slightly larger than a pencil, with a freezing surface at the tip. It is linked to a flexible insulated tube which is connected to a container of liquid nitrogen.

In operation the liquefied gas flows to and circulates through the tip of the probe, chilling it to a temperature as cold as −190° Centigrade, although the usual temperature reached during use is about −160° Centigrade. Suitably shaped probes can be used in the treatment of tumors in various areas of the body.

During the operation the surgeon applies the tip of the probe to the cancerous area, holding it in one spot for two or three minutes while freezing is produced. Then the probe is thawed and moved to other areas for freezing until the entire cancer has been treated. In about seven to 14 days the previously frozen tissue falls away, leaving a clean wound with very little scar formation. If examination shows that the initial treatment was insufficient, it can be repeated at intervals until the cancer is completely destroyed. Benign tumors and enlarged prostate glands are similarly treated.

According to Dr. Gage, cryotherapy has proven particularly useful in prostatic disease and in the treatment of easily accessible tumors, such as those of the skin, mouth and throat. The technique has also been advantageous when cancer is close to the bone, for with freezing, the tumor may be destroyed without permanently damaging the underlying bone.

The work done in cryotherapy in Buffalo has contributed very substantially to the knowledge of this relatively new treatment, so much so that the city is recognized by the medical profession as a center for research and development of the technique. However, as is the case in any advanced study, tangible results were neither quickly nor easily attained.

Many months of pioneering investigation were consumed at the Veterans Administration Hospital in order to determine the effectiveness of cryotherapy. Doctors spent countless hours studying the manifold aspects of the new treatment and in laboratories, gaining experience in the manipulation of the specialized equipment and in developing operating technique. Knowledge acquired by the individual was shared with colleagues, and that knowledge and its application has been worthwhile, as indicated by case histories.

Doctors Gage and Emmings, in the treatment of 21 persons with oral cancer, found only three that failed to produce satisfactory results. Eleven patients with skin tumors were treated with the intent to cure, and there has been no recurrence of cancer. In other cases where cryotherapy was used without hope of complete cure, the treatment eased patient discomfort.

Doctors Gonder and Soanes, in the treatment of more than 200 prostatic cases, found that cryotherapy yielded very good results, and their satisfaction with the technique is enhanced by the absence of complications frequently associated with older methods of treatment.

Doctors Shulman, Emmings, Gonder, Soanes and Gage are currently engaged in studies of immune response to cryotherapy. This treatment might be compared to vaccination. However, instead of employing a vaccine or serum to immunize the patient, the freezing technique is used on the tumor, which results in antibody production and perhaps helps combat tumors in other areas of the body.

Reviewing the work done in cryotherapy at the Buffalo Veterans Administration Hospital and looking to the future, Dr. Gage says: "The treatment of tumors by freezing with modern cryosurgical apparatus shows promise of becoming an important new weapon against cancer. Our clinical experience is about three years in duration and few patients with cancer can be considered cured in this short interval. However, our results have been sufficiently good to encourage continued use of the technique in carefully selected patients. Cryotherapy is not a panacea, and hopeless cancer cannot be cured, but some patients have benefited after the usual methods of treatment had failed. The technique is also used to avoid the risk of major surgery in elderly patients with severe heart or lung disease.

"Additional experience with cryotherapy is needed, but the results thus far indicate that the technique could become a standard method of treatment for prostatic disease. It also promises to be of benefit to some patients with localized cancer, especially when the usual methods of treatment cannot be used, are too mutilating, or have failed.

"Whether or not freezing an advanced cancer will produce an antibody response similar to that produced by vaccination and thereby help control cancer which has spread throughout the body remains to be proven, though the results of Dr. Shulman's experiments so far encourage continued investigation of this possibility."

How a State Plans To Cut Teenage Drinking

EXTENSION OF REMARKS

OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. GOODLING. Mr. Speaker, the teenage drinking problem is a plague on the American society, leaving in its wake tragedy on the highway, in the home, and in human hearts.

Pennsylvania is, for very good reason, known as the Keystone State, and true to its name it has come up with a Keystone approach to a solution for the teenage drinking problem. This approach gives parents a principal role in this problem-solving effort, thereby calling into service a vital influence for correction.

Because of this unique approach to a very widespread and dangerous problem, I commend to the attention of my colleagues the following article written by Mr. Bill Wingell and presented in the January 16, 1967, issue of the National Observer:

HOW A STATE PLANS TO CUT TEENAGE DRINKING

HARRISBURG, PA.—The Pennsylvania Liquor Control Board, which owns and operates all liquor stores in the state, is conducting a statewide advertising campaign aimed at getting parents to "take the pledge," not for themselves but for their children.

Over a four-month period, the board plans advertisements in some 350 daily and weekly newspapers urging parents to sign a pledge which reads, in part: "I don't care what other parents let their children do. I am not going to let my children drink any alcoholic or malt beverage at home or anywhere else before they are 21." Pennsylvania law prohibits the consumption of alcoholic beverages by persons under 21. The pledge, of course, has no legal status, but the board believes it may at least make parents conscious of teen drinking.

The first advertisement, which amounted to a quarter-page in the large dailies, was run the last week of December. A second is scheduled to appear across the state on January 23. A Philadelphia advertising firm was hired to handle the campaign, for which the board budgeted about $70,000. In addition to the newspaper ads, the agency is sending 60-second, taped, public-service announcements and color films to the state's nearly 200 radio and 28 television stations.

The unusual advertising campaign is part of a continuing effort to curtail illegal drinking by teen-agers; the program began almost a year ago when the state agency became alarmed over the growing number of teenagers arrested for drunken driving.

Teams of enforcement officers were sent out nightly to check on taverns across the state. In more than 10,000 investigations (the board watches over 25,000 licensees, including taverns and restaurants, hotels, and clubs), the officers arrested almost 200 minors for drinking and 80 license holders or their employes for serving the youths.

Declares A. D. Cohn, a retired York, Pa., businessman who serves as the control board's chairman: 'We have given the war on teen-age drinking the highest priority, and we intend to pursue it through every available means." With the night patrols by officers and the co-operation of tavern owners, the chairman relates, "we have succeeded, for all practical purposes, in eliminating teen-age dringing in licensed places."

But teen-agers still have access to liquor in homes—one reason for the liquor board's attempt to enlist the parents' co-operation in deterring teen-age dringing. "After all," says the chairman, "it is their inherent responsibility to guide their children into mature citizenship by instilling in them a practical regard for the laws of society."

"As I See 1967": A Projection on the Immediate Future of Kansas State University, Manhattan, Kans., by Its President, Dr. James McCain

EXTENSION OF REMARKS

OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. MIZE. Mr. Speaker, an indication of how well our colleges and universities are meeting the challenges of today is exemplified in a recent statement which Dr. James McCain, president of Kansas State University, Manhattan, Kans., prepared for the Sunday edition of the Kansas City, Mo., Star for January 8, 1967.

Under leave to extend my remarks, I wish to place in the Appendix of the RECORD, Dr. McCain's account of the significant advancements which will be made by Kansas State during this year. The following is his report as it appeared in the Star:

[From the Kansas City (Mo.) Star, Jan. 6, 1967]

AS I SEE '67 . . .

(By Dr. James A. McCain, president, Kansas State University)

Historically, Kansas State university has played a major role in the economic and intellectual progress of this area. As a result of recent developments on the campus, the university's contributions in 1967 and the years ahead should be greater than ever.

In chemistry, physics, mathematics and biology, for example, with the recent addition of several professors of unusual distinction to an already strong faculty, coupled with new physical facilities, the university is establishing a major center of scientific excellence.

Four years ago a 3 million dollar physics-mathematics building was occupied which houses an astronomical laboratory, a planetarium, a computing center and a 1 million dollar accelerator laboratory. Nuclear physicists share with the department of nuclear engineering the university's Triga-Mark II, a teaching and research reactor.

A $950,000 renovation of classrooms and laboratories in Willard hall, home of the department of chemistry, has just been completed. Late this winter the department will occupy a new $1,250,000 chemistry building annex.

Construction will begin soon on a new 4 million dollar biological science building. It will provide improved facilities for undergraduate and graduate instruction, and an ultra-modern microbiology laboratory to draw upon unusual staff talent in genetics, physiology, biochemistry, biophysics and bacteriology.

The university received eight grants from the National Science Foundation and the Atomic Energy commission, totaling more than $3,500,000, to match state funds for the construction of these scientific building and laboratories.

These same agencies together with private corporations are providing well over 1 million dollars annually in support of research in these departments as an exciting part of K-State's 8 million dollar research program.

An institute for Environmental Research has recently been established at the university and will draw upon exceptional resources in architecture, engineering and industrial psychology.

A $500,000 engineering laboratory, constructed and equipped with funds from the National Institutes of Health and the American Society for Heating, Refrigeration and Air Conditioning Engineering, is conducting studies in air pollution, biomedical engineering, heating, refrigeration, air conditioning and other conditions affecting the health, comfort and productivity of humans.

This program is directed by Dr. Ralph Nevins, KPL distinguished professor and head of the department of mechanical engineering. Application of these research data will be the responsibility of Henry Wright, regents distinguished professor of architecture and design, who is nationally known as an authority in environmental design.

This total program holds great promise as a stimulus to economic growth.

A 3-million-dollar auditorium and music wing on which architectural plans are now nearing completion will enrich the cultural environment of the campus in a variety of ways. The flexibility to be built into this structure (including an adjustable ceiling for "tuning" the auditorium) will make it an attractive setting for recitals, symphony concerts, chamber music, operas, choral groups, drama, student convocations and public lectures.

Two major K-State agricultural programs which have had a strong impact on the economy of the area, involving animal industry and grain and grain processing, are prepared to expand their services in the future.

The department of animal, dairy and poultry husbandry are now housed in modern buildings which provide a livestock pavilion, a model dairy and modern, efficient student classrooms and research laboratories.

New swine and beef cattle research units, being constructed to replace those destroyed by last June's tornado, will be more modern and efficient in many respects.

A program adopted by the Board of Regents two years ago for enlarging the staff and research resources of the college of veterinary medicine will equip this branch of the university for improving and expanding its services to all segments of the livestock industry.

With our nation's commitment to a global war against starvation and malnutrition, K-State's work in the area of wheat and feed grains and grain processing is assuming unusual and timely significance. Present staff and facilities measure up to the challenge and opportunity.

A hybrid wheat in process of development by the agricultural experiment station should be available for commercial use within two years and increase yields by as much as 30 per cent, just in time to prevent serious shortages.

The new flour milling and feed manufacturing laboratories are far and away the finest and most complete at any university in the world. Of the 3 million dollars invested in these laboratories more than $1,300,000 has been contributed by private industry.

As the capstone of this program, the Congress of the United States has now appropriated the full $3,380,000 for the construction at the university of the National Grain Marketing Research center. The largest federal laboratory ever located in Kansas, this facility will reinforce K-State's status as an important world center of teaching, research and service in grain production, processing, marketing and consumption.

Stokely and Dennis

EXTENSION OF REMARKS
OF

HON. ALEXANDER PIRNIE

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. PIRNIE. Mr. Speaker, recently one of the fine newspapers in my area, the Evening Times of Little Falls, N.Y., took note of a letter written home by a serviceman from my district now serving in Vietnam, Pfc. Dennis Allmendinger.

I share the pride of the community and his family which is prompted by this expression of loyalty and love of country. The following editorial, which contrasts the attitude of Dennis with that of the much-publicized Stokely Carmichael, is called to the attention of my colleagues.

[From the Little Falls (N.Y.) Evening Times, Dec. 2, 1966]

STOKELY AND DENNIS

"Hell, no, says Stokely Carmichael, the well fed and arrogant would-be Negro Hitler, when asked if he would serve in Viet Nam.

Carmichael, who faithfully serves Communist causes regardless of his political identity, has been convicted of inciting a riot in Selma, Alabama, fined and sentenced to 60 days in prison. He has appealed.

The country would be better served with Carmichael in jail than in uniform. In uniform, such a character would be a disgrace rather than a credit to the United States. We were going to say he might be in a position to actively assist the enemy, but from what we have heard about him he is too loud mouthed and conceited to accomplish much along this line.

Thank God, the United States and the cause of freedom depend for survival not on the Stokely Carmichaels in our midst. Thank God, instead, for such defenders as Pfc. Dennis Allmendinger of Little Falls, now serving his country as a volunteer in Viet Nam. Dennis is the son of Mr. and Mrs. Joseph Allmendinger of 611 East Albany Street, this city, and he enlisted in the Army in October, 1965. He spent time in Alaska, volunteered to go to Viet Nam.

The Little Falls soldier had no illusions about what duty would be like in the war—crucified nation of Southeast Asia. But he had matured to the point of understanding what the late President John F. Kennedy meant in his Inaugural Address when he eloquently urged Americans to ask not what their country could do for them, but what they could do for their country.

Pfc. Allmendinger recently wrote home and unburdened himself of some thoughts:

"Sure, people have said I'm crazy to volunteer to come here, but I'm proud to be a part of an Army respected by all other countries in the world, it makes me feel great to have a Vietnamese person come up to me and say 'Hi, Joe.' They are all thankful we are here protecting them.

"As for the draft-dodgers, well they can go to the devil. It's too bad they have to rely on guys their own age to come here and do what they should be proud enough of their country to do. They'd rather sit home safe and sound and laugh at the guys who have the guts to come over here.

"Most of the guys in the office here volunteered to come here. And believe me, none of us are sorry. Sure we miss our families and girl friends, especially me, but we all plan on coming back. And when we do, we can say we served our country the best we could."

The United States of America is beset with global problems and responsibilities because it is the world's greatest power. There are Americans who would renounce the duties that go with greatness. They would hide behind somebody else's shield. But if they spurn the American democratic shield, the only comparable one is the Communist dictatorial shield, which perhaps they prefer anyway.

The United States did not attain greatness and its present role as the world's strongest defender of freedom on the shields of cowards. It is where it is in this critical era of history because through all its trials and tribulations it has had devoted citizens like Dennis Allmendinger who "served our country the best we could."

Congressman McClory Cites Public Support of Automatic Data Processing

EXTENSION OF REMARKS
OF

HON. ROBERT McCLORY

OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. McCLORY. Mr. Speaker, in view of the importance attached to the projected establishment of an automatic data processing facility to serve the Members of the Congress, it is imperative that we draw upon the experience gained in similar projects. Therefore, I submit a listing of studies and articles from the public press which reflect the thinking of government, university, and business specialists who are concerned about the increasingly heavy workloads of the Federal legislators.

The concensus of these writers indicates such a facility as that proposed in H.R. 21 would go far in diminishing the redundant functions which must be performed by Members and committee staffs in certain application areas. Material selected from some of these studies and articles will be quoted in the near future, in the belief that it will be useful as a point of orientation.

A bibliography follows:

Huntington, W. Va., Job Corps Center

EXTENSION OF REMARKS

OF

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. HORTON. Mr. Speaker, the progress already achieved by the Huntington, W. Va., Job Corps Center for women is a source of real satisfaction to me. On December 18, the New York Times included a special report on the Huntington center by Marjorie Hunter, which describes how far the program has come and what an outstanding job the center is doing. The lives of the young women enrolled there are being transformed and the doors to economic opportunity are being opened.

Beyond the interest that all of us in the House of Representatives share for the progress of our national programs to combat poverty and the conditions which breed it, I have a special interest in the Huntington Job Corps Center. As Miss Hunter's article relates, it is the Xerox Corp. which operates the center. Xerox is among my most distinguished corporate constituents, and I am proud of the contribution its people are making in helping to prepare people for full partnership in the dynamism of our society and its economy.

I take pleasure, now, that Miss Hunter's story is printed with my remarks:

[From the New York Times, Dec. 18, 1966]

JOB CORPS HELPS SLUM GIRLS SHED "MUD OF GUTTER"

(By Marjorie Hunter)

HUNTINGTON, W. VA., December 17.—"You see your future etched in the scars of the dirty counter, in every smashed vodka bottle you've drained, every obscene sentence you've spieled off in retaliation . . ."

The words were those of a pretty young drifter named Barbara Dean.

Tossed out of school at the age of 12 (they called it a nervous breakdown, she said), she wandered alone into the world of pick-up jobs in dirty cafes, of cheap rooms with the vodka bottle waiting to say, "Welcome home."

Last January, she joined the Job Corps. She was just 17 years old.

Today, she is working in a San Francisco office and attending night classes in high school through a Litton Industries scholarship.

LETTER TO A FRIEND

In a recent letter to a friend here, she wrote:

"I'm going to keep on going to night school because I believe if I let myself slip once I may never stop slipping. This I had proven to me once.

"Only, if I start slipping now, no Job Corps is going to come and weep over my broken bones and fix my sore teeth and wipe the mud of the gutter off my face."

A talented writer and artist, Barbara Dean is among the most brilliant of the hundreds of girls who have passed through the Huntington Job Corps Center for Women since it opened nearly a year ago.

But others, too, have had the mud of the gutter wiped off their faces.

They come here from the tenant shacks of the rural South, from the dirty back streets or the ghettos of the big cities.

Some are tough and boisterous. Some are pathetically shy. Most are school dropouts. All are poor.

The first year for the Huntington center has not been easy. Located in the old Governor Cabell Hotel on the busiest downtown corner of this city of 83,000, the center has been very much in the public eye.

The city's reaction has been mixed. Some residents have been sympathetic. Others have been critical.

"Those girls just aren't our kind of people," one man said.

"It's pretty hard to take when you see one of those white girls walking hand in hand down the street with a Negro boy," another complained.

There were complaints too that the girls wandered around the streets in hair curlers and slacks and shorts and that they frequented undesirable "night spots."

As the criticism mounted, officials of the center established new rules last summer; no shorts or slacks or hair curlers on the streets; certain night spots off limits; no hanging out windows; 6:30 a.m. roll call.

The new rules touched off the only major incident of the year. Nine resident leaders—adults who serve as dormitory matrons—walked off the job, calling the new rules "too militaristic."

About 50 of the center's girls set up picket lines on the streets, parading with signs saying, "We refuse to be tin soldiers" and "This is not a reformatory."

Two girls got into a fight, and the case ended up in court.

A TURNING POINT

That was perhaps the major turning point for the center. The incident blew over. The new rules were enforced. The center settled down to the business of training the girls for useful occupations.

There is relatively little effort now to court favor with the townspeople, as there had been in the beginning.

"We have a job to do, and we're trying to get it done," said George N. Mayer, director of the center.

A former official of the Xerox Corporation, which operates the center under a two-year, $4-million contract with the Federal Government, Mr. Mayer is the fifth director at the center since it opened.

The rapid turnover reflects the basic problem encountered by the center, the problem of how to treat the girls.

"My theory is if you get the girls up in the morning, keep them in class and keep them busy, they won't have time to run all over town," Mr. Mayer said.

Some are still smarting over what they regard as too tight a rein, but most of the girls seem satisfied.

Patricia Hal, a teen-ager Fremont, Ohio, dropped out of the 10th grade to help earn money for her family. She is learning to operate graphic arts machines and is anxious to graduate and get a job.

So is Linda Eustace of Albuquerque, N. Mex., who dropped out of school in the ninth grade and is now learning to operate business machines.

Ninety girls have already completed training. Most have gotten jobs—as nurses aides, office workers, keypunch operators and floral assistants.

Patricia Adams of Albany, Ore., won a scholarship to Oregon State University.

SOME ARE BRIGHT

Some of the girls are extremely bright. Others are not. The classroom is geared to individual ability.

There are classes in basic education—reading, writing, mathematics and social sciences. Some are learning to operate office machines, others receive on-the-job training as nurses aides and practical nurses in local hospitals. Some with limited ability are being trained as laundry workers and food handlers.

Certain courses are mandatory—physical hygiene, care of clothes, make-up and personal appearance and homemaking arts.

Last week, the girls tried out their cooking by baking 600 dozen cookies for the soldiers in Vietnam.

Last September, they made 24 outfits for ragged children in the city. They have made and bought Christmas toys for poor children in local hospitals.

Many of the girls will go home for Christmas. Others will stay. Already there is a Christmas tree in the lobby and mistletoe over the doors.

There will be parties and dances with youths from Job Corps camps. There will be movies, too. And a Santa Claus.

And on Christmas Eve, when the last shopper has left the city streets, the girls will bundle up and go caroling.

For most of them, it will be the first time.

Passaic History

EXTENSION OF REMARKS

OF

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. JOELSON. Mr. Speaker, members of the Passaic County Historical Society made the suggestion of including the history of the lower part of Passaic County which until 1837 had been part of Essex County, the upper county until that time being part of Sussex and Bergen Counties. The lower part was settled earlier and has unusual historical and commercial history of its own, particularly Acquackanonk Landing, now part of the city of Passaic, which was the largest shipping port of North Jersey, being the upper most point of navigation and at important crossroads, with at one time the only bridge over the entire length of the Passaic River. Much credit is due James J. De Mario of Passaic, who helped prepare this history, as well as to the Passaic County Historical Society of which he is a member.

GEORGE WASHINGTON SAVED

And what is most important is that George Washington was saved with his army at this same point on his retreat from Fort Lee. Capt. John Post, a local man in his army, destroyed the former bridge, cutting off the pursuing British. If Washington had been caught, we would have lost our independence. This spot has historical markers, but it would seem the enormity of the event merits more. Then, Washington and his men camped up the hill in the church yards. After that the armies made use of several fords, in particular, one at Delawanna and one at Robertsford, both in the Passaic area. Later, during one year, all the famous officers of the American Army were within the borders of Saddle River Township across the river from Acquackanonk.

FIRST CHURCH—FIRST CEMETERY

At this same spot, known as Acquackanonk Landing, there is the first church in Passaic County with the first cemetery and burials of first settlers. Here also 200 or 300 feet away was the county's first district school used for nearly 200 years until 1870, probably longer than any other; also the first store, first tavern in the county, and the first Sunday school in the State. More about this remarkable area follows to satisfy the desires of members representing pioneer families and newer ones in my elective territory.

FIRST SETTLER—FIRST LAND PURCHASE IN NORTH JERSEY

Due to the area being so full of early settler and Revolutionary history, I am proud to give herein some brief highlights on both, plus its most unusual industrial and commercial development. Being at the head of river navigation surrounded with forested rolling hills for hunting, fishing, and farming, it was quickly inhabited by the early Dutch traders, farmers, and explorers from New Amsterdam and Communipaw—now Jersey City—seeking to extend their fur trading or finding better farmlands. One of these was Hartman Michielse—or Vreeland—who is believed to have been the first white man to have set foot upon, purchased land, and settled in what is now known as the city of Passaic, formerly Acquackanonk. He found a well-organized and established Algonquin Tribe Indian village at what is now Passaic's Wall Street across from what was known as Dundee Island. But they were not living in transitory wigwams but in cabins made of timbers covered with grass. An old Indian suggested that Michielse set up a trading post on the island, which he did immediately after getting the deed April 4, 1678, the first building by a white man in the Passaic City area. Evidence of Indian fishing activity can be seen today from several V-shape rows of large stones across the river.

BEGINNING OF ACQUACKANONK LANDING

Early settlers after taming wild Indians and wilderness turned to commerce by harnessing water in the many streams to power many lumber and grist mills and for shipping. Then, several paper mills were established sometime after, one about 1810 was the Whiting Paper Co.—still in existence—where Melville Curtis, father of the owners of Saturday Evening Post and Ladies' Home Journal, made paper, and another was the Kingsland Papermill, both in Delawanna.

RIVER BOAT, STAGECOACH, CANAL, BARGE, RAILROAD, TRANSFER POINT

Here is where the Passaic riverfront, known as Acquackanonk Landing, became famous as the largest shipping port in North Jersey for farm, forest, and mine products, and later for Alexander Hamilton's "Paterson-made goods" wagonned to Passaic for shipping. Incidentally, Passaic came within the 36-square-mile area set up by Hamilton's Society of Useful Manufacturers—SUM. Here was also the first and only bridge over the river and the junction of several turnpikes, some toll, the Plank Road to New York, Hamburg Turnpike, roads to Hackensack, Little Falls, and to the papermills in Delawanna. This was also the stage coach days. Then came the Morris Canal which skirted Passaic and permitted more commerce with other areas. Merchants and travelers stopped at and went through Acquackanonk Landing where there were taverns, small hotels, or rooming houses.

THE RAILROAD ERA

With the railroad era starting in the 1830's, the commercial business at Acquackanonk Landing dropped away as the stagecoaches and boats were being forced to discontinue, although Acquackanonk Township continued as a peaceful and rich farming community as it did for nearly 150 years, the farms being the finest in the State and owners were rich men. But pleasure boating, regatas, and excursions increased and the Passaic River became one of the East's leading boating playgrounds.

The Paterson & Hudson River Rail Road was organized in 1831. The big wagons that had brought to this dockage area iron ores, lumber, and timber from upstate ceased their trips and business dropped. It was one of the first railroads in the country, and operated at first between Passaic and Paterson, but horse drawn at first until the steam engine arrived from England. People far and wide heard of this new train and were curious to see this new method of traveling. The first day was a great success, being witnessed by great crowds, some coming from as far away as Sussex. Enterprising Yankees of Newark did a profitable business conveying parties by boat to Paterson over the Morris Canal, and there board the train to Passaic for their first train ride, even if horse-driven, and many had to sit on the coach roofs. At the peak of the railroad era, there were four steam railroads serving Passaic. Years later, the State's first trolley car line was operating within the Passaic limits.

DUNDEE CANAL AND BEGINNING OF GREAT INDUSTRIAL ERA

The business stagnation at Acquackanonk Landing was more than offset a few years later with benefits to the entire Passaic area when the Dundee Dam was constructed to provide water and water power for new industries which with the railroads brought about the greatest industrial expansion in Passaic's history. Lush farmland was turned over to industry and workers' houses, and rural water-powered saw and grist mills gave way to larger operating units, with industries and population spilling over into Clifton, Wallington, and Garfield, earning for Passaic and its environs at one time "the most progressive, energetic and pushing community in the country."

NEW INDUSTRIES ON DUNDEE CANAL

The railroad brought in a different kind of business and shifted the commercial center from Acquackanonk Landing inland away from the waterfront and increased travel. But the real stimulus started with the completion of the Dundee Canal and Dam in 1859 which was begun by the Dundee Manufacturing Co., owned by SUM and mother of Passaic's industries established in 1832, and later through the efforts of Edward J. C. Atterbury. A special act passed February 12, 1858, by the New Jersey Legislature authorized the building of Dundee Canal and Dam with locks, and so forth to provide a navigation link from the Passaic River at Passaic to Paterson, but this plan was never fulfilled.

The flow of this canal starts at a high dam forming Dundee Lake in Clifton and ends at South Street in the Dundee section of Passaic where it drops back again into the Passaic River, providing water and power to the new plants which were built along the canal. The first plant to be built was the Star Foundry & Machine Co., 1859, and others following were: New York Steam Engine Co., 1869; Reid & Barry, 1869; Waterhouse Bros., textiles, 1870; New York Belting & Packing Co., 1882, in Connecticut, 1846, now part of United States Rubber; Jacob L. Basch, textile; Ammidown Bros., textile; Okonite Co., 1878; Dundee Textile Co.; Clifton Paper Mills; Andrew McLean Co., netting; Botany Worsted Mills, 1890; Passaic Print Works, Manhattan Print Works, Pantasote Leather Co., Forstmann & Huffman Co., worsted, and others. Some of these are no longer in existance and some have merged with others and changed names.

OTHER OLD AND NEW PLANTS NOT ON CANAL

There were other plants built that did not need canal facilities, some built about the same time and some later, some having ceased operating or changed names. Some of these are: Acheson Harden Co., J. L. Prescott Co., Waldrich Bleachery, Paterson Parchment Paper Co., the Manhattan Rubber Manufacturing Co., Gera Mills, wool; New Jersey Worsted Spinning Co., Heyden Chemical Co., Robins Conveying Belt Co., Brighton Mills, tire duck; Robertsford Spinning Co., later Samuel Hird, wool; Magor Car Co., Algonquin Mills, textile; Pitkin-Holdsworth, textile; Passaic Cotton Mills, Richardson Scale Co., Garfield Worsted Mills, Hammersley Paper Co., first waterproof; Falstrom Co., Givaudan Corp., Passaic Metalware Co., now part of Continental Can; Athenia Steel Co., Standard Bleachery, Goodlatte Oilcloth Co., Standard Oilcloth Co. There were many others, large and small among old and newer plants, but these indicate the spread of industry. Here are some of the most prominent among the new in the Passaic area, indicating a further spread in variety but mostly results of newer technology: DuMont-Fairchild, Wright Aero Division, Shulton, Hoffmann-La Roche, ITT Federal Laboratories, Garden State Paper Co., Revlon, Weston Biscuit.

DIVERSITY OF INDUSTRY

The names above indicate the diversity of industry in this area, some being the largest in their fields. Some of the older plants are out of existence or are under new managements. The country's largest concentration of perfume makers is in this area. The Botany and Forstmann plants were the country's largest makers of their respective types of wool cloth. Brighton Mills at one time was the largest manufacturer of duck for high pressure tires and Acheson Harden was the world's largest handkerchief maker. The Manhattan Rubber Division is one of the largest manufacturers of industrial rubber products and the largest makers of rubber-bonded abrasive wheels and one of the largest makers of bowling balls. The Passaic area is one of the country's largest rubber manufacturing centers. The crushing panics of 1873, 1893, 1929, with competition and tariffs have taken a heavy toll of some of the older companies. This area has almost lost its wool, cotton, bleachery, and handkerchief business.

PLANT OWNERSHIPS

Idle plants have been saved due to the continual growth of industry here. Most of the plants idled by declining use of their products or plant transfer have been filled with numerous small space operators or by other single manufacturers. For instance, the Star Foundry & Machine Co. plant was taken over by the New York Steam Engine Co., and when that company failed, the plant was taken over by the New York Belting & Packing Co. as an annex plant to its main one then at Sandy Hook, Conn., the annex later becoming the main plant. The Forstmann plant was sold to J. P. Stevens, and Okonite, a progressive and going company, was purchased by Ling-Temco Vought as an active acquisition. The Okonite plant was built on the unfinished foundations of a then-new rubber company plant to be known as the New York & Boston Rubber Co. to consolidate the plants of the newly merged New York Belting & Packing Co. of Passaic and Sandy Hook, Conn., and the Boston Belting Co. of Boston, both Goodyear licensees, but the plan was dropped due to the severe depression that followed. Later, the Okonite Co. took over the once-idled adjacent Waterhouse Bros. plant. A number of other plants mentioned in paragraphs above have merged or had been acquired by other companies. Manhattan Rubber took over the adjacent plant of the Brighton Mills which had moved south. In it were several lessees, including DeForest Radio where television was born.

INDUSTRIES CENTERED HERE

From all the companies listed above, it is evident that the Passaic area exceeded at some time in the production of wool spinning and weaving, in industrial rubber products, textile finishing, handkerchiefs, stove polish, and bleach and other household products, oilcloth, waterproof paper, types of grinding wheels, submarine electric cables, netting, drugs and cosmetics, and particularly conveying machines as several basic types were developed here, some of these being: belt, bucket, portable, continuous weighing, pelletized, and fluid. As a volume indicator for this area, according to an analysis of distribution of industrial supplies by the American Supply & Machinery Manufacturers Association, purchases of such supplies in the Passaic area equals or exceeds that of the Paterson area, and both together is exceeded only by Newark in this State.

PLANTS KEEP UP WITH INDUSTRY AND PRODUCT CHANGES

Many of the older plants here survived by changing into newer or different products when use of their types of products was waning. A good example is J. L. Prescott Co., originally one of the country's largest makers of stove polishes. They later went into laundry bleach and other household products and are now one of the largest. They started in Maine in 1870 and are still a family-owned company with a fifth-generation family president, an industrial marvel in cooperation and resourcefulness. With the recent development of plastic liquid containers, they now also make their own and for other companies using plastic bottles. With the advent of the automobile, Prescott also designed and produced the Prescott Steamer, making about 700 of them, which at the turn of the century was good production. For a while it seemed that Passaic would be a "Detroit" as about the same time J. P. Lange, inventor and chief engineer for Botany Worsted Mills, was producing some radical designs of experimental "horseless buggies" starting in 1899. The Pantasote Leather Co., which originally made a patented leatherlike carriage cloth switched into vinyl film and other recent plastics and doing very well. The Falstrom Co. went from sheet metal cornices and ceilings to sophisticated control and computer cubicles. The Garden State Paper Co. is the country's first reconditioner of newsprint paper. The several rubber companies in this area have switched from natural rubber to synthetic rubberlike polymers and to various types of plastics to reach more markets, produce improved products, or to reduce costs. Some of the essential oil manufacturers have entered the new and more profitable vitamin field. It was unfortunate that the great woolen mills here did not operate long enough to take advantage of the newer wool like synthetic fibers.

PASSAIC AREA AGRICULTURAL PRODUCTS

Besides manufacturing, this area had an outstanding agricultural reputation. Alfred Speer had extensive vineyards in Passaic and Athenia, produced much of the best native wines and sherries in this country. He also named Passaic which was previously known as Acquackanonk, and published Passaic's first newspaper. In Carlton Hill and Richfield, Bobbink & Atkins had the country's largest rose nurseries. Richfield also at one time supplied the Nation with horseradish.

ABOUT THE PASSAIC RUBBER INDUSTRY

REMARKABLE RUBBER FAMILIES, FIRST PLANTATION, WELLESLEY COLLEGE, FIRST YWCA

The Okonite and Manhattan Rubber Cos., were family offshoots of the New York Belting & Packing Co. Henry Fowle Durant, a senior member of this rubber-manufacturing family, and John Haven Cheever, not of this family, both operated the earlier Roxbury Rubber Co. founded in 1833 in Boston as the first chartered rubber company in America at the dawn of the rubber industry. Later, both Durant and Cheever incorporated the New York Belting & Packing Co., solely owned by both with equal shares. Mr. and Mrs. Durant founded Wellesley College and Mrs. Durant was first president of the YWCA in Boston.

MANHATTAN AND OKONITE

Col. A. F. Townsend and Frank Cazenove Jones, Sr. were cousins of H. F. Durant and both founded Manhattan Rubber. The Okonite Co. was founded by Cheever and Jones. As mentioned above, Cheever also founded the New York Belting & Package Co., which was organized in 1846. While Cheever was with Roxbury, the prior company, Charles Goodyear was working at times at this plant on his vulcanization discovery, and at times Cheever was of some assistance.

Both the Passaic plant of United States Rubber Co., and the Manhattan Rubber Division of Raybestos-Manhattan, Inc., are leaders in industrial rubber products and both have developed products indispensable to industry today.

MORE ABOUT PASSAIC'S RUBBER FAMILIES—NEW YORK TELEPHONE CO.

The father of F. C. Jones above accompanied Commodore Perry in opening commerce with Japan, and his grandfather was Commodore Jacob Jones, hero of the *Wasp* victory over the British frigate *Frolic* in the War of 1812. He was also a cousin of Alfred I. du Pont and of Commodore A. Henderson. Mr. Jones had also been president of both Manhattan and Okonite. Col. Arthur Farragut Townsend was godson of Admiral Farragut and had also been president of Manhattan and Chairman of Raybestos-Manhattan, Inc.

Charles A. Cheever was a son of J. H. Cheever and a remarkable man. He was crippled and had to be carried around, but he was first president of Okonite. With Capt. Williard L. Candee he founded the New York Telephone Co., forerunner of American Telephone & Telegraph of which it is said he gained control later through his brilliance and keen financial ability.

FIRST RUBBER PLANTATION

Passaic also had an important part in helping to obtain an independent source of crude rubber for this country to avoid foreign price manipulations which in 1910 forced the price of crude rubber to $3 a pound; today it is around 25 cents. The Manhattan Rubber Manufacturing Co. twice undertook growing its own crude rubber in tropical countries, and both times as the first American rubber manufacturer to grow its own crude rubber. The first time in 1898 jointly with other financial interests established a rubber plantation in Nicaragua with success, but English and Dutch growers were planting immense acreages of rubber trees in their Far East colonies and Brazil lost its hold on rubber. Manhattan withdrew from Nicaragua when it had obtained a going plantation in 1910 in Java with a better growing atmosphere. The Okonite Co. also established a rubber plantation in British Guiana in 1911 at the time of the "foreign" squeeze on crude rubber prices.

FIRST INSULATED ELECTRIC WIRE AND CABLES WERE MADE IN PASSAIC

The Okonite Co., made the first rubber-insulated telegraph, telephone, and submarine cables in America. It also developed the high-pressure pipe-type electric transmission cable for high voltage now in general use and a number of other cable developments. Today most of U.S. naval vessels, submarines, city subways, and many powerplants here and around the world use Okonite electric transmission cables.

FIRST RUBBER CONVEYOR BELT

Thomas Robins, Sr., had worked with Thomas A. Edison in developing the first rubber conveyor belt which was made by the New York Belting & Packing Co. Robins then became Manhattan's first secretary and continued his belt conveyor development with them. Robins later founded the Robins Conveying Belt Co. in Passaic in 1896. This company later became Hewitt-Robins with the acquisition of Hewitt Rubber Co., of Buffalo, and today it is a division of Litton. Thomas Matchett was president of both Robins Conveying Belt and Hewitt Rubber before they merged.

TELEVISION DEVELOPED IN PASSAIC

It was in part of the Brighton Mills plant in Passaic, partly idled after moving south, that Dr. Lee DeForest of DeForest Radio Co., with Du Mont, perfected the TV tube and gave us the TV industry. This plant, adjacent to Manhattan Rubber, was acquired by Manhattan about this time.

INDUSTRIAL PIONEERS OF PASSAIC

Some of the pioneers behind the great development of the Passaic area are: Peter Reid and William I. Barry, both founders of Reid & Barry, the first large textile finishing plant on the Dundee Canal, and did much to spur the great industrial expansion of Passaic and both were generous community contributors, including the Reid Public Library; Richard Morrell, founded Campbell, Morrell Co., at one time largest State dealers in coal, grain, and building material, had eastern agency for Erie anthracite coal, built railroad from Dundee mills to Passaic Junction of N.Y.S. & W.R.R. in Bergen County; Gilbert D. Bogart, owner of large part of Garfield, named it, and helped develop it and other areas; R. D. Benson, late president of Tide Water Oil Co., first oil and pipeline company, organized Passaic and county park systems, helped on boards of several large local companies; W. F. Gaston, prominent lawyer who helped organize and manage large companies here—Manhattan Rubber, Okonite, New York Steam Engine Co., Forstmann, others—Frank Hughes, developed industrial property and brought in new industries, developed Athenia, most of which his father owned, and other areas.

Of the more contemporary ones: Julius G. Forstmann, built large integrated woolen mills in Passaic, Clifton, and Garfield employing thousands, very large community contributor and endowed Forstmann Public Library; Dow H. Drukker, Congressman, publisher, builder, banker, and on boards of large local plants; Paul L. Troast, president, Mahony-Troast Construction Co., was chairman of New Jersey Tercentenary Commission, headed New Jersey Turnpike Commission, Chairman S. H. Kress & Co., chairman of New Jersey Manufacturers Association, member of Governors Commission for More South American Trade, made close run for Governor. There were many others, like Paulison, Kip, Howe, and so forth, and others of earlier periods who did magnificent work under conditions difficult to evaluate with today's era, and there are many contemporary outstanding performers in public affairs, industry employing thousands, finance, law, some of big deeds, very large benefactors and community contributors, but space does not permit.

HOUSING PROBLEMS

This great industrial expansion created housing and rooming problems. In addition to many thousands of immigrants, many young men out of school came here to seek their fortunes. To take care of them, rooming and boarding houses were set up almost everywhere, many by upstate farmers or from small rural towns. There were also several housekeeping "bachelor clubs," two of which became famous as the young men come from well-to-do families from different parts of the country. They rotated purchasing and managing, had a cook or housekeeper and gardener. They became favorites at the ball or for whist. Many became responsible and influential executives, like C. T. Young, to vice president, the Manhattan Rubber Manufacturing Co., and F. L. Curtis to vice president of Raybestos-Manhattan, Inc., B. M. Mitchell, who founded the Conveying Weigher Co. and designed the first long-distance belt conveyor systems for construction, like the Wanaque Reservoir Dam, Stamford, Conn., reservoir, Conowingo Dam, George Washington Bridge colossal anchorages, and other executives many with equal accomplishments.

RELIGIOUS AND PUBLIC BUILDINGS

This expansion necessitated worship and recreational facilities, which were accomplished very well. Passaic has some of the largest and most elegant churches in the State of all denominations. It has two of the finest endowed libraries, also has YMCA and YWCA buildings among the State's largest and best equipped. All of these possible through generous public contributions and sizable endowments, both industrial and publicly, all made possible through the fruits of industry. It also has three large and complete hospitals that serve the entire Passaic area and beyond because of specialized facilities. Because of Passaic's early growth, it has become virtually the civic and commercial center of a wide peripheral territory. Passaic schools at one time had the highest scholastic standing in the Nation.

The boom conditions experienced manifested themselves in other directions. The Passaic Fire Department was the first in the country to be completely motorized; that is, no more horses, and shortly before, Passaic had its own trolley car line operating entirely within its boundaries, the first in the State, and again, no more horses.

WILLIAM W. SCOTT

In conclusion, I should like to express a deep sense of gratitude to William W. Scott for writing the history of Passaic and its environs from which much of the early data above has been taken. It was written after middle age and during a time when many old residents were still alive and able to give firsthand data on early events, or they themselves had known oldtimers who had direct or eyewitness information of their times, even to the Revolutionary period, and were able to provide Scott with documentary material they had preserved.

Crippling His "War on Crime"

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. YOUNGER. Mr. Speaker, the leading editorial of the Washington Evening Star on Monday, January 16, certainly voices the sentiment of millions of Americans, and in strong and unmistakable terms. It is deserving of the attention of every Member of Congress.

The editorial follows:

CRIPPLING HIS "WAR ON CRIME"

The President has always talked in ringing terms of his determination to wage an all-out war on crime, to make certain that the law-abiding American people will be safe on the streets, in their homes and in their places of business. When the chips are down, however, he tends to back away from the fight.

This was demonstrated, we think, in his misguided veto of the District crime bill passed by the 89th Congress after long and careful study. The same tendency has cropped up again in his message to the 90th Congress on the state of the union. Two of his paragraphs illustrate the point.

In the section dealing with "improving the quality of life and enlarging the meaning of justice for all Americans," the President said: "We should protect what Justice Brandeis called the 'right most valued by civilized men'—the right to privacy. We should outlaw all wire-tapping—public and private—wherever and whenever it occurs, except when the security of the nation is at stake—and then only with the strictest safeguards. We should exercise the full reach of our constitutional powers [whatever that may mean] to outlaw electronic 'bugging' and 'snooping.'"

Six paragraphs later the President came to the 1967 version of his War on Crime in a section headed: "This nation must make an all-out effort to combat crime." Here are the key sentences: "Our country's laws must be respected. Order must be maintained. I will support—with all the constitutional powers I possess—our nation's law-enforcement officials in their attempt to control the crime and violence that tear the fabric of our communities."

We do not know who is responsible for the inherent contradictions in this rhetorical nonsense. But we do know that the laws are not being respected, that order is not being maintained, that the incidence of crime is constantly rising, and that neither lofty verbiage nor more federal money, which the President proposes, can reverse this trend.

What, we wonder, does the President think Justice Brandeis meant by the right to privacy—the "right most valued by civilized men"? Does this right of privacy apply to the criminal who kidnaps a child for ransom, and who will not hesitate to kill the child if it serves his purposes? Does it apply to those unconscionable characters at the top who enrich themselves from the sale of narcotics, even down to the level of our schools, and never mind the cost in ruined lives? Does it extend to organized crime, to the racketeers who survive by corrupting law-enforcement officials at the price of tearing apart "the fabric of our communities"?

There are two possible conclusions. One is that Mr. Johnson is insincere in his war on crime. We do not believe it. The other is that he doesn't really know what he is saying. This, we think, is likely.

Nothing is easier than to be against "snooping." Who isn't? But the fact remains that wiretaps and electronic devices are vitally important tools if the war on crime, especially organized crime, is to become anything more than a mouthful of words. To say as some do that these tools cannot be used without invading the privacy of the bedroom, whatever the emotional impact of this contention, is simply not true.

Our hope is that the President will take a second look at the phony advice which has been given him, that he will talk to people who know something about the facts of life in any meaningful war on crime, and that he will exercise all of the constitutional powers he possesses to seek authorization, subject to strict controls, of the use of wiretaps and electronic devices in the many instances in which they are essential to effective law-enforcement. As a companion piece, he should seek legislation imposing a total ban on *unauthorized* "snooping." For this is the area in which the valid right to privacy is being destroyed.

Hon. John W. McCormack, Speaker, Nominated by Representative Philip J. Philbin

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. DONOHUE. Mr. Speaker, a week ago Monday, in the House Democratic caucus held on that morning of January 9, the distinguished gentleman from the Third Massachusetts Congressional District nominated, for the continuing speakership of this House, our beloved and revered colleague from Massachusetts, the Honorable JOHN W. McCORMACK.

In his nominating speech Representative PHILBIN delivered one of the most eloquent and well-merited tributes ever uttered on such an occasion and it was a privileged experience, for those of us on this side of the aisle, to hear this impressive address. Of course, the nomination was unanimously approved and on the following day the Honorable JOHN W. McCORMACK, of Massachusetts, was formerly and very wisely renominated to preside over this great legislative body as Speaker.

I am sure that all of us here, on both sides of the aisle, agree with and share in the sentiments so ably expressed by the gentleman from Massachusetts, Congressman PHILBIN, as he summarized the tremendous public service record of our revered Speaker and reviewed the remarkable talents of his great mind and compassionate heart, which have endeared him to all who have ever served with him and which assure that the name of Speaker McCORMACK will be forever an inspiring byword in the legislative history of this Nation.

A great many Members, on both sides of the aisle here, asked me to intercede with my dear and esteemed friend and colleague from the Third Massachusetts District for the purpose of having his eloquent address included in the permanent RECORD. He graciously consented to permit me to introduce it into the RECORD and Congressman PHILBIN's nomination speech follows:

Mr. Chairman and friends, it is a great honor, privilege and pleasure for me this morning to nominate the Democratic candidate for Speaker for the 90th Congress.

I am sure that no words of mine would be adequate to portray or to describe the tremendous public record of the great American I am so honored and pleased to nominate.

Speaker McCormack is universally known as one of the greatest Americans who has ever served in the Congress. To talk of his splendid personal qualities and his achievements to those who are so familiar with them as you, would be somewhat of a futility, and of course, it is completely unnecessary.

John McCormack is a man of great, humane sensibilities and a fine spirit of loyalty that dominates his character and the very essence of his being.

His greatness as a public servant; his essential goodness as a human being; his amiable personal qualities; the loyalty of his friendship; the sweep and import of his great accomplishments; his unselfish labors and achievements for the nation, the world and the American people, comprise a glorious chapter in the history of this government.

The magnificent distinction, fairness and impartiality with which he has conducted the affairs of this House—his dignity, the broadness of his vision, the generosity of his impulse, and the kindness and compassion he has shown in the discharge of his weighty responsibilities, are known to us and recognized by the people.

Master of parliamentary law, skilled in legislative accomplishment, resolute and tenacious in seeking his goals, our esteemed and beloved Speaker is an inspired and resourceful champion and fighter for the things in which he believes, willing at all times to give unselfishly of himself to promote human betterment, to broaden the horizons of freedom and hasten the cherished reality of universal peace and a world governed by the rule of law.

Illustrious son of our great Bay State of Massachusetts, unalterably committed to the free way of life for this nation and the world, our beloved and great leader moves unfalteringly with greatest skill, ability and determination to carry out the vital missions of highest responsibility that are entrusted to him.

Endowed with great mind, a great heart, and great spirit, John McCormack ranks with the greatest leaders of our national history, and it is indeed with esteem, with affection and with a very high sense of pride and honor that I am privileged to place in nomination as Democratic Speaker of the House the name of a very great American, a most courageous leader, our beloved, distinguished Speaker and friend, the Honorable John W. McCormack.

Tribute to John E. Fogarty

SPEECH

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. SMITH of Iowa. Mr. Speaker, those who have previously spoken have so eloquently described the great contributions that have been made by our late beloved colleague from Rhode Island Mr. Fogarty and his name and his great contributions are so well known by people in the fields of health and education throughout the United States that any further recital of these great contributions would be redundant. His great renown in these fields never changed him from being a most conscientious and humble person never willing to rest upon his morals and reputation for deeds in the past and always eager to plow ahead to met new goals. His passing is a great loss to our Nation and I join with my colleagues with heartfelt sympathy to his family. May his good soul rest in peace.

An Editor Retires

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. SCHWENGEL. Mr. Speaker, Walter Russell, the editor of the Muscatine Journal, Muscatine, Iowa, retired last Friday after 40 years of service to the Journal.

The people of Muscatine and of the First District of Iowa will miss Walter Russell's work on the Muscatine Journal. He has been an effective and hard-working newsman. He has been a leader in his community.

I am confident I speak for the people of Muscatine and the First District when I wish him well in the years that lie ahead.

A well-earned testimonial to Walter Russell appeared Friday, January 13, 1967, in the Muscatine Journal:

[From the Muscatine (Iowa) Journal, Jan. 13, 1967]

AN EDITOR RETIRES

Walter Russell, editor of The Muscatine Journal, is retiring today after more than 40 years of faithful service to this newspaper and the Lee newspaper organization.

Walter Russell has watched Muscatine grow and progress—not as an idle bystander but as an active participant in the life of the community.

"Russ" has been a steady hand during times of change, and during times of difficulty. He always had the time to help a young reporter. He remembered the elusive names and dates, and knew just where to find the helpful information when someone had a question. He retains a storehouse of knowledge about Muscatine and the surrounding area.

He has observed and shared with Journal readers the stories of tragedy as well as the stories of achievement. The accidents and fires, the highway fatalities, the jubilation of success, and the routine of daily events of a living city have all been a part of his life.

He has been devoted to the principles of good journalism. Russ was never too tired to work the extra hours, to attend the special meetings, or to leave home in the middle of night in response to an emergency news report.

Russ has been dependable in his work, and steadfast in his role as a citizen of the community. Others have gained much from his example and influence.

Walter Russell has been a credit to his profession and to his community. The publisher and fellow employees of The Muscatine Journal join in wishing him continued success and pleasure in retirement.

How To Read "Death of a President"

EXTENSION OF REMARKS
OF

HON. ROBERT H. MICHEL

OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. MICHEL. Mr. Speaker, Roscoe Drummond in the Chicago Sun-Times, January 13, 1967, suggests that William Manchester's book be read with "healthy reservation." Mr. Drummond finds it difficult to accept what he considers to be conjecture as the historical truth. I have unanimous consent that this article appear at this point in the RECORD:

HOW TO READ "DEATH OF A PRESIDENT"

Just about everybody is going to read—or read about—William Manchester's account of the assassination of John F. Kennedy, "The Death of a President."

That's good. It is an honest, well-written, valuable, partially informative, one-sided book.

There are two compelling reasons why the Manchester book needs to be read sympathetically and with abiding reservation. It is an "authorized" account. It is a book commissioned by Mrs. Jacqueline Kennedy and Sen. Robert Kennedy, who retained the right to edit the manuscript before publication and exercised that right.

Secondly, in his first installment in Look, Manchester affirms that he is "speculating" at different points but contends that "legitimate speculation is one of the duties of historians." And so it is, but before you have read very far it seems evident, to me at least, that speculation soon becomes assertion and assertion becomes apparent fact and it is hard to tell where the two separate.

Manchester speculates enough about the political rivalry among Gov. John Connally, Sen. Ralph Yarborough, Vice President Johnson and President Kennedy as to make Connally look bad, Johnson look futile and everybody else look good.

In recapturing the atmosphere of political hatred toward President Kennedy in Dallas, Manchester speculates about the effect of this ferment on Lee Harvey Oswald.

He reports from Kennedy's viewpoint on the night-before-the-assassination tension between the President and Vice President Johnson in their hotel room meeting.

And, most speculative of all in the first installment, Manchester assumes to pinpoint the occasion and the minute when Oswald finally lost his reason and asserts that after Marina Oswald's dismissal of her husband on the evening of Nov. 21 "the total eclipse of his reason occurred shortly before 9 p.m."

I can't say it isn't true, but it is certainly unproved. Apparently it is the kind of "legitimate speculation" Manchester deems the "duty" of historians and it shows how constantly the reader must protect himself from speculation clothed like fact and from one-sidedness.

You can't suppress the raw material of history any more than you can commission history by an authorized book. It may take years to reconstruct the full-sized and balanced truth. Meanwhile, we can read without rancor but with healthy reservation.

Buffalo a Principal Center for Hospital Equipment

EXTENSION OF REMARKS
OF

HON. THADDEUS J. DULSKI

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. DULSKI. Mr. Speaker, with the advent of the medicare program last year, considerable attention has been focused on hospital and nursing home facilities.

Over a period of years, our Federal Government has made grants and loans available to hospitals for remodeling present structures, building new additions, and so forth. Along with this demand for increased hospital facilities has come the demand for more modern and automated equipment, including the use of space age electronics.

The hospital equipment manufacturers in our country have responded admirably to this demand, and I am particularly proud of the accomplishments of manufacturers in our greater Buffalo, N.Y., area. It has been estimated that about 10 percent of all different types of equipment found in hospitals is made in or near Buffalo. I am told that it is nigh impossible for a person to be hospitalized anywhere in the United States without being the recipient of the benefits of some equipment manufactured in western New York.

With permission, I include the following article written by Don O'Hara, which appeared in the Buffalo Evening News, Buffalo, N.Y., on January 4, 1967:

BUFFALO A PRINCIPAL CENTER FOR HOSPITAL EQUIPMENT—AREA COMPANIES' PRODUCTS IN FIELD FORM $15-MILLION-A-YEAR BUSINESS

(Don O'Hara)

Federal medicare and state medicare programs are giving hospital equipment manufacturers in the Buffalo area a shot in the arm.

Buffalo-made hospital equipment already is a $15-million-a-year business, employing hundreds of workers. Many new products now being developed soon will join the long list of items which includes everything from medication trays to complex coronary monitoring systems.

"Business is booming," said a spokesman for one manufacturer. He estimated that 10% of the different kinds of equipment to be found in any hospital is made on the Niagara Frontier.

One manufacturer pointed out that it is almost impossible for a patient to receive treatment from a hospital anywhere in the U.S. "without benefiting at some point by equipment from Western New York companies."

300-PRODUCT LINE

Among the numerous companies here making products directed at a patient's immediate well-being is the Hard Mfg. Co., 117 Tonawanda St. The company makes more than 300 products which are sold to hospitals and nursing homes through a nationwide network of dealers.

These products include a wide range of specialized beds, chairs, desks and other equipment for intensive care centers, special departments and private rooms.

James G. Dyett, president, said that in the last 15 years sales have risen from $600,000 to $7,000,000 and employment jumped from 60 to 300. Hard was founded in 1876 by Mr. Dyett's grandfather, James Dyett.

Earlier this year, Hard introduced an "electronic console" which provides a patient with his own communications center—the console may contain any combination of telephone, nurse's call, radio, TV, clock and light and curtain control switches.

STAINLESS REFRIGERATORS

In the days before electrically-driven compressors the Jewett Refrigerator Co. Inc., 2 Letchworth St., made boxes refrigerated with ice.

Today, its modern, stainless steel refrigeration equipment is used in hospitals across the country to store blood and to keep biological and pharmaceutical supplies.

Harold S. Ruslander, president, said Jewett is believed to be the largest manufacturer of blood-bank and mortuary equipment in the world.

Gomco Surgical Mfg. Corp., 828 E. Ferry St., has become well known for its operating room pump equipment which can be used for ether administration, suction, pressure or combinations of all three.

SPACE-AGE TECHNIQUE

The company said its pumps are standard in most hospitals in the U.S., Canada and many other countries. The late Aaron A. Goldstein formed Gomco in 1931 with three employees. Among them was Harold J. Dunkelman, who is now president.

Gomco now employs 100 persons in the manufacture of a complete line of aspirators and other operating room equipment.

Master Metal Products Inc., 291 Chicago St., produces stainless steel, chrome and enamel-finish indoor waste receivers for medical institutions.

The company has annual sales of more than $2 million. The sales include a line of products for the home, such as canister sets and other pantry items. Master Metal is headed by Robert L. Wilson. There are about 100 employees.

A distinctive feature of a "patient monitoring system" manufactured by Mennen-Greatbatch Electronics Inc., 10,440 Main St., Clarence, is the use of solid-state space-age electronics.

WIRELESS TRANSMITTER

The "Cardio/Sentinel Monitor" is connected to the patient through the use of electrodes. The equipment measures the person's heart rate and displays its findings on an oscilloscope.

Audio and visual alarms are activated when the patient's heart rate exceeds or falls below the limits set by medical personnel. For the ambulatory patient, a wireless transmitter sends the heart signal to a receiver located at a central nurse's station.

A spokesman said Wilson Greatbatch, vice president and technical director of the company, invented the first successful implantable cardiac pacemaker—a small electronic unit which is placed inside the body to provide electrical stimulation to an ailing heart in order to keep it beating at a proper rate.

USED IN OPERATING ROOMS

Mennen-Greatbatch designed a complete physiological monitoring system for operating rooms where a number of body functions are placed under constant surveillance by the surgeon and anesthesiologist.

These functions include body temperatures, blood pressure, heart rate and electroencephalograph and electromyograph information from the patient's brain and muscle activity. Herbert Mennen is president of the company. There are 60 employes.

The Therm-O-Rite Products Corp., 1748 Main St., is producing a thermostatically-controlled device for the application of heat and cold to the patient's body.

The equipment, known as a "Hypo-Hyper-Thermia Unit," is designed to lower, raise or maintain the desired body temperature. Miss Virginia Barnes is president. Thermo-O-Rite has 11 employes.

STARTED IN BASEMENT

Gaymar Industries Inc. was started 10 years ago in a basement-workshop by its founder and only employe, John K. Whitney, who is now president and treasurer of the company. Today Gaymar has a work force of 38 persons.

The company occupies 20,000 square feet of manufacturing space at 701 Seneca St.

Gaymar's alternating-pressure pads are placed under a patent's body. The pads inflate and deflate smoothly with an imperceptible wave-like action which constantly changes the pressure on the body and stops static pressure buildup on the skin.

The John Bunn Corp., 11035 Walden Ave., Alden, produces machines to wash, dry, powder and wrap surgical gloves. "The glove machines are used in hospitals all over the world," said F. Robert Greene, president. Other Bunn products include incubators, oxygen tents, medication trays, diet card systems, sterilizers and stretchers.

World Watching Rhodesia

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. BOB WILSON. Mr. Speaker, under unanimous consent, I place the following editorial from the San Diego Union in the CONGRESSIONAL RECORD:

REPERCUSSIONS WILL MOUNT: WORLD WATCHING RHODESIA

Cecil John Rhodes, the founder of Rhodesia and the Rhodes scholarships at Oxford from which many Americans have benefitted, was undeniably a visionary, but not even he could have foreseen the repercussions following the declaration of independence of "his" country.

Africa is in uproar, the British Commonwealth is seething with inner dissensions and the United Nations is enrolling every member country in a unified and unprecedented trade war on Rhodesia. The waves emanating from this action herald some unsettled weather, politically, economically and ideologically. The precedents are not pleasant to contemplate.

An immediate result of United States compliance with the Security Council resolution was an executive order signed by President Johnson which instituted penalties of fines up to $10,000 and 10 years in jail for Americans who dare trade with the "enemy."

One item banned under the boycott is chrome. Until recently the United States bought approximately one-third of its needs from American-owned mines in Rhodesia, among the largest deposits in the world.

Now we will have to seek supplies elsewhere—most likely from Communist sources like Soviet Russia or Poland, to whom we turned more than a year ago when a political cut-back was made on Rhodesian purchases. Incredibly, to cripple a known anti-Communist country in Africa, we help known atheistic Communists in Europe.

It is not only whether we will buy Rhodesia's chrome or copper, sugar or pig-iron, or whether we will supply oil, autos or aircraft. The trade, in itself, while still important in our balance of payments, is not a major factor in our overall economy, but potent to our ideological pattern.

By helping to crush one of the few viable and pro-Western states in Africa we can only hope to sow the seeds of communism.

The U.N. Security Council action goes even further. If it brings down the Smith government—which is the hope implicit in the resolution—then will assuredly come a demand from the African states for a similar trade attack on the republic of South Africa. There is no wine so heady as that of victory.

If it is unsuccessful, and within a few months Rhodesia shows every sign of surviving, will there then be a demand for a naval blockade? Who will staff it and whose ships will fire the first shell?

The escalation of events emanating from this situation could be serious. While it is right and proper to support firm measures by the world body in efforts to keep the peace, this Rhodesian impasse is neither the place nor the time, and manifestly not the cause. There have been several more blatant cases in the past 21 years of U.N. life which have gone virtually unremarked; and certainly there has been no action.

Hamilton, Ohio, Serviceman Gave His Life in Vietnam

EXTENSION OF REMARKS
OF
HON. DONALD E. LUKENS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. LUKENS. Mr. Speaker, I would like to call to the attention of the Members of the House the story of the late Pfc. Robert Hatton, a constituent of mine from Hamilton, Ohio. This young serviceman fought for his life over half of his 21 years and gave it for his country in Vietnam. I ask unanimous consent to have printed an article which appeared in the Hamilton Journal News which recounts in detail this tragic story. The article follows:

HE DIDN'T HAVE TO DIE, BUT HAMILTON SERVICEMAN GAVE HIS LIFE IN VIETNAM

(By Joe Cella)

A young Hamilton serviceman who fought for his life over half of his 21 years, gave it for his country in Vietnam.

Ironically, he didn't have to die.

But Pfc. Robert Hatton was a dedicated man regardless of his physical incapabilities. He was dedicated to his country's cause in a war-troubled world and to the uniform which he wore. He was a rare human being.

No, he didn't have to die. Medical history that went back to his birth was enough to keep him home forever. Pride and a strong will to overcome a birth physical handicap led him to his death.

It was not an unjust death. It was an honorable one—one which he himself must be proud of in his resting place today.

A son of Mr. and Mrs. George F. (Red) Hatton of 1906 Sunset Dr., Hamilton, Pfc. Hatton was born with Hirschsprung's disease, a congenital megacolon. A portion of his bowel tract was partially paralyzed. Medical history reveals the disease is one of the rarest known.

Thus began a fight for life that was to reach proportions that would ordinarly destroy a child's mind and body. Pfc. Hatton was in and out of hospitals for 12 years in an attempt to correct the defect in his system. The number of operations on his frail, young body are difficult to recall. He went through 23 anesthetics in seven years, from age five until he was 12.

Detected at birth, doctors advised the family that the child had a 50-50 chance to live. It was at the age of five that the first major surgery was performed. Up until that time, other methods were employed by local doctors to ease the suffering. Noted specialists at Johns Hopkins University Hospital said that the operation was a waste of time; that the boy would not live.

However, local surgeons and the family physician had faith. They wanted the boy to live, to become a normal child.

THINGS WENT WRONG

Although the initial operation was termed "successful," everything went wrong in a matter of days. Healing became difficult. The incision reopened again and again. When that was repaired, another operation became necessary.

All through this suffering, Pfc. Hatton never complained. His smile, which became his trademark for 21 years, never faltered. He was always concerned about other people, even the young patients near him.

As he grew through the years of mental and physical frustration, various activities which he loved, had to be curtailed. While in junior high and senior high school, he was never allowed to take gym or participate in any sport. Still, the popular Taft High School graduate set goals of his own. He was determined.

"He did a lot of things which we never knew about," said his father. "He helped everyone he could regardless of his condition."

"Throughout his young life, there was always patriotism. When a small boy, he wanted to see parades because that's where the American Flag would be flying. The Flag always left a deep impression on him. How this ever came about will never be known."

TURNED DOWN

Upon graduation from high school, Pfc. Hatton attempted to enlist in the Air Force without the knowledge of his parents. He was turned down. When he was asked, he replied that the scars on his body were enough for the examining doctor. Again and again he tried. The other services also turned him down. His parents pleaded with him, but to no avail.

Then came the fateful chapter in his life. He was called up by the Middletown Draft Board in Middletown, Ohio, even though he was as resident of Hamilton and not registered with that board. He arrived home, all smiles. He had passed the physical examination. His parents were shocked. Asked how this was possible with all his scars, Pfc. Hatton replied "Dad, they didn't even look at them."

Pfc. Hatton entered the Army on Nov. 17, 1965, and sent to Fort Knox, Ky., for basic training. Unknown to others, he carried special medicines with him to ease reoccurring pain. He had to watch his food, as he did earlier in life.

Following Fort Knox, he was sent to Fort Polk, La., where he completed a special leadership preparation course for 11 weeks. He instructed for nine of the 11 weeks before he was selected to attend Officer Candidate School.

ROUGH TRAINING

While at Fort Polk, Pfc. Hatton went through the roughest training in existence for military personnel. It is the base for Vietnam combat operations.

Pfc. Hatton turned down the officer school to be with his buddies. When he was home on a 21-day leave, he hold his parents that he was departing for Vietnam.

"You've got no business in Vietnam," his parents replied "let us go to the Army doctors and tell them the true story, about your medical history."

"No dad, I don't want you to do that. I've got to go," were his last words.

About six months later, Pfc. Hatton, while serving with the 25th Infantry Division in combat operations, was killed in action.

The blow to the family is one which will never be overcome. Questions are repeated over and over. There are no answers. Perhaps Pfc. Hatton knew but never let on. In his letters to his family from Vietnam, he always closed with "am in good health and have no problems." Not once was there ever a complaint about his physical condition, his parents recalled. "Bobby never told us anything because he didn't want to worry us."

LETTERS ARRIVED

When his death was reported, letters came from all over. A total of 103 Masses was said for him at St. Mary Church. Friends from all faiths attended the services.

Three of those letters tell the story of Pfc. Hatton. From Sister Theresa Ann, SND, Dayton, Ohio, fromer teacher at St. Mary School, where he attended elementary school, came these words. "I am not a bit surprised that he died this way. It was like him to give his life in the service of others."

His commanding officer in Vietnam, Capt. Ora L. Boss, wrote: "The feelings of myself and all the men of "A" Company must be expressed. While on operation "Paul Revere IV," the platoon to which your son was assigned, came under heavy enemy fire. Bob was one of the platoon machinegunners and provided cover fire so that the wounded could receive medical attention. In doing so, your son was killed by fragments from a hostile grenade on Nov. 13, 1966. Bob died instantly, suffering no pain, and because of his dedication many of his friends were able to receive medical aid. Your son was a fine man and a dedicated soldier."

A CLOSE FRIEND

Officer Candidate David W. Moreno of the Bronx, N.Y., a close friend of Pfc. Hatton at Fort Polk, La., and presently at Fort Lee, Va., where the two were to attend officer school together, had this to say.

"Bob Hatton was the greatest human being I have ever met or probably will meet. He stood head and shoulders above myself and the other men in our company. He was always willing to help one with a problem as well as the men in his squad. His brilliant smile made me feel a lot better when I was depressed.

"Bob's friendship made the days go faster and the sun shine brighter. The last time I saw Bob, I knew I could never be the same person again. I had become a better man because of him. Bob showed an overabundance of good sense, integrity and moral strength. He tried to do his best at all times and won the respect of all the men in Company D.

MOST PRECIOUS

"Bob paid the most precious price for freedom and it is up to all of us to see it was not done in vain."

Pfc. Hatton's decorations came to light to his family at his death. He was the holder of the National Service Medal; the Vietnam Service Medal awarded by the U.S.; Republic of Vietnam Campaign Medal by the Vietnamese government; Combat Infantryman's Badge; Machinegunner's Medal; and Sharpshooter's Medal.

Pfc. Hatton rests now in St. Stephen Cemetery. His patriotism to his country since a child can only be summed up in the words of his father. "I guess Bobby had the Stars and Stripes in his eyes forever."

Our Space Program—What Next?

EXTENSION OF REMARKS

OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. RUMSFELD. Mr. Speaker, while the United States is going forward with its project to put a man on the moon, there is increasing debate on the question of what our future goals should be in space exploration and research. Decisions will have to be made, and soon.

Two recent editorials which appeared in the Chicago Daily News and the Washington Post discuss this problem in a constructive manner. The editorials follow:

[From the Chicago Daily News]

AFTER THE MOON, WHAT?

Project Apollo is expected to place Americans on the moon in two or three years. Then what? Should there be projects such as the establishment of semi-permanent lunar stations, with costs rising as high as the rockets? Or should there be a cutback in the manned space expenditures that would permit the achievement of other objectives?

In a recent New Republic, American physicist Ralph E. Lapp gives his answer: "I believe that the NASA manned space program must be cut back . . . Manned spectaculars must give way to instrumented programs, and we must relate space spending to national science policy."

Spokesmen for the space program give other answers, of course. Lapp quotes an editorial in the trade press urging a big followup to Apollo: "We feel space exploration is . . . as significant to mankind as any scientific, social or political program on Earth. In the long run, it may be even more important than slum clearance, pollution control, mass transportation, universal higher education, medicare and other vital programs."

This extreme statement helps state the issue, because the space program could be so expensive that the choice would have to be between it and some, or even all, of the other objectives mentioned. Project Mercury cost $500,000,000; Gemini cost $1.35 billion; the cost of Apollo is currently reckoned at $23 billion.

Lapp points to a "multitude of problems right here on Earth which science can help solve." There are social problems such as slums and congested traffic. There are health problems such as cancer, mental diseases and defective human organs. "The biological scientists," says Lapp, "bear a heavy responsibility to chart the future."

In urging that the U.S. space program be cut back to a steady $1 billion or $2 billion a year after Apollo, Lapp is not advocating that space exploration be abandoned. But manned exploration is what skyrockets the costs, and ". . . there is very little use for man in space if one considers the comparative cost of manned and instrumented space missions. . . . The single greatest discovery of the Space Age—the Van Allen radiation belt—was made with only a 30-pound payload."

If, as we believe, logic is on the side of disinterested scientists, powerful forces are nevertheless pushing for bigger manned space programs. NASA's annual budget is $5 billion a year. Because of the long lead-time in NASA operations, some of the Apollo contractors have nearly finished their jobs. Of the estimated 400,000 people employed in space work, 100,000 may well be out of jobs within a year if a post-Apollo project isn't launched soon.

So the time to decide what comes after Apollo is now. And the American people, advised by the entire community of expert knowledge, should participate in giving the answer, weighing value against competing value and one priority against others.

Fortunately, the climate is favorable for rational discussion. No convincing case has been made that there are military advantages in manned stations on the moon. Mao Tze-tung isn't likely to put the Red Guard on Mars or Venus. The prestige race to put the first men on the moon will be lost or won with Apollo. And the astronomical costs of space exploration recommend co-operative international ventures in the future, rather than the blind, national competitions of the past.

[From the Washington Post]

SPACE: THE CRISIS OF DECISION

(By Joshua Lederberg)

Decisions are being made now on the executive budget for the coming year. The public knows almost nothing of the personalities and political philosophy of the men in the middle echelons of the Bureau of the Budget. Yet they play a decisive role in the hard choices that must be made among competing values. The President has the choice of which programs will be implemented, which deferred..

Among the crises of decision, the national space program must be the source of some of Mr. Johnson's and his budgeteers' most painful dilemmas. Besides the committed Apollo program for "a manned landing on the moon within this decade," we have to consider the funding of the next steps in space, a policy that will have important consequences for our overall technical progress.

Three years ago, Sen. Clinton P. Anderson took testimony from a number of scientists concerning the merits of the Apollo program. My position at that time was in support of the program, which put me in the minority among scientists and educators. If my judgment were operative, other categories of work in space or on science might have higher priority, but tearing Apollo down could have no constructive result.

The expected scientific payoff from Apollo was incidental: unmanned scientific missions like Surveyor and Lunar Orbiter have been spectacular successes at a fraction of Apollo's cost. Some combination of possible military utility, anticipated impact on the rest of the world and our spectator-sport interest in astronautics may have been behind the choice of the manned landing among possible programs.

The choice has proven itself pragmatically. Would Congress have sustained its support for space merely for science? It has been cogently pointed out that the nominal goal of Apollo, the lunar landing, is merely the means to create our fundamental technological capacity to operate in space. We cannot readily assess how much more economically this could be achieved if it were attacked directly as the actual goal; if we could afford to dispense with the psychological focus of the living man in space.

Three years have seen enormous advances in political conscience and action. We now have plans and authorizations for education, health and social programs that were only dreams then. We are also told we cannot afford guns and schools and space—we must decide against some programs in order to match a limited supply of dollars.

The most disastrous response in space policy would be a sudden cancellation of existing contracts and suspension of programs in midcourse. The economic and employment dislocations of such a rash reaction are a sufficient argument against it. But now that competing values are so strident, this canont justify an indefinite absentminded extrapolation of past approaches.

NASA Administrator James Webb is a thoughtful public servant, as he showed by refusing to be stampeded into early commitments about major space programs after Apollo. In the present budgetary crisis, the greatest weight will, we hope, be given to effective holding actions—the postponement of major new commitments in favor of preparations for prompt reaction when our finances and our technology catch up.

The Saturn boosters being perfected for Apollo will give us all the propulsive heft we need to explore the whole solar system. Unless we invent further requirements, propulsion need no longer dominate our technological effort. Rather it will be the sophisticated spacecraft—the automated instrumentation on the one hand, or the life-support for humans on the other—that will need to be perfected for the missions of the next decade.

And for long range missions, whether manned or not, we will need better telecommunications, which means electronics and power supplies on board and radiotelescopes of deeper penetrating power on earth.

These are strong hints for a balanced policy, since the new requirements for the exploitation and exploration of space are now far less specialized than before. In their technological foundations, automated instruments to conduct experiments efficiently via an interplanetary radio link parallel those for monitoring the brain waves of a hospital patient under surgery to control the dose of anesthetic. Compact power supplies will also energize an artificial heart.

A budgetary stretchout might force closer attention to the long-term needs and neglected intersections of missions of different agencies. If so, it may be a blessing in the long run.

Fino Reintroduces Bill To Amend Civil Rights Law To Curb Riots

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. FINO. Mr. Speaker, today, I introduced legislation to amend the civil rights law to "prohibit travel or use of any facility in interstate commerce with intent to incite a riot or other civil disturbance."

Before summer comes once again, and riots break out all across the land, Congress ought to pass a law making it a Federal crime to go between States to incite riots. We ought to lay down the law to the agitators.

I am therefore introducing the antiriot section of the 1966 civil rights bill as a separate bill. I hope that Congress will pass it. It is high time we put the strong arm of the Federal Government to work repressing instead of inciting riots. I hope that the 1966 elections have convinced this administration that it is not good politics for high officials like our Vice President to urge people to riot for political goals—rent subsidies, for example. The people of the United States want antiriot legislation enacted. They have made their voice heard—and heard clearly.

Boston's WBZ Radio-TV Stations Endorse H.R. 1166, "Modern Governments" Bill

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. REUSS. Mr. Speaker, the Westinghouse Broadcasting Co.'s Boston stations, WBZ radio and WBZ–TV 4, have long been urging public concern for the problems of modernizing and financing State and local governments. Their first editorials, in 1960, stimulated little or no response.

Still, WBZ continued to speak out on these issues.

In July 1966, the Committee on Economic Development issued its report, "Modernizing Local Government—To Secure Balanced Federalism." The Committee on Economic Development report inspired WBZ to broadcast another series of editorials and documentaries. It also helped me significantly in preparing H.R. 1166, which, if enacted, would become the State and Local Government Modernization Act of 1967.

WBZ stations last week discussed the proposal of H.R. 1166 to offer unearmarked Federal funds to those States which take creative action in modernizing their State and local governments. WBZ describes this policy as "speaking softly and carrying a big carrot."

If H.R. 1166 were enacted, each State would first receive Federal funds—at least $250,000—to prepare within 18 months its own modern governments program, setting forth plans for modernizing both State and local governments. Such plans would have to include specific proposals for dealing with interstate regional problems, for strengthening State governments, and for strengthening and modernizing local rural, urban, and metropolitan governments—for example, by reducing the number of counties, eliminating inefficient local governments, reforming personnel practices, and strengthening local governments in metropolitan areas.

Each State modern governments program would then be reviewed by one of the four regional coordinating committees—to be set up under H.R. 1166 by the participating Governors in each of four regions: eastern, southern, midwestern, and western—and by the existing Advisory Commission on Intergovernmental Relations. Those States with plans designated as reflecting "sufficient creative State initiative so as to qualify that State for Federal block grants" would then begin receiving, in 1970 or at the latest by 1971, unrestricted Federal grants from a 3-year, $5-billion-a-year authorization.

Funds would be distributed according to population, with not to exceed 20 percent for supplements to those States having a low per capita income; a high degree of poverty, dependency, or urbanization; and an adequate State tax effort, as indicated by the amount of State and local taxes relative to personal income. At least 50 percent of the money going to a State would be earmarked for its local governments.

The text of WBZ's editorial follows:

WITH STRINGS ATTACHED

(Delivered by Perry B. Bascom, general manager, WBZ; Lamont L. Thompson, general manager, WBZ–TV)

Massachusetts took a major step forward in 1966 with adoption of a sales tax. Yet, the start of this new year finds state and local governments strapped for cash to meet obvious needs. There are still changes to be made to bolster our tax structure. But, more and more, it's becoming obvious that the cost of government services is getting beyond the financial resources of both communities and the state.

This problem isn't confined to Massachusetts. It exists in states across the country. And it has led to proposals that the federal government, with its broader tax base, turn back to the states a share of the money it raises. The idea was first put forth by former presidential advisor Walter Heller. It has since been endorsed in various forms by Congressmen of both parties and a meeting of state governors. It seems destined to be a major issue in the new Congress.

WBZ supports the tax sharing principle. And we feel there's special merit to the proposal by Wisconsin Congressman Henry Reuss. He's been impressed with the report on modernizing local government put out by the Committee For Economic Development. That's the same report we've cited in a series of editorials over the past few months. Representative Reuss feels massive federal aid would be pouring money down a rathole unless state and local governments are overhauled to meet present day needs more effectively. So he wants the federal grants conditioned on modernization of state and local administration.

There's no doubt this reform job is needed. And past experience shows that state and local officials will be painfully slow in acting without some prodding. The Reuss plan is massive use of the policy we've talked about before—speaking softly and carrying a big carrot. It offers real hope of solving financial and administrative problems at the same time.

Our Vanishing Wildlife

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. WOLFF. Mr. Speaker, I wish to take this opportunity to add my words of commendation to those of Secretary of the Interior, Stewart L. Udall, Thomas L. Kimball, executive director of the National Wildlife Federation, and other distinguished conservationists for the excellence of a film, "Our Vanishing Wildlife."

Productions Unlimited, Inc., of New York, recognized the urgent need for con-

servation education and produced this color film covering the subject with truth and dignity. I invite every American to see this film to better understand why it is so important to maintain our national wetlands areas, our forest covers and to husband our soil and water for the benefit of all living things.

Vietnam: Suffer the Little Children—I

EXTENSION OF REMARKS
OF
HON. WILLIAM F. RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. RYAN. Mr. Speaker, on January 11, the Committee of Responsibility To Save War-Burned and War-Injured Vietnamese Children held a press conference to announce their program. More than 100 prominent physicians, members of the clergy and others have joined together to bring children burned and injured in the war to the United States for medical treatment. This nonpolitical and nonprofit humanitarian committee has received commitments from leading doctors in the United States to treat Vietnamese children free of charge.

Martha Gellhorn, the distinguished author, in an article published in the January 1967 edition of the Ladies' Home Journal has described the plight of these children. I believe that all of us must be concerned with the great tragedy of the war in Vietnam. Therefore, I am inserting part I of her article, which follows:

[From the Ladies' Home Journal, January 1967]

VIETNAM: SUFFER THE LITTLE CHILDREN—PART I

(By Martha Gellhorn)

It's time to talk of the Vietnam casualties nobody dares talk about: the wounded boys and girls.

We love our children. We are famous for loving our children, and many foreigners believe that we love them unwisely and too well. We plan, work and dream for our children; we are tirelessly determined to give them the best of life. "Security" is one of our favorite words; children, we agree, must have security—by which we mean devoted parents, a pleasant, settled home, health, gaiety, education; a climate of hope and peace. Perhaps we are too busy, loving our own children, to think of children 10,000 miles away, or to understand that distant, small, brown-skinned people, who do not look or live like us, love their children just as deeply, but with anguish now and heartbreak and fear.

American families know the awful emptiness left by the young man who goes off to war and does not come home; but American families have been spared knowledge of the destroyed home, with the children dead in it. War happens someplace else, far away. Farther away than ever before, in South Vietnam, a war is being waged in our name, the collective, anonymous name of the American people. And American weapons are killing and wounding uncounted Vietnamese children. Not 10 or 20 children, which would be tragedy enough, but hundreds killed and many more hundreds wounded every month. This terrible fact is officially ignored; no Government agency keeps statistics on the civilians of all ages, from babies to the very old, killed and wounded in South Vietnam. I have witnessed modern war in nine countries, but I have never seen a war like the one in South Vietnam.

My Tho is a charming small town in the Mekong Delta, the green rice bowl of South Vietnam. A wide, brown river flows past it and cools the air. Unlike Saigon, the town is quiet because it is off-limits to troops and not yet flooded with a pitiful horde of refugees. Despite three wars, one after the other, the Delta peasants have stayed in their hamlets and produced food for the nation. Governments and armies come and go, but for 2,000 years peasants of this race have been working this land. The land and their families are what they love. Bombs and machine-gun bullets are changing the ancient pattern. The Delta is considered a Viet Cong stronghold, so death rains from the skies, fast and indiscriminate. Fifteen million South Vietnamese live on the ground; no one ever suggested that there were more than 279,000 Viet Cong and North Vietnamese in all of South Vietnam.

The My Tho children's hospital is a gray cement box surrounded by high grass and weeds overgrowing the peacetime garden. Its 35 cots are generally filled by 55 little patients. One tall, sorrowing nun is the trained nurse; one Vietnamese woman doctor is the medical staff. Relatives bring their wounded children to this hospital, however they can, walking for miles with the children in their arms, bumping in carts or the local buses. Organized transport for wounded civilians does not exist anywhere in South Vietnam. Once the relatives have managed to get their small war victims to the hospital, they stay to look after them. Someone must. The corridors and wards are crowded; the children are silent, as are the grown-ups. Yet shock and pain, in this still place, makes a sound like screaming.

A man leaned against the wall in the corridor; his face was frozen and his eyes looked half-mad. He held, carefully, a six-month-old baby girl, his first child. At night, four bombs had been dropped without warning on his hamlet. Bomb fragments killed his young wife, sleeping next to her daughter; they tore the arm of the baby. As wounds go, in this war, it was mild—just deep cuts from shoulder to wrist, caked in blood. Yesterday he had a home, a wife, and a healthy, laughing daughter; today he had nothing left except a child dazed with pain and a tiny mutilated arm.

In the grimy wards, only plaster on child legs and arms, bandages on heads and thin bodies were fresh and clean. The children have learned not to move, because moving hurts them more, but their eyes, large and dark, follow you. We have not had to see, in our own children's eyes, this tragic resignation.

Apparently children are classified as adults nowadays if they are over 12 years old. During a short, appalled visit to the big My Tho provincial hospital, among hundreds of wounded peasants, men and women, I noted a 13-year-old girl who had lost her left foot (bomb), sharing a bed with an old woman whose knee was shattered; a 14-year-old girl with a head wound (mortar shell); a 15-year-old girl with bandages over a chest wound (machine-gun bullet). If you stop to ask questions, you discover frequently that someone nearby and loved was killed at the same time, and here is the survivor, mourning a mother or a little brother; loneliness added to pain. All these people suffer in silence. When the hurt is unbearable, they groan very softly, as if ashamed to disturb others. But their eyes talk for them. I take the anguish, grief, bewilderment in their eyes, rightly, as accusation.

The Red Cross Amputee Center in Saigon is a corrugated tin shed, crowded to capacity and as comfortable in that heavy, airless heat as an oven. Two hundred amputees, in relays, have lived here. Now 40 Vietnamese peasants, male and female, ranging in age from six to 60, sit on chromium wheelchairs or their board beds or hobble about on crutches and, though you might not guess it, they are lucky. They did not die from their wounds, they are past the phase of physical agony, and in due course they will get artificial arms or legs.

The demand for artificial arms and legs in South Vietnam may be the greatest in the world, but the supply is limited; for civilians it had run out completely when I was there. These maimed people are content to wait; Saigon is safe from bombs, and they are fed by the Red Cross. To be certain of food is wonderful good luck in a country where hunger haunts most of the people.

A girl of six had received a new arm, ending in a small steel hook to replace her hand. Bomb fragments took off the lower half of her arm and also wounded her face. She has a lovely smile, and a sweet little body, and she is pitifully ugly, with that dented, twisted skin and a lopsided eye. She was too young to be distressed about her face, though she cannot have felt easy with her strange arm; she only wore it to have her picture taken.

An older girl, also a bomb victim, perhaps aged 12, had lost an eye, a leg and still had a raw wound on her shoulder. She understood what had happened to her. Since the Vietnamese are a beautiful people, it is natural that they should understand beauty. She hid her damaged face with her hand.

A cocky, merry small boy hopped around on miniature crutches, but could not move so easily when he strapped on his false, pink-tinted leg. Hopefully he will learn to walk with it, and meanwhile he is the luckiest person in that stifling shed, because the American soldiers who found him have not forgotten him. With their gifts of money he buys food from street vendors and is becoming a butterball. I remember no other plump child in South Vietnam.

A young Red Cross orderly spoke some French and served as interpreter while I asked these people how they were hurt. Six had been wounded by Viet Cong mines. One had been caught in machine-gun cross fire between Viet Cong and American soldiers, while working in the fields. One, a sad reminder of the endless misery and futility of war, had lost a leg from Japanese bombing in World War II. One, the most completely ruined of them all, with both legs cut off just below the hip, an arm gone, and two fingers lopped from the remaining hand, had been struck down by a hit-and-run U.S. military car. Thirty-one were crippled for life by bombs or artillery shells or bullets. I discussed these figures with doctors who operate on wounded civilians all day, and day after day. The percentage seems above average. "Most of the bits and pieces I take out of people," a doctor said, "are identified as American."

In part, it is almost impossible to keep up with the facts in this escalating war. In part, the facts about this war are buried under propaganda. I report statistics I have heard or read, but I regard them as indications of truth rather than absolute accuracy. So: there are 77 orphanages in South Vietnam and 80,000 registered orphans. (Another figure is 110,000.) No one can guess how many orphaned children have been adopted by relatives. They will need to build new orphanages or enlarge the old ones, because the estimated increase in orphans is 2,000 a month. This consequence of war is seldom mentioned. A child, orphaned by war, is a war victim, wounded forever.

The Govap orphanage, in the miserable rickety outskirts of Saigon, is splendid by local standards. Foreign charities have helped the gentle Vietnamese nuns to construct an extra wing and to provide medical care such as intravenous feeding for shriveled babies, nearly dead from starvation.

They also are war victims. "All the little ones come to us sick from hunger," a nun said, in another orphanage. "What can you expect? The people are too poor." The children sit on the floor of two big, open rooms. Here they are again, the tiny war wounded, hobbling on crutches, hiding the stump of an arm (because already they know they are odd): doubly wounded, crippled and alone. Some babble with awful merriment. Their bodies seem sound, but the shock of war was too much for their minds; they are the infant insane.

Hickory Boy in Vietnam

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. WHITENER. Mr. Speaker, while the great debate is taking place in the United States as to the reasons why we are fighting in Vietnam, our servicemen are making a magnificent contribution in defense of the vital interests of the United States and the freedom of the people of southeast Asia.

There is no doubt in their minds as to why we are fighting in Vietnam, and I believe that a letter written by Sgt. Arthur D. Miller, a constituent of mine and the son of Mr. and Mrs. James A. Miller of Hickory, N.C., expresses the sentiment of all our servicemen in Vietnam.

I include Sergeant Miller's inspiring letter, which appeared in the "Open Forum" of the Hickory Daily Record of January 16, 1967, in the Appendix of the RECORD:

OPEN FORUM: HICKORY BOY IN VIETNAM

EDITOR RECORD: I was talking to a couple of my buddies here in my tent, and we were discussing the backing, the people in the United States were giving us guys here in Vietnam.

We were talking about our buddies getting killed and other guys that get hurt. I asked one buddy, if he thought anyone in the States knew what we are doing in Vietnam—and his answer was he didn't know. Well I thought I would write my hometown newspaper a few lines. If you would print it.

I have thought about writing before, but since I'll be home soon I thought I'd better write the letter now.

I don't know just what all to say but here goes.

From a soldier in Vietnam to the people in the United States. A question or two for you, and a statement to you. Why can a person turn his back on his country? How can a man refuse to fight for his loved one's, and for their freedom? Why don't the people realize this?

Like someone said, the guys in Vietnam have 50% of the support of the people in the United States—why not 100 percent. Now for the statement I mentioned before:

A person cannot put on paper what Vietnam is like. Like guys and buddies getting killed every day. You cannot realize how it is—no one can, unless they have been through it themselves. I am putting this down on paper so anyone can read it that wants to.

We are not fighting for ourselves alone, but for freedom for everyone. I don't think people understand at all. My own opinion is, if the people themselves would support the Vietnam issue more, we would have more morale than we actually have. Well, I'd better shut up before I really get into trouble.

Thank you very much.

Sincerely,

ARTHUR D. MILLER

(Sgt. Arthur D. Miller, son of Mr. and Mrs. James A. Miller of Hickory, N.C.).

P.S.—I only have 63 days left over here.

Appraisal of L.B.J. by an Old New Dealer

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. BLATNIK. Mr. Speaker, when I first came to Congress 20 years ago, one of my most stimulating experiences was coming to know Adolf Berle on a personal basis. In my earlier student days I already had a great admiration for his perceptive, incisive, analytical mind and his tremendous insight into the great social, economic, and political issues of the day.

But even more than being one of the leading intellectuals of our time, is he a truly great humanitarian with tremendous human feeling for the problems of the disadvantaged, the downtrodden, the dispossessed, society's needy ones who never had their fair chance.

Adolf Berle demonstrates all of these many inspiring qualities in the accompanying article which is a refreshing, well-balanced evaluation of President Lyndon B. Johnson's continuing achievements for a better America.

Mr. Speaker, I commend Mr. Berle's article to the attention of my colleagues:

[From the New York Times, Jan. 14, 1967]

TOPICS: APPRAISAL OF L.B.J. BY AN OLD NEW DEALER

(By Adolf A. Berle)

Though President Lyndon B. Johnson may, as pundits say, be in for a spell of stormy political weather, conclusions from the 1966 Congressional elections can be overdone. In 1964, Republicans bolted from Goldwater to Johnson by millions. In 1966 they returned to the fold, perhaps restoring hairline party balance by which President Kennedy defeated Mr. Nixon.

But, since the Camelot era, President Johnson introduced a new element. He launched an irreversible tide in American politics inescapably bearing his stamp. Irrespective of press popularity, or opinions of his "style," or the barring of Camelot castles to him, his conception of the Great Society must dominate the political scene for years to come.

MEANT WHAT HE SAID

Johnson was one of a very few to realize that the impulses of Franklin Roosevelt's New Deal had achieved themselves. A new phase transcending mere economics was overdue. Christening it "The Great Society," Johnson blocked out its goals.

Credibility gap or not, he meant what he said. Civil rights, of course. A Southerner, he took the Negro side, converting ideas into measures. Abolition of poverty, plainly possible in a country providing an average income of nearly $3,000 for each American. But that means taking poverty out of people as well as people out of poverty.

A society of beauty, wiping out ghettos, redeveloping cities, cleansing air and streams, cleaning foul highway borders. But that requires liberating and canalizing reservoirs of local energy. A society in which no student must forgo education for want of funds. But that calls for vast increase in schools and universities. A society whose business and labor undertand economic planning well enough to cooperate in handling prices, profits and wages. But that calls for a changed conception of business.

Translation of American capacity to give full bank accounts into ability to cause civilized cultural achievement. But that requires intellectuals and artists to conceive, propose, execute. As in the case of the New Deal, criticism of the Great Society is bitter—but perhaps headed for similar oblivion.

Battle is joined on all fronts. President Johnson should, and does not, have support of many intellectuals who would seem to be his natural allies. Perhaps because of his proletarian experience, he dealt in realities, rather than in unassailable abstractions.

After the Dallas tragedy, he met coolness from some who identified their finest hours exclusively with President Kennedy. In fact, President Johnson did more than continue the Kennedy direction. He opened the gates to a new vista; and these cannot be shut by friend or foe. Already his ablest competitors pay him the compliment of imitation—as did Gov. Nelson Rockefeller on Jan. 2 in proposing the "Just Society."

THE WAR IN VIETNAM

In fiscal policy—to tax or to abandon Great Society spending—the issue comes to this: Will the prosperous insist on saving today at cost of a drab and dangerous tomorrow, or will they—as they can without hardship—assume the costs for tomorrow's America as well as the far from crushing costs of Vietnam? The President is saying they must.

Johnson's really controversial decision—his handling of the Vietnamese war—was that of a big man. At time of involvement, Moscow and Peking were working together. Indonesia was in the Chinese orbit. War was making in Malaysia. To enter Indochina was dangerous; to stand aside meant risking world balance at incalculable peril. Today, the Soviet Union is at odds with China, Indonesia is back in the United Nations, the Malaysian war is liquidated.

Johnson's decisive Dominican action seems to have reduced to minor scale Russian intrigues in the Caribbean. Balance is again emerging, and the Vietnam problem seems moving toward manageable dimensions, offering possibility of peace and disinvolvement without tossing Southeast Asia overboard.

Dissident Democratic Governors and reputed rivals are realizing that in 1968 any Democrat will have to run on the record, achievements and conceptions of Lyndon Johnson's Great Society. They cannot do otherwise. These will be the stuff of the next campaign.

Winning or losing, the President emerges as a towering figure. He is not a great politician; his local connections are absurdly weak. He is not a romantic image. The brilliant court and flashing pennons of Camelot are not his.

TRACE-LINES OF THE FUTURE

But neither is he an Andrew Johnson, vulnerable to attack by misguided idealists. Rather, with dogged determination, using what tools he has, and denied the help of some who should have been with him, the small-farmer's son become President has plotted out in his Great Society the contours and trace-lines of the next major social development in America.

Be the outcome triumph or tragedy, as an old New Dealer I am clear that to underestimate him is a historical mistake of the first order.

F.D.R. Memorial

EXTENSION OF REMARKS

OF

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. KUPFERMAN. Mr. Speaker, I have been pleased to serve as a member of the Franklin Delano Roosevelt Memorial Commission, which has recently made its choice of a final design for the F.D.R. memorial in Washington, D.C.

Members of this commission in the past year, during which I served, have been Senator Maurine Neuberger; Senator JACOB K. JAVITS; Senator Leverett Saltonstall; Senator EUGENE J. MCCARTHY; Congressman FRANK THOMPSON, JR.; Congressman SEYMOUR HALPERN; Hon. Francis Biddle; Hon. Clark M. Clifford; Hon. James H. Rowe, Jr.; Hon. Anna Rosenberg Hoffman, all under the chairmanship of Congressman Eugene J. Keogh, who recently retired as a Member of the Congress. Reference to the commission can be found in the report of the House, No. 1405, for the 89th Congress, second session, on the Department of the Interior and related agencies appropriation bill of 1967, at page 40.

Ada Louise Huxtable, a well-known writer and connoisseur, has well described the proposed memorial approved by the commission as prepared by Marcel Breuer and his associate, Herbert Beckhard.

Her article appeared in the New York Sunday Times of January 1, 1967, and I commend it to my colleagues:

IF AT FIRST YOU DON'T SUCCEED

(By Ada Louise Huxtable)

All's well that ends well in art and in memoriam. Five years after the competition winning design for the Franklin Delano Roosevelt memorial in Washington was unveiled, attacked, revised, rejected and recommissioned, the Roosevelt Memorial Commission has released its new, handsome and, hopefully, final proposal.

The new design is the work of Marcel Breuer, best known at the moment for his smashingly successful Whitney Museum in New York, and Herbert Beckhard, of the Breuer office. It displays some of the same strengths and sensibilities as that excellent building, and it is the most promising monument to loom on the memorial scene—admittedly overcrowded in Washington—in quite a while.

NEAT TRICK

The Breuer-Beckhard scheme is a thoughtful, contemporary, creative solution that honors the man it commemorates at a representative level of today's esthetic achievement, without doing violence to the classical Washington image. That is a neat trick, and an admirable one, involving a kind of talent and artistic intelligence too seldom seen or understood in the nation's capital.

The $4-million proposal consists of seven wing-like, rough granite walls arranged concentrically, like slanted spokes, around a polished granite cube, on which there would be a Roosevelt likeness.

The slightly canted, triangular walls, 60 feet high on their tallest side, slope gently to earth, and are flanked by slender pools. Where the radial walls focus on the central cube, an open plaza is formed. Set on a granite base, the memorial is penetrated irregularly by parks and trees, without rigid demarcation. Benches will be set within magnolia and cherry groves; columnar beeches will line the approach.

With the approach, the memorial will take up 5.8 acres of the narrow, water-surrounded peninsula of the 66-acre West Potomac Park. It is almost equidistant from the Lincoln, Jefferson and Washington monuments, which measures 141 feet, 129 feet and 598 feet high respectively, above sea level, as opposed to the 73 feet above sea level projected for the Roosevelt design.

The granite cube, raised slightly above ground, will have a picture of Roosevelt on the west, or entrance side. This will not be the conventional memorial portrait. It will be one of the many expressive photographs made during his lifetime, transferred to stone by a new method developed experimentally by the architects and the stonecutting industry. The texture of half-tone engraving—a screen of dots of varying size and density that reproduces the image in printed media—will be cut or sandblasted into the granite surface.

At the large scale that this is planned, the portrait will focus at about 20 feet; short of that distance it will be a pattern of abstract, incised cuts. Beyond that, it will read as an image of Roosevelt as the 20th century knew and recorded him, raised to the level of monumental sculpture through 20th-century techniques.

To this representation will be added another 20th-century technological device, voice reproduction, with excerpts from Roosevelt's speeches at normal voice level audible only in a limited central area near the picture, interspersed with periods of silence. Thus the traditional dignity of simple, monumental forms in stone—the most moving and effective architectural tribute to great men—is combined with contemporary portraiture in voice and image.

Curiously, or rather, not curiously at all, this design has quite a bit in common with the rejected prizewinner. (That ill-fated scheme was the work of Pedersen, Tilney, Hoberman, Wasserman and Beer. With some reservations, Breuer thought their solution good.)

Both approaches have emphasized an enclosing arrangement of severely monumental, free-standing walls; both have stressed a multidimensional, processional experience of the visitor through planes and spaces. A very large percentage of the 574 competition entries five years ago dealt in similar forms and values. Examination of the few postwar memorials of impact and quality show a parrallel reliance on abstract, slablike elements.

This is, of course, the authentic sculptural and architectural vision of our time, and only the genuine expression of this vision will produce a genuine monument. There will undoubtedly be critics of this design who would prefer some version of the exhausted Greek peristyle cum cotton clouds and personified virtues in low relief with the inflated superstatue that has always been the front runner in the Washington galloping graveyard sweepstakes.

The though of still another of those soporific substitutes for nobility invokes nothing but esthetic and emotional ennui. Familiarity may breed comfortably somnolent sensations of patriotic piety, but it says little for the creative character or claims to glory of our times, talents, or statemen. A monument stands for its age, as well as for a man. Those with the criteria to judge will question the greatness of both if the expressive medium of immortalization is mediocrity.

END OF THE LINE

Beyond the conceptual similarities of the two designs, there are significant differences that tip the scale in Breuer's favor. The giant slabs of the original scheme had a strong vertical emphasis, and their height was reduced from a towering 167 feet to 130 feet in response to worried protest that the neighboring monuments would be overpowered. The slabs were to be made of concrete aggregate, an excellent new material, but one for which we are only beginning to observe the weathering process.

The present design is horizontal in feeling and its height is roughly half that of the first proposal. It is secure in the beauty and permanence of its granite masonry. It is also obvious that it is the end of the line. Washington is in no desperate need of memorials, but it is monumentally short of the architectural and esthetic contributions of this extraordinarily creative century. The Roosevelt Commission can either build this one or forget it, for it is unlikely that a more appropriate version will come along.

The 48th Anniversary of Latvian Independence

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. DINGELL. Mr. Speaker, it is a matter of great sadness to me that for dacades now the peoples of Latvia, Estonia, and Lithuania, along with the peoples of several other nations, have been forced to live under Communist totalitarianism.

Since taking over Latvia, Estonia, and Lithuania in an infamous deal with Hitler's Nazi regime, the Soviet Union has attempted to stamp out the spirit of liberty which lives in the hearts and minds of the peoples of these three countries. But this effort has been to no avail. Latvians, Estonians, and Lithuanians retain their strong desires for freedom. Unfortunately, we in this country have not been able to remove them from their captive status. However, we must continue to help these people in any way possible.

It is with this in mind that the American-Latvians of Metropolitan Detroit met to commemorate the 48th anniversary of the independence of the Republic of Latvia and adopted on November 13, 1966, the following statement which, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD:

STATEMENT

The American-Latvians of Metropolitan Detroit, assembled at the Detroit Institute of Arts, 5200 Woodward Avenue, Detroit, Michigan on the 13th Day of November, 1966, to commemorate the 48th Anniversary of the Independence of the Republic of Latvia, unanimously agreed to issue the following statement:

"1. As we pause today to observe the 48th Anniversary of the Republic of Latvia, we again thank the United States Government for refusing to recognize the forcible seizure by the Soviet Union of the Baltic States of Latvia, Estonia and Lithuania and we urge that this policy be continued.

"2. We urge the President of the United States to direct the attention to the United Nations and to other international forums, to the denial of the rights of self-determination for the peoples of Latvia, Estonia and Lithuania, and bring the force of world opinion to bear the restoration of these rights to the Baltic peoples.

"3. We urge the United States Congress to establish a permanent House Committee on the Captive Nations.

"4. We oppose the ratification of the treaty with the Soviet Union to establish Consulates in the United States. Past experience shows these offices are nothing but centers of subversion. If the treaty is ratified, undoubtly the Soviet Union will endeavor to interpret it as American recognition of the Soviet seizure of the Baltic States.

"5. We deplore the continuation of the Soviet occupation and attempted russification of Latvia by the Soviets. This continuing crime is poisoning international life and world order cannot be built on violence and crime. It should be based on justice. Otherwise, the world would succumb to a rule of violence and a colonial system, as practised by the Soviet Union.

"6. Being aware that Latvia and other oppressed nations on our globe are looking upon the United States of America as the country chosen by God to become the champion and guardian of freedom in the world, and bearing in mind that appeasement never brings permanent and lasting peace, we fully support our Government's firm stand against Communist aggression throughout the world.

"7. We urge that the Voice of America broadcasts in Latvian, Estonian and Lithuanian be increased. These broadcasts carry the message of hope to the Baltic peoples and provide them with proof that they are not forgotten by the Free World. For the same purpose we urge the broadcasts in Latvian, Estonian and Lithuanian by the Radio Free Europe, as proposed by the Governor of State of Michigan George W. Romney, June 18th 1966.

"8. We thank the United States Senate for passing H. Con. Res. 416 which asks that the force of world opinion be mobilized to the restoration of the right to self-determination and national independence for the Baltic States.

"9. This statement be forwarded to the President of the United States, Vice-president of the United States, Secretary of State, the United States delegation to the United Nations, Senators and Congressmen from Michigan, Governor of the State of Michigan, Mayor of the City of Detroit and United States Information Agency."

Done in Detroit, Michigan this 13th Day of November, A.D. 1966.

Benjamin Franklin, 1706–90

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. FARBSTEIN. Mr. Speaker, it gives me great pleasure to extend my remarks with an editorial written by the late Harry H. Schlacht for the East Side News, a local publication with wide distribution throughout the 19th Congressional District of New York.

Mr. Schlacht's article, commemorating the birthday of Benjamin Franklin, describes in most moving terms the life of this great American.

Benjamin Franklin possessed character, vigor, humility, and most importantly, a love of life.

An account of his achievements, such as this one, can serve as an inspiration to us all. I am certain my colleagues will find it so:

BENJAMIN FRANKLIN—1706–90

(By the late Harry H. Schlacht)

The life story of Benjamin Franklin is one of America's treasures. It has also become one of the world's treasures, for he has been immortalized in prose and poetry for the things he stood and believed in during the birth of our nation. Mention of his name evokes the most pleasant recollections, for he symbolizes the glory of our past.

Ben Franklin, who was born in Boston on January 17, 1706, settled in Philadelphia where he spent the greater part of his life. He founded his own newspaper, "The Philadelphia Gazette," and later published his "Poor Richard's Almanac." Later, his inventions in electricity and optics earned for him a great reputation throughout the world. Subsequently, he founded the University of Pennsylvania.

He was one of the founders of the American Commonwealth, the incarnation of our Democracy, the master builder. He stands second only to Washington in the list of heroic personalities. He was a member of the Continental Congress, who signed the Declaration of Independence and the Constitution of the United States. To have been so privileged to sign these historic documents assures his perpetuity among the champions of human liberty.

No man ever lived a more virile life in his day and generation. He rose from humblest surroundings, and owed hardly anything to parentage or patronage. He enjoyed no advantage of early education, but he lived to stand before kings and died to bequeath a name crowned with the august halo of immortality. Well may it be said that he never wasted time nor time ever wasted him.

Franklin and Lincoln are the two Americans who typify the American character. Both were alike in their personalities—qualities of good humor, genial friendship, thought, simplicity of ideas, and unwearying industry.

The lessons of honesty, temperance and economy which Franklin inculcated and practiced with such brilliant success in his own person have been of priceless value to civilization. The world was his school, and necessity was his teacher.

Ben Franklin enlarged the boundaries of human knowledge by discovering laws and facts of nature, and applying them to the service of mankind. His writings have been translated into many languages, and they are still the "best sellers" after two centuries.

How glorious a legacy to the youth of America is the history of his abiding patriotism, his faith and his self sacrifice.

Let the young and the old read his writings and refresh their minds with the recollections of his fine maxims and virtuous deeds. We may not achieve his greatness, but we may strive to emulate his example.

Let us behold his calm and gentle face, never clouded by anger, or wrinkled by ill humor, but which beamed with a love for his fellow man. He was never dazzled by elevation, nor debauched by flattery. Neither was he ever soured by disappointment, or corrupted by ambition. He knew how to stand humbly and serenely on the lowest level of obscurity and on the loftiest pinnacle of fame. He won his place in the front ranks of the world's scientists, diplomats, statesmen, men of affairs and men of letters.

Shortly after George Washington took office as the first President of the United States, Franklin "wrapped the drapery of his couch about him and lay down to pleasant dreams." Like Moses, he could see the "Promised Land" from afar, but could not enter. It was on the 17th of April, 1790, that his sun sank in the horizon, to rise again in a purer sphere, in the vigor and beauty of eternal youth. His spirit abides in libraries, universities, and is ever associated with the printing press, the newspaper, the postoffice, and savings institutions.

It may be said of him, as was said of Shakespeare, that Franklin was a "myriad-minded man.'

In diplomacy, he was a Talleyrand; in invention, a forerunner of Edison; in physical science, a Newton; in philosophy, an Erasmus; in satire, a Swift; in style, an Addison; and in power of narration, a Defoe.

The statue of Benjamin Franklin in front of the Philadelphia Postoffice bears the following inscription written by George Washington:

"Benjamin Franklin, 1706–1790,
Venerated for Benevolence,
Admired for Talents,
Esteemed for Patriotism,
Beloved for Philanthropy."

What an inspiring privilege it would be for the youth of America to reflect on the life and achievements of Ben Franklin. May his ideals continue to disseminate throughout the land, and may his spirit protect us from oppression and preserve inviolate our freedoms, and the glories of our Republic.

Ethics in the U.S. Congress

EXTENSION OF REMARKS

OF

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TENZER. Mr. Speaker, I have today introduced a bill to establish a permanent Joint Committee on Ethics for the guidance of Members and employees of the legislative branch.

On February 4, 1966, I addressed the New York University Alumni of the New York State Bar Association on the subject of ethics in the U.S. Congress. At that time I described the difficulties which I had in obtaining guidance and advice in connection with separating myself from business activities upon my election to the House of Representatives. I was astonished to learn that there was no one to whom I could turn for official guidance. There were no clear rules for the proper conduct of a Member nor was there a readily available definition of "conflict of interest."

On March 29, 1966, I introduced H.R. 14091 to establish a Joint Committee on Ethics. It is that legislation which I have sponsored again today.

Recent events at the opening session of the 90th Congress point up the need for a meaningful ethics bill, one which would eliminate any accusation of a "double standard" in the present wholly inadequate procedures of the House of Representatives. There should not be a double standard of ethics among Members of Congress. I would expect any Member who has evidence that the U.S. Government has been bilked by a citizen, be he a private citizen or a holder of public office, to present such evidence to the appropriate authority. And if it involved a Member of Congress to which committee would such a complaint be referred? At the moment there is no such committee which points up the need.

The bill which I have introduced today differs from most ethics bills previously introduced in thre major respects:

First, the joint committee, composed of seven Senators and seven House Members, would be permanent, not merely an interim committee authorized to draft a proposed code of ethics and then cease to function. The committee would continue for the purpose of investigating complaints, recommending changes in the code of ethics, and acting as an advisory body to Members and employees of the legislative branch.

Second, the bill requires the disclosure of any and all financial interests—direct or indirect—in activities under the jurisdiction of a regulatory agency. Most other bills on this subject require only the reporting of financial interests in excess of a given figure such as $10,000.

Third, the bill establishes a guidance and advisory opinion procedure by authorizing the joint committee to render advisory opinions on possible conflicts of interest or a future course of conduct contemplated by a Member of Congress. The opinions would be rendered without identifying the parties involved and would serve to establish precedents for the guidance of all Members. This practice is followed by our bar associations and has proved invaluable to members of the legal profession.

The committee would be expected to research and compile all precedents since the first Congress and to review, revise and supplement these precedents and to write a new set of rules and regulations for the conduct of congressional offices and for the conduct of Members of Congress.

I urge my colleagues in the House to support and actively work for an ethics bill which will remove the cloud which has been cast over this distinguished Chamber. We have a constitutional responsibility to police ourselves and we have a moral responsibility to set an example for the American public. There are only 537 elected Federal officials and every one must follow a course of conduct which is beyond reproach.

The time is right to follow the course set forth in Lamentations 3:40: "Let us examine our ways and search them." If we act now the public will have its confidence renewed in the activties of their Representatives in the U.S. Congress.

Vietnam: Suffer the Little Children—II

EXTENSION OF REMARKS
OF

HON. WILLIAM F. RYAN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. RYAN. Mr. Speaker, I have inserted part I of Martha Gellhorn's article concerning the plight of the children of Vietnam. The article appeared in the January 1967, edition of the Ladies' Home Journal. I believe that it is a most moving and important article which must be of concern to all of us. Therefore, I bring part II of this article to the attention of my colleagues:

[From the Ladies' Home Journal, January 1967]

VIETNAM: SUFFER THE LITTLE CHILDREN—PART II

(By Martha Gellhorn)

Each of the 43 provinces in South Vietnam has a free hospital for civilians, built long ago by the French when they ruled the country. The hospitals might have been adequate in peacetime; now they are all desperately overcrowded. The wounded lie on bare board beds, frequently two to a bed, on stretchers, in the corridors, anywhere. Three hundred major operations a month were the regular quota in the hospitals I saw; they were typical hospitals. Sometimes food is supplied for the patients; sometimes one meal; sometimes none. Their relatives, often by now homeless, must provide everything from the little cushion that eases pain to a change of tattered clothing. They nurse and cook and do the laundry and at night sleep on the floor beside their own wounded. The hospitals are littered with rubbish; there is no money to spend on keeping civilian hospitals clean. Yet the people who reach these dreadful places are fortunate; they did not die on the way.

In the children's ward of the Qui Nhon provincial hospital I saw for the first time what napalm does. A child of seven, the size of our four-year-olds, lay in the cot by the door. Napalm had burned his face and back and one hand. The burned skin looked like swollen, raw meat; the fingers of his hand were stretched out, burned rigid. A scrap of cheesecloth covered him, for weight is intolerable, but so is air. His grandfather, an emaciated old man half blind with cataract, was tending the child. A week ago, napalm bombs were dropped on their hamlet. The old man carried his grandson to the nearest town; from there they were flown by helicopter to the hospital. All week, the little boy cried with pain, but now he was better. He had stopped crying. He was only twisting his body, as if trying to dodge his incomprehensible torture.

Farther down the ward, another child, also seven years old, moaned like a mourning dove; he was still crying. He had been burned by napalm, too, in the same village. His mother stood over his cot, fanning the little body, in a helpless effort to cool that wet, red skin. Whatever she said, in Vietnamese, I did not understand, but her eyes and her voice revealed how gladly she would have taken for herself the child's suffering.

My interpreter questioned the old man, who said that many had been killed by the fire and many more burned, as well as their houses and orchards and livestock and the few possessions they had worked all their lives to collect. Destitute, homeless, sick with weariness and despair, he watched every move of the small, racked body of his grandson. Viet Cong guerrillas had passed through their hamlet in April the old man said, but were long since gone. Late in August, napalm bombs fell from the sky.

Napalm is jellied gasoline, contained in bombs about six feet long. The bomb, exploding on contact, hurls out gobs of this flaming stuff, and fierce fire consumes everything in its path. We alone possess and freely use this weapon in South Vietnam. Burns are dealy in relation to their depth and extent. If upwards of 30 percent of the entire thickness of the skin is burned, the victim will die within 24 to 48 hours, unless he receives skilled constant care. Tetanus and other infections are a longtime danger, until the big, open-wound surface has healed. Since transport for civilian wounded is pure chance and since the hospitals have neither staff nor facilities for special burn treatment, we can assume that the children who survive napalm and live to show the scars are those who were least burned and lucky enough to reach a hospital in time.

Children are killed or wounded by napalm because of the nature of the bombings. Close air support for infantry in combat zones is one thing. The day and night bombing of hamlets, filled with women, children and the old, is another. Bombs are mass destroyers. The military targets among the peasants—the Viet Cong—are small, fast-moving individuals. Bombs cannot identify them. Impartially, they mangle children, who are numerous, and guerrilla fighters, who are few. The use of fire and steel on South Vietnamese hamlets, because Viet Cong are reported to be in them (and often are not) can sometimes be like destroying your friend's home and family because you have heard there is a snake in the cellar.

South Vietnam is somewhat smaller than the state of Missouri. The disaster now sweeping over its people is so enormous that no single person has seen it all. But everyone in South Vietnam, native and foreign, including American soldiers, knows something of the harm done to Vietnamese peasants who never harmed us. We cannot all cross the Pacific to judge for ourselves what most affects our present and future, and America's honor in the world; but we can listen to eyewitnesses. Here is testimony from a few private citizens like you and me.

An American surgeon, who worked in the provincial hospital at Danang, a northern town now swollen with refugees and the personnel of an American portbase: "The children over there are undernourished, poorly clothed, poorly housed and being hit every day by weapons that should have been aimed at somebody else. . . .

Many children died from war injuries because there was nobody around to take care of them. Many died of terrible burns. Many of shell fragments." Since the young men are all drafted in the Vietnam Ariny or are part of the Viet Cong, "when a village is bombed, you get an abnormal picture of civilian casualties. If you were to bomb New York, you'd hit a lot of men, women and children, but in Vietnam you hit women and children almost exclusively, and a few old men. . . . The United States is grossly careless. It bombs villages, shoots up civilians for no recognizable military objective, and it's terrible."

An American photographer flew on a night mission in a "dragon ship"—an armed DC–3 plane—when Viet Cong were attacking a fortified government post in the southern Delta. The post was right next to a hamlet; 1,400 is the usual number of peasants in a hamlet. The dragon ship's three guns poured out 18,000 bullets a minute. This photographer said: "When you shoot so many thousand rounds of ammo, you know you're gonna hit somebody with that stuff . . . you're hitting anybody when you shoot that way . . . a one-second burst puts down enough lead to cover a football field. . . . I was there in the hospital for many days and nights. . . . One night there were so many wounded I couldn't even walk across the room because they were so thick on the floor. . . . The main wounds came from bombs and bullets and indiscriminate machine-gunning."

A housewife from New Jersey, the mother of six, had adopted three Vietnamese children under the Foster Parents Plan, and visited South Vietnam to learn how Vietnamese children were living. Why? "I am a Christian. . . . These kids don't ask to come into the world—and what a world we give them. . . . Before I went to Saigon, I had heard and read that napalm melts the flesh, and I thought that's nonsense, because I can put a roast in the oven and the fat will melt but the meat stays there. Well, I went and saw these children burned by napalm, and it is absolutely true. The chemical reaction of this napalm does melt the flesh, and the flesh runs right down their faces onto their chests and it sits there and it grows there. . . . These children can't turn their heads, they were so thick with flesh. . . . And when gangrene sets in, they cut off their hands or fingers or their feet; the only thing they cannot cut off is their head. . . ."

An American physician, now serving as a health adviser to the Vietnamese Government: "The great problem in Vietnam is the shortage of doctors and the lack of minimum medical facilities. . . . We figure that there is about one Vietnamese doctor per 100,000 population, and in the Delta this figure goes up to one per 140,000. In the U.S., we think we have a doctor shortage with a ratio of one doctor to 685 persons."

The Vietnamese director of a southern provincial hospital: "We have had staffing problems because of the draft. We have a military hospital next door with 500 beds and 12 doctors. Some of them have nothing to do right now, while we in the civilian hospital need all the doctors we can get." (Compared to civilian hospitals, the military hospitals in Vietnam are havens of order and comfort. Those I saw in central Vietnam were nearly empty, wasting the invaluable time of frustrated doctors.) "We need better facilities to get people to the hospital. American wounded are treated within a matter of minutes or hours. With civilian casualties it is sometimes a matter of days—if at all. Patients come here by cart, bus, taxi, cycle, sampan, or perhaps on their relatives' backs. The longer it takes to get here, the more danger the patient will die."

There is no shortage of bureaucrats in South Vietnam, both Vietnamese and American. The U.S. Agency for International Development (A.I.D.) alone accounts for 922 of them. In the last 10 years, around a billion dollars have been allotted as direct aid to the people of South Vietnam. The results of all this bureaucracy and all this money are not impressive though one is grateful that part of the money has bought moderen surgical equipment for the civilian hospitals. But South Vietnam is gripped in a lunatic nightmare; the same official hand (white) that seeks to heal wounds inflicts more wounds. Civilian casualties far outweigh military casualties.

Foreign doctors and nurses who work as surgical teams in some provincial hospitals merit warm praise and admiration. So does anyone who serves these tormented people with compassion. Many foreign charitable organizations try to lighten imsery. I mention only two because they concentrate on children. Both are volunteer organizations.

Terre des Hommes, a respected Swiss group, uses three different approaches to rescue Vietnamese children from the cruelties of this war: by sending sick and wounded children to Holland, Britain, France and Italy for long-term surgical and medical treatment; by arranging for the adoption of orphans; and by helping to support a children's hospital in Vietnam—220 beds for 660 children. This hospital might better be called an emergency medical center, since its sole purpose is to save children immediately from shock, infection and other traumas.

In England, the Oxford Committee for Famine Relief (OXFAM) has merged all its previous first-aid efforts into one: an OXFAM representative, a trained English nurse, is in Vietnam with the sole mission of channeling money, medicine, food, clothing and eventually toys (an unknown luxury) to the thousands of children in 10 Saigon orphanages.

Everything is needed for the wounded children of Vietnam, but everything cannot possibly be provided there. I believe that the least we can do—as citizens of Western Europe have done before us—is to bring badly burned children here. These children require months, perhaps years, of superior medical and surgical care in clean hospitals.

Here in America there are hopeful signs of alliance between various groups who feel a grave responsibility for wounded Vietnamese children. The U.S. branch of Terre des Hommes and a physicians' group called The Committee of Responsibility for Treatment in the U.S. of War-Burned Vietnamese Children are planning ways and means of caring for some of these hurt children in the United States. Three hundred doctors have offered their skills to repair what napalm and high explosives have ruined. American hospitals have promised free beds, American families are eager to share their homes during the children's convalescence, money has been pledged. U.S. military planes, which daily transport our young men to South Vietnam, could carry wounded Vietnamese children back to America—and a chance of recovery.

The American Government is curiously unresponsive to such proposals. A State Department spokesman explains the official U.S. position this way: "Let's say we evacuate 50 children to Europe or the United States. We do not question that they would receive a higher degree of medical care, but it would really not make that much difference. On the other hand, the money spent getting those 50 children out could be better used to help 1,500 similarly wounded children in Vietnam. It seems more practical to put our energies and wherewithal into treating them on the scene in Vietnam." The spokesman did not explain why we have not made more "energies and wherewithal" available to treat the wounded children, whether here or in Vietnam. Officially, it is said that children can best be cured in their familiar home environment. True; except when the home environment has been destroyed and there is no place or personnel to do the curing.

We cannot give back life to the dead Vietnamese children. But we cannot fail to help the wounded children as we would help our own. More and more dead and wounded children will cry out to the conscience of the world unless we heal the children who survive the wounds. Someday our children, whom we love, may blame us for dishonoring America because we did not care enough about children 10,000 miles away.

Loye W. Miller Retires as Editor of the Knoxville News-Sentinel

EXTENSION OF REMARKS

OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. QUILLEN. Mr. Speaker, recently Mr. Loye W. Miller announced his retirement as editor of the Knoxville, Tenn., News-Sentinel, and I want to take this opportunity to congratulate him on his outstanding career in the newspaper field and to wish him good health and much happiness in the years ahead.

Mr. Miller and I have been friends for many years. I admire his steadfast commitments to report the facts and the dedication that he has brought to his endeavors in the news profession and to the many civic and governmental activities in which he has interested himself throughout the years.

East Tennessee and the whole region have benefited greatly from Mr. Miller's efforts, and I am sure that our area will continue to benefit from his past and his future undertakings.

Many of you know his sons, Mike and Loye, Jr., who have followed in their father's footsteps. Mike was formerly the Capitol Hill correspondent for the Knoxville News-Sentinel and the Memphis Press-Scimitar. He is now the Scripps-Howard correspondent covering the Pentagon. Presently he is on special assignment in Vietnam.

When I came to Washington in 1963, Loye, Jr., was on the Washington staff of Time magazine. He is now the manager of Time's Chicago bureau.

I know Mr. Miller is as proud of his sons' success as they are of his—and I am proud of the great success of both father and sons.

One of the many fine editorials which appeared in the newspapers in my district praising Mr. Miller is from the Newport, Tenn., Plain Talk, and under unanimous consent I include it at this point in the RECORD:

LOYE W. MILLER

After more than forty years of distinguished service, the past twenty-five years as editor, the Knoxville News Sentinel's Loye W. Miller has announced his retirement.

Under the leadership of Mr. Miller, The Sentinel has more than doubled in circulation and become one of the South's outstanding newspapers.

The influence of Loye Miller has been felt, not only in Knox County and East Tennessee, but throughout the state and at times the nation. As president of the Tennessee Press Association and also as a key committee chairman, he has spearheaded many a project in that organization. One of his major achievements is the election law reform that resulted from the hard work of the TPA committee which he headed in 1951. He played an important part on the GETS Committee and has worked tirelessly on many a public service project.

The Knoxville Sentinel editor has added distinction to his profession by his dedication and determination to fight for those causes in which he believed.

Although he is retiring as editor of the Knoxville News Sentinel, he may well find a greater demand for his talents than ever before in the further development of his chosen profession and in serving his community and state.

Secrecy in Government

EXTENSION OF REMARKS

OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. RUMSFELD. Mr. Speaker, despite continuing criticisms of the accuracy of information emanating from the White House on matters affecting national security and the welfare of the people, there has been no narrowing of the credibility gap.

At the convening of the 90th Congress, doubts and confusion remain. The Wall Street Journal of December 7, 1966, carried an excellent analysis by Mr. Alan L. Otten of the drawbacks and pitfalls of secrecy in government. And Mr. William J. Eaton of the Chicago Daily News, in a recent article, discusses a case in point, the lack of information about defense spending.

Mr. Otten's and Mr. Eaton's articles follow:

[From the Wall Street Journal, Dec. 7, 1966]

TIGHT-LIPPED TOWN

(By Alan L. Otten)

WASHINGTON.—"Why let the President box you in this way?"

The questioner was a new foreign service officer, one of a group being addressed by a long-time capital correspondent on the role of the press in Lyndon Johnson's Washington.

There were all these reports, the young State Department man observed, that Mr. Johnson wouldn't name a man to a top Government job if the news leaked out in advance, and as a result there had been very few stories recently predicting forthcoming appointments.

Why do the reporters hold back? he wanted to know. Shouldn't they go ahead and print the names as soon as they find out, and leave it to Mr. Johnson to decide whether to go ahead with the appointments or squash them?

There was only one flaw in this, the reporter replied: The supposed reason for the lack of advance stories. The press is still printing the news of prospective appointments whenever it finds them out, he said—but the press simply doesn't find them out much any more.

And that, the reporter concluded, is typical of Washington today: An exceedingly tight-lipped town, where comparatively little finds its way onto television screens and into print except what and when Lyndon Johnson wants.

Solid advance stories about Presidential plans—not merely prospective appointments but legislative proposals, political maneuvers, foreign policy initiatives—are increasingly rare. There's always the deliberate official leak; speculation about how high the next budget might be, reports of determination to hold back wheat shipments until India reforms its agriculture policy. But there have been very few good inside stories lately that the President hasn't wanted out.

Presidential news conferences have been exercises in non-news—a few tidbits he wants to publicize, some self-serving defense of previous actions and large doses of evasion and filibuster. From the White House press office comes a stream of routine that suits the Administration purpose, and great resistance to uncovering anything more. For weeks White House officials denied that any task force was studying new approaches to strikes that damage the national interest; finally, reluctantly, the existence of the task force was admitted when reporters dispalyed considerable knowledge about it, knowledge obtained largely from non-Government members.

Secrecy is, of course, a press complaint in every Administration. Criticism of the Johnson Administration reached floodtide in the spring of 1965, then seemed to subside when the very capable Bill Moyers first took over the Presidential press job that July. But for the past year or so the situation has been deteriorating again, and spreading, as LBJ appointees take over more top jobs and as word whisks through the bureaucracy about Presidential fury over loose talk.

Well-publicized reports of FBI probes of news leaks, of pointed White House inquiries as to which lower-echelon official talked to particular reporters, of Presidential threats to veto policies prematurely discused in the press—these have dampened officials' readiness for even the most casual press contacts. Old friends in Government suggest reporters call them at home rather than at the office, where their incoming calls are logged; they may not be about to say much anyhow, but this way they're not even suspect.

Reporters are told that information is not available, that officials are too busy to talk, that everything about a certain matter must come from the White House which in turn may say the information is available only at the agencies, putting the reporters on a squirrel run.

The President clearly believes this secrecy serves his interest best. He is spared advance pressure to appoint someone else or adopt some other solution, retains his preorgative to change his mind. He can announce his decision at the most favorable time, in the most favorable light. The suspense may provide an extra push to put his decision across to the public.

But is Mr. Johnson right—or might not his interest be better served by a more liberal flow of news?

Some advance word of contemplated actions and appointments might evoke constructive criticisms and alternatives from academicians and other experts, even from the general public. Now all this is accomplished within a small interagency committee or White House task force; the President's policies emerge in speeches and messages to Congress as holy writ, to be defended stubbornly against criticism and change.

There might be substantial benefits for the President, too, in the backing received from a public participating more fully in the preparation of a policy, rather than being asked only to rally round after the course has been decided upon and officially unveiled. How much stronger the popular support for the Vietnam war might be if the Administration had been more open from the start.

The secrecy syndrome has other drawbacks for the President. It deprives him of a valuable channel for communicating with the sprawling Federal bureaucracy for many Government officials below the topmost layers, the press provides the first news of changes in policy; an early report of Presidential intentions could help line up bureaucrats' support or spotlight likely internal opposition.

Secrecy aggravates the President's problem of finding and holding good men. No one is happy in a job where he feels someone higher up is looking over his shoulder every time he talks to a reporter. The news lid, too, often robs projects of the sense of excitement and importance that top-notch people want to feel about their work.

Lyndon Johnson invests huge amounts of time watching TV and reading the papers, talking privately and publicly to reporters and columnists, worrying about his press relations and public image. Yet press relations are worse than ever and the public image is bad. Maybe it's time to allow a little fuller disclosure of news—not only at the White House but all through the Government. Certainly it's a possibility the President has never tried.

[From the Chicago Daily News]

IS L.B.J. AFRAID TO TELL SIZE OF MILITARY BUDGET?

(By William J. Eaton)

WASHINGTON.—President Johnson is opening a new budget-taxation credibility gap by his unwarranted secrecy about defense spending—past, present and future.

Economists inside and outside the federal government are finding that military spending totals are harder to obtain than ever in history. Even members of the Cabinet are reported to be in the dark.

(The Texas White House apparently released some budget figures this week but refused to allow direct quotation.)

This means no one can debate very intelligently the merits of an increase in federal taxes since the Pentagon's outlays now add up to more than half of all U.S. spending.

"The plain unvarnished truth is that nobody can evaluate this situation because he lacks information about defense spending," said one Washington economist.

This is especially remarkable because Defense Sec. Robert S. McNamara is supposed to have mastered the military through a cost-accounting approach.

The President has been making one excuse after another, at least since April, for putting off his tax increase decision.

But he has known for many months that he would need billions more to pay for the sky-rocketing costs of the war in Viet Nam and related military programs. Congressional leaders were talking last October about a possible $12-billion request to pay the Pentagon's bills through June 30.

Mr. Johnson's budget message last January, incredibly, forecast a leveling off of military costs in the second half of this year and assumed the fighting in Viet Nam would be over by mid-1967.

Surely at the start of December the Chief Executive must know that optimistic prediction will not come true. It is also fair to assume that the Pentagon planners know pretty well what they will require to carry on the war during the next seven months. Yet the President insists the Joint Chiefs of Staff are still working on the figures and will not finish before early January.

So the credibility gap widens. Is the situation so much worse than the public has been led to believe that the President is putting off the bad news?

Most economists, including many in the higher levels of government, view a tax increase in 1967 as virtually unavoidable. They regard higher taxes as essential, if only to answer Federal Reserve Board pleas for an excuse to lower interest rates.

The President, however, is delaying any decision until he has "all of the facts." In the meantime, he is telling the country, keep guessing.

Harrison E. Salisbury Sums up—VII

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. RYAN. Mr. Speaker, in today's New York Times, the seventh in the series of Harrison E. Salisbury's summing up articles analyzes the meaning of the Soviet-Sino split to the North Vietnamese and to the Vietnam situation in general. I recommend that all who are interested in the tragic conflict in Vietnam read the following article:

[From the New York Times, Jan. 17, 1967]

SOVIET-CHINA RIFT HURTING HANOI AID—BUT NORTH VIETNAM KEEPS CLOSE TIES WITH TWO ALLIES

(By Harrison E. Salisbury)

HONG KONG, January 11.—Nowhere are the tensions, conflicts and delicate sensibilities engendered by the clash of the Communist giants, China and the Soviet Union, more excruciatingly felt than in North Vietnam.

North Vientam's fighting ability is almost completely dependent upon the aid and support of both China and the Soviet Union. Thus, the conflict between these two nations, in effect, poses a threat to the virtual existence of the small Indochinese Communist state, to its ability to maintain the struggle against America's superior material power.

An East European diplomat who has deep affection for the North Vietnamese and the Hanoi leadership spoke sadly of the "wonderful days," now long gone, when "we were all comrades together." That was back in

1954, just after the Geneva agreements that ended the Indochina war and established North and South Vietnam.

"I wish you could have seen Hanoi then," he said. "The city was so lovely. Every building had been painted, the streets were spruced up and there were flowers everywhere.

It was not only physically that Hanoi was attractive in that time, the diplomat said. The atmosphere for a Communist was fresh and invigorating.

"Everything seemed possible then," he recalled.

"There was no hint of a split in the camp. Russia, China, all of us were working shoulder to shoulder to help Vietnam, to enable the Vietnamese people to create a Communist future."

Another man, also a Communist diplomat, but one of the contemporary generation, said seriously:

"I don't know how they do it, but the Vietnamese have managed so far to keep their relations with both Moscow and Peking. But, honestly, I don't think there is another man in the world who could have accomplished it. I give full credit to Premier Pham Van Dong. He is a miracle of tact and he has had to be."

Both the Soviet Union and China are vital to North Vietnam's defense effort. Both provide supplies, arms and material without which North Vietnam would be hard pressed to stay in the war. Without such aid, Hanoi and its allies in the South, the National Liberation Front would be compelled to revert to small-scale guerrilla actions.

They would have to take cover in the mountains and jungles and dig in for the long 20-year pull that President Ho Chi Minh and the other leaders have warned may be necessary.

TWO ROUTES FOR SUPPLIES

There are two routes by which supplies from the Soviet Union and China and from other Communist states reach North Vietnam. The first is the railroad from China, which can be supplemented by truck deliveries. The second is the shipping route to Haiphong.

North Vietnam receives not only Communist aid through Haiphong. It is through this port that the country maintains small-scale trade with some Asian states, mostly in food products and consumer goods. This traffic is handled in ships of a number of flags in addition to Communist shipping. The United States has blacklisted shipping lines for engaging in the traffic, but it continues.

The Chinese said in late December that they were providing 70 percent of the aid Hanoi was receiving. The Russians have not indicated what percentage they are supplying.

Foreign diplomats in Hanoi believe that China is the main supplier of foodstuffs, particularly rice. North Vietnam has been running a deficit in rice in the last two or three years, largely because of the war. Much manpower has been diverted from the paddies. And this past year was a poor year for a number of rice-producing countries, inculding parts of Indochina.

It is believed that the North Vietnamese may be dependent on China for as much as 600,000 or 800,000 tons of rice in 1967 because of a shortfall in the domestic crop.

Rice and similar bulk commodities are delivered by the land routes from China. It is probable that the North Vietnamese receive much of the rail replacement and angle irons and other repair materials for their rail system from the Chinese by rail and truck.

In addition to materials that originate in China, the North Vietnamese have been obtaining across Siberia and through the Chinese rail network a substantial part of the goods, including heavy armaments, coming from the Soviet Union and other countries of Eastern Europe.

As the Chinese-Soviet split worsened, the problems of maintaining these shipments across China steadily increased. As long ago as last spring the Chinese were pointedly suggesting to the Russians that they ship their military material by sea. The Russians countered that the Chinese had held up shipments, sometimes for weeks, sometimes for months. There were occasions, the Russians charged, when the Chinese did not permit the Soviet arms to cross China at all.

ARGUMENTS OVER TRAFFIC

The Chinese rejoined that the Russians were putting up a smokescreen, that they had in fact been dilatory or reluctant to send aid to Hanoi and that Peking was the main supporter of the North Vietnam regime.

Peking said that far from being a true friend of North Vietnam the Russians were conspiring with the United States against North Vietnam's interests.

The facts behind these charges and counter-charges have been obscured by the polemics of Moscow and Peking. But knowledgeable East Europeans in Hanoi concur that there is fire behind the smoke. They say that on some occasions the Chinese have refused to let Soviet supplies come in and have told North Vietnam that the Chinese will provide the needed item.

"Then months go by and they send nothing," an East European Communist said.

The French Communist secretary, Waldeck Rochet, charged at his party's congress that the Russians, unable to get speedy delivery of essential supplies via the Chinese rail network, had petitioned Peking for permission to set up a special airlift for delivering urgently needed items. Peking was said to have refused.

Asked about this specific charge, a North Vietnamese official observed: "When people are angry with one another, they don't always tell the truth."

There have been rumors that the Chinese removed from flat cars some of the advanced military equipment that Moscow was sending to Hanoi, specifically, unassembled MIG–21 fighters, radar equipment and ground-to-air missiles. This allegation was doubted in Hanoi. It was said that most major shipments of this kind of materiel are supposedly now coming in by sea at Haiphong.

OIL STORAGE DISPERSED

The Chinese are not able to provide such items to Hanoi. They do not produce them themselves. In the armaments line, the Chinese are thought to have provided ammunition, some artillery, rifles, machine guns and possibly mortars.

Oil supplies apparently come from the Soviet Union. At least the oil barrels strewn all over the North Vietnamese landscape seemed largely if not entirely of Soviet origin. These are big 50-gallon oil drums that presumably have replaced Haiphong and Hanoi oil storage facilities destroyed in United States air strikes. It would seem to be difficult to make a major dent in the oil storage facilities in the future since they have been dispersed in big steel drums over thousands of fields and roadsides.

CHINESE PRESENCE DOUBTED

There have been rumors in the West that the Chinese have provided labor battalions and construction crews to keep the North Vietnamese rail system functioning to the Chinese frontier. This correspondent can offer no direct evidence on that aspect of Chinese aid. No one in Hanoi, however, seemed able to confirm or deny the report. The general opinion among foreigners was that the North Vietnamese had mobilized ample labor resources of their own for this purpose.

It is generally agreed among foreigners in Hanoi that the North Vietnamese regime must have the continued support of both the Soviet Union and China to maintain its defense against the United States at the current level.

If the Chinese were to close their railroad to Soviet shipments entirely, it would be difficult to divert all the needed supplies to Haiphong. Neither shipping nor harbor facilities are readily available. Foreign visitors believe that Haiphong is already strained beyond capacity in attempting to handle the volume of freight pouring in.

It would be equally disastrous if the Chinese were to halt their own shipments, particularly foodstuffs. It would not be easy for Moscow to replace Peking as a supplier of rice, for instance.

THEORY OF "PEOPLE'S WAR"

Thus far Hanoi has managed to maintain working relations with both Moscow and Peking because of a variety of factors. Historically, President Ho Chi Minh has had close connections with the Soviet Communists. Among his earliest Communist experience was work with Moscow's Comintern, the Communist International, between the two world wars. His relations with the Moscow leadership have been warm.

At the same time, during much of his revolutionary career, he was actually based in China. He has equally close and long-standing ties with the Chinese party and at one time was a member of that party.

In ideology and political orientation, the North Vietnamese regime has always drawn on both Soviet and Chinese sources of inspiration. Its industry is set up largely on the Soviet model, its rural communes are much like those established by Mao Tse-tung in China.

Listening to North Vietnamese explain their theories of "people's war," a protracted popular struggle against an "imperialist" power like the United States, one hears echoes of the philosophy that underlies the essay of Lin Piao, Chinese Defense Minister, on the same subject. The psychology is much the same. But when asked about this relationship, the North Vietnamese will smile, say, yes, there are similarities, but each country has its own way of doing things.

RUSSIANS AND CHINESE

Because of the extended relationships that the North Vietnamese leaders have had with both the Soviet and the Chinese, they seem to have found it possible to a remarkable degree to keep their two great friends from coming to blows over the Vietnam aid issue.

Since Peking denounces any party or group that maintains speaking terms with Moscow, and since Moscow is almost as violent against any friends of Peking, has required skillful tightrope walking.

One technique that North Vietnam has employed is to deemphasize foreign aid in its internal propaganda. On wall bulletin boards there are no displays honoring the Soviet Union or China. There are group exhibits with pictures and displays from all Communist countries, arranged in aphabetical order.

There are important differences in the way the Russians and the Chinese conduct themselves in North Vietnam. The Russians are gregarious, attend receptions, have personal friends among the North Vietnamese and are prominent both because of their numbers and because of their presence in public places like hotels, restaurants, theaters and stores.

The Russians entertain much as diplomats do in any capital. They invite the French, the Canadians, the British, the Indians, anyone who happens to be in town, to their dinners and receptions.

The Hanoi diplomatic colony is small but active. The West is represented by the French, which maintain what is called a "delegation" headed by François de Quirielle, This is the largest Western establishment in

Hanoi, about the equivalent of a consulate general.

The British maintain a "resident" carefully spelled with a small "r" by the North Vietnamese. He is John Colvin and his calling cards bear the designation "Her Britannic Majesty's Consul General."

There is an Indian consul general and a number of Asian representatives, including those of Indonesia and Algeria.

In addition, there are missions of the three powers represented on the International Control Commission—India, Poland and Canada. The commission, established to supervise implementation of the 1954 Geneva accords on Indochina, occupies one of the largest office buildings in downtown Hanoi, on the shore of the Lake of the Recovered Sword. It is hardly more than one-tenth occupied, however, with the withering away of the commission's functions.

These Western and neutral diplomats mix freely with those of the East. The Russians go out socially with the representatives of the West. Soviet newsmen associate with both their North Vietnamese colleagues and with any foreign correspondents or visitors who chance into town.

CHINESE KEEP ALOOF

Not so the Chinese. They are aloof and withdrawn. They do not appear in public or, when they do, they hold themselves in tight little groups. For instance, one day the Foreign Ministry's press department arranged a trip for accredited newsmen to go out of Hanoi a few miles to visit the place where an American robot plane had been shot down.

Except for the Chinese, the correspondents rode out to the countryside in ordinary cars, Russian Volgas. The Chinese, five or six of them, rode together in an olive-drab command car. They walked stiffly over the fields to the downed drone, peered at it, took pictures, jotted down some notes, returned to their car, climbed in and went back to town, without a word to any of their colleagues.

The Chinese are said by East European Communists to be unhappy concerning many aspects of Hanoi's policies. They do not, for instance, approve of the relationship between the Liberation Front and the Hanoi regime. They do not believe in the programs of "neutrality" and "democracy" that are the official policy of the Front. They do not believe there should be any programmatic differences between North and South Vietnam and, particularly, they do not approve of what they regard as the "revisionist" or "deviationist" content of the Front's program.

One of the controversies between Moscow and Peking centers on the Chinese preoccupation with theories of permanent, or long-range, revolution, the "people's war" theory enunicated by Defene Minister Lin, which underlies part of Hanoi's propaganda concerning its struggle against the United States.

The Soviet Union has indicated that it is not enamoured of the "people's war" theory.

SPLIT AFFECTS THE WAR

Not a few diplomats believe that one of the factors that tend to keep the war in Vietnam locked in its present status with little or no progress toward negotiation or any diplomatic attempt to end the conflict is the vise that the conflicting positions of the Soviet Union and China have created for North Vietnam.

Thus far it has been possible by tact and diplomatic skill for Hanoi to keep both the big Communist powers at its side. But any move by North Vietnam either toward a conference table or toward any new status for the war would set in motion diplomatic groundswells both in Moscow and Peking that may wreck the delicate balance of Hanoi's relations with its allies.

The rise of centrifugal forces within China, the growing preoccupation of the Chinese with their own internal quarrel, Moscow's increasing concern over the possible explosive results of that quarrel further complicate the tasks of Hanoi's leadership.

So far the skill of President Ho Chi Minh, the diplomacy of Premier Dong, the talents of Gen. Vo Nguyen Giap, the Defense Minister, and possibly the special pro-Chinese alignment of Le Duan, the party secretary, have kept the skein of aid and alliance more or less intact. But the question in the minds of informed Hanoi observers is: How much longer can it go on? The answer, they believe, lies not in Hanoi but in Moscow and Peking.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective departments or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H–112, House wing, where orders will be received for subscriptions to the Record at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

The Senate Debates Debate

EXTENSION OF REMARKS

OF

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Norfolk, Va., Virginian-Pilot of January 17, entitled "The Senate Debates Debate."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SENATE DEBATES DEBATE

The issue underlying the Senate's antifilibuster fight is simply stated: Shall the will of a simple majority be permitted to prevail at all times on any question? The Senate, however, has not found the problem so simply resolved.

And thus, in the 90th Congress, as in all the others since 1953, the Senate is deeply embroiled in the struggle to alter Rule 22, which provides that unlimited debate can be shut off only by two-thirds approval of those present and voting.

The more significant of the proposed changes would permit 51 of the 100 Senators to invoke cloture after 20 days of debate. The other proposal is merely a compromise, reducing the required majority from two-thirds to three-fifths (67 to 60).

Pervading the current argument for change, as in the past, is the confusion of democratic decision with majority rule. To plead for the absoluteness of majority rule is to ignore the principle inherent in the Constitution of the limitation of *all* power, including that of majorities, and the resultant protection of minorities against coercion. Those who would destroy the power of a minority—often as a means to achieving the goals of another minority—should reflect on the Constitution's specific extension of the limitation of majority power in areas affecting the entire nation, by its two-thirds vote requirement on such matters as Constitutional amendments, overriding Presidential vetoes, and treaty approval.

That either of the two proposals before the Senate would expedite the flow of legislation is obvious. The desirability of it is less apparent. Senator Majority Leader Mike Mansfield's call for a review of legislation passed in recent years suggests that more careful consideration is a greater virtue than speed. That any good measures have been killed by filibusters is questionable; their delay often has had beneficial effects, such as providing adjustment time and prompting moderation in the civil rights field.

It is unfortunate that efforts to make it easier to shut off debate have been so closely associated in recent years with liberal causes. Majorities have an unsettling way of swinging from left to right. In the 1963 debates over Rule 22, Senator Daniel K. Inouye of Hawaii observed that those who would radically change the balance of power between the majority and minority "sow the wind, for . . . the time will surely come when you feel the hot breath of a righteous majority at the back of your own neck. Only then perhaps will you realize what you have destroyed."

Or, as French statesman and author Alexis de Tocqueville once wrote: "If ever the free institutions of America are destroyed, that event may be attributed to the omnipotence of the majority."

Historical Reappraisal of Early Italian Settlers in America

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. FINO. Mr. Speaker, I would like to bring to the attention of the Members of this House a very interesting article written by Joseph A. Tigani of Rowayton, Conn., about the contribution made by Italians to America's "coming of age" period.

Mr. Tigani's article is not the usual ethnic oratory. On the contrary, it is a well-researched capsule of the pre-Civil War Italian contribution to America.

I would particularly like to commend this article to the attention of my colleagues from Indiana, Minnesota, Georgia, and Nebraska, who may wonder how the counties of Vigo, Beltrami, Taliaferro, and Sarpy in these States, respectively got their names.

The article follows:

HISTORICAL REAPPRAISAL OF EARLY ITALIAN SETTLERS IN AMERICA

(By Joseph A. Ligani)

(AUTHOR'S NOTE.—It is the intent of my critique to outline briefly, a selected number of Italian Pacemakers and their contribution from the 1500's to 1800's; seedtime of collective transplanting and building of Western civilization in America, as well as tilt the injustice of the past and encourage the historical searchers of tomorrow.)

"The place of Italy in civilization is best shown by trying to subtract that place from world history. Take away her scientific accomplishments, her statesmanship, her leadership of the world for many years and what have you left? The world looks badly decapitated. You can subtract Italian culture from civilization only by destroying that civilization," Nicolas Murray Butler, Late President Columbia University.

The times require an historical reappraisal of Italian participation and influence from early Colonial period to the 1800's, unfortunately omitted and hidden in the archives through a chauvinistic historical reporting and miscroscopic observation of the times.

It is historically self defeating to the past glorious history of Anglo-Saxon and Teutonic participation to the birth and making of our nation by attempting to amputate the collective foundation of a glorious age, or expecting to blindfold all future generations to the panoramic seeding and growth of a free society.

Hundreds of Italian words have enriched our English language in expressing the fields of music, literature, science, commerce, etc., starting with the American expression "dear me" ('dio mio) and "Dear Sir" with which we prefix our letters ("Sir" is a contraction of the word "Signor"), unquestionable proof of Italian cultural influence.

Early Italian settlers, true to their heritage of builders, accustomed to hardship, enviable record of performance and deeds, human understanding of inter-racial relations, found in the New World, the climate to apply and exercise their characteristic qualities.

With the 1500's, following the discoveries and exploration of famous navigators such as Columbus, Caboto, Verranzano, etc., a cavlacade of Italian pacemakers settled and explored the Eastern as well as the Western Territory, leaving their imprint and influence in their cavalcade across the country. The historical cavalcade was motivated and inspired by their adventurous spirit, and crowned by their deeds, actions, thoughts, collective cooperation, and above all, their compassion and respect for the American Indian. The latter quality was part of the Italian heritage of assimilating people through race and cultural relation so successfully practised on the Italian Peninsular by their forefathers . . . which explains their justified reaction to the abuses and defrauding of Indian interest.

The early Italian settlers found on their arrival, particularly in Virginia, the impact of indirect influence of Italian culture among the Jeffersonian group and prominent men like Dr. Robert Child and Henry Saltonstall, who received their degrees in Physics at the University of Padua in 1694 . . . and numerous other outstanding Anglo-Saxon and Teutonic personages who quenched their thirst for knowledge at the fountain of Italian thought.

To appreciate and evaluate the Italian participation to collective pioneering of America, we must examine a few individual biographies and accounts to get a glimpse and insight of the varied human elements that built our nation and laid the foundation for its growth in the 20th Century.

After the glorious 1500's, the urge for land exploration was uppermost in the mind of the European powers who were seeking riches in the New World. Fra Marco da Nizza, an Italian, fulfilled this thirst for Spain by exploring an area that ran from the Mexican border to Nebraska . . . subsequently further explored by another Italian pacemaker, Father Eusebio Chino (1600) who penetrated the Southwest and laid the foundation of the great cattle industry.

The Tonti family, in 1650, were the forerunners of American Political dynasties. Their spirit of adventure, resourcefulness, ambition to succeed in a primitive environment, heightened by imaginative and human concern, spearheaded their pioneering march to political power. Their lives sounded like chivalric epics full of thrills and suspense . . . their success was due in large measure in applying leadership, military planning and action whenever required, extending their hold through human understanding of Indians and excellent administration. One of their many achievements worth mentioning was the construction of the "Griffan", the first ship to sail the Great

Lakes. This was followed by their exploration of the Mississippi Valley which the family ruled afterwards for 20 years.

Among their outstanding trade ventures was the establishment of the first Trading Post in Chicago, and the good fortune of establishing another first in the birth of Theresa Tonti, first white child born in the West. Enrico Tonti, the military strategist, organized a League of Indian Nations belonging to the Illinois, Miami, and Choanancous Tribes; resulting in a fabulous fur trade for the French in 1687, thereby strengthening the economic and military positions of the French visavis the British. He gave his life to help the settlers in their battle against Yellow Fever, contracted through imported wives. Americans, French, and Indians mourned his death, and his contemporaries called him the bravest Neapolitan officer of the Colonies. His brother, Alfonso, one of the founding fathers of Detroit, became its Governor for 12 years. Alfonso's son Henri became a noted explorer of the Sioux Territory and later Governor of Fort Charters. John Tonti De Lieto was appointed second in command at Green Bay, Wis. Their Neapolitan cousin, De Lieto, who originally managed their Chicago Trading Post, reorganized Fort Illinois and won the Indian tribal support for the French. Just like their ancestor, Lorenzo Tonti (Neapolitan Banker) who enriched the government of Louis XIV through his Tontine system of insurance; his heirs enriched the Colonies with their organizing ability, business acumen, military leadership, and human understanding.

In 1637 the Tagliaferro family of Genoa settled in Jamestown, establishing a prolific generation of public men, etc., up to and within our times (late House Speaker Sam Rayburn was a Tagliaferro on his mother's side). Major Lawrence Tagliaferro, Indian Agent, following his Italian tradition, befrinded and defended Indians against the defrauding and debasing policy of the Astor fur interest, etc. . . . his ventures are part of a current book entitled "Where the Rivers Met" . . . Benjamin and John Tagliaferro served as U.S. Congressmen in the latter 1700's.

The 1600's lured another adventurous family of builders in the Sicilian noblemen, Antonio and Tomaso Crisafi, alias Sarpi or Sarpy. Among the numerous exploits is their attempt to navigate the Missouri River in Keelboats and their successful pursuit in establishing a pelt trading company, later affiliated with American Fur Company. As a result of their successful achievements, Antonio was appointed Governor of Three Rivers; Tomaso became consultant to Frontenac . . . later Governor of Fort Anondaga, New York, in 1699 and Knighted in The Order of Malta. Their fame and exploits earned them a shower of honors by European Monarchs.

Especially active in the 1600's, contributing to the progress of the Colonies were: Father Richard Blount (Biondi), born in England of Italian ancestry . . . he assisted Lord Baltimore in founding a Colony in Maryland; John Palentine, elected Burgess of the city of Henricus, Virginia, who pleaded for the Colony in London in 1624; Pallavicine, later made Lord by the Crown; Toriano and Torigiano distinguished themselves in the mercantile field promoting trade, especially with England.

The most notable indirect Italian influence was Cesare Beccaria (1738–94), a native of Milan, whose treatise "Of Crimes and Punishment", first published in 1764, proved to be the most revolutionary book of the year. English prisons were chambers of torture . . . life imprisonment was more serious than hanging. Beccaria insisted on credibility of witness, denounced secret accusations, abuse of oaths, and use of torture. His works influenced the reform of criminal jurisprudence in America . . . officially attested to by William Bradford, Attorney General of Pennsylvania, later U.S. Attorney General, in his letter to Count Luigi Castiglioni, dated August 10, 1786.

Following the example of earlier Italian navigators and the great sea tradition of the Italian Admirals, who tutored an English King, commanded and fought on behalf of French, English, and Spanish Kings; Alessandro Malaspina (1751–1810) was appointed by the King of Spain to take command of two war vessels and explore the coastal area of Alaska, Vancouver Island, and the coast of California. His meticulous preparations for the scientific expedition was aided by Italian scientists in Turin, Italy. His discoveries and report on plant life, soil, rock formation, maps and charts of coastal area, etc., are to be found today in the archives of the Spanish Admiralty. His description of Monterey in 1791 stands out among his many reports; his findings of the 58th and 60th parallel were proved correct.

In the 1700's another Italian pacemaker, Constantino Beltrami, explorer and writer, native of Bergamo, Italy and earlier explorer of the Northwest, discovered the sources of the Mississippi. His quote in one of his works . . . "the war, the horrors and policy of the Northwest and 'Hudson Bay' companies, offer new proof that civilized man is more barbarous than the savage", made headlines. His reputation as a writer was equal to his reputation as an explorer . . . his description of American Indian life was used as background by James Fenimore Cooper and others who acknowledged and praised his work.

The 1700's Italian contribution would not be complete without mentioning Colonel Francesco Vigo, native son of Mandovi, Italy, who was fascinated and sold to the conquest of the Northwest through its architect, General Rogers Clark. Clark's dream and military plans lacked financing and credit to pursue his conquest; a vacuum that could not be conquered by his volunteers without Vigo's enthusiastic promotion among French traders who responded to Vigo's appeal, basically due to his reputation as a trader and to his fine credit, which resulted in Clark being able to cash drafts, etc., and finance his initial march to the Northwest. His second great contribution to Clark came through his secret mission to General Hamilton's Headquarters; and thanks to his uncanny memory and power of observation, Clark received from Vigo, fortification plans and detailed report of military preparations; making victory possible at Vincennes. This information came to Clark in the nick of time, as his volunteer army was restless and ready to go home. His contribution to the Revolutionary War can best be appreciated through our experience in two World Wars.

Vigo was asked by General Washington to undertake secret missions on the Western front to observe, pacify, and avoid any Indian hostilities or alliance of Indian tribes with the British, in order to secure his military position as well as to avoid a second front. This mission was officially sanctioned and approved by the Continental Congress . . . its results were so successful that General Washington, at no time, had to divert his forces to protect his flank or rear, and thereby enabled the Revolutionary Army to keep its time table at Yorktown.

Filippo Mazzei, physician, well traveled and connected in high circles of the Continent as well as in the British Isles, was an outspoken champion of freedom, and, like his contemporary countryman, Count Vittorio Alfieri, whose poems, plays, and sonnets ruffled the tyranny of the times . . . Mazzei's writings, speeches, and his untiring effort, was destined to awaken the Colonial apathy towards the British Constitution. Upon suggestion of Benjamin Franklin and Thomas Jefferson, he came to America in 1773 and joined the Jefferson group in Virginia. His early speeches and writings were translated by Jefferson, who had a knowledge of Italian, like so many other contemporary men in public life. Mazzei's speeches against the British political thought were published by Pinkney's ("Virginia Gazette") from 1774–75. His words and ideas are to be found in the Declaration of Independence. Part of his successful mission as a Virginian Representative in Europe, aided the collective effort of France's entry into the Revolutionary War. Like so many Italian pacemakers, he had a natural gift for military strategy, which led him to draw plans for the capture of the British in New York . . . plan was later adopted and executed at Yorktown. His creative and constructive urge to help the Colonies, culminated in his presentation of plans and theories to increase agricultural output; which led him to receive a land grant of thousands of acres for experimentation purpose . . . enterprise was turned into a stock company by Mazzei, and among his stockholders were Washington, Jefferson, Harrison, Randolph, etc. His successful experimentation produced a variety of agricultural products, mechanical implements for farming, and above all, a celebrated variety of corn which acquired notoriety and known in the trade as "Mazzei's Corn". Needless to state that his words and deeds had a lasting effect on American Colonial history as well as in our Declaration of Independence. According to Professor James Brown Scott, Jefferson was also indebted to an Italian Cardinal, now Saint Bellarmine, who enunciated principles later contained in the Declaration of Independence.

Approximately 34 years after the Pilgrims founded Plymouth, the first recorded group of Italians, natives of Piedmont, Italy, members of the Waldensian Church, landed in New Amsterdam in the year 1656. They were received by Governor Peter Stuyvesant as per prearranged planning made through the West India Company. They settled in New Amstel, now New Castle, Delaware, according to their preference. The first group of Italian Waldensians totalled over 170 . . . later groups settled in Carolina, Georgia, Staten Island, etc. They embarked from Holland where they found refuge after persecutions and the massacre of 1655. They came across on Dutch ships . . . "Prince Maurice", "Bear", and the "Flower of Gudder". Another recorded group of Italians settled in New Smyrna and later in St. Augustine, Florida, in 1768.

In the latter part of the 1700's, Paul Busti, native son of Milan (1774–1824), was General Agent for the Holland Land Company that controlled 23,000 acres situated in the state of New York and Pennsylvania. His visionary and business acumen lead him to the founding of the city of Buffalo. He delegated a Joseph Ellicott to proceed with construction and building of the city of Buffalo. Upon completion of construction, Ellicott tried to credit himself for the planning and founding of Buffalo. He later was discharged for crooked practices, Busti is still awaiting full historical recognition and justice, like so many other unsung Italian pacemakers.

Roundly supplementing the exploits of Italian pacemakers were the Italian arts, best exemplified by the imported Andrea Palladio's designs which gave the Georgian style to early American homes and influenced Jefferson's Monticello (meaning small mound in Italian). The Georgian style symbolizes early American gracious living. Italian sculptors and painters were assigned by Jefferson and succeeding presidents to decorate Washington in keeping with the tradition of their predecessors and contemporaries who received commissions to embellish Capitals of Europe, Asia, and South America. Luigi Palma of Cesnola, archeologist, who revealed the ancient civilizations of Cyprus, founded the Metropolitan Museum of New York in later years.

Italian musical influence of Rosini, Bellini, Vivaldi, and Donizetti was heard in concerts and recitals played and directed by Italian musicians. Among this group worth noting is J. Palma, F. Alberti, N. Biferi, V. M. Pelossi, etc. Italian musicians were engaged by Jefferson to reorganize the U.S. Marine Band, and out of the 14 musicians, Leoni Carusi achieved fame in society circles by opening an establishment of fashionable salons in Washington which served as quarters for Presidential Inaugural Balls for Presidents: Adams, Johnson, Van Buren, Taylor, Pierce, and Buchanan.

Trade was promoted by Italian pacemakers since the 1600's, and at the turn of the 1800's, men such as Reggio, Fabri, and Dominus developed shipping lines with commerce to Europe and the Pacific area . . . over 1,300 Italians served in the American Merchant Marine in the latter 1800's. Italians, such as Morisini (J. Gould's partner), and manufacturers, Tagliabue and Grasselli, contributed to the industrialization of America; as their earliest countrymen established silk and glass industries in the Colonies.

The military achievements of the early Italian pacemakers won them honors and respect of their fellow settlers, Indians, Colonial Governors, and European Kings, while serving under the flags of Spain, France, and England. Their military success was in keeping with the Italian military tradition of the times, when Italian Generals and Admirals served a multitude of Monarchs in Europe and their military leadership conquered and defended territories through their skillful military tactics and commands and their design and construction of fortifications like the Walls of Aigues-Mortes, Fortress of Antwerp, Spandau, etc. The prize of their military fruitage was the 17th Century military genius "Eugenio di Savoia". The Civil War failed to attract the great Garibaldi; nevertheless, seven Italian born Generals and scores of Colonels, etc., volunteered and fought bravely in the Union Army, in addition to Americans of Italian extraction. The latter, gallantly exemplified by General Francis Spinola (1821–92), New York State Senator (Douglas Democrat); who stood up in the State Senate with the flag, and called halt to political differences with President Lincoln, and rallied the people of New York behind the Union.

Italian literature was in the forefront since the 14th Century, spearheaded by Florence, center of European humanism, which influenced England, France, and Spain, as well as the Reformation movement in Europe. Its impact and influence on our Colonial intellectuals and public men can best be attested to by the thoughts, writings, and collection of Italian works found in their homes, plus the report of numerous visitors to the Colonies. Part of their valuable literary collections are to be found today in our Colleges of Harvard, Cornell, Pennsylvania, and Notre Dame . . . all adding to our Italian American heritage and national cultural patrimony. We cannot overlook the great direct impact of Italian culture disseminated by Italian Catholic Priests, Monks, Nuns, etc. and various Catholic Brotherhoods, whose members headed and founded many Colleges in the U.S.; for example, Father Samuel Mazzuchelli (1828), educator, architect, and artist, credited with building thirty schools in Illinois, first Capitol for the state of Iowa, first Cathedral at Dubuque, Court House at Galena, Illinois, Colleges, etc. Scores of Italian professors taught at Harvard, Columbia, Georgetown, Vassar, etc., among whom was Professor Vincenzo Botta of New York University, whose home was the rendezvous of intellectuals in the 1800's . . . honored by the University of Berlin with honorary degree of Doctor of Philosophy, voted Vice President of the Union League Club (1863–1894).

In order to have a deeper understanding of the indirect and direct Italian influence, we must take into account that nature had denied Italy natural resources; but had endowed her with a prolific offspring of men who changed the course of world history through their gigantic cultural and religious mergers; namely, Greek and Roman culture, Pagan and Christian faith, and its glorious birth to the Renaissance of Art. With this granite heritage, the Italian pacemakers embarked on a building mission to their former Colonies of old. . . . Spain, France, and England, where they exerted their impact of indirect and direct influence in America. Therefore, the Italian contribution cannot solely rest on the glories of its discoverer, Christopher Columbus; or its explorers, Caboto, Verrazano, etc.; or the fact that our continent bears the name of an Italian navigator, Amerigo Vespucci; but on the full historical disclosure of Italian contribution to our free heritage since the 1500's.

Historical justice requires, in our times, that we establish a truthful reappraisal of our early Italian settlers who have contributed and enriched our land in cooperation with their Anglo-Saxon brethren, etc. We cannot bury under the ashes of history, the unsung builders of America, their deeds and achievements, or hide their identity through Anglicized spelling and omission of source of origin . . . and sit in world historical judgement. It is up to contemporary historians, not subject to ethnic or political consideration and influence, to record from archives here and abroad, for posterity to judge; only then can the true collective pioneering crusade be measured, and its unsung Italian builders receive proper historical credit for their share in building the Bastion of Freedom which has withstood all assaults to date by foreign tyrants and their paid Trojan Horse.

I believe it is apropos to end my critique by quoting the Italian pacemaker, Giacomo C. Beltrami: "The World is now in America; that you are the first actors in it, and that the good or bad example you may set, is the compass which conducts us to the port, or make us run against the rocks."

DECEMBER 1966.

Government Deficits

EXTENSION OF REMARKS

OF

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 18, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Norfolk Ledger-Star of January 12, 1967, entitled "The Deficit: Rebellious Genie."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DEFICIT: REBELLIOUS GENIE

The President proposes, goes the saying, and the Congress disposes. So the suggestions for taxing and spending in Mr. Johnson's State of the Union message are now in the speculative stage, and a lot could happen before a budget is voted for fiscal 1968.

We note, however, that the administration shows no signs of kicking the Potomac habit of running sizable budget deficits. By Mr. Johnson's figures, the deficit in the present fiscal year—which still has more than five months to run—will be $9.7 billion. If Congress were to accept his 1968 program in toto, including the six per cent income tax surcharge, there would be a projected deficit of $8.1 billion that could well be pushed even higher by unexpected spending demands in the next 18 months.

Familiarity often breeds contempt, and Congress and the people have lived so long with deficits that they no longer are a bugaboo. But there still is ample reason for caution, if not fear, as a former Director of the Budget warns.

He is Maurice Stans, who held the post for three years under President Eisenhower. In an interview with *U.S. News and World Report*, Mr. Stans urges sharp budget-cutting and speaks of deficits in terms that suggest a genie let out of the bottle and turned rebellious.

By way of preface, Mr. Stans remarks that there is in federal programs a built-in growth factor and that this now operates to the tune of about $4 billion dollars ever year in added cost, compared with a $2 billion rate at the time he was Budget Director. So even without additional programs, the budget will edge toward deficit unless revenues continue to grow.

In recent years, of course, those revenues have grown at a strong pace. But even with federal pumppriming, there can come a point when business slacks off—and this is when the practice of running deficits is most dangerous. The reason is, Mr. Stans says, that once federal spending has built up forces for growth to a peak, these forces get beyond effective control. We don't get enough good information on the economy soon enough to apply the gas, or the brakes, at the optimum time; things are always outrunning us. And even if they weren't, politics, rather than economics, plays too large a role in decisions on taxing and spending.

So what can happen? "If we should have any kind of recession at a time when our expenditures are as high as they are now," declares Mr. Stans, "and when we are already operating at a significant deficit, the government could end up the year with an over-all deficit of 30 or 40 billion dollars." Picture the paralysis in confidence such a situation could create.

Some may challenge Mr. Stans on the grounds that, first, he served a Republican President and political bias may enter into his appraisal: and, second, that he shouldn't talk because, as Budget Director, he oversaw a budget in fiscal 1959 whose $12.4 billion deficit still stands as a peacetime record.

But Mr. Stans was warning against budget deficits even while he served Dwight Eisenhower. And the fact that deficits were rolled up then does not discredit him, but proves his point.

For it was a Congress in political opposition to the President that contributed in large measure to that deficit, one so big that it was a shocker. Moreover, even a popular chief executive who abhorred deficits as much as did Mr. Eisenhower could not stem the tide. What better evidence of how uncontrollable deficit spending can become, and of the effects it can have before the country realizes what is going on?

Our Constitution: Barrier Against Tyranny

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. GATHINGS. Mr. Speaker, our forefathers left this Nation a Constitution which has met the needs of our people consistently throughout our history. This document imposes upon the citizen great responsibilities in the fulfillment of the principles embodied in it. Safeguards were written into the Constitution which are our insurance against tyranny.

Miss Donna Lynn Goe entered a contest sponsored by the American Legion in the spring of 1966 on the subject "Our Constitution: Barrier Against Tyranny." Miss Goe, who is the daughter of Mr. and Mrs. John H. Goe, of West Memphis, Ark., and is presently a student at Stephens College in Columbia, Mo., was awarded second prize in the contest.

Her article on this subject is an outstanding gem which I am glad to bring to the attention of the Members of the House. The full text follows:

OUR CONSTITUTION: BARRIER AGAINST TYRANNY

The sky melts into pale gold, and the gold spreads into a lake under a fragile film of pink glass; clouds drop away in long shreds of smoky blue; all is still and at peace as Dawn, with her ease of experience, gives birth to another day. Peace; a fiery sun slowly sinking into the horizon beyond a calm, majestic sea. Peace; a friendly neighbor's wave, a warm house, a loving family. Peace; the humble worship of one's God. Peace; peace of mind.

We hold these truths to be self-evident, that all men are created equal and they are endowed by their Creator with certain unalienable rights, that among these are Life, Liberty, and the pursuit of Happiness.

To me, happiness is peace of mind. In few countries today are people given the right to pursue whatever may be happiness to them.

Most countries can be classified as one of the two types of government: Democracy or Dictatorship. Under a Dictatorship one is free only to obey the dictator's commands. People exist for the government, not for Life, Liberty or the pursuit of Happiness.

A Democracy, as Abraham Lincoln said in his famous Gettysburg Address, is "government of the people, by the people, and for the people." The government exists for the people. The will of the people prevails. Citizens are guaranteed their right to Life, Liberty, and the pursuit of Happiness.

These rights are threatened today as never before. Outside our nation's door wait the dictators, or tyrants. They wait for one false move; they wait for us to tire and our eyelids to close; they wait for us to become over-confident in our security until we neglect our upkeep and in bold ignorance walk outside our door and into their hands.

Our door, our one barrier against this tyranny, is our Constitution. We must understand this enemy called tyranny, and fight it, if we wish to continue Democracy in our country as we know it today.

In ancient Greece a type of government which had authority centered in a single, all-powerful Ruler was called a tyranny. Today the word tyranny means a cruel and despotic government in which the ruler has unlimited power over the lives of the people. As a rule a despot can keep his absolute power only by the use of force. Given a little freedom, people seem always to want more freedom, so that despots are usually compelled to clamp down firmly or give up despotism.

In modern times dictators usually have come to power under conditions of turmoil and confusion. The people's government may not be able to provide security and the people turn to a dictator who promises to get it for them. Often the dictator seizes power through political trickery.

Dictatorships of our own times have much in common with the tyrannies of the ancient world. All tyranny is basically the same, whether it is called dictatorship, despotism, absolute monarchy, racial state, Fascism, Nazism, Sovietism, Communism, or by any other name. In their disregard of the rights of citizens and their contempt for human life, there is little difference among Nero, Mussolini, Hitler, Stalin, or Malenkov. All of these dictators trampled on the liberties of the people, resorted to violence and torture, and seized the power to govern. They all used murder and treachery as a means of grasping authority.

Our forefathers set up a democracy as a safeguard against such tyranny. Where democracy prevails, government is based on the consent of the governed as expressed through constitutions, elections, and public opinion. Precautions are taken to keep power responsible, or limited; dissent is tolerated, and even encouraged, and individual rights are given special protection. These precautions are stated or implied in our Constitution, thus making it our door against tyranny.

Government is admittedly a necessity, but it implies enforcement and restraint. How to get enough governmental authority without creating an agency that will become abusive of liberty is a problem as old as human society. Those who wrote and ratified our Constitution thought they had found an answer to the paradoxical question.

1. They assumed that the people were supreme in power.

2. The organization and powers of their government were set forth in written documents in language as plain as could be commanded.

3. After carefully stating what powers they wished the Federal Government to exercise they left all residual powers to the states or to the people.

4. The three branches of government were separated and made to operate with elaborate checks and balances.

5. Both the Federal and State governments were specifically forbidden to perform certain acts.

6. The military was subordinated to civilian control.

7. Individual and personal rights were protected against invasion by either the Federal or State governments.

8. Powers could be exercised only by elected officers or those duly appointed by officials who had been chosen by the voters.

9. It was provided that amendments could not be added to the Constitution unless desired by an overwhelming majority of the voters.

Recent years have witnessed a decline in emphasis upon keeping government limited in favor of sentiment for bigger and stronger governments. The industrial revolution, depressions, and wars have created conditions that lead many to fear their consequences more than they do strong government. To these people, government has become the champion and protector of the common man. Although insisting upon governmental respect for personal rights, many of the new schools look with impatience upon other traditional restraints that impede prompt enactment of welfare programs. This poses the crucial question of whether American Government can continue to meet recurring crises, provide the manifold services expected of them, and still avoid becoming tyrannical.

In a representative Democracy, "of the people, by the people, and for the people," a heavy responsibility rests on every citizen to take part in civic affairs to the best of his ability. The voters exercise influence through officials selected to express and enforce their will. Citizens who are indifferent soon take their country down the road to un-democratic practices and to tyranny. The responsibility of citizens goes beyond payment of taxes, obedience to law, and service in the armed forces of the nation. It includes willingness to inform themselves regarding the political and social issues of the day. It includes learning how and when to protest and give support. Well-organized protests at the right time can reform governments, change policies, and prevent the abuse of power.

Our Constitution has kept pace with the American people for 177 years, allowing them a maximum of freedom while providing machinery through which order might be maintained, domestic problems resolved with a minimum of violence and national aspirations realized.

Don't let us, the citizens of America today, allow our right of Life, Liberty, and the pursuit of Happiness, as given to us by our forefathers, slip through our fingers. Don't let us sit back in our comfortable easy chairs, too satisfied to go to the trouble of voting, much less looking into the matter and choosing the best candidate. Don't let us eat well-balanced meals, work eight hours daily at the jobs of our choices, sleep a restful eight hours in soft, warm beds, own two or more automobiles, go to a movie, concert, or any other type of entertainment whenever we choose, and yet be too busy to keep up with governmental affairs, too busy to offer our ideas which might be just the needed answer to some major crisis, too busy to insure our children and their descendents the liberties we now enjoy but so often take for granted.

Our government cannot exist as a Democracy without the support of the people of this nation. Support in Money, Time, Ideas, and Effort.

Our Constitution is based on "government by the consent of the governed." If the citizens are indifferent, careless in obeying the laws, too lazy to vote, and unwilling to serve as public officers, then government will decline. Good government requires eternal vigilance and personal sacrifice on the part of every citizen. We must look into our political affairs! We must understand the Constitution and adapt it to our changing needs and conditions and interpretation, custom, and usage. We must stand behind our Constitution if it is to continue to be our door against tyranny!

Vietnam: How It All Started

EXTENSION OF REMARKS
OF
HON. HARRY F. BYRD, JR.
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 18, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by K. V. Hoffman, published in the Richmond, Va., Times-Dispatch of January 14, 1967, entitled "Vietnam: How It All Started."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VIETNAM: HOW IT ALL STARTED

(By K. V. Hoffman)

The "limited war of indefinite duration" to which Mr. Johnson would commit the American people is generally believed to be the current chapter in a "twenty years' war" that has convulsed Vietnam since V-J Day.

Actually this struggle had its beginning as far back as 1789, when the first French troops landed in what was then loosely known as Cochin China.

Two years previously King Louis XVI had signed a treaty with the deposed King Gia-

Long of Annam, pledging himself to send French naval aid to restore Gia-Long to the throne—in return for French occupation of the port of Hanson and the adjacent islands of Fairfar and Haiwen. These territories were to be ceded outright to France "in perpetuity".

But the French revolution and the ultimate death of Louis XVI on the guillotine delayed implementation of the treaty. Only after a ten years' war was Gai-Long finally restored to the throne, and five more elapsed before Tonkin (what is now North Vietnam) recognized his authority.

Gia-Long remained true to his pledge as long as he lived. But his successors increasinlgy resented French domination, and the intrusion of an alien religion. They fomented persecution of French and Spanish missionaries who were finally ordered to leave the country. When they refused to do so, they were executed.

In retaliation against these atrocities, French and Spanish fleets headed by Admiral de Genouilly bombarded the city of Saigon. Marines were landed, but were outnumbered and defeated by an Annamese army of 20,000. The French dispatched reinforcements and the Annamese resistance was crushed in 1861.

The French then turned to economic pressures to acquire more territory. They cut off the rice supply from Cochin China, forcing Emperor Tu-Duc to negotiate a treaty yielding three provinces to France. However, when the time for final ratification came, Tu-Duc reneged. The French had to fight more battles before they were able to force acceptance of the terms under which they ultimately acquired the richest of their colonies—including Cochin China and the "protectorates" of Cambodia, Annam, Tonkin and Laos.

In 1863 Admiral de la Grandiere was appointed governor of Cochin China. But the native population refused to be "pacified". Sporadic hit-and-run jungle wars continued, mostly in Annam and Tonkin.

The French were not content with control of Indochina. Occupation of Kiaochow by the Germans in 1898 spurred French ambition to create "a second Hong Kong" on the eastern coast of China's Liuchau peninsula—just across the Gulf of Tonkin from Haiphong.

They dickered until they got what they wanted—a 99-year lease, dated 1898, for the port of Kwangchow-wan (now called Chankiang.) This snug harbor, long a nest of Chinese pirates, could have been an ideal spot for a French naval base and a bridgehead for the eventual acquisition of further territory.

Saigon became "the Little Paris of the East", a French enclave in an alien culture on the edge of jungles where memories of past grievances were not erased by improvement in sanitation, the establishment of agricultural colleges and hospitals.

Chankiang proved unprofitable, however, and was returned to China in 1945. As for Kiaochow, the dream of a "German Hong Kong" was shattered by World War I. The port was seized by the Japanese in 1914, and returned to China in 1922.

Ironically, the United States, which has no colonial ambitions in Southeast Asia, now finds itself involved in a quicksand war with the avowed purpose of defending what was once part of a French colony against a Communist takeover from the North.

The cost of that war thus far has been estimated at $30 billion and 40,000 casualties. Our greatest liability in the effort to convince the Vietnamese of our honorable intentions, is the memory of French rule.

The Cost of Greed

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. YOUNGER. Mr. Speaker, as we start considering the proposed 6 percent surcharge tax as recommended by the President, we should get all of the information we can on the subject, and I believe the editorial from the Wall Street Journal of Friday, January 13, presents some very good points on the subject of the tax.

The editorial follows:

THE COST OF GREED

The case for the President's proposed tax increases is weak from every angle.

In an effort to keep the deficit for the next fiscal year from growing to financially and politically unacceptable proportions, the Administration asks a 6% surcharge on corporate and most individual income taxes. Even so, the estimated deficit for fiscal 1968 is over $8 billion.

That comes atop nearly $10 billion now reckoned for the period ending June 30, or close to $20 billion of red ink in a scant two years. And—especially judging by the course of Federal spending since last January—it could easily turn out to be much worse.

It may be recalled that a year ago administrative-budget spending for the current period was projected at $112.8 billion; now it's $126.7 billion. The figure for the following period is now given as $135 billion.

To call such outlays fiscal recklessness is an understatement. There is no excuse for pushing ahead with the whole hodgepodge of domestic welfare programs in the midst of a war that is rapidly getting very big and very costly.

Yet, while demanding tax boosts, Mr. Johnson made no mention in his State of the Union message of reducing nondefense spending. The omission is all the more striking in the light of his candid acknowledgment that some of the programs are shot through with mistakes and failures. Nothing daunted, the Administration is determined to intensify the effort to create a full-blown welfare state.

The economics of the tax increase are no more logical. Last year the argument for raising taxes was made largely on the ground of fighting inflation. At the moment, with evidence of slowing down in many business areas, less is heard of that contention. It ought to be noted, however, that the inflation is still with us.

How good, then, are the Administration's tax proposals as a way of dampening inflation? The figures speak for themselves. By greatly expanding its spending, running enormous deficits, the Government is still on an inflationary spree. It is attempting to curtail private demand while swelling Governmental demand, an exercise which makes no sense.

It is an exercise, ironically, which could both maintain inflation and help produce recession. For it is a myth, we think, that public spending will automatically compensate for any slack in private demand; most Federal outlays do not have the productive effect that causes the economy to thrive. That lesson should have been thoroughly learned a good 30 years ago.

Admittedly the White House is playing it cagey, figuring that no tax boost would get through Congress, if at all, before July 1. These months of grace will presumably give the economic advisers an opportunity to assess the state of business right up to the last moment. If a recession is upon us or seems to be impending, they could withdraw the tax request.

Perhaps it has not occurred to the learned gentlemen that the threat of a tax rise can itself be a depressant, especially after the tax increase business has just been hit with, namely the Government's recision of the investment credit.

Finally, a word about the individual taxpayer, the harried middle-class man who provides most of the Government's revenues. He finds taxes already going up on almost every front—Social Security, state and local. The Federal authorities have already given him the fat tax of inflation, and today kindly, paternalistic Washington wants to gouge still more in direct taxes.

If it were really to finance a war, even a confused and confusing war, the taxpayer would not mind so much. But it is an affront to the American people to have to pay so much for political greed.

Aid and Comfort to the Enemy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. MULTER. Mr. Speaker, this country has committed itself to achieving independence for South Vietnam. We are fighting a war to fulfill that commitment and it is most unfortunate that those of our citizens who do not agree with our policy continue to parrot the enemy's propaganda.

As stated in the following editorial from the December 29, 1966, edition of the New York World Journal Tribune, the stopping of the bombing of North Vietnam and prior truce periods have had no effect on the enemy. They still have evidenced no interest whatever in coming to the conference table.

The editorial follows:

AID AND COMFORT

Quite obviously a truce is a bullet-peppered path to peace in Viet Nam—if it is any path at all.

There was a truce over the Christmas weekend. Or so it was called. Yet in the 48-hour period the United States and the South Vietnamese commands tallied 122 attacks by Communists.

Another 48-hour truce is coming up for New Year's and still another Feb. 8–12 to commemorate the Lunar Year among the Vietnamese. What can they promise?

Sporadic lulls at best. Certainly no rationale for a long cease-fire. Certainly no step toward the negotiating table.

And still there are elements on the home front who agitate to stop the bombings. Like the group of Washington clergymen who demonstrated last Sunday at the homes of Secretary Rusk and Secretary McNamara. Like the interfaith group that wrote to President Johnson questioning the policy of aerial attacks "even if civilians die."

Civilians do die during war—but not by design of U. S. military leaders. As for stopping the bombings, the U.S. did that last year at this time for 37 days, and there was not a whisper from Hanoi about ending the war.

It has been well established that declaring a truce or stopping the bombings will not stop the war.

The war will end when our military forces, by carrying the war to the enemy, convince Ho Chi Minh that aggression in South Viet Nam is a lost cause.

Meanwhile those Americans who protest the bombings—though they speak with freedom of expression, as is their right—are giving aid and comfort to the enemy.

A Challenge To Be Considered

EXTENSION OF REMARKS

OF

HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. EDWARDS of Alabama. Mr. Speaker, Nation's Business, a respected magazine, in its January 1967, issue, takes the position that there are jobs for everyone willing and able to work.

In an article entitled "We Can Get Anybody a Job," it is shown that private enterprise makes it possible for individual initiative and desire to prevail over poverty.

Free enterprise is the answer, and not Government handouts except in cases of real incapacity. All Members should read this thought-provoking article which is short and to the point. The article follows:

WE CAN GET ANYBODY A JOB

Government agencies daily hand out taxpayers' money to compensate the country's unemployed, a good chunk of whom could get productive jobs tomorrow if they had to.

The editors of Nation's Business guarantee that there is a job available for every person in this country who is willing and able to work.

This claim is backed by the 1,500-member National Employment Assn., the countrywide organization for private employment agencies.

"We can find a job for any person who is able and willing to work," states A. G. Hayes, NEA's president. "By able we mean any person of integrity who is physically capable of working. By willing we mean any person who has enough desire to work that he will, if necessary, take some training, move to another location and settle for a job reasonably consistent with his qualifications."

While unfilled job openings in St. Louis, for instance, have increased by one third over the past year, the number of job applications is down one fifth.

"And most applicants are people who already have jobs—people looking for better jobs," notes John E. Harmon, executive vice president of NEA.

"Every vocational school has a waiting list of employers who want to hire the graduates. In one vocational school in Los Angeles there are more than nine employers on the list per student."

Although opportunities with private companies are replete for on-the-job training for uneducated, unskilled persons who don't even need to speak English, the government is advertising for people to take taxpayers' money for attending government job-training schools, complains Max Mosner, a partner of Colony-Tilly Employment Agency, Inc., in New York City.

"The government has made a tremendous mistake in taking initiative away from people," he adds. "Everybody now wants to start at the top. They don't believe that some of the best chefs once were dishwashers."

He notes that last November the New York City Neighborhood Youth Corps received government grants totaling $10.5 million to provide jobs for 3,650 youths between 16 and 22 years old. The jobs paid $1.25 an hour in public or private nonprofit organizations.

"That comes to almost $2,900 a placement," Mr. Mosner says. "If they'd come to us, we'd get the same people better paying jobs for only $21.50 a placement."

"There is too much fear today of good hard work, of getting the hands dirty, of working by day and studying for something better by night," observes Robert O. Snelling Sr., president of the nationwide employment firm, Snelling and Snelling, Inc.

"The Bill of Rights offers no protection of the ego. It gives us the freedom of the pursuit of happiness. It doesn't guarantee that society will bring you a happiness package and lay it in your lap. You've got to do your own pursuing."

Mr. Snelling has little truck with many people who think they are too "disadvantaged" to work. His firm recently put a totally blind woman to work at a salary of $9,500 and a totally deaf man on a good job in an aircraft plant.

It also got a bookkeeping job for a man permanently confined to a wheelchair.

Dr. Simon Ramo, vice chairman of the board of TRW, Inc., of Cleveland, Ohio, sums up the problem of unemployed who won't work this way: "It's not socially acceptable to do unskilled work any more. It is much more socially acceptable to do nothing at all."

So Nation's Business, with the support of the nation's private employment agencies, throws out the challenge: We can get anybody a job who is willing and able to work. Write the Editor, Nation's Business, 1615 H St. N.W., Washington, D.C., 20006.

Mr. Will W. Campbell, Dean of Savings Bonds Chairmen, Receives Tribute From the ABA

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. GATHINGS. Mr. Speaker, I wish to call to the attention of this body the significant contributions to the U.S. savings bonds program by one of America's most distinguished bankers, Mr. Will W. Campbell, of Forrest City, Ark.

Mr. Campbell is chairman of the National Bank of Eastern Arkansas. He has served continuously as Arkansas State chairman for the savings bonds program since June 29, 1941—just a few weeks after the program was launched on May 1 of that year with the sale of the first series E savings bond to President Franklin D. Roosevelt.

Mr. Campbell is the dean of all State chairman for the bond program.

Thus, it is entirely appropriate that he has been presented the 25-year Savings Bonds Volunteer Award by the American Bankers Association in recognition of outstanding service to the Treasury bond program.

In presenting the award, the Association said that it constituted a tribute to all commercial bankers who have provided leadership for the Savings Bonds program during the 25-year period. During this period of time, more than 2.7 billion individual savings bonds have been sold, valued in excess of $150 billion. Of this total, more than $50 billion in bonds still are being held by Americans, contributing importantly to the support of our men in Vietnam.

Mr. Campbell has contributed significantly to the achievement of this record and merits the respect and appreciation of this Nation.

Kansas Farm Leader Honored With Two Awards

EXTENSION OF REMARKS

OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. MIZE. Mr. Speaker, at the 96th annual dinner of the Kansas Agricultural Convention in Topeka, January 12, Roy Freeland, of Topeka, secretary of the State board of agriculture, received two awards in recognition of his distinguished service to agriculture. One of the awards was from Kansas State University, the other from the Federal land bank.

My colleagues, I am sure, will find the news coverage of this event worthy of note. Under leave to extend my remarks, I submit the story written by Patrick Burnau, of the Topeka Capital-Journal, on the awards to Mr. Freeland. The item follows:

TOPEKAN GETS FARM AWARD

(By Patrick Burnau)

Roy Freeland, who in 1950 was the youngest man ever appointed secretary of the State Board of Agriculture, Wednesday night was honored by two institutions for his "distinguished service" to agriculture.

Freeland, 1352 High, 55 years old, was given Kansas State University's distinguished service award in agriculture, and the Federal Land Bank's golden anniversary award for meritorious service to agriculture.

The awards were made at the annual dinner of the 96th Kansas Agricultural Convention in Municipal Auditorium where Kansas Gov. Robert B. Docking and Hawaii Congressman Spark M. Matsunaga both spoke.

AWARD GIVEN

Dr. James A. McCain, president of K-State, presented the university's award, which is the equivalent of an honorary degree.

William G. Plested, president of the Federal Land Bank at Wichita, gave Freeland the golden anniversary award, which is the first presented by the Federal Land Bank to a Kansan.

Plested, in making the presentation, said: "It is evident, the contribution he has made in that we both (the bank and the university) decided to give him these awards at the same time."

After receiving his award from the university, Freeland recognized those working in agriculture—their dedication and help. After accepting the award from Plested he thanked him, and congratulated the Federal Land Bank on its anniversary.

Freeland also joked: "It looks like we hit the jackpot tonight." His wife, Marguerite, went to the stage with her husband to accept the awards.

Freeland has held nearly every major office in the National Assn. of State Secretaries of Agriculture, including president.

OTHER AWARDS

Other awards he has won as Kansas secretary include: honorary state farmer from the National Future Farmers of America; distinguished alumnus of Gamma Sigma Delta, honorary agricultural society; distinguished service to agriculture from the Kansas Grange; and a state 4-H alumni award.

As a 4-H youth, Freeman won the champion barrow award in the junior division at the American Royal Livestock Show three consecutive times. He also received the Thomas E. Wilson award as state swine champion.

At Kansas State University, Freeland won nearly every student scholarship honor available to College of Agriculture students at K-State, including Phi Kappa Phi, highest scholarship society open to all students at the university.

He attended the university on a Union Pacific Railroad scholarship, and was high individual student judge at the National Western Stock Show in Denver and on winning teams at Fort Worth and the International Livestock Exposition in Chicago.

After graduation, Freeland worked with the Corn Belt Farm Dailies in Omaha and Chicago, the K-State Extension Service, as associate editor of Kansas Farmer magazine and as field representative of the Kansas Livestock Assn.

The Freeland's son, Kent, is a K-State graduate in journalism and now attending the University of Kansas law school. He has worked as a reporter for the Capital-Journal the past two summers.

Affiliated Government Organizations Extols Congressman Keogh—Regrets His Departure From Congress

EXTENSION OF REMARKS

OF

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. MURPHY of New York. Mr. Speaker, the Affiliated Government Organizations, Brooklyn, N.Y., recently issued a press release concerning the contributions made by Congressman Eugene J. Keogh in his 30 years of legislative endeavors. I submit the release for the attention of my colleagues, as well as a poem written by the organization:

> When the 90th Congress reconvenes on January 10, 1967 one of its most revered members and a key figure in the halls of the Congress will not be returning. For thirty years, Congressman Eugene J. Keogh has been amassing an amazing record of service to his constituents and to the Federal employees of this country. We in the Federal Service will especially miss his untiring efforts for the advancement and welfare of civil service employees.
>
> His greatest work was accomplished on the powerful Ways & Means Committee, where he was known as the authority on Social Security. Civil Service employees will remember him, especially, for his efforts in 1966 in sponsoring a bill which would have permitted employees to attain SS in addition to their CSR annuity, on a voluntary basis. The bill HR 15262, was the high water mark for this important fringe benefit.
>
> We have had the good fortune of conferring with Congressman Eugene J. Keogh and have constantly marvelled at his knowledge, imparted with such skill and in such a gentleman-like fashion. However, we were not alone in offering accolades on this great man. In the last few weeks of the 89th Congress, scores of his colleagues praised him as a legislator and as a gentleman.
>
> Congressman Eugene J. Keogh, may you enjoy happiness and fulfillment of all you desires in the years ahead.

CONGRESSMAN EUGENE KEOGH

A man of enduring charm and immaculate dress
Faithful to his loyalties; giving more, never less
For thirty years in Congress, a respected voice
With logical analysis, presented the right choice

A man of true word, action and deeds
In House ways and means disseminated the seeds
For social security and kindred measures
To the aged and infirm veritable treasures

Dedicated his every effort to public life
Composed differences; avoided strife
The welfare of people was his foremost thought

Now voluntarily retired with respect
Among the best he can stand erect
The years, we pray, will treat him well
He worked for mankind; his programs did sell.

East-West Trade and Export Control List

EXTENSION OF REMARKS

OF

HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. REES. Mr. Speaker, last October, President Johnson added another important span to the bridges his administration is building between the American people and the people of Eastern Europe. He announced the removal of some 400 items from the list of export control.

I believe it was an important gesture in our efforts to ease cold war tensions.

Some thought otherwise. Some looked over the list of items and concluded that they were insignificant and had little, if any, trade potential. I recall that manhole covers was one of the items used as an example.

So it came as a surprise to me to learn that my distinguished colleague from California [Mr. Lipscomb] is now criticizing the list on the ground that it contains strategic materials—materials that could conceivably be used against our fighting men in Vietnam. And he has accused the administration of misleading the American public with regard to the items in question.

Mr. Speaker, the last thing I want to do is add to this confusion. If possible, I would like to clear it up.

What are the facts?

First of all, the gentleman from California [Mr. Lipscomb] contends that the list of 400 items contains, among other things, jet aircraft engines, diesel engines, and machine tools. The Department of Commerce has already addressed itself to this assertion. These items are not on the list. They never were. They are still under export control to Eastern Europe. Mr. Lipscomb was misinformed.

As to the actual list, I am not certain what the gentleman from California [Mr. Lipscomb] might have been referring to. I have read it carefully. It appears innocent enough to me.

But more to the point, this list is not something that was hastily drawn up and carelessly reviewed. The ground rules were quite explicit: each item had to be of a nonstrategic nature—and each had to be available on the foreign market.

And, while the list was made public last October, I am told by the Commerce Department that it was actually compiled last February—8 months earlier. At that time, it was distributed to the members of the Interdepartmental Committee on Export Controls for a complete review. This committee is represented by the State Department, the Defense Department, the Treasury Department, the Department of the Interior, the Department of Agriculture, the Federal Aeronautics Administration, the Atomic Energy Commission, the National Aeronautics and Space Administration, and the Office of Emergency Planning. A copy of the list was also supplied to the Central Intelligence Agency.

Each had a crack at it. And, in point of fact, some 10 items included in the original list were actually deleted at the suggestion of several of the agencies; some because they were in the scarce national supply category, and others because of their possible strategic implication.

So I, for one, cannot fault the administration.

I believe it has taken a bold and courageous step in the field of peaceful international trade.

I believe, further, it has been prudent, keeping the ultimate objective of national security in sight at all times.

I hope we will continue to build such bridges to Eastern Europe. For it is in our own national interest to do so.

An Ex-Mayor Reminisces

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. SCHWENGEL. Mr. Speaker, last Saturday a former mayor of Davenport, Iowa, Ed Frick, was given an opportunity to reminisce about the accomplishments of his administration and to talk about the future of the city he loves.

In a guest editorial which appeared in the Davenport Times-Democrat, Saturday, January 14, 1967, Mr. Frick was rather modest in talking about his experiences as mayor. Ed Frick has made a fine record as a community leader. His advice and counsel is still sought by the present city officials.

What follows, Mr. Speaker, is the guest editorial authored by Mayor Frick:

MEMORIES OF AN EX-MAYOR

(NOTE.—Our guest editorial today is by Ed Frick, who served as mayor of Davenport from 1941 through 1944. He was asked to reminisce on problems and accomplishments of his administrations and to comment on municipal problems of the present.)

It was my good fortune to serve as ward alderman and alderman at large under two able mayors of Davenport before I was elected to that office.

The men who served as mayor during my years of council service, were Merle F. Wells and the late John Jebens, father of our present mayor. Working in harmony with both of them I had a good chance to size up the problems of the city and of the way a mayor must deal with them before I was called to take over the gavel following the death of Mayor Jebens.

During my own years in office I had an evenly divided council—four Republicans and four Democrats—but there was little political sharpshooting. The council members were all interested in good government for our city and were ready to vote for city betterment projects regardless of their party.

Looking back I sometimes think of my years as mayor as the "good old days"—the city was then only nine square miles and did not have as many or as expensive problems to wrestle with as today.

I got good advice and support from my city attorney, Ed Doerr, from Public Works Commissioner Ralph Graham and from community leaders like the late E. P. Adler and J. M. Hutchinson, then active in the Chamber of Commerce.

Since I took a keen personal interest in street and highway developments I am proud to report we made excellent progress in those fields when I was mayor. During the years I was mayor or streets committee chairman Marquette Street was paved from 2nd Street to Locust; Lombard Street was paved as was Locust Street from Warren to Washington Street; E. 3rd Street from Mound to Iowa Streets.

My administration was also responsible for starting the underpass under the government bridge approach—at the time it was sometimes called "Frick's Folly" but during the years it has given good service. We also launched the project of removing streetcar tracks from our streets.

The council today has my sympathy. Costs have risen so much many necessary things just can't be done as quickly as they should. However I feel that the council members of my time had success in facing up to their problems and am confident the members of today will meet with equal success. They, too, seem to be men dedicated to the public good.

Conservation in the Space Age

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. CONTE. Mr. Speaker, social historians have tried to label each succeeding generation of man as an age of something or other: The age of this or that invention or condition which perhaps emerges for that era as a dominant characteristic. Through the centuries, for example, we have cataloged the stone age, the bronze age, the iron age, the age of exploration, the age of sail, and the Age of Discovery, to name but a few.

More recently, we have seen the age of flight, the atomic age, and the space age. It seems as time progresses, each of these new ages is shorter lived and yields more rapidly to a new phenomenon and a new age.

Nowadays, of course, technology and science have become the prime movers in man's progress and achievements. The electron tube and the test tube have replaced the more primitive tools of ax and sword.

We think nowadays of space travel, journeying to the moon and beyond in vastly complex machines undreamed of barely a generation ago. We think of beans of light cutting through thick steel plates—the ray gun that aws a figment of a comic strip artist's imagination just a few years ago.

We think, too, of the nightmares of atomic energy, of nuclear destruction, and of manmade forces that defy the imagination.

And in this age of complexities, we tend to lose sight of things that have transcended all of man's ages and all of man's endeavors; that have survived and endured first in spite of man and now, to an increasing extent, because of man. I speak of the world of wildlife, of nature and nature's wilderness, the world of trees, and birds, and animals.

It may seem at times highly incongruous to many that we should devote not only a considerable amount of time and attention, but of funds as well, to the matter of preserving wildlife and wilderness resources. To the less sensitive, perhaps, it may seem odd indeed that the wilderness which man once was forced to conquer for survival, he now seeks to protect and safeguard. It may seem incongruous if not ridiculous to one whose horizons have seldom extended beyond walls of glass and brick, or whose footfalls have always been carefully guided by white lines painted on cement and macadam paths.

For those of us who have been blessed not only with a boyhood of experience with the outdoors, but who are presently fortunate enough to represent an area of the country that can still boast of a large measure of outdoor beauty and wildlife, there is nothing strange or unusual about our concern for the continued preservation of these things.

I am pleased to boast that I represent such a congressional district, the First District of Massachusetts which comprises the Berkshire Mountains and a lengthy stretch of the Connecticut River. And I am also proud to boast of a constituency to whom the value of these natural resources has never been questioned, much less scoffed at.

Their attitude is clearly reflected in a recent editorial in the pages of the Athol Daily News, published in Athol, Mass. Under unanimous consent, I would like now to place this editorial at this point in the RECORD and respectfully commend it to the attention of my distinguished colleagues.

The editorial follows:

[From the Athol (Mass.) Daily News, Jan. 10, 1967]

PROGRESS ON WILDLIFE

An observer from afar might think it passing strange that the richest and most powerful nation on earth should devote some of its official energies to counting everglade kites and whooping cranes. It might seem rather out of keeping with our demanding worldwide and domestic obligations that we spend money and manpower trying to keep these and other beleaguered wildlife species from dying out.

Some—and not necessarily from afar—may even be inclined to go a step further and say that fooling around with such concerns in a world on the brink of a disaster is plain silly. They would be wrong.

America's varied and abundant wildlife is an essential part of our heritage, a link with the natural world. It is important that we not allow the world of nature to be overwhelmed and spoiled by the spread of our civilization. As much of it as possible should be preserved for future generations of Americans, who will have even greater need than we do for the healing beauty and solitude of the wild.

Nurturing those species of wildlife that are in danger of extinction is a part of this effort to conserve. Thus it is heartening that, in general, the latest report of the Bureau of Sport Fisheries and Wildlife is optimistic about prospects for saving such species. For the most part, during the past year there has been progress in handing on our natural heritage to Americans yet unborn.

The New GI Bill

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. AYRES. Mr. Speaker, early last year the 89th Congress enacted the Veterans' Readjustment Benefits Act of 1966. The act was signed into law on March 3, 1966, as Public Law 89–358. Among other things, the new legislation authorized a permanent program of educational assistance for individuals serving in the Armed Forces after January 31, 1955. Having shared the responsibility for the enactment of this legislation, I have followed with close interest developments in connection with its operation and administration since June 1 of last year, the effective date of the new law. I am confident that my colleagues will share my interest in certain statistics and profiles that have emerged to date.

The open-ended feature of Public Law 89–358, meaning that there is no closing date of the service period during which entitlement may be earned, makes every new active-duty serviceman a potential GI bill student. Of the 4.5 million discharged veterans who became qualified by the passage of the law, over 300,000 have already entered some form of training. More than $80 million has already been paid in educational allowances to veterans and servicemen across the Nation during December 31, 1966. For the month of December, $32 million in educational allowances was paid.

In Ohio, an estimated 228,000 veterans were eligible. More than 12,300 of these were enrolled by December in the 263 schools in Ohio currently approved for veterans' training. Veterans' Administration checks in the month of December to all students in the State of Ohio amounted to $1.4 million. In the 14th District of Ohio which I have the privilege to represent in the Congress, there are an estimated 15,310 veterans eligible for educational benefits under the new law. They constitute about 6.7 percent of the total in the entire State. Approximately 850 of these eligible veterans have thus far availed themselves of the benefits of the new law.

The initial participants are 99 percent male and have a median age of 27. About 28 percent of the veterans enrolled are under 25 years of age. The largest group, 47 percent of the total, are between 25 and 29 years of age.

Approximately 51 percent of the veteran enrollees attend school full time. More than 65 percent are in college as undergraduates, while 17 percent of the total enrollees entered school at the graduate level. Vocational and trade schools received 11.4 percent of the total applications. Technical institutions received 2.4 percent with business schools enrolling 3.1 percent of the total. Less than 1 percent of the veterans have entered secondary school to attain their high school diplomas.

In Ohio, the larger colleges and State universities have already accepted and enrolled over 10,000 veteran students with Ohio State University, Kent State, and the University of Akron accounting for one-fourth of the total. More than 100 institutions of higher learning in Ohio are participating. The remaining trainees are enrolled in 157 vocational, technical, and business schools or are participating in some form of hospital training. About 300 active duty servicemen based in Ohio are availing themselves of extra schooling on a part-time basis in preparation of civilian careers after discharge.

The Cleveland Veterans' Administration office, under the extremely capable direction and guidance of Manager Bill Blackwell, has jurisdiction over the claims of all GI bill students in the State. They will process the applications of the 21,700 Ohio veterans and servicemen who will be enrolled in fiscal year 1967. This number will probably increase to about 23,000 in 1968 and 26,000 by 1971. A total of $13.3 million in veterans' educational allowances will be received by Ohio veterans in fiscal year 1967. The next year is expected to provide $15.7 million with a continuing increase each year until 1971 when the program will probably stabilize at about $20 million a year coming into Ohio.

These impressive statistics, Mr. Speaker, indicate that the Nation's younger veterans and servicemen have been eagerly awaiting this benefit which a grateful government has provided for them. A word of congratulations and a vote of thanks for a job well done is in order, Mr. Speaker, for Bill Driver, the competent Administrator of Veterans Affairs, and his staff, who without fanfare, publicity, or unusual expense to the taxpayer, expeditiously processed the additional heavy workload created by the new law.

Despite the magnitude of the initial response, an analysis of the correspondence I have been receiving indicates that further refinements to this legislation should be considered. For example, consideration should be given to increasing the monthly educational allowances so that veterans may receive the same allowance for attending school as is presently paid under the war orphans' educational assistance program. Consideration should be given the feasibility of authorizing on-the-job training or apprentice training as was provided in the World War II and the Korean GI bills.

Consideration should be given to authorizing more liberal criteria for flight training. Finally, Mr. Speaker, we should address ourselves to the wisdom of authorizing a certification fee to schools for the additional administrative and clerical workload involved in processing veteran enrollments. Such a fee was authorized in the World War II program and the Korean program. We should consider the propriety of providing a similar fee in the current program.

The results of the World War II and Korean conflict bills were gratifying, with more than 10 million veterans educated by a Federal Government investment of approximately $19 billion. The excellent early response to the new GI bill promises vast benefits for the entire Nation as the educational and economic status of our veteran-citizens increases.

Tax-Free Foundations

EXTENSION OF REMARKS
OF
HON. JAMES C. CORMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. CORMAN. Mr. Speaker, the tax-exempt status of foundations has been a matter of great concern and should merit the attention of the House. The Select Committee on Small Business and the Subcommittee on Foundations of the select committee, of which I am a member, are greatly concerned about the effects of tax-exempt foundations on small business, and will continue the study of this issue begun in the 89th Congress. It is important that the Congress make certain that foundation exemptions are valid. I believe that the nature of the problem is clearly expressed in the following editorial appearing in the Los Angeles Times of December 23, 1966, which I call to your attention:

SOME TAX-FREE FOUNDATIONS' ABUSES

Under federal statutes on the books for more than a half century, corporations organized exclusively for religious, charitable or educational purposes are exempt from income taxation.

The 1950 Revenue Act provided that this exempt status would be revoked if foundation income was unreasonably accumulated, or if any part of earnings inured to the benefit of any individual. The act also listed various prohibited transactions, including payment of exorbitant salaries, purchasing of securities or property for more than adequate consideration, and selling such holdings for less than adequate compensation.

Although the law seemed clear enough at the time, there have been complaints of abuses and intensive investigations almost from the time it was enacted. There also have been repeated requests for Congressional action. In January President Johnson proposed a six-point program to correct conditions. His request came after the Treasury Department and the House Small Business Committee found that some foundations were using their tax exempt status for empire building rather than benevolence.

Rep. Wright Patman (D-Tex.) chairman of the House committee will press for corrective legislation in the 90th Congress. His latest committee report shows that over a four-year period 575 foundations returned to education and charity only 48% of the $4.6 billion they collected. This is possible, Patman says, as the result of "expert tax dodging" through loopholes which Congress should close.

While the vast majority of foundations serve worthy purposes within the clear intent of the law, it is obvious that some have cheated. And Patman's report, one of a series issued in the past four years, plainly indicates that the practice is becoming more widespread.

Two years ago the Internal Revenue Service cracked down on tax-exempt organizations engaging in political activity and propaganda. Perhaps the IRS could also act to stem some of the current abuses to which President Johnson and Rep. Patman refer.

If not, then Congress most assuredly must enact corrective legislation to reverse the trend and head erring foundations back toward their proper function.

Journalistic War Likely To Escalate Sharply

EXTENSION OF REMARKS
OF
HON. W. E. (BILL) BROCK
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. BROCK. Mr. Speaker, as more and more Americans lose their lives fighting in Vietnam, the policy of the Government toward responsible news coverage of the war effort grows in importance.

The following column, written by Crosby S. Noyes, and published in the Washington Evening Star on January 3, 1967, points out this problem and shows how current official policy is inadvertantly undermining America's credibility and, to a growing extent, morale on the home front. I offer this article to be printed in the Appendix of the RECORD:

JOURNALISTIC WAR LIKELY TO ESCALATE SHARPLY

(By Crosby S. Noyes)

Now that the North Vietnamese have seen the light and started issuing visas to high-powered American newsmen, the journalistic war in Vietnam can be expected to escalate dramatically.

Under the preposterous ground rules that apply to reporters in this war, it could hardly be otherwise. For this is the first U.S. government in history to have committed American lives to the outcome of a war and at the same time permitted—one could almost say invited—the systematic subversion of this commitment by the press.

The responsibility in this case lies squarely with the government. Say what you like about the attitude of individual newspapers or individual reporters toward the war in Vietnam. Their first obligation is to go where they are permitted to go and tell the truth as they see it.

But it is the paramount responsibility of any government to define the national interest and to defend it, in time of war, by every means at its command. The failure to do this in the case of Vietnam is unprecedented. And the seeming indifference of the government is matched by an utter lack of identification by an important segment of the press with what the government defines as the national interest of the United States.

The attitude of the goverment cannot be justified by the legal fiction that there is no war in Vietnam because Congress has not declared one. It is not justified either by the argument that our objectives in the war are limited. The same was true in Korea. But in that war the government exercised effective controls on reporters in the field. And no one, so far as I recall, suggested that he should be permitted to go and see how they were making out in Pyongyang.

It is, in short, simply incredible that a government can ship 400,000 men to fight in a war and at the same time cheerfully accede to visits by reporters, handpicked by the enemy, to tour the territory and write straight-faced dispatches on what they are told and shown.

The folly of the government is compounded by the divisions of public opinion that exist in this country over the war. No matter how conscientious the visiting reporters may try to be, it is inevitable that what they see and hear will serve the cause of the enemy and further confuse opinion at home. Their dispatches are already being seized on by domestic critics who for years have done everything in their power to subvert the effort in Vietnam.

What are the leaders in Hanoi supposed to make of all this?

Success in South Vietnam depends on convincing these leaders that whatever happens, the United States is determined to prevent a Communist takeover of the country by force of arms. From the outset the great hope of the Communists has been that public dissension in the United States will force the government to abandon its effort. How can the presence of American reporters in Hanoi fail to nourish these illusions and prolong the war?

And what is the American public supposed to make of it?

The public is told by the government that a vital national interest is at stake in Vietnam. In the large majority, they are prepared to believe it to the extent of sending 400,000 of their sons to fight and perhaps to die half way around the world.

But how long will they go on believing it as long as this same government allows its own credibility to be undermined by the same people it is fighting?

Or is this war, after all, so half-baked that there is no such thing as an enemy who can be given aid and comfort, no such thing as loyalty for people out of military uniform and no national interest apart from what every individual decides for himself? If so, someone had better start explaining again what those 400,000 American soldiers are doing in Vietnam.

When it comes to fighting the war, President Johnson is dead right, I believe, in using the utmost restraint to prevent unnecessary destruction and a possible enlargement of the conflict. He is dead wrong, I submit, in persistently minimizing the cost of the war, both for ourselves and the enemy and in failing to convince people that Vietnam is as serious a commitment as any the United States has ever made.

At this stage, very certainly, there is no excuse for a business-as-usual attitude on the part of the government. It is simply not possible to justify such an attitude and also justify the sacrifice of thousands of American lives. And in the case of the visitors in Hanoi, this is precisely what the government is trying to do.

The Past Lives Again in Memories

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. DERWINSKI. Mr. Speaker, the oppression of individuals by communism and the conflict between totalitarianism and the freedom of an individual is a factor often forgotten by our State Department policymakers as they blindly pursue their policy of coexistence with the Communist dictators of Eastern Europe.

A very dramatic article which gives us an effective insight into the individual's battle against tyranny which we must not forget is woven into a Christmas Day article by Columnist Dumitru Danielopol, of the Copley Press, which appeared in the Aurora (Ill.) Beacon News, as follows:

THE PAST LIVES AGAIN IN MEMORIES—A MAN'S THOUGHTS ARE TURNED TOWARD HOME ON CHRISTMAS

(By Dumitru Danielopol)

WASHINGTON.—What does a man think about at Christmas?

Home.

But for a man who hasn't seen his native land for more than two decades, I think Christmas has an extra meaning—especially if that land is now in the grip of communism.

In the Carpathian Mountains of Romania, when I was a boy, we used to ski to Pestera Ialomicoara, 6,000 feet above Sinaia where Romania's kings spent their summers.

In Romanian "pestera" means cave. Ialomicoara is the name of a storied river that runs deep underground through the mountains, then spreads out across the broad Romanian plain. In summers as a boy I used to swim in that river.

But at Christmas time memories do not dwell long on skiing trips or fabled rivers.

Inside one cave high in the Carpathians I remember a small church, built centuries ago by early Christians who sought refuge from the barbarians and pagans who stormed across south central Europe in a see-saw struggle that spanned much of what American school children call "ancient" and "medieval" history.

Christianity came early to my country. It was brought by the Roman legions in the second century. When Rome declined, Romania saw the Goths, Visigoths, Huns, Tartars, Slavs and Turks. But in the mountains and on the high Transylvania plateaus guarded by impenetrable passes, Christianity lived on.

The people surrendered their homes and their fertile plains along the Danube to the invaders and retreated to the refuge of the stormy mountains that centuries later were to defy the best of Nazi Germany's Wehrmacht and Josef Stalin's Red army.

In remote caves and in hidden valleys, these people built their crude churches. At Pestera Ialomicoara the one in the cave still survives and on a Christmas Eve, skiers carrying torches used to light the snowy mountainsides as they sped to midnight worship.

The church was simple, built of wood. It had none of the elegance that marks the Orthodox faith. There were no gold and silver icons or handsomely painted murals.

A few bearded monks and a collection of skiers made up the congregation. The austere surroundings and hardy worshippers evoked memories of the church's origin. On a Christmas Eve 30 years ago it wasn't hard to imagine that one was again in the time of the barbarian and that this little gathering had formed, under the threat of persecution, to worship the God of their choice.

As a young man we imagined the past. Today in Communist dominated nations in Eastern Europe, the people live the past.

The pagans have returned to Romania on the coattails of the Russian army. Not only the Christians have felt their torture. The Jew and the Muslim has felt the same whip.

But according to all reports, religion survives in a sort of "invisible church."

One of its leaders was the Rev. Richard Wurmbrand, a Lutheran minister who survived 14 years in Communist jails and finally escaped Romania with the help of Scandinavian Lutherans. Today he continues his fight from Glendale, Calif., as director of an organization called "Underground Evangelism."

In testimony before the United States Senate this year, the Rev. Wurmbrand told of holding clandestine services in a Russian army barracks in Romania.

"God is not dead," Wurmbrand told the senators.

On this Christmas day, I wonder if some hardy band of worshippers is riding the ski slopes above Sinaia, bound for the little wooden church in the cave. If they are, they won't relive the past. They'll be proof that the present is only like the night.

Morning always comes.

Even the Communist can't stop it.

A Tribute to a Kansas Journalist

EXTENSION OF REMARKS

OF

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. SHRIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wichita Beacon of Saturday, January 14, 1967, paying tribute to the late Martin N. Perry, managing editor of the Wichita Beacon, Wichita, Kans.:

A LOSS

Being a good newspaperman, Martin N. Perry disliked cliches, trite phrases.

This is one reason it's hard to write about him. Because only the familiar words—integrity, talent, energy, vision, devotion to duty—can describe the qualities that won him the respect of his colleagues at The Beacon and The Eagle, of fellow newspapermen across the country, and of his community.

Martin Perry knew and loved our community. He was born, reared, educated here—and returned to Wichita when the opportunity came. And this affection for and interest in our community led him not only to wise use of the tools of his calling in the community's behalf, but also to constructive participation in its activities.

But words are unnecessary as well as inadequate. Wichitans can discern for themselves each day, in the quality of the community we enjoy, something of his contribution. He would have contributed more, had not death taken him this week at the age of 43. Those of us who remain—individually, his friends; collectively, the community—are diminished.

Mr. Speaker, it was with a deep feeling of regret that I learned of the death of Martin N. Perry, of Wichita, Kans., who was an outstanding newspaperman and a highly regarded citizen in the community where he lived. Martin Perry demonstrated a sincere interest in his community, State, and Nation. He was a keen observer of all that was going on about him and this awareness and interest distinguished him as an editorial writer. Later he was given an even larger assignment as managing editor of the Wichita Beacon, which he performed so successfully. It is indeed sad that his time was so short, but Martin Perry has left his mark in the field of journalism. We extend our heartfelt sympathy and condolences to his wife, Betty, and his two children.

Pull Up in Front of My House

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following column from the December 16, 1966, edition of the Bulletin of the East Midwood Jewish Center of Brooklyn, N.Y.:

PULL UP IN FRONT OF MY HOUSE

We came across an editorial which appeared in the Colorado Springs Gazette-Telegraph. It was written by William Aiken. Mr. Aiken is not a Jew, even as the Gazette-Telegraph is not a Jewish house organ or Journal. It was Mr. Aiken's comment on the slogan which appeared during the recent flurry of Nazi scrawlings on Synagogues and other public buildings. We republish it herewith because we thought that many of our readers would like to read it. It was titled, "Reflections on the Revival of a Slogan." Here it is.

"Jews go home—Well, now, this is nothing new. Never in the past have you ever taken this gentle suggestion to move on. But Heaven forbid, suppose just this once, you thought that expression of a few sick people actually expressed the conviction of all the people in this wonderful land of ours, and all of you started to pack your bags and leave for parts unknown.

Just before you leave, would you do me a favor? Would you leave your formula for the Salk Vaccine with me before you leave? You wouldn't be so heartless as to let my children contract polio?

And would you please leave your knack for government, and politics, and persuasion, and literature, and good food, and fun and love, and all those things, and would you please leave with me the secret of your drive to succeed?

And please, have pity on us, please show us the secret of how to develop such geniuses as Einstein and Steinmetz and oh so many others who have helped us all. After all, we owe you most of the A-Bomb, most of our rocket research and perhaps the fact that we are alive today, instead of looking up from our chains and from our graves to see an aging, happy Hitler drive slowly by in one of our Cadillacs.

On your way out, Jews, will you do me just one more favor? Will you please drive by my house and pick me up too?. I'm just not sure I could live too well in a land where you weren't around to give us much as you have given to us. If you ever have to leave, love goes with you, democracy goes with you, everything I and all my buddies fought for in World War II goes with you; God goes with you. Just pull up in front of my house, slow down and honk, because so help me, I'm going with you, too."

Direct Popular Election of the President

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. MATHIAS of Maryland. Mr. Speaker, the rites of democratic presidential elections are so thoroughly traditional in this country that it is startling to reflect that this system is totally extraconstitutional. As the Washington Sunday Star reminded us on January 15:

> For 177 years, the presidents of the United States have been elected, not by the people, but by the faceless, nameless membership of the Electoral College. . . . Indeed, the citizens of the United States have no constitutional right to vote for their president, even indirectly. They do so solely at the pleasure of their state legislatures.

This month the persistent campaign to reform the electoral college system has been given new momentum by the report of a special commission of the American Bar Association, calling for a constitutional amendment to institute a process of direct popular election of the President. This reform presents a number of serious problems, including these of fixing a percentage of the total vote required for election; providing for a runoff election, by the people or by Congress, if necessary; protecting minority parties; and determining the extent to which Congress should be able to oversee election procedures set by the States. But direct popular election proposals also have great merit. In my judgment, the House Judiciary Committee should give thorough hearings to the entire problem early this year.

The tremendous defects and dangers of the present constitutional provisions, and the merits of direct election, were set forth clearly in a thoughtful editorial in last Sunday's Star. The editorial follows:

IT'S TIME TO ELECT THE PRESIDENT DIRECTLY

For 177 years, the presidents of the United States have been elected, not by the people, but by the faceless, nameless, membership of the Electoral College.

The people's voice is heard, to be sure, in the election of the electors. And usually, but not always, the people's mandate to the electors is carried out. But nothing in the Constitution binds the electors to vote for their partys nominee. Indeed, the citizens of the United States have no constitutional right to vote for their president, even indirectly. They do so solely at the pleasure of their state legislatures.

The Electoral College system was adopted by the constitutional convention over bitter but splintered opposition. Today the system is still with us, substantially unchanged. So is the general opposition to that system. And so is the disagreement over how to go about changing it that has, up to the present, stymied hundreds of attempts at reform.

From the beginning, opposition to the existing electoral system has divided itself into four camps favoring rival reform plans. These are: (1) The proportional vote plan that would split a state's electoral vote in proportion to the vote cast for each candidate; (2) the district vote plan, whereby the electoral vote would be divvied up according to the outcome of the election in a state's election districts; (3) the automatic electoral vote plan under which the Electoral College would be abolished and a state's entire electoral vote would automatically go to the candidate that carries the state, and (4) the direct election plan that would abolish the electoral vote as well as the Electoral College, and would choose the president and vice president—our only two national officers—in a direct national referendum.

Now, as the 90th Congress settles down to business, there is a growing feeling in and out of Congress that the archaic system can best be reformed by doing away with the electoral middlemen and by guaranteeing, through constitutinal amendment, the right of the voters to elect their own president directly.

The movement toward popular presidential election picked up significant momentum with the release, earlier this month, of a report by a special commission of the American Bar Association, set up to study Electoral College reform. The substance of the commission's argument is that the system has never functioned as the framers of the Constitution intended; that it is "archaic undemocratic, complex, ambiguous, indirect and dangerous," and that it should, therefore be abolished.

The ABA report backs up this strong language. For example, on the question of democracy, while it is true that the voters speak every election day, their voice is not always heard by the presidential electors. In 1948, 1956 and 1960, individual electors took it upon themselves to vote contrary to the mandate of the voters. Three time in American history the candidate receiving the greatest number of popular votes has turned out to be the loser. And under the present winner-take-all system, all of a state's electoral vote goes to the candidate who carries the state, regardless of the margin of victory, so that all the votes cast in that state for the loser count for nothing in the election of the president.

As to the dangers, it is the ABA's contention that the republic has survived in spite of the system, not because of it. Perhaps one chilling near miss will serve to show how lucky we've been. In the election of 1948, a shift of less than 0.6 percent of the popular vote for Truman in two states would have thrown the election into the House of Representatives where each state would have had one vote for president. It is quite possible, in view of the political division of the House at that time, that no majority could have been achieved either by Truman or Dewey. The Senate, meanwhile, would have been fulfilling its constitutional function of picking a vice president. Assuming that no deadlock developed, either Alben W. Barkley or Earl Warren would have been named. If the House was still knotted by inauguration day, the vice-president elect would have been named president. The possibilities, then, were Truman for president with either Barkley or Warren as his vice president; Dewey for president with either of the same men as his vice president; Barkley or Warren as President, or—if the Senate as well as the House should deadlock—no constitutional president at all!

Granting then that the present system is undemocratic and dangerous, what are the arguments that have kept the Electoral College in existence to date?

It has been said that direct election would undermine the two-party system and would lead to a proliferation of parties. In answer to this, the ABA report argues that many factors besides the Electoral College system work to produce and maintain the two-party system. In addition, the ABA proposal makes it necessary for a candidate to get at least 40 percent of the popular vote in order to be elected; in the event that no candidate received the required 40 percent, a runoff election would be held between the top two candidates. This provision would tend to minimize the importance of splinter parties.

Too, it has been the prevailing view that a direct election amendment can never pass Congress or be ratified by the required number of state legislatures. The opposition, it has been said, would come from the small, least populous states which are benefited by the present system which provides for a minimum of three electors, regardless of the population. Under this formula, for example, a single vote cast in a presidential election in Alaska is worth more than five times as much as a California vote.

Yet recent supporters of direct election include members of Congress from both large and small states. And a recent poll of state legislators showed that 58.8 percent favor direct election, including a clear majority of the legislators in the small states. Significantly, only 9.7 percent of the legislators favor retaining the present system.

In 1956, The Star supported the Lodge-Gossett amendment, which would have apportioned a state's electoral vote according to the popular vote. At that time, such a step seemed the most that could be hoped for—and indeed even that limited reform was turned down by the Senate.

But today, the prevailing mood has changed. A series of Supreme Court decisions supporting the one-man, one-vote principle have lent support to the idea that all the voters should have [illegible]qual say in the selection of the highest elected official of the nation.

On Wednesday, the first day of regular business for the new Congress, Senator Birch Bayh of Indiana introduced an amendment based on the ABA proposals. From all indications, the nation's voters and the legislators of the separate states are ready for the change. It is now up to Congress to follow through on this proposal to guarantee, under the Constitution, an orderly and democratic means of electing the nation's chief executive.

Hon. Victor L. Anfuso

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mrs. KELLY. Mr. Speaker, while Congress was adjourned, a former colleague, the Honorable Victor L. Anfuso, of New York, passed away on December 28, 1966. As a fellow Brooklynite, I remember when he first came to Congress in 1950, I too was considered a freshman in Congress. Unfortunately, he had to give up his seat at the end of 2 years because the area he represented was redistricted due to a population change in Brooklyn.

Victor Anfuso, in his strong desire to represent his people, ran again for election in 1954 and was elected to the 84th Congress. While in Congress, he served on several committees, among them the Committee on Science and Astronautics, the Committee on Merchant Marine and Fisheries, and the Committee on Agriculture where he achieved the reputation of "window-box gardner." He was chairman of the Subcommittee on International Cooperation and Security and was a congressional adviser to the U.S. representative on the United Nations Committee on Peaceful Uses of Outer Space. He also expressed his great interest in foreign affairs and U.S. foreign policy and, as a Member of the House of Representatives, he was sent on a special mission to study stockpiling and handling of American surplus food in Europe and the Middle East.

He was dismayed when he learned that his district would again be redistricted in 1962. He agreed to step down in favor of another colleague and Democrat, the Honorable JOHN J. ROONEY.

Victor Anfuso regretted leaving the House of Representatives but the people of Brooklyn elected him as a justice of the supreme court so that he would not lose the opportunity to serve his people, whom he loved and enjoyed helping. He was well liked by all who knew him and was sorely missed by his colleagues.

I extend to Mrs. Anfuso and to his family my deepest sympathy in their irreplaceable loss.

Speaker McCormack: Great Legislative Captain

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. EVINS of Tennessee. Mr. Speaker, the tribute which the President paid you on yesterday was most fitting and appropriate and no words I might say are needed and necessary. However, as one who has served with you and worked with you, I feel compelled to go on record emphatically as reinforcing and endorsing President Johnson's great tribute to your distinguished record of service and leadership in the Congress.

Mr. Speaker, permit me to say that you are a great leader—a great captain of our legislative ship of state. You have a great heart, a warm heart filled with compassion and understanding. You are one of the outstanding Americans of all time, Mr. Speaker—and history will record that fact.

History will record that JOHN McCORMACK—the great leader, our great legislative captain—steered through the processes of our legislative body the greatest and most far-reaching body of legislation ever enacted by two Congresses, the 88th and 89th Congresses.

You, Speaker JOHN McCORMACK, are fair—firm—and forceful. You are a leader of honor, courage, and great ability—a warm personality with qualities of leadership that are needed in our times.

History will record that JOHN McCORMACK was Speaker when this Nation enjoyed its longest period of uninterrupted growth and prosperity—due, in great part, to the legislative record of the Congress, enacted under his leadership.

Yes, Mr. Speaker, the President was absolutely correct when he said that you have never retreated from your responsibilities, never withdrew, never flinched. How right the President was in his words of praise of Speaker McCORMACK.

Harrison E. Salisbury Sums Up—VIII and Final Report

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. RYAN. Mr. Speaker, the final report by Harrison E. Salisbury was published in the New York Times today. In his report, Mr. Salisbury indicates the determination of the North Vietnamese people to continue to fight for what they consider a struggle for independence. There are very few writings which delve into the attitudes of our adversaries in this tragic struggle. Mr. Salisbury's report is most illuminating. The article follows:

[From the New York Times, Jan 18, 1967]

A TURNING POINT IN WAR IS SEEN AFTER HANOI VISIT—MEETINGS WITH OFFICIALS AND DIPLOMATS INDICATE THAT NEW PHASE MAY RESULT IN EVENTUAL PEACE OR SUDDEN ESCALATION

(By Harrison E. Salisbury)

HONG KONG, January 11.—Nearly two years after the United States began bombing North Vietnam, the war appears to be entering a new phase—one that may lead to eventual settlement or to a sudden and extreme escalation.

Two weeks of on-the-scene inspection of North Vietnam, dozens of talks with Hanoi officials, including very high officials, and discussions with leaders of the National Liberation Front, the political arm of the Vietcong guerrillas, and with informed neutral, Communist and Western diplomats indicate the long war has reached a turning point.

Although both Hanoi and Washington suggest in public statements that their positions on negotiations have not changed, there appear to be signs of below-the-surface movement that could lead in that direction.

Neither Hanoi nor Washington, it is apparent, is as immune to the forces of world opinion as the propaganda statements sometimes would indicate. And it is behind the facade of that propaganda that soundings suggest that not every position may be quite as rigid, fixed and unchanging as the public declarations would indicate.

Nonetheless, a visitor to Hanoi comes away with a feeling that the road to peace cannot be anything but an arduous one.

And the alternative to a successful negotiated settlement looms on the horizon: a deadlier, vastly escalated war. Both the North and the United States, it seems clear, are prepared for the possibility of such an escalation.

Premier Pham Van Dong made plain that it is within the power of North Vietnam to call in "volunteers" that are waiting in the Communist states of the world. The country where they stand nearest and in greatest numbers and perhaps most eagerly waiting the call is China.

The volunteers have not been called thus far. The Hanoi leaders make it abundantly clear that it is their fervent hope that the call will never go out.

They see in the presence of volunteers a possibly deadly blow to their most cherished ideal—national independence.

They have gone to what seems to an outsider to be fantastic lengths to preserve and maintain independent control of their affairs and their destiny. But they give the impression that if, and the "if" is a big one, the United States takes another important step to increase the level of the war the call will almost certainly go out.

DIFFERENT APPROACHES

At lower levels North Vietnamese officials say that if the United States takes another major escalation step, China will be called in. This is not said in unequivocal terms by the highest leadership. The decision probably remains to be made. But the weight of probability appears to be on the side of acceptance of volunteers.

The result of such fateful action could be explosive, not only in terms of Vietnam but also of the world. If Chinese volunteers went in, could Soviet volunteers stay out? Possibly, but not probably, observers feel, in view of the present balance of forces in the Communist world. In other words, when the North Vietnamese pose this question, they are really posing the question of direct confrontation between the United States and the two leading Communist powers in the world.

Lurking in the shadow of such a confrontation are the deadly armories of nuclear weapons now possessed by all three powers.

What would North Vietnam regard as an escalation so marked as to evoke the call for volunteers? At lower levels this was described specifically: carrying the land war north of the 17th Parallel, amphibious landings in the North, military action to cut off the land supply routes to China, possibly the bombing of Vietnam's dikes.

Would the bombing of Hanoi and Haiphong produce a call? This is not being said specifically. At higher levels none of these eventualities is specified. The impression is left that in any of these events a determination would have to be made.

In North Vietnam there appears to be a general conviction that, judged by past conduct, the United States sooner or later will escalate and not merely by introducing 100,000 more troops. The indication given by North Vietnamese officials was that such an increase in United States strength was not what they were speaking of. They seemed to feel confident that they could handle many more troops in the South. Indeed, they suggested that more troops in the South would be more of a hindrance to the United States than a help.

But radical intensification of the war in the air or a move of land forces into North Vietnam apparently would come under a different category.

If a negotiated settlement is not achieved, what course does Hanoi think the war will take? Everyone there talks in terms of a war that will go on 10 or 20 more years if that is what the United States wants. They seem to have confidence that their people, particularly their youth, will not become exhausted.

APPEAR TO BE SERIOUS

When they speak of retiring into the hills and the jungles to carry on interminable guerrilla warfare against the United States, they appear to speak in utter seriousness. They point out that they have been fighting that kind of war for 20 or 30 years, that they have survived the experience and grown tougher in the process. And they think more can do it for two or three decades more and in the end come out with the possession they say is their most priceless, their liberty and independence.

Hanoi's version of what those 20 years of guerrilla warfare would be like is a picture of a total population dedicated to the struggle, to fighting the enemy, to providing an eternally hostile environment for the United States forces.

In this vision it is the total population that occupies the central position rather than the organized armed forces. Or there would be, as there already is, a blending of the regular army and the civilian population.

In two weeks in Hanoi this correspondent did not see a major unit of the North Vietnamese Army. But by the same token he seldom failed to see some members or units of the North Vietnamese defense forces.

The reason is that the defense forces now combine regular troops, newly mobilized youth groups, home guard units, civil defense units and ordinary housewives who carry a rifle with which to fire at United States planes.

They are all around, in the city streets, on bicycles or riding in big olive drab Russian trucks toward the south.

Is it possible to see any path toward a negotiated peace? It is possible but the path is thorny. The chief obstacle is certainly the deep suspicion held by Hanoi toward any and all suggestions of peace talks made by the Americans or others such as Secretary General Thant or the British Foreign Secretary, George Brown, or Pope Paul VI.

The suspicion the North Vietnamese feel is reinforced in part by experience with the Americans and perhaps in greater measure by experience with the French.

Hanoi feels that twice it went in to peaceful negotiations and twice it was robbed or cheated of the fruit of those negotiations.

The first time was when the French, in Hanoi's view, repudiated the 1946 post-war agreement made with Ho Chi Minh.

The second was when, again in Hanoi's view, the United States at French instigation repudiated the 1954 Geneva agreement and started the country down the path that has led to the tragic present.

Those two experiences, whether the North Vietnamese interpret them correctly or not, have left deep and possibly permanent scars. These have been exacerbated by the experience of the last two years with the United States.

Hanoi contends that each peace move by the United States has been accompanied by or has been designed to conceal a step toward further escalation.

It does not propose to be caught short again. The war has become a war for survival, for "life," as Premier Dong put it.

The populace has been aroused to a state of solidarity that represents a formidable asset for a country struggling against a foe many times more powerful in material means and techniques.

If negotiating should be embarked upon and came to nothing, officials feel, the fighting edge of the North Vietnamese would be lost and might not be regained, and if the war were resumed it might be on terms much less favorable to Hanoi. Since the struggle is viewed as a life-and-death one for Hanoi this is a risk it will not take. Premier Dong said this specifically. Other North Vietnamese echoed the thought.

Since the United States possesses the somewhat similar fear that if it starts on the path to the conference table it may touch off irreversible changes in the South Vietnamese political situation, the inhibitions toward taking the first step toward a conference are great on both sides.

There is another inhibition on the North Vietnamese side. Hanoi regards itself as the aggrieved party. Hanoi says it was the United States that attacked and has been bombing its territory, actions it categorizes as both aggressive and illegal.

Therefore, Hanoi says, the United States must be the one to halt—not North Vietnam. Nor, says Hanoi, should it be compelled to pay a "price" to persuade the United States to halt what it ought not to be doing in the first place.

This is not a mere semantic point. It bears directly on the question of which side will take the first step toward the conference table and what the other side will do once a first step has been taken.

The United States contends that it has said again and again it is ready to negotiate but that Hanoi has not responded. Hanoi rejoins that there will be no response so long as the United States continues to attack her.

If the United States took a first step, would North Vietnam respond? This is the great question but the answer to it seems to have been given quite clearly in the past week.

QUESTION OF RESPONSE

While he made no specific promise or pledge, Premier Dong in speaking with this corresponded left the impression that if the United States acted positively, for example, by halting the bombing, North Vietnam would not ignore it.

This impression was strengthened by the statement of North Vietnam's representative in Paris, a senior envoy, who said that if the bombing stopped Hanoi would respond.

Speaking with a West German correspondent a few days later, President Ho Chi Minh echoed the same sentiment, saying that if the United States halted the war "then we would take tea."

Mr. Thant has offered the opinion that a halt in bombing is a requisite to talks. This is the view this correspondent brought away from Hanoi.

But, if a conference were agreed upon, what kind of solution could be evolved?

Here is the thorniest question of all. For the real issue then is the question of the fate of South Vietnam. Hanoi has said repeatedly and echoed the statement last week that the fate of South Vietnam must be settled between the North and South, dealing together as partners and that the appropriate representative of the South is not the Saigon Government but the National Liberation Front.

There is no reason to doubt that North Vietnam would adhere to this position in any conference.

Would the United States accept such a solution? There has been no sign of it up to now. However, this correspondent uncovered some interesting areas for further research in talking with representatives of the Front and the government in Hanoi.

The two are not a single entity in so far as political, social and economic views are concerned. The stated differences are deep and would be difficult to compromise or bridge—if they are real. They suggest that another and closer look might be taken at the Front to see whether on inspection it proves to be the puppet of the North that the common United States view has supposed.

PEKING FROWNS ON FRONT

It might prove that the Front possesses not only more independence but more iconoclastic views in Communist terms than have been attributed to it. One thing is certain; the Chinese Communists take a very dim view of the Front's platform.

Behind the maneuver and countermaneuver in Vietnam are other forces that cannot be ignored. The Chinese, for example, have made no secret of their strong approval of the general nature of the Vietnamese conflict. They think it is going very well. They see it as the opening phase of possibly 25 or even 50 years of similar guerrilla conflicts that will spread through Asia, Africa and Latin America, eventually leading to the "encirclement" of the West.

By "West" they mean North America, Western Europe and the Soviet bloc. It is the great phase of the battle of the "country versus the city"—the same struggle that was won in China by the "country" and which the Chinese see as being won in world terms by the "country"—that is, the peasant masses, which they would lead.

China apparently has no interest in seeing the Vietnam war ended. It has no interest in a peaceful negotiated settlement. Not only has it no interest but also it is likely to oppose any step in that direction with great force.

This includes some powerful persuasives. China could at a single stroke close the frontier to the passage of arms and aid to Hanoi. China could cut off the supplies it provides. It might even do more. It might seek to reverse Hanoi's policy by calling on sympathizers within North Vietnam's leadership to oppose any effort to end the way.

A small clue as to China's reactions: diplomats of Eastern Europe eagerly inquired into the significance of this correspondent's trip to Hanoi. They wondered if he was bringing a peace bid from Washington or taking one back from Hanoi.

When he told them that he was not acting as a messenger, they plainly did not entirely believe the denial. They made no secret of their earnest desire that an end be found to the war in Vietnam. They expressed fervent hope that maybe at long last some steps toward that end were being taken.

The Soviet reaction was more restrained. But the Soviet press published and commented on this reporter's dispatches from Hanoi and their possible significance on the progress toward the conference table. There was no reaction from China or the Chinese. Not a word about the visit appeared in the Chinese press.

There was even speculation among some Hanoi diplomats that the visit of an American journalist to Hanoi and the succession of visits of other non-Communists might bring some real problems in North Vietnam's relations with Peking.

One diplomat thought that the Hanoi reaction to the peace proposals of Mr. Brown were couched in somewhat sharper language than might have been expected, simply to reassure the Chinese that Hanoi was holding the line.

There is another nightmare that haunts Hanoi's leaders as they ponder the future. This is the possibility that at some moment the Chinese internal political struggle will bring on an open struggle between the contending factions and that in the process China's ability to continue aid to Hanoi will be radically affected.

Associated with this fear is another: that the quarrel between Moscow and Peking might grow from a polemic and diplomatic struggle into a major military conflict. While many diplomats who closely follow events in the Communist world feel that this is an extreme possibility, they cannot entirely discount the angry mutterings the Russians now make for almost anyone to hear, mutterings that the quarrel may evolve into a military conflict.

No one in Hanoi can fail to observe the signs of the intra-Communist struggle. They are visible in personal and diplomatic relations, in difficulties North Vietnam has in getting transit facilities for invited guests, in the open wrangling between Moscow and Peking about methods of shipping in aid.

"North Vietnam has enough problems with the Americans," a Communist diplomat said, "without having this terrible quarrel with all its dangerous possibilities going on all around her."

With these factors in the background it would seem to be prudent to watch carefully for any sign of a situation that might lead to an honorable settlement. But here North Vietnam is divided against itself.

The declarations that Hanoi statesmen make about national honor, about independence, about survival seem entirely genuine. That is what they believe they are fighting for.

They look askance at suggestions that the object of their struggle is to spread the influence of "international communism." Once, perhaps, that might have been a goal. Some day in the future it might be again. But today the struggle as they see it is for the survival of Vietnam as a nation. They feel that the United States seeks to establish a "puppet" regime for the whole of Vietnam. This they are willing to give their lives to prevent and in this the Hanoi leadership appears to have the strong support of the country.

It is generally believed by non-Communist diplomats in Hanoi, rightly or wrongly, that the American bombing in the North not only has strengthened the regime in its conviction that the Americans aim at its destruction but also has crystallized a national spirit of patriotism and self-defense that gives the country a united aspect in standing against the United States regardless of how some citizens may privately feel on the question of Communism.

"The United States has never shown any signs of goodwill," Premier Dong said. The same sentiment was echoed by other Government members and by ordinary North Vietnamese. It was their conviction that the United States had set itself resolutely against them and that there was no real alternative but to fight it out to the end.

"We will die but we will not submit," was a phrase echoed repeatedly. It was apparent that to the North Vietnamese mind there was no alternative—no real road to an honorable conference to resolve the disagreements without further fighting.

This kind of attitude makes it difficult to take even a small step toward peaceful talk. When this was pointed out to the North Vietnamese, they fell back on the view that it was up to the United States, not them, to take the first steps toward halting the conflict. As to what would come later they did not say precisely but did leave an impression that they would not sit with folded hands if—against all their expectations—the United States did halt its bombing.

What influence do the Russians have on Hanoi's attitude toward negotiation? Not much, it seems evident. Soviet representatives stress the independence of the Hanoi officials.

One Soviet diplomat, bemoaning a New Year's hangover, said in despair: "And this is the day I'm supposed to turn in my annual report on the North Vietnamese economy!"

WON'T GIVE FIGURES

A friendly Westerner expressed his sympathy, adding, "After all, it's just a matter of writing up the figures."

"Don't make jokes," the Russian said. "That's the whole problem. They won't give us the figures on anything."

The North Vietnamese resent suggestions from Moscow about the conduct of the war and they resent suggestions from Moscow about making peace. In part, it would seem, this is deliberate policy on Hanoi's part. In order to maintain some kind of relations with its two big allies it emphasizes its independence of both. It takes no advice from Moscow and none from Peking.

In that fashion neither side can accuse it of favoritism. But if this acts to reduce the effectiveness of Peking's arguments in favor of protracted war it equally reduces any advice that Moscow may proffer about the advisability of cutting the conflict short.

The continuation of the war is difficult for the North Vietnamese people—they make no bones about that. But they insist that on balance it is not going too badly. Their towns, villages, cities, roads and railroads have taken a beating. The danger to the dikes is considered great. The rice crop is down because of bad weather and lack of manpower.

But the movement of forces, materials and arms to the south goes on. And in the south, too, although rosy expectations of major victories against the Americans have not been fulfilled, the Front says that in 1966 it actually extended its territorial sway over larger areas than in 1965—a claim that some neutral observers believe is pretty well founded.

The Americans have conducted some effective "spoiling" operations in the South but when they are completed the control of the territory drifts back into the hands of the Vietcong. Nothing has happened that has made either the North or the South feel continued persecution of the war impossible or too costly.

And, as Hanoi says, if worst comes to worst and the people are bombed back into the caves—well, they will go into the caves and the jungles and carry on from there until the Americans tire of it all.

That is a grim prospect, but the North Vietnamese have faced up to it and this correspondent found no one, Vietnamese, Communist or non-Communist who doubted that they were prepared to go through with it if necessary.

Nonetheless, this correspondent left Hanoi with a private impression that if the conference table ever was reached it would be possible for statesmen on both sides to hammer out a settlement that could well surprise each side by its effectiveness.

One other impression: in spite of all the harsh language that each side has used against the other, in spite of the desperate fighting, the death and destruction and cruelty, if the war could be ended, the North Vietnamese and the Americans could well end up excellent friends.

It would not, for one thing, require much actual contact with Hanoi for Washington to come to a clear understanding that, whatever else they may be, the North Vietnamese leaders are never going to be stooges for Peking, Moscow—or, for that matter, the United States.

They have—or think they have—fought all comers to a standstill for nearly 2,000 years. That is one reason the thought of ending the present war ever comes as a shock and a surprise to some youthful North Vietnamese.

"End the war?" one said recently. "End the war? What would we do with ourselves without the war?"

Release Highway Money

SPEECH

OF

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. OLSEN. Mr. Speaker, I have introduced a concurrent resolution expressing the sense of the Congress that the Federal-aid highway program should proceed as rapidly as available revenues in the Highway Trust Fund permit.

Last November the Bureau of Public Roads announced a substantial reduction in Federal funds for highways because of increased costs associated with our involvement in Vietnam.

I think this was an unwise decision. We need excellent highways not only to reduce injuries and fatalities and to improve normal domestic transportation, but as an important part of our Nation's defense. The state of our transportation system could spell success or failure for us in any national emergency. Surely the war in Vietnam is a reminder that improved highways should be high on the priority list of necessary expenditures.

In the Interest of Foreign Trade

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. CELLER. Mr. Speaker, the decision by President Johnson to rescind the 1954 escape-clause tariff increases on watch movements was both courageous and correct in my judgment. After 12½ years, it is certainly high time to restore watch tariffs to the levels agreed upon in 1936. Even at the reduced rates, watch duties will continue to be among the highest on any imported product.

The domestic watch industry has had every opportunity to adjust to import competition, and the evidence that they have successfully adjusted is persuasive. The domestic industry has steadily increased its sales and profits in recent years. Domestic production is up about 45 percent since 1960.

Some people have the mistaken notion that the U.S. industry has only a tiny share of the domestic market. But the fact is that each of the domestic watch manufacturing companies is substantially larger than the largest watch importing firm and the domestic producers account for three-fifths of all U.S. watch sales. Furthermore, it is worth pointing out that each of the so-called domestic producers owns large overseas facilities.

There is nothing wrong with this, but it helps to explain why those who have been close to this subject over the years have always looked on the tariff dispute as a commercial fight between two competing segments of the industry. It is a fight that ought to be settled in the marketplace, and the President's decision will help to assure that result.

Following is the splendid editorial on the watch decision which appeared in the New York Times of January 14, 1967:

MR. JOHNSON'S TARIFF COURAGE

President Johnson's decision to roll back watch and sheet-glass tariffs—despite powerful opposition mobilized by those industries in a Congress he no longer dominates—was an act of political courage with broader world implications than trade in those products would suggest. It affects the atmosphere of the entire Kennedy Round of trade negotiations now nearing completion in Geneva.

The Kennedy Round centers on an American offer of deep tariff cuts to persuade the Common Market to lower trade barriers toward other European countries and the outside world as a whole. Economically, success is vital to the export trade of Britain and many other countries, including the United States. Politically, the unity of the Atlantic Community is involved.

The decision on watches, a major Swiss export, eliminates the danger that Berne will withdraw many of its Kennedy Round offers, a move that could trigger similar action by the Common Market. The partial rollback in glass tariffs is symbolically important because the tariffs were raised in 1962, only a few months after a previous reduction. This circumstance outraged Belgium, and the Common Market as a whole joined in retaliatory tariff increases against several American export products.

Even more significant is the fact that the original American tariff increases for watches and glass took place under an "escape clause" which long had been a psychological impediment to trade liberalization. Europeans had come to suspect that the United States would rescind tariff cuts whenever foreign industries really succeeded in penetrating the American market.

Business requests for escape clause protection were, in fact, rarely granted by Washington. But the frequency of such requests and the lengthy procedures involved often created enough uncertainty to discourage European companies from the huge investment in product adaptation and merchandising needed to crack the American market.

To persuade Europe to enter the Kennedy Round, the 1962 Trade Expansion Act turned toward a new concept, "adjustment assistance" to American business and labor affected by foreign competition. The escape clause itself was made more difficult to use and a Presidential review was instituted that promised to roll back tariffs previously raised under escape clause procedures.

With his action on watches and glass, President Johnson now has kept that promise in all five of the cases on which he has had to rule and given Europe new reason for confidence that the tariff cuts made in the Kennedy Round will not be easily reversed.

Hon. Walt Horan

SPEECH
OF
HON. THOMAS S. FOLEY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. FOLEY. Mr. Speaker, will the gentleman yield?

Mr. PELLY. Mr. Speaker, I yield to my colleague from the State of Washington.

Mr. FOLEY. Mr. Speaker, I thank my colleague for yielding.

Mr. Speaker, I wish to join in everything that has been said by the gentleman from Washington [Mr. PELLY], the distinguished minority leader, the gentleman from Michigan [Mr. GERALD R. FORD], the distinguished majority leader, the gentleman from Oklahoma [Mr. ALBERT], and the majority whip, the gentleman from Louisiana [Mr. BOGGS], but I wish to add a personal note.

I am, I think, in a special position in the House in relation to Walt Horan. I have the honor to be his successor, and I am from another party.

On the day that I was seated as a Member of this House in January 1965, Walt was to my knowledge the only man to come from another side of the aisle to congratulate a successor who had been his opponent in the previous election.

I know I do not need to assure my Republican friends of the esteem in which Walt was held by the Democratic Members of this House. He was a dedicated Republican, but he could never have applied a partisan test to friendship. There was simply nothing small or narrow in his nature.

When I was introduced as a new Member in the Democratic cloakroom many of my new colleagues could not conceal their deep regret at Walt's defeat and it was clear that no one found any pleasure in it. Walt himself was undaunted and immensely generous to me. He took me through the Capitol to introduce me to his colleagues and countless friends. It was more than a magnificent gesture of good will; I think it was symbolic of the best traditions in our American political life: That the responsibility and service can be passed not only without violence but indeed without rancor. It was a day that I shall always remember.

Not long ago it was said here that to be gracious in victory required one to be a gentleman, but to be gracious in defeat required one to be a man. Walt Horan was a man as well as a gentleman, a warm, kindly, dedicated man who served his district longer than any other Representative and served it always with honor.

His passing brings grief to his wonderful wife and family to whom he was so devoted. Their grief is shared by all who had the privilege of knowing him. That is a rare testament.

Would You Believe Drew Pearson Defending the Right to Privacy?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1967

Mr. MULTER. Mr. Speaker, we all know the reputation for truthfulness and accuracy earned by Drew Pearson over the years: a very bad reputation. In addition, of course, he is a notorious invader of privacy.

Thus, as pointed out in the following column by William F. Buckley, Jr., which appeared in the December 29, 1966, edition of the New York World Journal Tribune, it is rather astounding to see Mr. Pearson defending the right of privacy.

The column follows:

PEARSON'S STRIKING OUT IN ATTACKS ON HOOVER

(By William F. Buckley, Jr.)

Would you believe Drew Pearson defending the rights to privacy? It is of course Pearson who has done more than any man in recent times to sanctify the violation of privacy—by trafficking, endlessly, in documents stolen from the private files of a United States senator by thieves who did not cavil even at the removal of the senator's correspondence with his children.

Drew Pearson is not alone. Alas. There are others like him who will fast for forty days and forty nights to proclaim the absolute right of Miranda and Escobedo to keep to themselves the details of their rapes and murders, but who sate themselves on every revelation by Pearson of the little transaction in the life of a public and decent man.

Pearson-observers will have noted that the gentleman is widening the net. The goal is to discredit J. Edgar Hoover who, Pearson keeps reminding us, is 72 years old, and hence presumably ill-equipped to carry on the rigorous duties of presiding over the greatest fact-gathering agency in the land.

Last summer Pearson accused Hoover of misscheduling an arrest of an American caught giving security information to the Communists, and the expulsion of two Communist diplomats who were receiving the secret goods. Hoover did this, said Pearson, at the most inopportune possible moment for the sole purpose of getting himself and the Bureau some favorable headlinage so as to distract attention from recent revelations about the FBI's bugging activities in Las Vegas.

Pearson's theory was that it would have been better to let the American traitor and the two diplomats continue under surveillance in the hope that other undetected spies would be exposed. He quoted the American State Department employee who had provided critical assistance to the FBI as, in private conversation, blasting the FBI's incompetence in the whole matter. Another charge, another tedious search for the truth, which however is easily come by.

(1) The State Department and the Justice Department, not the FBI, decide with reference to their own interests, as coordinated through the Presidency, when to make arrests and when to declare foreigners non grata, and cannot be assumed to schedule such decisions solely to oblige the p.r. requirements of the FBI at Las Vegas, Nev.

And then, (2), the gentleman who was professedly porked off at the FBI wrote to Hoover on seeing the Pearson story: "When I was contacted by Jack Anderson (Pearson's associate) I had no idea that he would bring forth an unjustified attack using half-truths and twisting facts in a brazen attempt to tarnish the superb image of your organization." Pfft, there go the charges. But Pearson is unrestrained.

It is Pearson's current thesis that Hoover is regularly using methods of crime detection which are outside the boundaries of the law and the crystallizing boundaries of good conduct, and that moreover he is doing so without the knowledge of his superiors, the attorneys-general. We have seen that the specific dispute over whether Hoover has acted in concert with Attorney General Kennedy turned out to be an unprofitable encounter for Kennedy.

Concerning the matter of convention, Pearson admits that the Soviet Union bugged the American Embassy in Moscow—but "this was over 20 years ago. Today if a bug were found in the Moscow hotel suite of an American visitor there would be an international uproar." Has the gentleman taken leave of his senses? There wasn't even an international uproar when a young American was, by the evidence of his mutilated corpse, beaten to death by the Communist police in Russia as recently as six months ago. If the redundant bug were discovered in an American embassy behind the Iron Curtain, it would cause less of an international uproar than the discovery of an accurate statement in a column by Drew Pearson.

"American Economy To Get 'Breathing Spell' in 1967," Says Wells Fargo Bank's Ransom Cook

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. YOUNGER. Mr. Speaker, on January 6, Mr. Ransom M. Cook, chairman of the executive committee of the Wells Fargo Bank of California in San Francisco, made an address before the Commonwealth Club of California on the subject "American Economy To Get 'Breathing Spell' to 1967." Excerpts from his address, as published in the Commonwealth, follow:

"AMERICAN ECONOMY TO GET 'BREATHING SPELL' IN 1967," SAYS WELLS FARGO BANK'S RANSOM COOK

(From address by Ransom M. Cook, chairman, executive committee, Wells Fargo Bank)

"American business decisions in the international field must constantly be approached long range to keep our projections for the future from becoming too romantic. We make our plans for ten to twenty years into the future with short-range plans subject to modification as conditions warrant, but always with a steady eye on our long-range objectives.

The emotional trail may have even more significance for the future. Why are we in a dilemma over our balance of payments and the Great Society program? Do we believe improving the economic lot of the poor here and all over the world is good business or is our conscience bothering us? Or, perhaps it is fear of war induced among frustrated and despairing people by troublemakers, where seeds of discontent can blossom into fighting? All three of these factors influence our foreign policy and aid programs.

FREE-ENTERPRISE TO EXPAND

In 1967 we will have to do some deep soul searching respecting our balance of payments. New rules have already been laid down for industry and banking which might hurt our long-range international position and even be detrimental to world economic development.

A sharp increase on the part of American industry in Europe and Great Britain has occurred in the past several years stimulated by Marshall Plan aid, glowing prospects for the European common market, and an improved attitude toward change. This has absorbed a lot of money, created many jobs in Europe. On balance it would seem that this activity has been stimulating, generally beneficial to the standard of living of people in Europe, and profitable to the American businessman.

EUROPEAN STOCKS SLUMP

For some lines of business the opportunity for profit and growth still seems nearly twice as favorable in parts of Europe as it does in the United States.

But some of the glow is off the common market picture. Profit prospects in many lines are less attractive than in the past few years. European stock market prices have declined.

American industries are finding that their original business policies need more attunement to European attitudes.

Aggressive American policies have brought about some change in the business pattern in Europe. While the "mama-papa" type business is still very important, it naturally under these conditions loses position somewhat. This enforced change in business habits has created resentments.

WARY JAPANESE

For Asia, Japan is coming out of the slump following a too rapid expansion and is depending for its future growth and economic stability on expanding export markets. American industry would like to base more operations in Japan to export from there, and is impatient with Japanese reluctance to permit foreign equity—while accepting foreign loans.

Short range, there seems no probability of a change in their attitude, but long range the opposite might come about. If or as the Japanese become less wary and fearful of foreign participation in their business affairs, as they expand their business horizons and if or as they move to a better proportion of equity to debt in their business structures, they will no doubt come to accept more foreign participation in business ownerships.

Expansion of economic activity in Southeast Asia must be slow. It promises to be, with our government's blessing, very much in the hands of the Japanese but national and religious prejudices will not disappear quickly.

COMMONWEALTH VERSUS COMMON MARKET

It will be some time before fully responsible governments will emerge in some parts of this area, a step precedent to some of the activities of the Asia Development Bank. And even more time may be needed before these economies will produce credit-worthy prospective borrowers who are able to productively use loans from the bank, and repay them.

Much hinges on England's relationship with the common market. The road in is rough but desirable. Should they be successful, however, Canada, Australia and New Zealand may find themselves much more closely identified with the United States and the economy of the Pacific.

FOOD PRICES UP

The pressure to increase food prices will mount and our food grants to other parts of the world, in addition to our aid in developing food production in other countries, will have a continuing adverse effect on our balance of payments.

Regarding our balance of payments, we have to make a number of assumptions.

First, domestic conditions for the coming year will continue for several months more in a declining rate of domestic growth in business volume and profits. While the profit squeeze will in some cases actually reduce earnings, the broader indication is that a high volume of inflationary pressures will more than offset the softening price tendencies and increased wage payments, so that gross business volume will increase significantly although less than last year. However, earnings may increase only half as well proportionately.

When we talk of a business downturn the downturn we discuss is only in the rate of increase. Our economy is structured for growth and dislocations would be severe even if all that happened to our economy would be that growth stopped.

HIGHER PROFITS ABROAD

Second, the war in Southeast Asia will be with us for a long time. Cash and manpower drains will not be expected to diminish in the coming year but to continue at somewhere close to present levels. When the war is over, we are committed to very large expenditures for rehabilitation and development in the Southeast Asian area. This type of expenditure has a very adverse effect on our balance of payment, and we seem to be locked into it.

NO MORE COMPLAINTS

Third, money in this country will ease to a degree, although not drastically.

The fourth assumption is that our fiscal federal budget through 1967 will be in substantial deficit and that there will be no tax increase, at least within the time necessary to have any very drastic affect on this budget.

There seems to be a case for expanding both production and sales in several world markets. Failure to do this might potentially weaken our financial postion and deprive American corporations of higher profit margins than are available domestically.

We will find American banks with overseas branches releasing the Euro-dollars they borrowed in '66 at very high prices and returning them to the available supply of Euro-dollars.

A few years ago Europeans were complaining that we were exporting inflation to them by flooding their markets with dollars resulting from our world aid programs. As American industry moved into Europe, attracted by the prospects for the common market and the expansion of European business, the balance of payments was further aggravated by big movements of capital abroad.

WORLD HOUSE CLEANING

This coming year, we can see the American banks releasing perhaps as much as $2 billion back into the Euro-dollar market. We will also assume that trade balances will not change too much as the coming year looks like a house-cleaning period with everyone working on increasing exports and reducing imports. We seem to be staring at a very substantial overall increase in short-term dollar claims against us owned abroad.

While the demands of American industry for Euro-dollars exceeded the supply last year, the opposite could be true this year. Rates should soften somewhat and would seem to provide funds for American industry to tap to finance foreign expansion. Two warnings seem indicated. First, that these dollars are short-term more or less hot money, and the needs of American industry for expansion are generally for intermediate or long-term money. The marriage of these two kinds of money transactions can be quite disastrous.

NEED SELF-DISCIPLINE

Second, a flood of Euro-dollars to Europe resulting from an increase in our balance of payments deficit could provide Europeans with more dollars than they want to own and renew the drain on our gold supply. This would certainly heat up the discussions on the suitabitily of the dollar as a reserve currency and bring us a whole nest of embarrassments.

Most European nations have reduced government spending and government borrowings in the private market. This is going to have a retarding effect on their business activity for 1967 but makes 1968 look good. Having taken this punishment themselves, they will take a dim view on holding an excessive supply of dollars, when we have not used the same kind of self-discipline.

GREAT NEXT STEP

The indicated down-turn in the private sector in this country poses a real problem for our government in deciding how to handle the budget deficit, a balance of payments deficit and maintain confidence in the dollar.

We think the American economy will get a well-deserved breathing spell in 1967 which will slow down the strong inflationary pressures and will no be too alarming. The Vietnam war will keep disposable income high and when the 1967 adjustment has been completed, there will be the renewal of housing construction and programs of the Great Society to recharge business activity. Relatively hgh interest rates will stimulate savings and provide the financial base for our next step ahead. The better we control inflation, the faster the savings will grow and the greater our next step ahead can be.

PROSPECTS GOOD FOR 1968

While financing of foreign capital expenditures seems reasonably available through Euro-dollar sources, the nature of these funds will limit their use. Interest rates in Europe will drift a bit lower.

The general period of adjustment going on in the coming year in many parts of the world make prospects for 1968 look better than 1967.

SOBER DECISIONS A MUST

A prominent European banker recently made this observation—"Booms in the past have been predicated on social changes or new products that excited the consumers and stimulated markets." Housing has done it, defense activities, color television is perhaps the latest. What do you have up your sleeve now that is new and will provide the stimulant for the next boom? But even if you don't have anything, what better currency is there to own than the dollar?

We believe that a more responsible tax position will be taken in the months ahead and are encouraged by the signs throughout many parts of the world, including our country, that some more sober fiscal decisions are being made and publicly accepted.

Don't Stop With Powell

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. DERWINSKI. Mr. Speaker, there has been unfortunate emphasis on the personality of Representative ADAM CLAYTON POWELL, of New York, rather than on the ethics and legality of his actions. A very timely and practical editorial in the Saturday January 14, 1967, Chicago Daily News merits the attention of all who serve in the legislative branch:

DON'T STOP WITH POWELL

Adam Clayton Powell's bleat that he had done no worse than many of his colleagues was, of course, irrelevant to the matter at hand. Congress had plenty of reason to keep him out of his House seat until further inquiry. He has been a disgrace to his office, and to the nation he represents. Most particularly, he has by his profligate conduct brought shame to a race that, whether it wholly realizes it or not, deserves far better than to be represented by Adam Clayton Powell.

And yet it is safe to conclude that Powell could have gone on his free-wheeling, free-spending way indefinitely without causing a ripple among his colleagues, except for his involvement in a criminal contempt of court charge. That put him on the wrong side of the law for sure, and put Congress in the position of not being able to ignore him.

For Congress dearly hates to expose or censure one of its own.

The record of congressional starts and stops (especially stops) in various probes of its members gives credence to Powell's suggestion that certain of his colleagues are up to their elbows in petty or grand chicanery.

This would be a good time to ventilate that subject, too—not for the purpose of diluting the case against Powell, but in the interest of a little more rectitude in a body that should be at constant pains to keep itself above reproach.

Whether Congresses of the past had any better morals than those of recent years we cannot say. But there is no mystery about how members occasionally get corrupted these days.

With hundred-million-dollar government contracts commonplace in a context of lax and fuzzy laws governing conflict of interest, the legitimacy of campaign contributions, and so forth, temptation is constantly present. When a half-dozen votes rounded up in the cloakroom could spell a million dollars of profit for a firm and a tithe of that sum for the man who made it possible, the only insurance against corruption is eternal vigilance. The Dodd case, the Bobby Baker case, the Powell case all testify that there has been little vigilance.

The House will and must look into the Powell case. At the same time, it should give prompt consideration to means of tightening checkreins on all congressmen, to make the law clearer, corruption more difficult, and exposure surer than now.

Government Consolidation

EXTENSION OF REMARKS

OF

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. CORMAN. Mr. Speaker, Los Angeles County has taken a significant step in the matter of consolidating fragmented local government by merging its city and county health departments. Careful study is now being given to the very important area of consolidating Los Angeles' law enforcement agencies. I cannot stress too strongly the paramount importance of this study.

The following editorial in the Los Angeles Times of January 9 concerns itself with these problems, and I call it to the attention of the House.

The President, in his state of the Union message, raised the same issue, pointing to the need for greater efficiency in the organization and methods of administration on all levels of government. His proposal to combine the Commerce and Labor Departments in Washington dramatizes this point.

The editorial referred to follows:

THE GOVERNMENTAL MAZE

Los Angeles County is 7 million people living in a bewildering maze of fragmented local government—and looking for a way out.

The proliferation of separate cities and special districts produced a divison of authority that increasingly diluted governmental responsibility. Duplication and competition inevitably led to waste and inefficiency.

Historically, as the population of the metropolis grew larger, the average size and scope of its sub-governments grew smaller.

As the problems of urban existence expanded and became more complex, the capacity of the decentralized agencies to meet new challenges diminished.

Once formed, this labyrinth of 76 municipalities and more than 600 special districts has resisted structural change. But now population growth has so compounded urban problems—and the price of their solution—that new approaches are essential.

Political boundaries demand new scrutiny when they become artificial barriers to effective action on area-wide problems or to more economical supplying of public services.

Yet the remedies are often more apparent than real. There is no single, simple formula for making local government more efficient, more responsive and less costly. The difficulty, however, must never deter continuous efforts for improvement.

The proposed merger of the Los Angeles Police Department and Sheriff's Department provides an example of the complex factors involved in governmental consolidation.

At first glance, the uniting of the county's two major law enforcement agencies seems eminently reasonable. Any such decision, however, must be carefully examined to make certain the end result is not merely a larger force but one that operates more effectively and at less cost.

The Board of Supervisors acted properly in calling for a thorough study of the possibilities of consolidation by its outstanding Citizens Committee on Economy and Efficiency. Surprisingly, no such independent, in-depth examination has ever been conducted, despite periodic discussion of the merger by various official bodies.

Committee members may find that consolidation should be limited to certain police services and facilities, such as training, records, communication and purchasing. A complete merger would pose major questions of control, organization and assimiliation of personnel, as well as inevitable political problems. Further, it must be noted that the over-all level of law enforcement in the county cannot be substantially raised until the dozens of smaller municipal police departments are part of a comprehensive plan.

Functional consolidation, however, already is widespread in law enforcement. Training, laboratory and investigative assistance is continuously provided other departments by both the Sheriff's Department and the LAPD. A total of 29 communities also contract with the county for all police protection services.

Such consolidation of functions also occurs frequently in other areas of public service throughout the county. The county government provides health, assessment and tax collection services for all but two cities while assuming countywide responsibility for air pollution and flood control. Numerous other contracts link the county and cities as well as cities with cities for more advantageous joint action.

Study of the proposed law enforcement merger should develop many other possibilities of mutually advantageous joint effort, including fire departments.

The potential seems limitless, but it can be achieved only after thorough study and thoughtful consideration of the disadvantages as well as the benefits of further consolidation.

The General Practitioner Is Not Being Replaced

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. ROBISON. Mr. Speaker, with all our appropriate concern about matters involving public health—and the Federal role in relation thereto—one problem, though a very real one, has so far escaped all but the periphery of recent congressional attention.

That problem, which day by day is assuming ever greater urgency, is the serious shortage of general medical practitioners. The problem is especially acute in rural areas and suburban areas, though its effect is likewise being felt, in this age of specialization, in urban centers, as well.

There are numerous approaches toward alleviating the problem that could well be worthy of our consideration, but—and this is my point—consider them we should. As a beginning point, perhaps the following piece from the Wall Street Journal for January 17—which I now include under leave to set forth extraneous material—will be of interest to those of my colleagues who share my concern with the diminishing numbers of general practitioners, and may also serve to interest others not yet aware of such a problem.

The article follows:

NEW MEDICAL "SPECIALIST": THE GP

(By Jonathan Spivak)

HERSHEY, PA.—This famed cocoa-making community will soon be the setting for an adventuresome experiment in medical education.

The Pennsylvania State College of Medicine, which opens this fall, will seek solutions to one of the nation's most pressing medical problems—training doctors dedicated to the art of general medical practice and capable of caring for the entire family.

The spread of medical specialization has already drastically diminished the rolls of the American general practitioner. There are only 72,000 now, compared with 112,000 three decades ago. The GP is outnumbered by the specialist three to one and the fragmentation of medical care continues unabated. "The threat is not that the GP is being demeaned; he is not being replaced," declares Dr. Raymond Pruitt, Baylor University's vice president for medical affairs.

To help reverse this trend, Penn State Dean George T. Harrell has persuaded three local general practitioners to join the new medical school as fulltime faculty, forming a Department of Family and Community Medicine. The local doctors, now taking refresher training for their professional chores, will continue to care for their own 2,000 patients at the school. Offices and examining rooms are being provided, as well as access to the new 350-bed hospital being built at the Hershey Medical Center.

"Here we will try to define the area of competence of the general practitioner," says Dr. Harrell. As part of their training, students will participate in the care of the same families for four years, ministering to minor ailments, handling emotional upsets and managing chronic medical difficulties.

COPING WITH NONMEDICAL NEEDS

Dr. Harrell's hope is to interest students in the rewards of routine family practice or, at least, infuse them with a personal concern for patients, however specialized their subsequent careers. Courses in religion, sociology and other such subjects will be emphasized, to develop the physician's ability to cope with his patient's non-medical needs.

Traditionally, medical schools have concentrated on the coldly clinical aspects of medicine, particularly training in the diagnosis and treatment of the acutely ill. Usually the student sees the patients only briefly in the hospital; there is scant emphasis on preventive or follow-up care or on the medical needs of other family members. Education efforts at the hospital's outpatient clinic, which most closely approximates the GP's practice, are usually poorly organized and often ignored. What's missing is a stress on providing comprehensive, continuous care.

But now many leading medical educators, at Penn State, Harvard, Vanderbilt, Baylor and elsewhere, are beginning to grapple with the problem of properly preparing students for general practice.

The best approach, many experts agree, is to elevate general practice to a specialty itself—paradoxical as that may sound—because specialty status promises more pay and prestige. Instead of a catch-all year of hospital internship after medical school, the student receives three or four years of residency training in family practice.

The influential American Medical Association and the American Academy of General Practice, the GPs' professional group, favor the change. But the details are already being debated.

One issue: Who sets the educational standards? The General Practice Academy insists it should have the major role, but many medical educators lean to the internal-medicine specialist. Clearly, family-practice training will draw heavily on the talent of the internist, who deals mainly in the diagnosis of disease. But many internists become specialists in the ailments of a single organ, such as liver or lung. The family physician doesn't need such an intimate knowledge of infrequent afflictions. But he does need some training in obstetrics, pediatrics and emergency surgery, plus a grounding in psychiatry, because many of his patients will have emotional as well as physical complaints.

Whatever their educational content, the family-practice programs will encounter organizational obstacles. Many medical-school deans are eager to start, but their department heads, specialists themselves and frequently more powerful personages, may feel more allegiance to their specialty organizations than to the school.

Also, where will the added faculty come from? Experienced private practitioners may hesitate to return to the campus. Talented young graduates may be unwilling to immerse themselves in routine medical care concerns when academic advancement and research renown repose in the specialties.

The toughest task, though, will be insuring that prospective family doctors acquire practical experience by treating patients. To do this, the medical school must take on responsibility for care of a large group of local residents; Dr. Stanley Olson, who heads a family-practice program at Vanderbilt, estimates the desired number at about 5,000. Many schools will hesitate, however. Extension from teaching into service is likely to stir savage struggles with local practitioners. One way schools can minimize "town versus gown" rivalries is to limit care to the poor or to patients referred by local doctors. But a full-fledged family-practice program almost inevitably invades the private practitioner's domain.

Better education alone won't solve all of the general practitioner's problems, medical men point out. Family practice must be made more satisfying, personally and professionally. "You could set up general practice programs in every school in the country, but if that was the only thing that was done you'd still not solve the problem," declares Dr. Robert Marston, an associate director of the Government's National Institutes of Health.

In many parts of the country the GP has trouble acquiring hospital privileges; thus, the specialist automatically takes over when the GP's patient becomes seriously ill. Even in rendering routine care the GP is handicapped by a lack of convenient, dependable X-ray and laboratory facilities. Much of his time is consumed in counseling patients, for which he cannot command high fees.

The GP's temptation is great to perform costly surgery, particularly high-frequency operations like appendectomies and tonsillectomies. Yet his formal surgical training is slight, his skills acquired largely by practice; regularly he risks encountering dangerous unforeseen complications.

Some medical men discount the prospect of promoting family practice to a specialty. Given the many difficulties the general practitioner encounters, it may be that "you are asking for a second class citizen," in the words of Dr. Arthur Richardson, dean of the Emory University School of Medicine. It's argued that a well-trained non-MD, perhaps even a professional nurse, could with equal effectiveness perform the basic functions, tending to patients' minor problems and channeling the more severely ill to suitable specialists. Or medical schools could begin providing relatively quick and inexpensive training for cadres of GP's to provide such fundamental treatment.

Still, steps could be taken to lighten the family physician's load and make his career as a specialist more challenging. Non-professional assistants could take over some of his duties, such as giving nutritional and prenatal advice and taking routine histories. The physician would be free to serve more patients, spend more time with the acutely ill, make his medical judgments more deliberately.

More widely available post-graduate education could keep the practicing doctor abreast of medical developments; brief refresher courses already are offered at medical centers and elsewhere. Teaching aids such as closed-circuit television could be installed in his office. But many educators insist that more radical remedies are required, that changes in medical practice come too fast and reach too far to be mastered by such makeshifts.

DOCTOR WOULD RETURN TO SCHOOL

So there's growing support for some system that would regularly return the family doctor to medical school for months or a year at a time, at government expense (Dr. James Shannon, NIH director, is one advocate). Young residents could be dispatched to care for the doctor's patients, as the final preparation for their own private practices.

Even more directly could the Government help GPs render better service. Indeed, this is one aim of the NIH heart-cancer-stroke program now getting under way. The NIH wants to export high standards of urban medical care to smaller communities. Modern X-ray machines and laboratory equipment could be provided so local practitioners are assured high-quality diagnostic help; special units for care of heart patients and others acutely ill could be installed at local hospitals; the list is probably limitless.

Also, the GP of the future may be a member of a many-specialist medical group, coordinating the care his patients receive from other medical men. At Houston's famed Methodist Hospital, for example, this role is filled by a doctor known as the general internist. "He's the key to my care," says Hospital Administrator Ted Bowen. "He's the one I relate to."

Thus, the trend toward specialization may increase, not diminish, the patient's preference for a general medical adviser. How well today's educators succeed in overcoming the doctor's distaste for general practice could be the key to the public's satisfaction with medical care in the decades ahead.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mrs. KELLY. Mr. Speaker, among tens of millions of non-Russian people suffering under the Communist regime of the Kremlin, the Ukrainians are the largest ethnic element. They have sacrificed much. For more than 45 years they have been among the most victimized national minority groups in the Soviet Union.

Before the end of the First World War when the callous autocracy of the czars in Russia collapsed, the Ukrainians hoped to attain their freedom. The Russian Revolution of 1917 offered them the real opportunity; they seized upon it and proclaimed their national independence on January 22, 1918. Unfortunately for the Ukrainians, and their friends everywhere, that independence lasted for only a short time. In 1920 the country was attacked by the Red army, overrun, and the Ukrainian Republic vanished as quickly as it was born 2 years earlier. Soon the country was incorporated into the Soviet Union, and to this day remains chained to that Union. There in their homeland more than 40 million Ukrainians are prisoners, being isolated from the outside world. They are deprived of all forms of freedom, even though in recent years there has been considerable relaxation and thawing in the unrelenting Communist regime. We in the free world observe the anniversary of their Independence Day and hope that they will again regain their freedom and live in peace in their homeland.

Rhodesia: Colony, Not State

EXTENSION OF REMARKS
OF
HON. DONALD M. FRASER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. FRASER. Mr. Speaker, in recent weeks a number of arguments have been made in opposition to the United Nations sanctions against the Ian Smith regime in Rhodesia.

Among the most articulate opposition I have seen was an article on the editorial page of one of the Nation's leading newspapers. The article raised several questions about the legality of the U.N. position.

To clarify my thinking on this subject, I sought the advice of a man I consider an expert, Prof. Charles H. McLaughlin, chairman of the Political Science Department at the University of Minnesota. Professor McLaughlin, who is spending the current academic year teaching at the University of Hawaii, responded thoughtfully and in detail to the assertions in the article. His reasoning was so sound that I want to include his letter in the CONGRESSIONAL RECORD.

The article took issue with, among other thing, "vociferous U.N. partisans of 'action now' against Rhodesia" who "argue that Salisbury isn't legitimately independent, just because its declaration of independence was 'unilateral.'"

Professor McLaughlin had this to say in answer to my letter:

> I have little doubt of the correctness of your view that Rhodesia must in a legal sense be regarded at this stage as still a self-governing colony of the United Kingdom. There would be no objection to saying that it is a state in a *de facto* sense, since it has maintained its control of the territory and population of the colony in the face of British economic sanctions for more than a year since the declaration of independence on November 11, 1965. But it is not a state in the *de jure* sense of one recognized as a member of the society of nations, subject as an international legal person to the system of international law; i.e., it is not a legitimate state.
>
> Of course it must be conceded that if a *de facto* government succeeds in maintaining its independent control of the territory and population against the mother country from which it has broken away, for an indefinite period successfully resisting any pressures the mother country can apply, there must eventually come a time in which it must be considered independent in the fullest *de jure* sense.

The author of the article, Professor McLaughlin went on, "apparently thinks that point has been passed."

He continues:

> I do not, for two reasons:
>
> First, the United Kingdom has neither conceded independence nor ceased to apply measures designed to bring the Smith government to terms. On the contrary it has plainly stated that independence would be granted only if the Rhodesian government accepts and incorporates into its constitution certain conditions designed to assure rapid movement toward majority government, or alternatively if independence under the 1961 constitution can be shown to have public approval by a referendum of the entire population or at least of the present electorate plus all African taxpayers. When the Smith government refused to meet these conditions the British Government indicated that it would apply such non-military sanctions as might be required to compel submission. That the sanctions have to date proved unsuccessful does not demonstrate that the British position has been lost, for far from abandoning economic pressures the British Government has now secured a very substantial escalation of them in the United Nations sanctions program. Even without this it was by no means clear that Rhodesia could continue indefinitely to resist the more limited program.
>
> Second, there has been no general recognition of Rhodesian independence by other states which could be pointed to as overruling the British position. Indeed, *de jure* recognition of Rhodesia at a time when the British are still actively applying pressures to compel submission would in international law constitute a premature recognition and therefore an improper intervention into a civil conflict. As far as I know only the Union of South Africa and the Portuguese African colonies have assisted Rhodesia, and other states have refrained from extending aid or recognition to Rhodesia. Further, a great majority have voted for the United Nations sanctions. Under these circumstances it surely cannot be said that there has been any support from the society of nations for Rhodesian independence. As we have no other test of *de jure* independence than the crude one of general recognition of it by other states, this would seem to be decisive.

In discussing the principle of national self-determination as it applies to Rhodesia, Professor McLaughlin wrote:

> Rhodesia has long been a self-governing colony. A few years ago Great Britain formed the Federation of Northern and Southern Rhodesia and Nyasaland, but the Federation presently came apart at the seams, mainly because African nationalists

feared it might become subject to a regime of white minority supremacy. Subsequently Northern Rhodesia and Nyasaland became the independent states of Zambia and Malawi, respectively. The United Kingdom Government could hardly admit their right to self-determination and independence without conceding as much to Southern Rhodesia, i.e., what we now call simply Rhodesia. This is so clearly true that we need not enter into discussion of the difficulties of the principle of self-determination as it appears in other contexts. It is in fact a principle which, although often applauded by the United Nations and others, has never been defined with precision. The determination what is a "nation" for purposes of self-determination may well fix in advance the result of the process of determination by including or omitting peoples whose vote is critical to the result of the plebiscite. Again, a feeling of nationality among a people is no guaranty that it possesses the means of defense and economic viability requisite for effective statehood. Fortunately we escape these perplexities in the case of Rhodesia, for it seems sufficiently integrated by historical circumstances and economic development that no one seriously contends it is not an appropriate unit for self-determination. Why then, [the author] seems to ask, do we not recognize the act of national self-determination which has taken place?

The answer, surely, must be that we cannot regard what has happened as a true act of national self-determination because the nation was not generally involved in it but only a small minority comprising the white population and a few unrepresentative African chieftains. This is precisely the point the British Government made in stating that it could not accept independence on the basis of the 1961 constitution unless this were shown to have truly national support by a general referendum. The Smith government in refusing to accept this challenge declined to abide by the normal tests of self-determination.

The article stated that:

It ought to be impossible for the U.N. to shrug off paragraph 7 of article 2 setting forth the "principles" of the Charter:

"Nothing in the present Charter shall authorise the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state"—

To which Professor McLaughlin responded:

There is a substantial literature of legal monographs and articles in which the writers have tried to determine the meaning of the domestic jurisdiction limitation both by textual exegesis and by reference to the practice of the UN organs in applying it. The results are unsatisfactory. Such terms as "essentially within the domestic jurisdiction" and "to intervene" are clearly very fluid and relative to context. We have the authority of the Permanent Court of International Justice for the conclusion that "domestic jurisdiction" is not an absolute concept but one which must be defined in terms of current and ever changing national and international functions. Fifty years ago one might have said that the regulation of labor was a matter not only "essentially" but almost exclusively of "domestic jurisdiction." Now we have a substantial international apparatus, the International Labor Organization, which regularly busies itself with establishing labor standards by international convention and has already produced a large mass of such regulations. A further difficulty is that the organs of the United Nations have never really defined the paragraph; they have simply observed the limitation or not observed it as they thought proper. We are therefore left with little standard other than the good sense and restraint of the delegates.

These difficulties do give some color to [the author's] charge that if the United Nations reserve the right to intervene whenever a state's domestic acts are so provocative that they may stir other states to use force to restrain them, then we may open the way for interventions in the name of peace against states which are acting very properly just because less worthy states don't like their conduct. But I think he is to a large extent demolishing a straw man, for the United Nations has not advanced so broad a proposition. They have merely said that when a state is engaging in domestic conduct which violates fundamental principles of the Charter, such as racial discrimination or genocide, this is so likely to lead other states to a *just* intervention to restrain such conduct, that the United Nations should regard it as a threat to the peace and take appropriate measures. There is a very clear sense of who are the virtuous and who are the miscreants in this formulation. And certainly there is no notion, as he suggests in his examples of intervention by Arab States into Israel or of Castro-leaning governments into democratic states of Latin America, of providing a justification for interventions by states or groups of states. The only intervention contemplated under this principle is intervention by the United Nations in some form of collective action authorized by it.

However difficult it may be to arrive at clear definitions in this area, I hardly see that the world can afford to revert to the principles [the author] advocates. If the United Nations may occasionally err in overzealous application of collective measures (although I can't agree that it has done so to date), it at least will do so in the name of principles we can all applaud. There is less risk in a collective action taken after full deliberation than in the kind of international anarchy we must otherwise tolerate.

The Poverty War

EXTENSION OF REMARKS

OF

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. MINISH. Mr. Speaker, in many New Jersey cities, the war on poverty is opening the doors to opportunity for thousands of our less fortunate fellow citizens. The war on poverty is helping people to help themselves, and in so doing is bringing a new measure of hope and justice to our communities.

On December 15, the editorial page of the Trenton Trentonian featured a report by our distinguished friend and colleague, Congressman THOMPSON, regarding the outstanding job being done by Trenton's antipoverty agency, United Progress, Inc., as in most New Jersey programs, the biggest problem facing UPI is an urgent need for additional Federal funds. But even on an extremely modest budget, the war on poverty in Trenton, as in Newark and other cities, is a growing success.

Mr. Speaker, I include Congressman THOMPSON's fine report, entitled "Much Can Be Said for Poverty War," at this point in the RECORD:

CONGRESSMAN THOMPSON'S REPORT—MUCH CAN BE SAID FOR POVERTY WAR

(By FRANK THOMPSON, JR., Member of Congress, Fourth New Jersey District)

Despite the truly remarkable record of the 89th Congress, there was one major disappointment—the failure to fully fund the anti-poverty program for the coming fiscal year. It will be recalled that while Congress authorised continuation of the program at the level of $1.75 billion as requested by the Administration, it appropriated only $1.6 billion.

It would serve no useful purpose now to single out scapegoats—there is enough blame for everybody to share. But in retrospect, I suspect the old American custom of expecting instant success has a great deal to do with the general lack of enthusiasm in the Congress for the anti-poverty program.

This is a great pity for the nature of the problems to be overcome for the most part precluded easy solutions. Indeed, I have had men highly experienced in government administration tell me it was a minor miracle that the program got off the ground at all considering the enormity and complexity of what was and is being attempted.

Certainly, one of the major difficulties which confronts the Office of Economic Opportunity is that of devising criteria by which to measure the effectiveness of the several parts of its program. The lack of such criteria has given the critics a field day. Who, for instance, has not read or heard the invidious comparison made between the cost of educating a student at Harvard and a high school dropout at a job corps center? The fact that any such comparison is pure nonsense is lost.

Of the several programs administered by OEO, the one whose effectiveness is the most difficult to assess is almost certainly the Community Action Program. Not unsurprisingly, this is the program that elicits the least enthusiasm in Congress. And yet, I think a good case can be made for CAP in my home city of Trenton.

One of the major efforts of Trenton's community action program has been directed against reducing hardcore unemployment. United Progress Inc., the city's antipoverty agency, has launched manpower training programs, basic education programs and has made available job development, counseling and placement services. In its relatively brief tenure, it has placed more than 3,400 people in jobs, training programs or in work-experience programs.

Consider these facts: About 125 former welfare recipients now have permanent jobs as a direct result of UPI programs; in October, UPI extended services to 800 unemployed persons, 24 per cent of the official total as compiled by the State Division of Employment Security; more important, more than one third of the 800 had never registered with the state employment service and, therefore, presumably were not even counted as being among the unemployed.

In short, UPI is obviously reaching people through its community action programs that are not being reached by the regular governmental agencies. Does this mean that the CAP programs are responsible for the fact that Trenton's rate of unemployment (2.5 per cent) is the lowest in the State? I don't know. But I'll bet those slide rule operators in the Bureau of the Budget can't prove otherwise!

In short, a lot can be said for the poverty program if people are willing to listen.

U.S.S. "Constellation"

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. MATHIAS of Maryland. Mr. Speaker, many Marylanders were distressed earlier this month when the U.S.S. *Constellation*, the Nation's oldest warship, sprung a leak at her berth in Baltimore harbor and had to be extensively repaired. This mishap dramatized the need to provide more complete protection for this historic vessel, and to preserve her and restore her to her original trim.

I am pleased this year to joint Congressman GARMATZ in reintroducing legislation to achieve these objectives by establishing the U.S.S. *Constellation* National Historic Site adjacent to Fort McHenry. This bill would complete the task which has been carried forth so far through the dedicated work of many Maryland citizens and groups.

An article by Jack Kneece of the Associated Press last week summarized the proud history of the *Constellation*, and I would like to insert in the RECORD his story, as it appeared in the Washington Post on January 12:

OLD WARSHIP REGAINS FIGHTING TRIM

(By Jack Kneece)

BALTIMORE, January 11.—Walking the creaking wooden decks of the oldest U.S. Navy ship, one can almost hear the cannon fire and wind in her rigging that day long ago when she and her crew won America's first victory at sea.

An antique contrast at its downtown mooring, the U.S. frigate Constellation is a National Historical Site being restored to fighting trim.

It is hoped that the ship soon will be as it was that day in 1799 when she attacked L'Insurgente, a French ship of 40 guns to the Constellation's 36.

Exploring musty below-decks, it's easy to imagine the bright Caribbean day when the United States finally struck back at France for officially sanctioned French piracy during the "quasi war" of 1797–1800.

The French, and Barbary pirates too—safe in the knowledge that the fledgling American Eagle was still a landlubber—had been plucking ripe U.S. merchant ships from the high seas.

The Constellation, reportedly named by George Washington, was one of five wooden frigates built expressly to stop these inroads.

On Feb. 7, 1799, Commodore Thomas Truxton, whose love for the Constellation began as he supervised her construction, wrote this simple log entry: "I discovered a large ship to the southward on which I bore down."

The speedy Constellation, dubbed the "Yankee Racehorse" by later foes, closed the distance on the L'Insurgente after a 90-minute chase. After a succession of skillful maneuvering and accurate U.S. gunnery, the French ship lost its mizzenmast and 29 French sailors were killed and 40 wounded.

It was America's first victory on the high seas. It cost the life of only one American—a sailor run through by an officer for cowardice.

The Constellation saw much service and won many battles—some much more spectacular—representing her nation well. She escorted merchant ships and sailed until she was rebuilt at Norfolk in 1852.

Disputes over whether the Constellation is the oldest U.S. ship afloat (it was launched in 1797), and whether it is actually the same vessel after the 1852 reconstruction have been settled once and for all by the Navy. The Navy says yes to both questions.

The Constellation was sailing off the west coast of Africa on May 21, 1861, when its captain, John S. Nicholas, spotted what appeared to be a brig flying an Old American Revolutionary War flag.

He ordered a shot put across the smaller vessel's bow and his crew boarded the brig and learned that it was part of the Confederate Navy—that the bombardment of Ft. Sumter several months earlier had started the American Civil War.

This also was the first sea victory by the Union over the Confederate Navy.

Steam and steel armament soon relegated the Constellation to a new role as training vessel. It continued in this capacity after the Civil War.

When the Constellation was discovered rotting in a Boston Navy yard after World War I, a 30-year public outcry by Baltimore citizens culminated in the return of the ship in 1955.

Work, including building new masts and installing original iron fittings, has been progressing steadily since.

But, could the ship talk, her proudest moment would undoubtedly have been when she finally was returned to Baltimore aboard a barge, with colorful code flags flying the words, "Yankee Racehorse."

Industry Objection to FDL Program Welcomed

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. GARMATZ. Mr. Speaker, the Baltimore Sun of January 18 carried an account of a speech made by Mr. Stewart S. Cort, president of Bethlehem Steel Corp., regarding the fast deployment logistics ship program. He called it a prime example of "ill-conceived government activity in the transportation field" and said that it was based on misconceptions.

The Bethlehem Steel Corp. is one of the largest shipbuilders in the United States and its president speaks with a high degree of authority on the subject of shipbuilding.

I, and the members of my committee, have been pointing out the fallacies of the concepts embodied in this program ever since it was originally announced and I am very pleased to see that our judgment is being vindicated by such an expert as Mr. Cort.

I believe that the vast expenditures called for by the program would be an utter waste of public funds and that the use of such money for commercial ships would not only supply the same service that the FDL ships will furnish but will carry a greater portion of our commerce as well.

The article follows:

CORT WEIGHS, REJECTS SHIP DEPLOYMENT PLAN—BETHLEHEM HEAD CITES DEFENSE IDEA COST, INFLEXIBILITY

(By Richard Basoco)

A major figure in the shipbuilding industry for the first time took strong exception yesterday to the Defense Department's proposed Fast Deployment Logistic ship program.

The president of Bethlehem Steel Corporation said last night that the Government's plan to construct fifteen to twenty cargo ships which would be loaded with military supplies and deployed around the world was too "expensive and inflexible."

Stewart S. Cort, Bethlehem president, criticized the FDL program in remarks for the annual meeting of the Chamber of Commerce of Beaumont, Texas.

WANTS COMMERCE CARRIERS

He declared that "a large, modern merchant fleet" could meet the same wartime needs for which the FDL ships are to be designed, "and, in peacetime, can carry our commerce and earn money in the process."

Cort condemned the program as a prime example of "ill-conceived Government activity in the transportation field," and said it was based on "misconceptions."

He thus appeared to break with the Shipbuilders Council of America, which last week cautiously indorsed the "rationale" of the FDL program.

NEED OF WATER TRANSPORT

The Bethlehem executive, whose shipyard division operates six facilities around the country, said that the theory behind the deployment program is that "such vessels would permit a quicker response to brushfire wars than we can make with present transportation arrangements."

Such a premise, he suggested, is based on a belief that it is no longer necessary to depend primarily on water transport to support military operations.

The error of such a view he said, can be found in two facts:

1. During World War II "about 99 per cent of the personnel and materiel used abroad was carried by ship."

DEPLORES SHIPS' AGE

2. "A quarter-century later—after immense expenditures on aircraft design and production and very little on ship construction—we find that 98 per cent of the personnel and materiel needed in Vietnam is being carried—you guessed it—by ship."

He added that "unfortunately" the nation is still having to rely on ships built under World War II programs.

Cort challenged another "misconception" which, he said, suggested that only "modern management techniques" can meet the design and construction requirements of the ships—"although the vessels themselves do not appear to involve any radically new design problems."

Just to design the FDL, he said, will take eighteen months and perhaps as much as $25,000,000. He contrasted this with the private development of the high-speed Mariner class of cargo ship which took one month to design at a cost of $1,000,000.

NOTES MARINER SUCCESS

The soundness of the Mariner design, he said, has been demonstrated by the fact that 35 ships were built from those plans and another 50 built from modifications of the basic plans.

Cort took special aim at "the notion that existing private shipyards are obsolete and their managers too ignorant or stubborn to adopt modern techniques."

"This basic error arises from a profound ignorance of shipbuilding economics," he said, noting that it is difficult for shipyards to adopt mass production techniques because "each purchaser insists on and gets a tailor-made suit."

YARDS AND BIG ORDERS

He defended the shipyard industry, saying that, if large ship orders are placed, "amazing results" can be achieved.

He pointed to Bethlehem's experience during World War II when "we produced at such a rate that we could complete 500 ships in eighteen months—the time required merely to arrive at a design for the projected FDL vessels."

He also said that the creation of "a whole new shipyard" envisioned as a part of the FDL program "may cost the taxpayer quite a lot of money, because no one in his right mind would build such a yard unless he thought he could recover his investment."

"NIGGARDLY" MERCHANT OUTLAY

And because of the "niggardly" merchant shipbuilding program, the builder will want to write off the yard's cost against the fifteen to twenty FDL ships thus far announced, he went on.

He described as "nonsense" the image—created, he said, by publicity attending the FDL project—of established shipbuilders as having resisted modernization and change.

Violence in the Streets: Challenge to Democracy

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a speech given by my esteemed colleague, the Honorable JONATHAN B. BINGHAM, of New York. The statement, which follows, was delivered at Columbia University, January 6, 1967, on the occasion of the first annual dinner of the New York State Board of Regents for Herbert H. Lehman fellows in the social sciences and public and international affairs.

VIOLENCE IN THE STREETS: CHALLENGE TO DEMOCRACY

Mr. Chairman, Mrs. Lehman, distinguished guests, Lehman Fellows, and friends, it is indeed an honor to have been asked to address this first Dinner for the Herbert H. Lehman Graduate Fellows.

First of all, I should like to congratulate you who are the first Fellows, as well as those who had a hand in giving reality to this splendid program, which is such a suitable memorial to a man who was to universally and so deservedly loved and admired.

I want to discuss with you this evening a topic that was close to the heart of Herbert Lehman, the battle for civil rights, and particularly recent trends in the course of the battle which are profoundly disturbing.

By way of background, let me first of all say a few words about the Negro in predominantly White America.

In a sense, it seems truly incredible today, *not* that Negro demands for equal rights should be so vigorous, but that the Negro community had accepted second-class citizenship for so long. The paradox of American life has been that while we have been one of civilization's few "open societies", we have managed to remain largely oblivious to the condition of Negro Americans.

The myth of American society proclaims this to be a land where all men have rights and privileges equal before the law, and where all have an equal opportunity to rise within the society. This American Dream was an inspiration to immigrants struggling to reach a new country and then to survive, and generations watched paupers become millionaires and sons of immigrants rise to become President.

But while this myth—which is part social justice, part freedom—became more and more real for growing numbers in the white majority, it almost never included the Negro—neither in the minds of the whites nor in the minds of the Negroes.

Even today, when the question of equal rights has been under constant discussion for over a decade, most Americans have no real idea of the problems facing the minority communities. There have been moments, particularly during 1963, 1964 and 1965, when examples of brutality in the South, especially to children, gave many Americans a fleeting glance at symptoms of the intolerable condition. But the depth and complexity of the problem could not be shown in a one-minute newsreel clip. That the "Society of the Poor" is a cancer that can undermine the entire society unless treated and cured, is a concept that has not been accepted by the American public.

The height of white support for civil rights appears to have come during the fight for the Civil Rights Bill of 1964 and the Voting Rights Bill of 1965. Most northern and western legislators and even some from the south, felt that they had strong support in their constituencies for such measures. The nation's imagination had been caught by such events as the enormously dignified March on Washington and the story of Selma.

For the Negro, however, voting rights and elementary legal protection were only a beginning. What was presented to the White Majority as a culmination of the civil rights effort, only marked a shift in battlefields for the Negro. Victories in the courtroom and legislative chamber led to a new impatience for equal opportunities all along the line, and new spokesmen for Negro rights emerged to exacerbate that impatience and ride it to personal prominence.

Arguing that traditional methods were too slow, and existing and proposed programs insignificant or even fraudulent, these spokesmen urged direct action to break down the barriers of the ghetto, to change the educational system, to re-do housing patterns, to increase job opportunities—in fact to change the shape of urban life.

And the field was wide open—the ground fertile—for this fierce approach for, from the point of view of the Negro community, previous efforts had not even begun to scratch the surface of the problem.

Whether we speak of the "other America" or the "underclass" in American society, each passing year intensifies the problems of minority groups buried in our urban slums. Poverty becomes frozen into the way of life of ghetto America. Hopelessness, bitterness, disease and crime become the norm, even for the young, and it becomes more, rather than less, difficult for individuals to break out of the pattern and enter into the mainstream of American life.

Faced with such conditions, Negro leadership obviously felt compelled to try to speed the process of change. They wanted new tools to attack the poverty cycle. But in their effort to accelerate the process of change, the Negro leadership found itself in direct conflict with much of the white community. The demand for school and housing integration and for entrance into closed unions met serious resistance, especially because many northern whites were able to separate off in their minds the problem of segregation in the south from discrimination in the north. To many whites, the northern Negro community projects an image of crime and violence, widespread narcotics usage, families on welfare, irresponsible men, unwed mothers. And this kind of image, plus long inherited prejudices, created a new and fierce resistance to the efforts of civil rights groups to speed integration.

This was bad enough, but the resistance might have been overcome by good will and wisdom on the part of the Negro community and their white allies.

The tragedy was that, when the call for "freedom now" became "black power" and when orderly demonstrations gave way to anti-social acts and lawlessness, the opponents of Negro rights were given new encouragement and support.

To already prejudiced and frightened whites, the Negro then became not so much mistreated, as the destroyer. The stereotype of the ghetto was reinforced: "the Negro has no concept of law and order; he is violent; he is a danger to the rest of society."

The simultaneous emergence of lawlessness as a pattern of protest and of war-cries that sounded like black racism accelerated the reaction against civil rights activity in the white community.

As a result, we are in the midst of a new and destructive cycle: the white community is reluctant to support new efforts in the civil rights field. This results in Negro leadership taking to "direct action" again, which in turn hardens white resistance.

Both communities believe they are demanding justice. For the ghetto, justice implies full social justice, the right to participate and share in the fruits of the broader society—without delay, without further litigation, without more legislation. To the white community, justice has come to mean, more and more, law and order and security.

Both concepts of justice are of course compatible—until the debate moves from the courts and legislative halls into the streets. For, as the vast majority of Americans firmly believe, street riots and action tending toward anarchy undermine the very structure of democracy.

This, then, is the tragedy of the civil rights movement at this time. Driven by incredible pressures from below, many of the new Negro leaders have chosen a course that is not only ineffectual, but positively harmful to their objectives.

The impression is inescapable that some of these leaders actually welcome the worsening situation. They seem to want to prove that our society is rotten and is incapable of providing equal rights for all. So when achievement is within their grasp they spurn it as insufficient. As has been well said, they will not take yes for an answer."

In the light of the record, one can understand their mistrust of our system of government. But what they are ignoring is the truth of Winston Churchill's remark "democracy is the worst form of government except all those other forms that have been tried from time to time."

Do the advocates of Black Power really think that a minority will do better under some other system, under a system where power is the only language? (James Madison had something to say, you will recall, on the natural tendency of majorities to oppress minorities. As he pointed out, our system, with its separation of powers and federal character, was well designed to prevent the majority from coalescing and thus realizing its full potentiality of power.)

Do those who advocate direct action, regardless of what the law is, really want a situation where the laws are disregarded by all? If so, what happens to the principle that *Brown* vs. *The Board of Education* is the law of the land and must be obeyed? After all, the main hope for justice and equal rights lies in the idea that ours is a government of laws, not of men.

(I am not saying, of course, that there is no place for civil disobedience in the fight for civil rights. Obviously, many of the most important court rulings in recent years have come about because some one had the courage to act in defiance of a local law that was in itself discriminatory and therefore unconstitutional. But there is all the difference in the world between those who advocate disregard, say, of a local police ruling that infringes the right of free assembly, and those who seek to organize, say, a "stall-in" on expressways at the rush hour.)

And a third question is: Do the Negroes who want no part of their white liberal allies ("liberal" has become a dirty word in some quarters) really think they will do better on their own?

Obviously what progress we have made in recent years has been brought about by action of whites as well as Negroes.

It was joint action that enabled the Congress not only to pass the various civil rights bills, but to establish and fund the war-on-poverty program two years ago. Limited as this program was, it was a step in the right direction. And it contained tools that could be broadened and expanded. Its commitment to job retraining and development of leadership and opportunity in the ghettos was constructive. So was the idea of programs which bypass the traditional bureaucratic channels and which bring the government into the ghetto and the ghetto into the government.

Fortunately, there are many prominent Negro leaders—probably a majority—who would basically agree with what I have been saying, who fully understand the wisdom—indeed the necessity—of joint action with like-minded whites. But one senses that they are beleaguered by the extremists, that they find it difficult to hold on to their leadership in the face of those who promise "action now". The very fact that the N.A.A.C.P. and the Urban League receive heavy financial support from white-run foundations—desirable as that financial support is—will no doubt be used as ammunition by the demagogic critics of these organizations.

As the cries for "Black Power" multiply, as extra-legal activity mounts, the ability of most Congressmen to focus on the real problems—poverty, injustice, and their effects—diminishes. When forced to choose between social justice and law and order most constituents will choose law and order. In this kind of an atmosphere, the dialogue between an elected representative and his constituents—a dialogue in which he tries to explain why he votes their tax moneys for projects that may or may not succeed, why he supports programs specifically designed to help the poor, why the interests of the poor are in fact the interests of the nation as a whole—this dialogue is choked off.

To this unfortunate picture I must add yet another unhappy dimension. As the reaction to violent demonstrations and extra-legal action intensifies, those who promise to restore peace and order by whatever means are necessary will play a growing role on the American political scene. I mean, of course, the right-wing and conservative groups throughout the country who have been campaigning for years against the civil rights movement.

Against the demands for freedom to move into new spheres of employment, housing, education, the right wing promises freedom to reject, freedom, in Thomas Mann's phrase, "to be with one's own." We dare not underestimate the strength this appeal can have, particularly if recurrent violence provides a convenient excuse, a handy rationale.

It is not fantasy to warn that frustration and fear can be mobilized by evil forces in an effort to gain power. It is particularly not fantastic when one looks at the growing conservative vote, the growing number of conservative candidates, the growing respectability of anti-civil libertarian groups, and the growing financing that is available to them.

One of the tragic ironies in the situation is that the use of extra-legal methods by those who struggle for Negro rights is sure to strengthen the hand of those very right-wing fanatics who itch to use the same techniques to frustrate the struggle.

Obviously, I am not calling for any relaxation, any slow-down, in the struggle to wipe out the ghetto. On the contrary, the very dangers I point to, the very fact that we may be heading into an era of terrible and widespread violence by extremists on both sides, makes it all the more imperative that we redouble our efforts to promote equal rights and opportunities. And these efforts cannot wait until peace comes in Vietnam. The time for more vigorous action is now.

But answers to the problems of the ghettos will not come quickly or easily. And they cannot come at all unless we can keep before the majority of Americans the simple fact I mentioned before: That the interests of the poor are the interests of the nation as a whole.

As a Congressman I shall try to encourage my colleagues and the Administration to expand our programs in the cities and the ghettos—rather than to cut back in the name of false economy. But those of us who will be calling for greater efforts, greater courage, greater imagination, cannot hope to succeed if the public turns against the struggle.

Many of us are willing to accept the challenge of securing the "Blessings of Liberty to ourselves and" to *all* of our posterity, but we face defeat if the techniques of protest are self-defeating.

"Justice is the end of government," Madison said in the Federalist Papers. "It is the end of Civil Society. It ever has been and ever will be pursued until it be obtained, or until liberty be lost in the pursuit."

If we are to be successful in achieving true justice for all, while at the same time guarding against the erosion of liberty, white and black leadership must work together, functioning as part of the single society we live in. We must reverse the trend encouraged by segments of the leadership in both communities. We must reject the notion that white and black are hostile antagonists thrown into the arena to do battle for the fruits of society.

Business Was Never Asked

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, I call to the attention of my colleagues in the House of Representatives the activities of a man I have the privilege to know well and whom I admire greatly. Mr. George C. Seybolt, president of the Wm. Underwood Co. of Watertown, Mass., and a member of the board of trustees of the Boston Museum of Fine Arts has taken on the chairmanship of the museum's centennial fund drive.

George Seybolt's success in business and dedication to the arts call for respect and praise. With this background, he has appealed to Boston area businessmen to support the activities of a museum located in one of our Nation's leading academic and culturally oriented cities. The Boston Museum of Fine Arts, unlike many other large museums, is wholly independent of government subsidy of any kind. The goal of $13.4 million which Mr. Seybolt faces is therefore an even more vital challenge. That he is a man equal to the task is evidenced by the recent article published in the Boston Globe, and I insert it for publication in the CONGRESSIONAL RECORD:

"BUSINESS WAS NEVER ASKED"—HEAD OF MUSEUM FUND DRIVE (A BUSINESSMAN) SOUNDS OFF

(By Alexander Auerbach)

American businessmen are a bunch of capitalistic clods, financial finks whose idea of a work of art is black ink on green ledger paper, right? Nope.

Whatever other failings Boston businessmen may have, they have among their number a core of men unabashedly in love with art; maybe not an army of them, but an effective group nonetheless.

Many of these are associated in one way or another with the Museum of Fine Arts. Some, like George C. Seybolt, are on the museum's board of trustees.

Seybolt is president of the Wm. Underwood Co. of Watertown (Red Devil foods), a job that should be enough to keep him busy. But along with his trustee duties, he's taken on the chairmanship of the museum's Centennial Fund Drive.

What does a trustee do? "We represent the public interest to the general management of the museum, and provide continuity," Seybolt says.

In addition, there are the administrative tasks of appointing employees, supervising the operations of the men who actually run the museum, making policy and discussing and approving large outlays of money.

Money is a preoccupation with Seybolt right now, for he's in the process of raising $13.4 million in the museum's fund drive.

"We've never had a public fund campaign before. We get no Federal, state or city money." There's a look of both pride and indignation as he notes the museum's independence of government subsidy.

"New York City gives the Metropolitan Museum all its money for building programs, and $1.5 million for the salary of guards, etc.

"In Europe the great museums such as the Prado and the Louvre are almost totally subsidized by the governments.

"But here in Boston even the damn trees out front, which belong to the city, have to be trimmed by the museum."

The fund drive will correct some of the museum's major and chronic fiscal problems. Seybolt, a businessman, is helping to raise that money. But how much will other businessmen contribute in hard cash?

Seybolt figures he will know by February how corporate response will be, but he's guessing a toal of $1.5 million or about 10 percent of the total goal of $13.4 million.

"Support from the business community is not great," he admits, "but it's not their fault. Tehy never were asked.

"Before World War II business gave heavily to health—the United Fund, hospitals. Then as educational institutions expanded they approached corporations, and trained them to give money.

"Cultural institutions haven't done this at all. The museum has to make its needs known, and make known what it does for the community."

Well, what does the museum do for the community?

"Boston has no real natural resources—no oil, coal, water power, minerals. The location is marginal for national manufacturing and distribution. It does have human skills, in education, finance, research and the rest.

"Our output here is in terms of I.Q., not tons. Our resources are the brains of our people.

"These people have cultural needs above average, and they look to places like the Museum of Fine Arts, the Symphony, the Museum of Science, the theaters and restaurants.

"My company has ten plants scattered around the world, and I have a hell of a time sending guys to some of them; they're used to certain cultural resources, and want them."

Seybolt leaned back in his chair and rumpled his reddish-brown hair with one hand. "Education provides both customers and workers. Art does the same, but in addition it attracts first-class personnel. Business has to learn that," he concluded.

Our Time in Hell

EXTENSION OF REMARKS

OF

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. CORMAN. Mr. Speaker, during World War II, against almost overwhelming odds, U.S. marines completed the longest combat odyssey in history as they fought their way from island to island across 7,000 miles of the Pacific.

In some of the most savage battles of the war, against top Japanese troops who had vowed to fight to their deaths, the U.S. Marine Corps became an American legend.

Their achievements will for all time serve as inspiration for other Americans who may one day be asked to take up arms in behalf of their country.

Many of their proud exploits were filmed in color by combat photographers assigned by the corps to record for future generations the courage and dedication of this magnificent group of fighting men.

At this moment in Vietnam, U.S. marines are once again defending American ideals and principles against their country's enemies. Another generation of gallant fighting men is carrying on the tradition made famous by the corps since its founding in 1775.

Some among us question the validity of our effort to stop aggression in southeast Asia. A few young men deny their obligation to serve their country in combat. It is well that we review the history of the 1940's and its effect on our lives in the 1960's.

What would life be like in these United States, if we had lacked the perseverance, the will and the courage to resist the Axis powers?

The 3M Co. is to be highly commended for bringing to the American public at this propitious time an hour-long documentary in color comprised entirely of footage filmed under fire by marine combat photographers during World War II.

The title of this production, written and produced by Laurence E. Mascott for ABC-TV, is "Our Time in Hell." It will be narrated by Academy Award-winning Actor Lee Marvin, who as a teenage marine took part in three of these landings.

Mr. Marvin is also to be highly commended not only as a former marine but also as a patriotic American who is donating his entire fee for this narration to the Marine Corps Civic Action Fund. This fund is currently being used to rehabilitate civilian victims of Vietcong attacks.

To anyone who is much less than 30 years old, the awesome battles waged over these tiny Pacific islands are but a page in a history book. However, to the fighting men who participated in them, they are proud memories.

As an example of their courage, it might be well to recall that island invasions are not to be compared with any other type of combat. There is only an angry sea into which one may withdraw. Knowing this, the marines never made plans for retreat. They landed intending to win.

And they did win, island after island, in a magnificent display of raw courage and esprit de corps which won them the enduring gratitude of a grateful nation.

I feel that to be afforded the opportunity to see and relive those moments of glory and personal sacrifice is indeed a privilege which should be taken advantage of by every American.

Our Nation shall always be grateful.

Total Attack on Air Pollution Is Urgent

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MACHEN. Mr. Speaker, there was a grim coincidence in President Johnson's call for measures against air pollution and a report on the death rate among residents of Staten Island, N.Y.

In his state of the Union address, the President called for regional airsheds to attack the problem.

Less than 24 hours later the results of a study financed by the U.S. Public Health Service were announced. They showed that higher death rates from respiratory cancer in northern Staten Island could probably be attributed in part to pollution caused by industrial complexes in neighboring sections of New Jersey.

The same official who reported on this study also said the Thanksgiving Day smog in New York could have been disastrous had it lasted longer.

In commenting on the menace, the Washington Daily News asserts the President's proposal for a total attack on air pollution is urgent. To underscore my agreement, I ask that its editorial on this critical subject be entered in the RECORD:

[From the Washington Daily News, Jan. 13, 1967]

BREATHE DEEP: BREATHE DEADLY?

Less than 24 hours after President Johnson in his State of the Union Message called for "regional airsheds" to attack the problem of air pollution, the need for some such remedy was underscored by grim statistics.

Dr. Leonard Greenburg reported a study financed by the U.S. Public Health Service showed that higher death rates from respiratory cancer in northern Staten Island, N.Y., probably resulted in part from air pollution produced by industrial complexes in neighboring New Jersey.

In the northern area, Dr. Greenburg said, the death rate among white males 45 years and older was 55.4 per 100,000 as against 40.2 in the central and southern areas of the island that were less exposed to pollution.

Dr. Greenburg, former New York City air pollution control commissioner, also said the Thanksgiving Day smog that blanketed the New York area could have been a "disaster" if it had lasted longer. He warned that air pollution, if permitted to continue, would produce a nation of "respiratory cripples."

Altho New York is one of the most populous and industrially concentrated areas of the country, the air-pollution menace has grown so pressing that even wide-open-spaces states such as Colorado admit to grave problems.

President Johnson's proposal for "a total attack on (air) pollution at its source" is urgent. And it is one domestic program from which all will benefit. Congress should give his "regional airsheds" plan high priority.

Chula Vista, Calif., Star-News Outlines Principles of H.R. 1166, Modern Governments Bill

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. REUSS. Mr. Speaker, the Star-News, of Chula Vista, Calif., published on January 5, 1967, an article describing the provisions of the draft text of my State and Local Government Modernization Act of 1967, which I introduced last week as H.R. 1166. Its author noted the growing support both for the Heller concept of unrestricted Federal aid to States and for action for substantial modernization of State and local governments.

H.R. 1166 would, if enacted, provide substantial unearmarked Federal grants to those States which take steps to modernize their State and local governments. Each State would first receive Federal money to prepare its own modern government program, setting forth its plans and timetables for revitalizing its State and local governments. Such plans would have to include specific proposals for dealing with interstate regional problems, and for strengthening and modernizing State and local governments.

Each State modern governments program would then be reviewed twice: first, by one of the four regional coordinating committees—to be set up under H.R. 1166 by the participating Governors in each of the four regions: eastern, southern, midwestern, and western—and, second, by the existing Advisory Commission on Intergovernmental Relations. Those States with plans designated as reflecting sufficient creative State initiative so as to qualify that State for Federal block grants would then begin receiving unrestricted Federal funds in 1970, or at the latest by 1971.

H.R. 1166, if enacted, would authorize $5 billion a year for 3 years, a total of $15 billion. Funds would be distributed according to population, with not to exceed 20 percent for supplements to those States having a low per capita income; a high degree of poverty, dependency, or urbanization; and an adequate State tax effort, as indicated by the amount of State and local taxes relative to personal income.

The text of the Star-News article follows:

States May Get Streamlining Aid

(By Casper W. Weinberger)

A proposed large Christmas present for the states was unveiled recently by a Wisconsin representative, Henry S. Reuss.

He plans to introduce a bill in the new Congress providing for $25 billion in federal grants, spread over a five-year period, to states that "modernize state and local governments."

The idea appears to combine the carrot-and-the-stick approach for states with the Heller plan for sharing federal revenue with state governments.

Under the Heller plan, 1% or 2% of the federal income tax moneys collected from a particular state is returned to that state with no strings attached.

Recently an increasing number of people have come to support the Heller plan, but many connected with the federal government feel that, however desirable it might be to get additional revenues to states, nothing of permanent improvement can be accomplished until there is substantial modernization of state and local governments.

Congressman Reuss' plan contemplates allocation of approximately $500,000 to each state to enable that state to prepare "a modern government program."

This program must be filed 18 months later by each state governor with one of four regional co-ordinating committees that would be established in the east, south, mid-west and west.

The "modern government program" would outline the steps each state proposed to take to deal with interstate regional problems by use of interstate compacts or otherwise, as well as proposals to strengthen state government by reorganizing the executive and legislative branches, adopting an up-to-date system of taxation, etc.; and strengthening local, rural and urban governments through such means as a merit civil service system.

The regional coordinating committees are to be set up by the governors in each region, and these committees are required to advise Congress which of the state plans submitted to them qualifies the state for a federal grant.

Those states that qualify would then share in the $5 billion annual grants that the bill proposes.

Obviously the Congressman's bill is in its earliest possible stage, and both the drafting and the ideas require considerable refinement before any state would feel very favorably inclined to such a measure.

Of particular concern would be the fact that no state would qualify for the federal funds unless the state's plan met with the approval of one of the regional committees. The bill contains only the vaguest possible standards for determining whether or not "a state modern government" plan would actually qualify.

Nevertheless, the idea of conditioning allocation of free federal funds to states on their adoption of proposals to strengthen and modernize state and local government is an interesting one. It may well be eventually adopted in some form by the Congress.

California would have far fewer changes to make than most states. Our local government is already strong, and, for the most part, modern, and has achieved most of the goals spelled out in Congressman Reuss' bill.

However, the executive branch of our state government does need substantial reorganization, strengthening and modernization.

This may well be accomplished by unilateral action of California's state government without the inducement of vast amounts of federal funds. But it is at least possible that an inducement of the kind proposed in Congressman Reuss' bill would speed the process.

Experienced observers of the legislative scene are unanimous in reporting that few if any bills are harder to enact than reorganization measures.

This is largely because employes and office holders fear proposals to modify, change or lessen their powers and prerogatives. As a result, they fight such bills at least twice as hard as any other measure.

The Cost of Bad Air—II

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. RYAN. Mr. Speaker, last week I brought the attention of the House to part I of an article concerning air pollution which was published in Manhattan East, a New York community newspaper. On January 5, Manhattan East published the second part of the article. Air pollution is one of the Nation's most serious problems. The articles by Anthea Lahr highlight the problem in New York City.

The January 5 article follows:

[From Manhattan East, Jan. 5, 1967]

The Cost of Bad Air—Part II

(By Anthea Lahr)

"Big industries are big polluters. They are also big employers, big buyers and big political influences."—James Quigley.

The order of priority for control of air pollution *nationally*, based on the contribution of this source, is: 1) Motor Vehicles, 2) Generation of Electricity, 3) Industry, 4) Space Heating, 5) Refuse Disposal. Of course, local situations demand local priorities worked out with local control officials regarding local interests; such as auto emission in Los Angeles, refuse disposal and generation of electricity in New York, and manufacturing chemicals in Wilmington, Delaware. Thus, apart from refuse disposal, and private, municipal and business space heating, industry is the prime polluter, and with their immense profits, huge influence, and engineering skills, should be the leader in the field, not the reluctant follower.

The steady industry pressure against air pollution control is probably not malevolence or anti-social instinct, but the normal business motivation to cut costs and raise profits. But the recalcitrance of the utility industries is odd—their profits are guaranteed by law and if costs go up, a rate increase is nearly always granted (especially for air pollution control measures) by the appropriate regulatory agency.

The slogan, *Smoke in the Air is a Sign of Prosperity*, is outdated. Smoke-filled air is no longer an occasion for civic pride, but civic shame. But industries can still use the smoke-equals-jobs argument against local councils who try to impose air pollution controls. Industry can always threaten to move, unless state and federal tax incentives encourage installation of pollution-control equipment. However, tax abatement for fighting dirty air is only granted in 7 states. Industry often uses public-relations techniques to keep anti-pollution efforts at the very minimum.

Representatives of the coal industry have in the past placed an advertisement in the news media which said:

"Don't use anything which requires oil, gas, coal or atomic energy in its manufacture—such as electricity, steel, cement, clothes, food, newspapers, babies' rattles . . . any instant end to air pollution brakes our civilization to a halt . . . coal is a minor cause of this contamination but the coal industry is working hard to clean the air . . . "

This irresponsible insult to the American people's intelligence rightly infuriated Mr. Norman Cousins, editor of the *Saturday Review*, who replied in his October 8th editorial:

"The American public has a right to resent back-of-the-hand treatment by the coal industry. Are we to regard the U.S. Public Health Service as a collection of quacks who are foolishly trying to deprive the American people of the necessities and the accoutrements of modern society? Are all the people, public and private, who are working on the air pollution problem merely dupes of those who are secretly plotting to undermine the American Way of Life?

"What is being sought is not an 'instant end' to air pollution but better controls *than now exist. It is possible through existing technology to reduce sharply and, in some cases, to eliminate entirely poisons in the air caused by combustion, incineration or chemicals."*

The major industrial offender in New York City is Consolidate Edison, which has 14 generating plants within the City.

Con Ed cannot shut down any of its plants long enough to make repairs and install adequate equipment to reduce air pollution significantly. Con Ed would like to burn more natural gas, but the Federal Power Commission will only allow them very limited and temporary supplies.

Con Ed would like to build an atomic energy plant inside the city, but the City would not allow it. There has to be careful evaluation before building any nuclear installation because the effects of radiation are very serious, and they do not blow away easily or lose their potency. But nuclear plants have operated very satisfactorily, and although it is necessary to proceed carefully in increasing the amount of radiation that could escape to the air, nuclear operations built outside metropoles, with efficient emergency procedures would be safer than inefficient, obsolete generating plants burning sulphur-filled coal and low-grade oil.

The economic arguments against pollution-free atomic energy and natural gas are fundamental. Atomic energy involves a calculated risk with radiation, and natural gas is in limited supply. A reduction of the burning of coal would cause increased unemployment in the Appalachians and would further reduce the role of the railways. Thus Con Ed is investigating the possibilities of mine-mouth generating of power, which would be transmitted to the city; bringing hydroelectric power from Canada as do other American cities; constructing power-generating stations along the Delaware River (this has run into opposition from factions concerned with preservation of beauty and wildlife). The coal would be brought by rail to the power stations, and then the Pennsylvania Railroad would allow the power to be brought in along the rights-of-way owned by the railroad. These are all long-term recommendations which Con Ed is investigating.

In the short-term, Con Ed can try and control the sulphur content of its fuels, plunge into research, and attempt to measure the level of the pollutants. The City is supporting Con Ed's application to the FPC for more natural gas, and facilitating the construction of nuclear plants outside the City, and obtaining a right of way into the City.

Many of these recommendations by the Mayor's Task Force on Air Pollution have begun to be implemented. Con Ed is starting to shut down its City installations, to build nuclear power stations, and to survey other sites for generating plants. Con Ed could cooperate with the City in using garbage to generate heat, as in Rotterdam, but this they are reluctant to do, because it is uneconomical, although public spirited.

"It is time that the City stopped issuing press releases and started issuing the criteria that will permit us to get on with the hard,

costly, unglamorous job of tackling air pollution at some of its most critical sources."

Robert Low, the City Council's spokesman on air pollution, is here referring to the City Administration's dragging its feet in enforcing the City Council's air pollution control law, which places certain restrictions and requirements on landlords' operating incinerators.

Until the City Department of Air Pollution Control issues engineering criteria, work cannot proceed. These incinerators must be updated by May 1967, yet the City is scarcely giving the landlords enough time to comply with the law.

The City Government is the worst violator of its own laws. The City is the greatest device for enhancing culture, facilitating social exchange, and accommodating man's genius for transactions, but the City is also a major contributor to air pollution. Its incinerators have no electrostatic precipitators (as Europe's latest municipal incinerators do), its buses are overloaded, its taxis are uneconomically large and powerful and without pollution control devices and all the department cars, engines and trucks, the City controls, are a prime sources of auto pollution; the City sewage plants pollute the water, and the burning garbage dumps infest the air.

American cities have to dispose of 520,000,000 lbs. of trash every day, and spend $1,500,000,000 for public disposal and $1,300,000,000 for private disposal every year. Only the budgets for roads and schools exceed that for garbage disposal. Each American produces 4 pounds of garbage daily, and this will increase to 5.5 pounds by 1980. The cities are faced with the increasingly difficult problem of disposing of it. U.S. cities are rather inclined to encourage private incinerators because they cost the city nothing, but it is difficult to maintain and supervise private disposals of refuse, and they pose air pollution and fire hazard problems.

Although it is uneconomical at present, but efficacious in the long run, marketable items can be removed from the garbage, i.e., cans, plastic, paper, etc., and then resold. The remaining refuse can be made into fertilizer or compacted (as in Sweden) and buried.

One chlorine user with air pollution controls recovers wasted chlorine at the cost of $19 a ton, whereas the chlorine, if bought, would cost $60 a ton. Conservation of paper (which is done in England) is not profitable, and there is a limited market for fertilizer, which is a bulkly commodity and does not fetch a very high price. San Fernando however, has a plant which removes saleable objects from refuse and converts the rest to compost. The plant works well, but has difficulty in finding a market for its products.

Efforts at cleaning the air are still falling behind the ability to pollute it, and nowhere is this more noticeable than with the buildup of auto emissions in our cities. Los Angeles suffers most from incomplete combustion of gasoline and has taken the lead in imposing a vent on the tailpipe of autos so that the unburnt gas can be reburned.

Since the California legislature required that tailpipe emissions be controlled, there are no air pollution devices on *all* cars in the U.S. But this is not enough; the number of cars is increasing every year (we produce twice as many cars as people per year), and so the total amount of pollution from cars is growing. This is particularly harmful, as the carbon monoxide from the unburnt gasoline deprives a man's blood of its oxygen-carrying capabilities. It is also very wasteful, as $3,000,000,000 worth of gasoline, which is incompletely burned, ends up in the air.

Mr. Norman Cousins has outlined the path that progress in control of air pollution on autos should take: 1) Research should be accelerated on fuel cells; 2) Research should be accelerated on fuel additives; 3) Research should be accelerated on efficient tailpipe electrostatic precipators; 4) We should take a good look at the kind of cars we are driving.

Most American cars are far larger than necessary. They are far too powerful for the speed limits imposed by both law and traffic. This especially applies to New York's 14,000 taxis, which travel almost completely in the city at low speeds and waste both horsepower and gasoline. Fiat 600s are being imported as experimental taxicabs. The Fiats have a submerged motor (thereby utilizing all possible space), travel at 45 m.p.h. (sufficient for City travel) and use ¼ of the horsepower, therefore producing ¼ of the pollutants. Hopefully, this will encourage the automakers of Detroit to produce compact, economical cars which will substantially reduce pollution from motors.

Fuels other than gasoline should be investigated, especially by the City Transit Authority, which could experiment with electric-powered and gas turbine buses, and Fire Department restrictions should be relaxed to allow liquid petroleum gas to replace noxious diesel fuel in fire engines.

"Ultimately, cars will be banned from midtown Manhattan. The question is how long will it take? How many people will have to die?"—Norman Cousins.

"Extreme remedies are most appropriate for extreme diseases."—Hippocrates.

There is a critical shortage of breathable air, and at the moment the atmosphere is a shallow, stagnant pond, and we are the gasping fish at the bottom.

Unless drastic measures are taken to alleviate this situation, all major cities in the U.S. are going to be uninhabitable. The disasters, such as the ones in London, Donora, and the Meuse Valley, will grow more frequent, and the level of air pollution will increase so as to make habitation in a city for a long uninterrupted stretch deleterious to both health and work. The air pollution is warming the air to such an extent that it could, conceivably, melt the ice caps and flood most of the Western World.

Thus, fighting air pollution, a problem bound inextricably with other city problems, could change many aspects of urban life. Cars might be banned from downtown areas (Robert Low has said that they are considering a plan to forbid cars below 59th St.); vehicles would cease to depend on diesel and petroleum, turning to electricity and liquid petroleum gas; cars would be taxed, like buildings, on the amount of area covered; the city would use garbage as a fuel to generate heat and power, having extracted reusable items from the refuse; nuclear power would become increasingly important in a peaceful role; and the Appalachians might become a center for nuclear development, instead of a depressed area, clinging to the diminishing importance of coal.

The battle against air pollution is also a battle against outmoded, inefficient methods of generating power, of transportation, and of disposing of unwanted material. By cleaning up the air we will have improved, rather than undermined, the American Way of Life.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H–112, House wing, where orders will be received for subscriptions to the Record at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided,* That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Public Forum on the Draft

EXTENSION OF REMARKS

OF

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TENZER. Mr. Speaker, on December 21, 1966, I sponsored a public forum on the Selective Service Act in my congressional district. The public forum on the draft was held at Lynbrook High School in Lynbrook, N.Y. My announced purpose in sponsoring the all day conference was to afford an opportunity for those most affected by the draft—the young people—to express their views on the current debate as to the future of the Selective Service Act.

The choice of a high school as the site for the forum was most advantageous as if permitted an added educational advantage because it provided an opportunity for the political science and social studies classes of the school to attend the conference at the time of their scheduled class on the subject in the company of the teacher, and to hear college and high school students present their views to their Congressman. They had a firsthand opportunity to see democracy in action.

We were privileged to have as an opening guest speaker, Major Byron Meader, representing Col. William Boughten the New York State Selective Service Director. Major Meader outlined the present provisions of the act and answered questions relating thereto.

The ground rules which I established for the conference permitted each speaker to address the audience for 3 minutes and to file a written statement of any length. I indicated that there would be no debate, because anyone holding an opposing view to the speaker was able to obtain time to express his own views.

Questions were permitted to clarify any statement of a previous speaker. Thus, though sharply opposing views were presented and differing proposals made, the all-day session was orderly, informative, and enlightening to me as well as to those who attended.

At the start of the conference I presented the issues to be discussed. I explained the nature of the questions raised in mail received in my congressional office and the scope of the suggestions ranging from a complete elimination of the draft to a continuation without change. Between these two viewpoints there were the following wide range of points raised in letters and during interviews:

First. The present draft law should be continued without change.

Second. The Selective Service should be continued but amended to eliminate inequities: (a) College deferments should be eliminated, (b) college deferment examinations should be discontinued, (c) married men should not be drafted, (d) the reserve system should be reviewed, (e) hardship exemptions should be granted, (f) minor physical impairments should not be cause for exemption from service, (g) educational standards should be revised—there is work for all, (h) deferment for Peace Corps Service should be allowed, (i) geographical inequities should be eliminated. Pool should be nationwide, (j) differences between draft boards in same area should be avoided, (k) punitive actions of draft boards should not be permitted.

Third. There should be a system of universal military service.

Fourth. There should be a national service corps.

Fifth. The draft should be abolished in favor of a volunteer army.

Sixth. Establish a national lottery system for selection of those who are to serve.

Thirty-seven students of high school, graduate and postgraduate levels had requested an opportunity to present their views and appeared at the public forum.

The 90th Congress will soon have, and face, the responsibility of deciding whether we are to continue the present Selective Service Act or to revise it. To prepare to formulate my own views, I thought that it would be most appropriate to hear the views of those most affected. These young men of high school, college, and postgraduate age groups, presented their views and suggestions on the above proposals. It is not possible to state that I found a consensus on any of these proposals other than that approached to by almost unanimous feeling that the Congress should correct the existing inequities when the draft law is extended.

During the conference I refrained from expressing my own views on the amendments which were proposed. Since the conference, and based on many of the statements made by the students, I have again reviewed my position.

It is my belief that the 90th Congress should not attempt to draft a universal military service plan or a national service plan at this time. The simple fact that there are over 2 million young men who reach the age of 18 each year makes these proposals costly and difficult to manage or administer.

I believe that many, if not all, of the inequities in the present system can be corrected through a form of national lottery. A lottery would apply to all young men without placing additional hardships on the Selective Service System.

Under a national lottery, students could still be deferred, but Congress should make it clear that the deferment is not to become an exemption. Students would be subject to the lottery immediately after completion of their education. The present college deferment tests could be abolished.

Once manpower requirements for the year have been filled, those young men whose numbers were not drawn from the national pool would know they would not be required to serve barring a national emergency. As a result, the uncertainly about one's future would be eliminated.

National standards under the selective service law could eliminate or reduce to a great degree the other inequities outlined above—inequities arising from geographical circumstances, the prohibition against changing one's local draft board, punitive actions taken by local draft boards and the status of married men.

I plan to make available to the House Armed Services Committee the testimony presented at the public conference for their evaluation and consideration. It is my hope that the 90th Congress will draft Selective Service Act amendments which will correct many of the inequities discussed by these young people.

Philadelphia Naval District

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1967

Mr. SCOTT. Mr. President, I am deeply concerned over the announcement by the Department of the Navy that the naval district headquarters in Philadelphia is being moved to Norfolk, Va. As the birthplace of the U.S. Navy, Philadelphia, I believe, is at least entitled to a hearing in this matter. I ask unanimous consent that an editorial published in this morning's Philadelphia Inquirer be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DON'T TEAR THAT ENSIGN DOWN

Without so much as a warning shot across our bow, the Pentagon has fired a broadside into cherished Naval tradition of Philadelphia. The stripes so valiantly won are to be torn from our sleeve. This city no longer will be the home port for Naval District headquarters, if the Defense Department goes through with its plans.

If savings can be achieved, without loss of administrative efficiency, by consolidating Naval District headquarters throughout the country, and reducing their total number, then so be it. But by what logic can the shifting of Philadelphia's headquarters to Norfolk, instead of the other way around, be justified? Is the birthplace of the American Navy to be unceremoniously stripped of its rank, and relegated to second-class status, without the courtesy of a hearing?

Philadelphia, with its huge Navy Yard, will continue to have the largest Naval installation in the combined Fourth and Fifth districts. This would seem to be, by any reasonable criterion, the ideal locale for the consolidated headquarters. In any event, public officials and civic leaders of Philadelphia should have an opportunity to argue their case before a final decision is made.

With all due respect for Norfolk, which also has gallant traditions as a Navy town, Philadelphia has just claim to be the site of District headquarters on the basis of history, seniority and service.

The Late Honorable John E. Fogarty

SPEECH

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. ANDREWS of Alabama. Mr. Speaker, it would require more time than we have before us today to pay adequate tribute to the life and ideas of John Fogarty. It would take more foresight than we possess to gage fully the effects of his work upon present and future generations.

A great many qualities distinguished John Fogarty. Standing high among these were his dogged determination, his devout dedication, and his fighting spirit. These qualities, perhaps more than any others, characterized John Fogarty throughout his service to the people of Rhode Island and to the Nation.

As those of us who had the honor to serve with him on the House Appropriations Committee are well aware, John Fogarty left an indelible imprint on the proceedings and accomplishments of better health for Americans as well as better health facilities and more and better health research. He was recognized by friend and foe alike as a fighter for the principles in which he believed and for the plain people whom he loved. His steadfast championship of the cause of better health and rehabilitation services; and of his State, his section, and his Nation will stand forever as a monument to his years of devoted service to his country.

I think the following poem well typifies our late friend. He was ever active, always understanding, helpful, interested in the other man's problem:

Sermons We See

I'd rather see a sermon than hear one any day
I'd rather one should walk with me than merely tell the way.
The eye's a better pupil and more willing than the ear;
Fine counsel is confusing, but example's always clear;
And the best of all the preachers are the men who live their creeds,
For to see the good in action is what everybody needs.
I can soon learn how to do it if you will let me see it done;
I can watch your hands in action, but your tongue too fast may run.
And the lectures you deliver may be very wise and true;
But I'd rather get my lessons by observing what you do.
For I may misunderstand you and the high advice you give.
But there's no misunderstanding how you act and how you live.

EDGAR A. GUEST.

I extend to Mrs. Fogarty and to the other members of the family my deepest sympathy in their great loss.

The Vietnam Dilemma

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1967

Mr. FULBRIGHT. Mr. President, Mr. David Schoenbrun, a distinguished journalist, has written a very interesting article on the Vietnam dilemma which appeared in the Columbia University Forum. His conclusion is that neutralization is the only practical solution to the Vietnam problem. Mr. Schoenbrun wrote:

> I was at the Battle of Dienbienphu; when I saw the Chinese mortars going into position on the crest of the hills above the valley I knew I was watching the end of the era of Western dominance in Asia. I flew from Hanoi to Saigon to Geneva with Prince Buu Loc, then Prime Minister of South Vietnam. I covered the conference and interviewed the principal actors. They came to the conclusion that Western powers could no longer determine the flow of history in Asia; that the best that could be expected for the West was an independent, neutralist Vietnam, Communist but not a satellite of China.

Mr. Schoenbrun's article is one of the most succinct and penetrating analyses of the problem that has come to my attention, and I recommend it to Senators and to other readers of the Record. I ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Vietnam: The Case for Extrication

(By David Schoenbrun)

Most of the men who rule Saigon have, like the Bourbons, learned nothing and forgotten nothing. They seek to retain those privileges they have and to regain those they have lost. In Vietnam, only the Communists represent revolution and social change. The Communist Party is the one truly national organization that permeates both North and South Vietnam. It is the only group not dependent on foreign bayonets for survival. For its own strategic and political ends the United States is thus protecting a non-Communist Vietnamese social structure that cannot defend itself and that perhaps does not deserve to be defended. Our responsibility for prolonging what is essentially a civil conflict may be one of the major reasons for the considerable amount of confusion, guilt, and soul-searching among Americans over the Vietnam war. I simply cannot help worrying that, in the process of waging this war, we are corrupting ourselves. I wonder when I look at the bombed-out peasant hamlets, the orphans begging and stealing in the streets of Saigon, and the women and children with napalm burns lying on the hospital cots, whether the United States or any nation has the right to inflict this suffering and degradation on another people for its own ends.

I agree with the paragraph above although I did not write it. It is composed of sentences excerpted from a much remarked upon article in *The New York Times Magazine* of Sunday, October 9, "Not a Dove, But No Longer a Hawk" by Neil Sheehan, who has been covering the Pentagon since returning from Vietnam last August.

Neil Sheehan is not a Nervous Nelly, not a Peacenik, not a Vietnik, not even anything so supposedly un-American as an intellectual. He is a professional reporter who once "believed in what my country was doing in Vietnam," but who, as of October 9, 1966, no longer believes. Along with many of his fellow citizens, he goes so far as to "wonder" whether his country "has the right to inflict this suffering and degradation on another people for its own ends." His is the cry of anguish of an honest man who has gone far toward the realization that his country is doing something very wrong. He has not yet gone that one vital step further to the only attitude that has both practical and moral importance: the willingness to right the wrong. His cry of anguish ends with a whimper: "Despite these misgivings I do not see how we can do anything but continue to prosecute the war"—and with a pious prayer: "I hope that we will not, in the name of some anti-Communist crusade, do this again."

A professional reporter myself, with long experience in Vietnam, particularly the larger region—Vietnam, Cambodia, and Laos—once known as French Indochina, I read Sheehan's article with strong emotion: admiration for the sweep and depth of his reporting; respect for his distress and soul-searching; bemusement as to why he did not include more of these facts in his daily reports from Vietnam; finally, a hot flash of anger at his grotesque conclusion that we must continue to prosecute an evil war that cannot be won. How many readers, like myself, clutched at their sanity as an otherwise lucid writer concluded that there is no way out of a frightful mess other than to dig deeper into it?

If this were Neil Sheehan's personal dilemma it could easily be dismissed in light of his valuable documentation. But the greater value of Sheehan's article is that it so fully reflects a national dilemma, broad and deep across the country and, indeed, within the government itself. I have met and talked with many Neil Sheehans, in the White House, in the State Department, in the Congress and in lecture tours, symposia, teach-ins and other public and private discussions of the Vietnamese war. At the Bankers Association of Omaha, the Community Center of Oak Park, Illinois, the World Affairs Councils of Buffalo, Philadelphia, and Chicago, the Forum of Miami, the Merchants Club of Dallas; from Garden City to Beverly Hills, from Minneapolis to New Orleans, in almost one hundred meetings with some hundred thousand people I have heard this same cry of anguish; it's a dirty war but we're stuck in it.

All of the evidence that I have seen, including analyses of the opinion polls, indicates that an overwhelming majority of Americans wants an end to the war. What clouds the issue is that the majority is divided into three groups: those who think the war can be ended by an all-out escalation, those who think it can only be ended by deescalation leading to negotiation, and finally—perhaps the majority of the majority—those citizens neither hawk nor dove, who, as Sheehan correctly describes them, are confused, feel guilty, and let themselves be pulled into deeper and deeper waters by the more powerful tides.

Of all the conflicting attitudes this war has stirred up perhaps the most extraordinary is one that every lecturer and teacher knows well; it astonished Senator Robert Kennedy on his recent trip to the Far West, when he was addressing the student body of a West Coast university. He told them that he was opposed to the student deferment system, which favors those who could afford to go to college. He was almost hooted off the platform. Startled at the outburst, Kennedy then asked the students whether they favored greater escalation, and they roared their approval. Such twisted thinking can be summed up: More War Without Us—or escalation without participation. I have run into this attitude in every part of the country and not just among students. In Omaha, the executive vice president of a bank told me that he hoped we could hit hard enough to get it over before his son was drafted. Another man told me he had advised his son to study a special branch of science that would require four years of post-graduate study. "In the meantime let's bomb the hell out of them and get it over."

Get it over, get it over, is the cry heard across the nation. For some it is a cry of personal fear. For some it is a cry of moral anguish. For most, I am afraid it is only a cry of anger—a howl of frustrated pride that has little to do with morality and everything to do with proving America's power and saving Uncle Sam's face. This attitude is most frequently expressed in the statement: Maybe we shouldn't have gotten into this, but since we have, we must see it through. Perhaps the most prominent spokesman for this view is General Eisenhower, whose recent reversal of attitude reflects this widely held position. In October of this year Eisenhower said we must do everything necessary to wage the war successfully, and he refused to rule out even the possibility of using atomic weapons. Yet I heard General Eisenhower talk very differently two years ago.

I visited Eisenhower at his farm in Gettysburg, on August 25th, 1964, on the occasion of the 20th anniversary of the liberation of Paris. In the course of a talk lasting several hours the General reminisced about the French Indochinese War and the pressures he had put upon the French to conduct it differently. They could not rally the people to their side, he recalled, adding that no white, Western nation could win a colonial war in Asia. He then talked about our own dilemma in Vietnam and his decision to give economic aid to Ngo Dinh Diem to help him resist communism. "That's the only way it can be done," Eisenhower told me. "We can only help them to help themselves." He thought then that we could not and should not try to do their fighting for them. Today he thinks differently and the reason is surely evident: our massive commitment to defeat communism in Vietnam has in Eisenhower's view created a new situation. Eisenhower has not contradicted himself. He now believes that the context has so changed that we need no longer concern ourselves with what changed it; perhaps we should never have gotten involved, but there is no point in dwelling upon past history. Historian Arthur Schlesinger, Jr. apparently agrees. He began his article "A Middle Way Out of Vietnam" in *The New York Times Magazine* of September 18 by stating: "Why we are in Vietnam is today a question of only historical interest. We *are* there, for better or for worse, and we must deal with the situation that exists. . . . Our stake in South Vietnam may have been self-created, but it has nonetheless become real."

Nothing could be more dangerous than this kind of thinking. The point in examining the past is not to cry over spilled milk or to indulge in useless blame-finding, but to find out what went wrong and why so that we might see more clearly, first, how to put it right, and, second, how best to answer Sheehan's prayer that we don't do it again.

To illustrate the value of looking backward in the dispute, let us examine the question of the nature of the war, particularly the issue of aggression. The Johnson Administration talks constantly of North Vietnamese "aggression," sometimes simplifying it to "Communist aggression." Over and over at the Manila Conference, and in its final communique, aggression was the word used to describe the war. If we simply accept this charge without checking it against the historical record—that is, if we persuade ourselves that "now" is unrelated to "then" —it will be almost impossible, I believe, to find the way to peace. Hanoi will certainly not enter negotiations as the "aggressor."

Examination of the record would show a situation very different from today. (Is that why we are so often urged to forget it?) Certainly Hanoi is taking aggressive action now in sending regular soldiers to fight in South Vietnam. But Hanoi's views, which is accepted by most observers outside the United States, is that the original provocation was committed by the South Vietnamese and by the United States of America in jointly refusing to carry out the provisions of the Geneva Accords. Vietnam did not send troops south until after the American build-up. Hanoi has been reacting to both the American intervention and the refusal of South Vietnam to hold free elections. It is also reacting to the usurpation of power by a military clique that is not representative of the Vietnamese people, and not even of the South Vietnamese, since Premier Ky and his principal aides are refugees from the North. It does not invalidate these facts to argue that Ho Chi Minh does not represent the people either, or that what we are facing is some new kind of internal aggression. That is precisely what all the turmoil has been about. From the very start there has been a civil war among the Vietnamese, not a Korean-like aggression by the North against the South. And if this fundamental truth cannot be accepted, then any kind of an honorable settlement is beyond hope. You can't settle a fight if you do not know what it is all about.

I do not speak of history only from hindsight. I watched all of this happen. I was at the Battle of Dienbienphu; when I saw the Chinese mortars going into position on the crest of the hills above the valley I knew I was watching the end of the era of Western dominance in Asia. I flew from Hanoi to Saigon to Geneva with Prince Buu Loc, then Prime Minister of South Vietnam. I covered the conference and interviewed the principal actors. They came to the conclusion that Western powers could no longer determine the flow of history in Asia; that the best that could be expected for the West was an independent, neutralist Vietnam, Communist but not a satellite of China. I have come to believe that period deserves the closest study by American citizens, not because errors were made or evil done intentionally, but because the leaders of our country, Eisenhower and Kennedy in turn, were either not aware of the dynamics that would follow from their decisions, or discounted the dangers too readily. If we turn our backs on the dynamical process that led us, without intent, into a war we know we should not be fighting, how will we avoid making the same mistakes in the future?

Our predicament began with the judgment of John Foster Dulles—a correct judgment—that Ho Chi Minh had become so popular a national hero that he would win free elections by a big margin (80 percent, President Eisenhower estimated in his memoirs). Every informed observer concurred. It was not the judgment that was wrong, but the conclusion Dulles drew from it. Dulles decided that we must organize an Asia equivalent to NATO, support an anti-Communist leader in South Vietnam and stall off the free elections provided by the Geneva Accords. This led to Eisenhower's letter to Ngo Dinh Diem, our selection as anti-Communist champion, offering economic aid. Eisenhower then believed that the South Vietnamese needed only our friendly help and guidance. This policy was based on America's brilliant success in Europe, where the Marshall Plan, the Truman Doctrine and NATO combined to provide the fruitful use of economic aid under a military shield against external aggression. The error, of course, was the assumption that a policy that had worked in industrialized, technologically, advanced, white, Christian Europe could also work in rural, backward, yellow, non-Christian Asia.

We also failed to understand how the mechanism of our program of aid leads inexorably from butter to guns. We start with the simple proposition that communism is evil and should be stopped from spreading. Therefore anti-Communists must be helped. When we give economic aid we soon discover we must also provide technological help. To persuade Congress and the people to give tax dollars the anti-Communists are described as fighters for freedom. When they fail to carry out our proposals for reforms the fact is hidden because more aid must now be given to prevent their collapse. The investment in aid and technical advisors becomes so great that soldiers are sent to protect them. The soldiers are shot at, so they are authorized to shoot back. The Communists strike harder to prevent the American program from shoring up the adversary. More soldiers are sent and bases are built. Once our honor and power are committed it becomes our war. And once it becomes our war then we devise new rules. Thus an Eisenhower who once believed that only Asians should fight an Asian war can two years later approve an American commitment greater than the commitment of the South Vietnamese themselves.

How can we avoid the dynamics that lead from economic aid to all-out commitment? The mechanism that springs the trap is our unilateral programming. By giving aid directly, we directly involve our flag, prestige and power in the success of the recipient, and so become the servant of a Chiang Kai-shek or a Marshal Ky—men who stand for the very opposite of the democratic cause we suppose we are defending. If instead we gave aid through international organizations—the World Bank and OECD are two of many—we might find a palliative for the ills of our foreign aid program. We could commit American dollars without committing the American flag.

Maybe then we would not find ourselves in situations that inevitably become polarized into the fatal alternative: victory or defeat. This false dichotomy is what leads a Neil Sheehan from lucidity to absurdity. He and many other Americans see only a continuation of the war or a "precipitate retreat, degenerating into a rout." Or, as I have heard it said again and again across the nation, "we can't turn tail and run." Of course that isn't the answer; trouble is, it isn't even the question. The real question is how to find a middle ground between victory and defeat. Is there, as Sheehan suggested, really nothing to do but make a bigger mess?

It is at this point that a huge dense cloud seems to descend upon even the clearest thinking Americans. We cannot seem to perceive the shape of that middle ground. Mr. Schlesinger called on us to find it in his *Times* article, but did not describe exactly where it might be found. He saw no reason for "our reluctance to follow the Laos model and declare neutralization, under international agreement, our long-run objective," but he only proposed de-escalation and put major emphasis on our need "to regain our cool." President Johnson too employed this in-cliche in his Princeton address when he urged his critics not to blow their cool.

It is at this point that I lose my own cool. It seems to me singularly inappropriate for anyone conducting a major war to accuse others of being overheated. Has President Johnson kept his cool in Vietnam in dropping more tons of dynamite on that tiny country than were dropped on Nazi Germany in World War II? Are doves really more hotheaded than hawks? Is there some intrinsic virtue in keeping cool before so tragic and cruel a war as this? Indeed isn't it about time to *get hot* about demanding an end of the war? It is said that Senators Wayne Morse and J. William Fulbright hurt themselves badly by losing their cool. Perhaps they did. But they have also done their country a great service and were it not for men like them we might still be awaiting responsible nationwide discussion of the Vietnamese and Chinese issues.

It is at this point that I feel only an intense anguish for the crisis of my profession and of my country. I know that Neil Sheehan is not the only reporter to suspect that he had been fooled, not the only correspondent to be torn between the realization that the war is corrupting us and a failure to see any honorable way out of it. I watch my colleagues agonizing about it, struggling to keep cool, but ending up by stepping away from the truth. They denounce the war but advocate that we continue to prosecute it. It is not that the press is cynical, but it seems paralyzed by the war, an avowed mistake, the correction of which appears so difficult and costly that it seems easier just to continue it. Many fellow countrymen, like my colleagues, recognize the mess but cannot agree on how to clean it up. Some advocate greater peace efforts; others, the plurality, greater efforts to win. Both doves and hawks agree, however, on the desirability of ending the war swiftly. Hardly anyone has much stomach for Johnson's policy of a long hard war.

It is at this point that someone inevitably asks: what can be done about it? I would suggest first of all that we stop using such loaded words as withdraw or retreat. Our problem is rather to *extricate* ourselves from a difficult position, not to fight our way out or to turn tail and run. To extricate ourselves would require a lot of truthtelling. Yet very few Americans even try to examine what others think is the truth. We charge China with being aggressive and expansionist, but most of the world believes that *we* are the expansionist power. American soldiers, businessmen, and technicians are seen almost everywhere in the world. Hardly a single Chinese soldier is seen outside China, and few Chinese diplomats or technicians are seen anywhere. We believe we are not expansionist because we clearly do not covet territory, but we fail to see that others regard the extension of influence on a global scale as a new form of expansionism. They do not believe that we are in Vietnam only to prevent a South Vietnamese Communist victory over a South Vietnamese military clique. They have long believed—and feel their suspicions confirmed by President Johnson's Asian tour—that the United States, a Pacific power, now has a new objective: to extend its power from the Pacific to the continent of Asia.

I have never believed that America's vital interests were at stake in the Vietnamese civil war. I have never accepted the correlation between Munich and a settlement in Vietnam. Mao Tse Tung is not a Hitler, nor is Ho Chi Minh his servant. North Vietnam is not a powerful imperialist nation like Germany. If Ho is comparable to any European, he is the Tito of Asia. That is, a national Communist, at the head of a small state, trying to keep independent of an enormous Communist neighbor—in the case of Tito, Russia, in the case of Ho, China. If we can live with Tito to the tune of one billion dollars of aid, why is it so unthinkable to live in a world with Ho? Why do we fight for the South Vietnamese when we did not go to war for the Freedom Fighters of Hungary or for the East Germans? By what logic do we now offer more trade and closer relations with Russian and all of Eastern Europe but feel we must make war in Vietnam?

The crux of the matter is this: should not the Vietnamese have been permitted to determine their own fate in the first place? And is it now too late to reverse that error? Can we not return to the basic principle of the Geneva Accords: the creation of a military cease-fire and the beginnings of a negotiation among the Vietnamese themselves by themselves, between the NLF and Saigon in the South and also between South and North? It seems to me to be possible and certainly desirable for the United States to change its role from belligerent to interested party, one among many who have an important stake in peace in Asia. Japan, India and Pakistan surely should be associates with efforts to end the war and encourage negotiations among the Vietnamese. The only way such negotiations could succeed and produce an enduring peace would be to quarntine Vietnam off from the world power competition, that is to neutralize it.

By "neutralize" I mean something comparable in spirit and form to the neutralization of Austria. All foreign forces—Russian, American, French, and British—were withdrawn from Austria. The Austrians drafted a constitution under which the country would not enter into a military alliance with any foreign power. This did not preclude many forms of cooperation between Austria and the West. Austria was neutralized but not neutral. This represented a real sacrifice on the part of the Russians for they were pulling out of a country they knew would henceforth be Western-oriented even in its neutralized state. They did not, of course, withdraw very far—just across the border to Hungary. But we would not be very far off from Vietnam either, if we withdrew as a result of a treaty of neutralization. Our Navy and Air Force control the seas and air of Vietnam. And we have a firm base of operations in Thailand. There would be no great strategic danger of a phased withdrawal as a result of a negotiated treaty of neutralization. South Vietnam, without direct American military engagement, might not be able to maintain itself as a non-Communist state. The Communists might well be the dominant element of a coalition government. But which is the greater danger to America and the world: a Nationalist-Communist Vietnam, neutralized by an Asian treaty, guaranteed by the great powers, or the current danger that Vietnam might become a world battlefield? I feel strongly that it is possible to bring about a situation now where all foreign forces can be withdrawn, and Vietnam first, neighboring countries later, brought under a general great-power agreement to guarantee the neutralization of Southeast Asia. Britain has already indicated it would approve. So has Russia. General de Gaulle proposed the neutralization of Southeast Asia as far back as 1964. Eventually, and the sooner the better, China would have to be brought into the great-power agreement. There can never be any stability in Asia without Chinese consent—certainly not now that China has become a nuclear missile power. There would still be great problems. Neutralization would not solve any of the internal problems of the states in Southeast Asia, but it would solve the external problem, which is becoming the gravest problem in the world.

Neutralization is not a blueprint. No detailed plan would be of any real value today in any case. What is more immediately important than a plan, is a change of attitudes and of objectives. If it becomes more important to Americans to end the anguish of this war than to continue it, there will be no problem finding a plan. Plans are, after all, only ways of carrying out what one wants to do. If we want to end the war, to keep Southeast Asia from becoming a world battleground, to neutralize it for everyone's safety, then the detailed plan will easily be found.

Neither a plan nor a prayer would be meaningful except in the service of a new policy.

We Propose: A Modern Congress

EXTENSION OF REMARKS
OF
HON. JAMES C. CLEVELAND
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1967

Mr. CLEVELAND. Mr. Speaker, as you know, the House Republican Task Force on Congressional Reform and Minority Staffing conducted an in-depth study of the operation and organization of the Congress in 1965–66. The results of some of our research efforts were published last fall by the McGraw-Hill Book Co. under the title of "We Propose: A Modern Congress."

Under leave to extend my remarks, I would like to include in the Congressional Record a review of the book by Robert K. Walsh of the Washington Evening Star.

The 21 articles that make up this book were intended, as Mr. Walsh notes, as "pragmatic suggestions rather than a partisan manifesto." Happily, many of our recommendations are reflected in the final report of the Joint Committee on the Organization of the Congress. In other areas, we will continue to press for needed reforms in shaping a truly modern Congress.

I am grateful to Mr. Walsh for his thoughtful remarks and commend the attention of my colleagues who have not yet found time to read it to a careful scrutiny of "We Propose: A Modern Congress."

[From the Washington (D.C.) Sunday Star, Nov. 20, 1966]

The Problem of Modernizing Congress

"We Propose: A Modern Congress," By a House Republican Task Force. McGraw-Hill. 338 pages. Hard-cover, $5.50. Paperback, $1.45.

Whether men make events, or vice versa, the 1966 congressional elections certainly contributed to the timeliness and usefulness of this book.

Present or former Republican congressmen, aided by the Library of Congress and legislative staff specialists and researchers, deal here with the need for reforming the methods and modernizing the machinery of Congress rather that with the problem of getting there.

Their 21 articles, pragmatic suggestions rather than a partisan manifesto, offer proposals which admittedly are not altogether new or advocated only by Republicans.

As House Republican Leader Gerald R. Ford notes, they were intended to encourage broader discussion and were planned originally "to serve as a reservoir of recommendations should the Joint Committee on the Organization of Congress fail to report out a set of comprehensive proposals for modernizing and strengthening the role of Congress in the 20th century."

That bipartisan Senate-House committee submitted numerous but not very startling recommendations last summer under conditions which cramped its range and depth. The 90th Congress probably will act on some of them. The ideas offered in this book go substantially further as the result of more than two years of work by a House Republican task force on congressional reform and minority staffing.

The chapters carry such well-known bylines of present or former House Republican members as New York Mayor John V. Lindsay on the seniority system, Sen. Robert P. Griffin of Michigan on rules and committee procedures, Rep. Charles McC. Mathias of Maryland on "Managing the District of Columbia," Rep. Joel T. Broyhill of Virginia on "Reforms Needed in House Personnel," and Rep. Bob Wilson of California, Republican congressional campaign committee chairman, on "Congressional Ethics."

Most of the articles, in substance at least, began as House speeches earlier this year and were reported to some extent in news stories at the time. In the outgoing 89th Congress several of the proposals were challenged as being impractical or impossible of achievement. But this book deserves not only a revived and larger reading but also nonpartisan reflection and discussion as the 90th Congress prepares to convene in January.

—ROBERT K. WALSH.

Operation On Guard

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. LIPSCOMB. Mr. Speaker, at this time when the crime problem grows ever more serious and menacing I would like to draw attention to a publication recently issued by the office of Los Angeles County District Attorney Evelle J. Younger.

The purpose of this booklet, entitled "Operation On Guard," is to inform the public about some of the more widely used methods of criminals as they attempt to victimize people by fraud or force. Materials for the booklet were contributed by various Los Angeles County and city agencies and the office of the Governor.

In the opening message, District Attorney Younger states:

> The mounting crime problem in our county requires that we make a greater effort to alert and inform the public. Individuals need to know how best to guard against criminal assaults and frauds and to know what public services are available in the way of legal information and other assistance.
>
> We hope this booklet will be useful in spreading needed information throughout our county. We ask members of the public to help combat crime by assuming individual responsibility and by helping to educate others. Law enforcement needs your cooperation.

The booklet tells how the public can be victimized by such means as bogus solicitors and inspectors, investment frauds, medical quackery, and home improvement and automobile sales misrepresentations. It covers various of the vicious confidence games and in the area of force, such crimes as robbery, automobile thefts, pickpocketing, intrusion by telephone, and others. The booklet gives helpful tips on how to detect crime and how to obtain legal information and advice.

District Attorney Younger and Los Angeles County are to be commended for issuing this publication to the residents of the county. An informed, alert citizenry is one of our best means of guarding against crime.

A Shortsighted Policy

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. COHELAN. Mr. Speaker, for 98 years the people of California have felt that their investment in tuition-free higher education was a sound and profitable one. As the New York Times stated in an editorial on January 11, 1967:

> California has been the leading proponent of the theory that high quality and universal availability of higher education are compatible and essential.

But this 98-year-old tradition of publicly financed college education is now in jeopardy. Gov. Ronald Reagan's proposal that the budgets of the University of California and the California State colleges be cut by 10 percent means either that tuition will have to be charged or that the doors of educational opportunity for many will be closed.

The Governor has stated he intends to make budget economies. But cutbacks at the expense of our young people who increasingly require the training of a college or a university education, would be false economy of the gravest nature.

It should be clear by now that it takes generations to build a university and State college system as fine as California's. But it takes little time at all to weaken or dilute it. Again quoting from the New York Times article of January 11, let me stress that "those responsible for the stewardship of this vital system should know that their academic institutions decline more rapidly than they rise."

Mr. Speaker, this thoughtful editorial deserves the attention of our colleagues and I am including it with my remarks:

[From the New York Times, Jan. 11, 1967]

CALIFORNIA ON THE BRINK

Governor Reagan's threatened budget cut hits the great University of California at a time when it can least afford undermining of its strength.

Disruptive student and nonstudent demonstrations at Berkeley, the giant institution's principal campus, have already caused some faculty members to wonder whether it would be wise to look for greener academic pastures. The prospect of an inadequately financed public higher education system, at a time of serious faculty shortages, could lead to a destructive exodus. The suspicion that politics has entered into fiscal policy conjures up memories of the past fate of other state universities.

To permit development of such a trend would be a national tragedy. California has been the leading proponent of the theory that high quality and universal availability of higher education are compatible and essential.

Those responsible for the stewardship of this vital system should know that academic institutions decline more rapidly than they rise. The small minority of destructive left-wing activists at Berkeley at one extreme, and the fiscal conservatives and political reactionaries at the other, represent a two-front threat. To resist both, and avert a damaging crisis, requires the persuasive strength which President Clark Kerr has shown in the past and which he fortunately seems ready to bring to the battle now.

Equally significant is the declaration by Dr. Franklin Murphy, chancellor of the Los Angeles campus and often mentioned as a likely successor to Dr. Kerr, that he does not intend to "preside at the liquidation or substantial erosion of the quality which fifty years of effort have built up."

Surely Governor Reagan must know that the decline of higher education would jeopardize California's economic growth along with its intellectual prestige. As for the student activists, it should at last occur to them that their aimless fight against "authority" could rapidly replace a progressive system with social, economic and academic retrogression.

Tribute to Senator A. Willis Robertson

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the Appendix of the RECORD, I include a copy of a resolution passed by the council of the city of South Boston, Va., commending the outstanding public record of the Honorable A. Willis Robertson, former U.S. Congressman and U.S. Senator, from the Commonwealth of Virginia.

South Boston is my home city. I am glad to know that the Honorable Wyatt W. Wall, mayor of that city, and the members of the city council have seen fit to express appreciation of the high public services rendered by our distinguished former Senator Robertson. I share fully the sentiments expressed in this resolution, which is as follows:

RESOLUTION

Whereas, A. Willis Robertson served the Commonwealth of Virginia for thirty-four years, fourteen as a representative in the House of Representatives and twenty as a United States Senator, and

Whereas, Senator Robertson, during this time, rendered outstanding service to the people of this Commonwealth of our nation;

Now, therefore be it resolved that the Council of the City of South Boston expresses its appreciation and sincere thanks to Senator Robertson for his many years of loyal, devoted service, and orders a copy of this resolution to be forwarded to Senator Robertson and a copy spread upon the minutes of this meeting.

WYATT W. WALL, *Mayor.*

Attest:

E. K. TUNE, *Clerk.*

Is Lake Tahoe Set To Turn Green From Overnourishment?

EXTENSION OF REMARKS

OF

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. DON H. CLAUSEN. Mr. Speaker, the pollution of Lake Tahoe has been a matter of concern to me for many years, and I have pressed for action to save the lake from destruction by pollution and overnourishment for an equally long time.

On April 30 and May 2 of last year, a special subcommittee of the House Committee on Public Works held public hearings on the pollution of South Lake Tahoe, Calif. The special subcommittee was established at the direction of the distinguished chairman of the full committee, the gentleman from Maryland [Mr. FALLON], in response to requests by local citizens and by concerned Members of Congress. The subcommittee was composed of the gentleman from Minnesota [Mr. BLATNIK], the chairman of the Subcommittee on Rivers and Harbors and the author of many outstanding Federal water pollution control measures; the gentleman from California [Mr. JOHNSON], whose congressional district borders the western and southern extremities of Lake Tahoe; and myself. Senator BIBLE, of Nevada, also participated in the hearings and represented the other body.

The subcommittee held several highly important and very informative sessions on the complex problems of the lake. Federal, State, and local officials; sanitary and civil engineers; wildlife and natural resources authorities; medical doctors; and concerned public citizens presented testimony before the subcommittee. The subcommittee sessions brought out the reasons for the lake's severe pollution and acute overnourishment. Constructive recommendations for the reduction of pollutants and nutrients entering the lake were offered, and from these recommendations we are today much better prepared to meet the intricate pollution problems of Lake Tahoe.

During the adjournment, an enlightening article by Burt Schorr appeared in the Wall Street Journal. The article is a result of deep research into the genuine problems of pollution in Lake Tahoe, and, in my opinion, it is an outstanding presentation of the facts on this matter.

Mr. Speaker, under unanimous consent I include Mr. Schorr's article at this point in my remarks. I commend it to the attention of every American who is concerned about the pollution of America's waters.

The article follows:

OVERNOURISHED LAKES: TOO MUCH PHOSPHOROUS, NITROGEN PERIL WATER—JOHNSON TO SIGN A BILL SHORTLY TO HELP FIGHT THE POLLUTION; IS TAHOE SET TO TURN GREEN?

(By Burt Schorr)

At a casual glance, it is hard to understand the furor over the danger of polluting Lake Tahoe, high in the Sierras dividing California and Nevada. So crystalline are most of its 192 square miles of blue water that investigators on its surface have spotted a white disc at a depth of 136 feet.

Yet, according to the recent findings of a Federal sanitary engineer and an aquatic biologist, Tahoe is on the verge of turning a murky green, its surface and beaches fouled by thick patches of slimy, foul-smelling algae, its weed growth on a rampage and its dissolved oxygen diminished—thus reducing the fish population and retarding Tahoe's ability to purify itself.

The factors underlying Tahoe's troubles have a familiar ring: A swelling population in the surrounding Tahoe basin is placing an ever larger burden on sewage treatment plants and seepage-prone privies and septic tanks. Contrary to what one might expect, however, the direct threat to the lake isn't from disease bacteria, greasy scum or other obvious signs of human abuse.

Rather, the culprits are the tasteless, invisible compounds of phosphorous and nitrogen that abound in sewage and many industrial wastes. In normal amounts these are essential to the growth of useful algae. But an excess of either pollutant can trigger the explosive algal "bloom" that may destroy a lake's recreational value and impair its use as a water supply.

With the tide of human wastes, detergents and other algae nutrients rising yearly in this country, the problem is receiving increased attention from pollution fighters. A conference of California, Nevada and Federal officials concluded in July, for example, that if Tahoe's pristine water quality is to be preserved, the basin area must be exporting most of its sewage and garbage by 1970, thereby cutting down sharply the underground flow of nitrogen and phosphorous into the lake from present disposal sites.

FIFTY BILLION DOLLARS, 10 YEARS

The U.S., of course, still has far to go merely to shut off the flow of raw or inadequately treated sewage into its waterways: the primary and secondary treatment plants needed to accomplish that goal alone would require 10 years and up to $50 billion to construct, according to one Government official's estimate.

All the same, the realization is growing that a parallel effort against less noticeable algae nutrients also is needed. At stake: The fate of still unsullied lakes and even of heavily polluted ones like Lake Erie, where excessive phosphorus has helped de-oxygenate some 2,600 square miles, or more than a fourth of the water area. Also, the algae question is becoming more critical with the increasing use of dammed lake water for recreation and reservoirs.

"A lake basically is a stagnant body of water," says Murray Stein, enforcement chief of the Interior Department's Federal Water Pollution Control Administration. "Once waste materials get into it, they have no place to go." Consequently, heavy infusions of phosphorus and nitrogen compounds "threaten to destroy a lake forever" by speeding up the natural process of utrophication, or aging, which gradually fills it with organic material and transforms it into a marsh, Mr. Stein says.

RIVERS, TOO

Besides lakes, algae also trouble sluggish rivers and other slow-moving water courses. The resulting odor and taste of their tap water certainly made this clear to some Washington-area residents, for example, during the past summer of severe drought. The Potomac River, chief source of local drinking water supplies, fell to unusually low levels, increasing the relative amount of algae present.

The anti-algae campaign is still in its infancy; most sewage treatment plants today don't even bother to record the amount of algae nutrients released in their effluent. But one result, stricter Federal requirements for phosphorus elimination, already appears likely.

Under the Water Quality Act of 1965, states have until next June 30 to set water quality standards for their interstate waterways as well as to make plans for abating pollution. Approval is vested in the Interior Secretary who, in the absence of satisfactory state action, can impose standards of his own.

If a newly tested method for extracting a higher amount of stubborn phosphorous compounds during secondary waste treatment proves applicable nationwide, as pollution control experts anticipate, Secretary Udall likely will issue phosphorous removal guidelines based on its use. States then would be expected to require municipal waste treatment plants to incorporate the new procedure in their operating practices.

In the years ahead, even more sophisticated processes will be developed. Government water men believe. The Clean Waters Restoration Act of 1966, which President Johnson is expected to sign into law soon, for the first time authorizes substantial outlays for development of practical "tertiary" sewage treatment that would include almost complete elimination of the phosphorous compounds that now get by customary secondary treatment.

LOS ANGELES PLAN

The legislation offers to reimburse states and localities for 75% of the cost of such demonstration projects and authorizes $60 million for this purpose over a three-year period. Los Angeles County, for one, is ready to apply for such aid in helping to create 20 acres of recreational lakes fed entirely by discharge from its Lancaster, Calif., secondary treatment plant.

Starting with sewage effluent from which about 90% of the pollutants have been removed, a tertiary treatment plant estimated to cost $200,000 would take out more than 99% of the phosphorus compounds, then pass the water through 400 square feet of sand and anthracite coal filters. The result: Clear water safe for fishing, boating and, possibly, swimming. The anticipated operating cost, 10 cents per 1,000 gallons, is high compared with the 3 cents per 1,000 gallons charged for secondary treatment alone; but John Parkhurst, chief engineer for the Los Angeles Sanitation District, contends the figure is half the cost of fresh water transported to the arid Lancaster area from the north, and could be reduced with operating experience.

Available figures suggest an even larger sewage bill for taxpayers and industries like dairies, slaughter houses and canneries whose wastes are rich in nutrients.

The Tahoe Basin sewage export scheme carries a tentative price of $50 million, about double what it would cost to expand standard sewage treatment for the area. (The plan also is stirring protests by local governments along Nevada's Carson and Truckee river systems, which have been selected to receive Tahoe Basin effluent; they fear degradation of their water supplies, a view Federal pollution control experts dismiss as groundless.)

Any cost calculation must include a portion of the maximum $30 billion the Federal, state and local governments could need to separate municipal storm sewers from ones carrying human and industrial wastes. Most older U.S. cities employ combined systems, and heavy rains can increase their sewage plant loads 100 times, washing as much as 99% of sanitary wastes into receiving waterways with out treatment. Moreover, street drainage itself usually is rich in phosphates from dripping vehicle oil.

AN UNCERTAIN SCIENCE

Algae control remains an uncertain science because the behavior and interrelationships of the more than 650 common U.S. species are largely uncharted. "We still don't know if, by feeding on each other, algae can become self-perpetuating in a lake, or whether growth cycles can be cut back once nourishment is reduced," says a Federal pollution researcher.

Algae possesses chlorophyl, which enables them to combine water and carbon dioxide in the presence of sunlight to form starch. In a clean, "young" lake, the process performs the useful function of replenishing the dissolved oxygen because the algae produce oxygen faster than bacteria in the water take it up. The plant-like algae themselves serve as an important food source for fish and other aquatic life.

However, relatively modest amounts of nutrient elements—more than 100 parts of phosphorus per billion of water and 300 parts of nitrogen—can touch off frenzied algae growth. Result: Diatom algae, perhaps the most important form of aquatic food, soon are replaced by blue-green species that consume oxygen, form nuisance growths, exude noxious odors and occasionally poison fish, fowl and animals.

The precise factors that trigger sudden algal blooms are far from certain. But most researchers are inclined to view phosphorus as the controlling element. The Agriculture Department figures that phosphoric acid available for such domestic fertilizer uses as lawns and crops increased 80% to 3.7 million tons between 1950 and 1965. In the same 15-year period, sales of synthetic detergents containing up to 50% phosphorous compounds zoomed to 4.9 billion pounds from 1.4 billion, according to the Soap and Detergent Association.

(The detergent industry last year completed the elimination of "hard" detergent materials that caused foaming in waterways receiving sewage effluent. But an association spokesman concedes that use of new "soft" materials doesn't diminish the heavy need for phosphorus in detergent manufacture, and the prospects for replacing the phosphorus compounds now seem remote.)

Sewage experts scoff that, because agricultural runoff is responsible for so much of the algae nutrients in lakes, there's little point in worrying about the municipal and industrial share. But Federal authorities contend that the municipal-industrial contribution appears to be growing fast. "It may provide the triggering amount of nutrient for algae growth," theorizes H. W. Poston, Chicago-based director for the Great Lakes region of the Water Pollution Control Authority.

SAN ANTONIO SYSTEM

Until recently, the lack of a proven, efficient and economical method for eliminating elusive phosphates from effluent by filters, chemicals or other means barred any meaningful, large-scale test of the resulting benefits. The plans of The Los Angeles Sanitation District are one example of an antinutrient process, though. Government officials also are optimistic about a technique recently developed in San Antonio, that suggests the typical modern municipal sewage plant can be adjusted to achieve high phosphorus removal.

Tinkering by a Federal team included closing down two inefficient aeration tanks so the remaining tanks would receive more compressed air. Also, a proportionately larger amount of solid wastes with their helpful bacteria was cycled from the final clarifying tank back into the aeration basin. The aeration basin actually achieved 99% phosphate removal. The overall design and operating changes necessary would, it's estimated, add about 25% to typical sewage treatment costs, which range from $40 to $60 per million gallons.

Should the San Antonio concepts prove adaptable to colder climates as hoped, they'll actually offer bargain-rate phosphorus removal because the required capital investment would be very modest. Other Federally aided experiments promise similar savings.

Thus Chicago, with an eye on protecting Lake Michigan, is studying a tunnel network to store storm water for leisurely disposal into the Illinois River System after the rain lets up. Heavy rains in recent years have occasionally altered this flow, sending sewage into Lake Michigan.

The cost of the tunnel storage, $750 million, compares with the estimated $2 billion it would take to build a separate storm runoff system.

The Minneapolis-St. Paul Sanitary District shortly will begin installing computerized remote control and monitoring of its 65-square-mile network so it can store storm water in the sewer lines themselves or pass it around more harmful human and industrial wastes. Total cost: $1.7 million, 50% paid by the Federal Government. The district will feed rainfall data from the local Weather Bureau office, five of its own remote gauges and possibly its own radar into a computer for hourly predictions of storm flows. In addition, telemetry readings at 40 pipe locations will pinpoint water surges, permitting central plant operators to divert them directly to river outfalls at 15 junction points or hold them in the system.

The waterway benefiting most from the new controls would be the Mississippi River, to which the Twin Cities effluent flows; but Government experts believe the automatic system, if successful, could be applied as easily in communities that contribute to lake pollution.

Anniversary of the Ukrainian Republic

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. DIGGS. Mr. Speaker, I am proud to join with the many thousands of Americans throughout this land in commemorating the 49th anniversary of the proclamation of the Ukrainian National Republic. It was on January 22, 1918, at Kiev, that the Ukrainian people, after a long and bitter struggle, were able to realize their cherished dream—freedom. As was the case with our own American Revolution, the Ukrainian people demonstrated that sacrifices and pain must be endured if a cause is to be won. They showed that a band of courageous and dedicated men and women could indeed affect the course of their country's history. They showed what true patriotism and honor really mean.

Mr. Speaker, not only were the Ukrainian people able to successfully declare their country a republic, but exactly 1 year later in the proclamation of the act of union, it was declared that all Ukrainian lands were united into one sovereign Ukrainian Republic.

What a thrill and privilege it must have been for those gallant Ukrainian patriots who partook in the winning of their country's independence. They must have felt honored to pass on the stories of their beloved Ukraine's liberation.

Today, as we honor the memory of those events of 1918 and 1919, the Ukraine is under the control of foreign rulers in Moscow. It is our fervent hope that someday soon this unfortunate situation will be rectified. But let us not waver in our devotion to the ideals of the men and women who fought and won a free Ukraine. Let us pledge to work faithfully for the redemption of this land for which so many thousands so freely offered their fortunes and their lives.

Franksville Man's Dream Comes True

EXTENSION OF REMARKS

OF

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. SCHADEBERG. Mr. Speaker, I am proud to bring to the attention of my colleagues in the Congress the story of Mr. A. B. Savage, a humble but truly great man who lives in my district. While outwardly he might appear to be just a plain, ordinary man, inwardly he is made of the strongest fiber. Truly one of God's gentlemen, his achievements make him deserving of that title of which Herbert Hoover was so fond, the uncommon man.

Mr. Savage is an outstanding example of personal initiative to all of us in this age of apathy, of "what's in it for me," of dependency and the outstretched hand for the largest of Government welfare. While countless numbers of our citizens have been talking and demonstrating for more Government programs to take care of this or that need, Mr. Savage has been doing something about it. Often working two jobs, he has put all of his nine children through school. Two of them have master's degrees, one is in medical school, and the others have bachelor degrees or, so far, at least a year in college.

Aware of the danger in giving children everything without real effort on their part, Mr. Savage's philosophy is simple and true:

> We need to push our children, to make certain they get a good education. If they keep their feet on the ground and Jesus in their hearts they are bound to succeed.

And they have been succeeding. All of the Savage children received college scholarships and have worked to help pay their way through school. The future successes of his children will provide an ever-growing tribute to this fine man who in working hard to achieve his dreams of the very best for his children, has given us all an example to follow. Now, as he broadens his efforts to help others beyond his family, I am certain he will inspire many more to follow the path of personal responsibility that has made America the great nation it is today.

I commend the Milwaukee Sentinel for bringing to the fore last December 26, the following story of this admirable man, Mr. Savage:

> FRANKSVILLE MAN'S DREAM COMES TRUE
>
> FRANKSVILLE.—A 66 year old Negro man has found his dream in his nine children.
>
> The dream, represented by a cap and gown, is an education. Two of his children have

masters degrees, a third is in medical school and the rest either have bachelors degrees or at least a year of college.

A. B. Savage, who lives at 4838 Highway H in Racine county, was born in Arkansas and had little chance to get an education.

"My mother was a teacher and she knew the value of an education but she died while I was a child," he said. "My father kept pulling me out of school to work."

"I used to cry, I was so determined to get an education."

At 17, Savage decided to start school in Memphis, Tenn. He stayed there until he was about 25, completing 10 grades.

"Then I became a photographer and took pictures at the school," he said. "Every time I saw caps and gowns I got the blues."

"I asked the Lord, 'If I ever have children won't you help me educate them?'

"For us folks it is a big battle—a hard battle—but God has blessed us."

Today the Savage children are:

Mrs. Lionel (Hester) James, a supervisor of elementary music for Milwaukee public schools.

Mrs. Canary Girardeau, director of program development for the north side area of the Milwaukee YWCA.

Mrs. James (Rosetta) Foote, a teacher at E. B. Phillips nursery school.

Mrs. Alex (Mary) Mitchell, a secretary for the Milwaukee YWCA.

Mrs. Clarence (Cecelia) Dade, a medical technologist in Washington, D.C.

A. B. Savage, jr., chief warrant officer, U.S. Army.

Youlon Savage, child welfare supervisor, department of public works, Denver.

Shelby Gene, who has a service disability.

Daniel, who is in his first year of medical school at the University of Wisconsin. He was valedictorian at North Division high school.

A fifth boy died when he was 18.

"I'm proud of my children," Savage said. "They have made me very happy."

Savage said he met a school principal who had once been in his class in Memphis.

"The principal told me, 'You know, I envy you. You have 10 children—four are in college. You are spreading out 10 ways while I can only teach the children of others.'

"I had the blues about education until then. I haven't had them since," Savage said.

To help provide the children's education, he often worked at two jobs. In Memphis, he worked as a photographer, sold real estate for the government and worked in a bank.

COLLEGE SCHOLARSHIPS

He worked in Milwaukee for 18 years before moving to Franksville six years ago. In Milwaukee, he worked for the American Motors Corp. and said he was the first licensed Negro car salesman in the city.

The children all received college scholarships and worked to help put themselves through school, Savage said.

"We need to push our children, to make certain they get a good education," he said. "If they keep their feet on the ground and Jesus in their hearts they are bound to succeed."

Now that his own children are grown, Savage and his wife have two foster children living with them, an 11 year old girl and her 7 year old brother.

"They had never known the joys of a home," he said. "We are teaching them how to take care of their room, how to be clean and how to work for good marks in school."

Savage said he is now in the ministry working "with the souls of men. I have done this all my life but now I am doing it full time."

He doesn't have a church, he said, but visits hospitals and homes, carrying one basic message: "You must have love in your heart."

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. GERALD R. FORD. Mr. Speaker, Sunday, January 22, marks the 49th anniversary of the proclamation of the Ukrainian National Republic and the 48th anniversary of the proclamation of the Act of Union whereby Western Ukraine united with the Ukrainian National Republic into one sovereign and independent Republic of the Ukrainain people.

These dates and events are acknowledged as marking a fulfillment of Ukrainian aspirations that had endured two and a half centuries of oppression. To the Ukrainian people it signified freedom of the individual and independence as a nation.

The independence and sovereignty of the Ukraine were recognized by many states including Soviet Russia; however, as history can readily attest, Communist Russia honors few agreements and for almost 3½ years waged an unprovoked, unwarranted, and ignoble onslaught against the heroic, freedom-loving peoples of the Ukraine. The valor and dedication of the Ukrainian forces in this war have become legend. Deprived of virtually all military, economic, and diplomatic support, they fought on until they finally succumbed to the numerical superiority of the Communist Russian forces.

The Ukraine while under the yoke of Soviet communism was forcibly integrated into the Soviet Union. This act on the part of the Communists was calculated to reduce the Ukrainians to total submission. To this day the Ukrainians have never, and will never submit to Soviet force. The Communist Russians perpetually fear this captive nation for they well know that the spirit of freedom is aflame in every Ukrainian heart, and the desire to regain national independence cannot be extinguished. Moscow recognizes that it has never deprived the Ukrainian people of their basic human dignity nor their spirit to reestablish themselves as a free nation.

During the 4½ decades of forced enslavement under the Communists, the Ukrainians have lead numerous uprisings and coordinated massive resistance movements. In retaliation the Soviets have deported, starved, and executed great numbers of the Ukrainian people, and yet even when confronted with genocide, they do not submit.

Today, we salute the Ukrainian dead and the Ukrainian living who have greatly served the cause of freedom in the vanguard of the fight of freemen everywhere against Communist oppression. May we solemnly acknowledge the enormity of the human sacrifice that has been made by the Ukrainian people for their fellow man. May we reaffirm our convictions and rededicate ourselves in an increased united effort to exhaust all avenues and execute all actions necessary to accomplish the liberation of the Ukraine nation—for we know as surely as the Soviets know it is not a question of "if," but a question of "when" independence will be regained for the Ukrainian peoples.

U.S. Jaycees: Young Men of Action

EXTENSION OF REMARKS

OF

HON. ED REINECKE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. REINECKE. Mr. Speaker, in more than 5,000 communities across the Nation this week salutes are being given to members of local chapters of the U.S. Jaycees. This is national Jaycee Week.

The Jaycees is a movement of young men of action who are developing leadership by community service. They are committed to the vision that young men can change the world. And they give unselfishly of their energies and time in building their local communities through programs covering everything from traffic safety to child development to war relief to national legislation.

Some of this Nation's great leaders have been Jaycees early in their careers. Of particular note are John F. Kennedy, and Richard M. Nixon.

These young men, between the ages of 21 and 36, wield great influence in thousands of communities across the country. Their influence comes because of their concern for public problems. They have significantly contributed to making our Nation the great place that it is.

One of the most outstanding national projects of the U.S. Jaycees is sponsored by the Capitol Hill chapter, right here in Washington. This is the National Governmental Affairs Seminar. In just a few weeks, between January 29 and February 3, the 50 State presidents, the national executive committee, and winners of civic action competition will gather here in the Capital for this annual seminar.

The theme is very timely. It is "The City and Your Future." These Jaycee leaders will be meeting with several leaders of the Congress, with members of the Cabinet, heads of executive agencies, and members of the Supreme Court. They will seek to make themselves aware of the efforts of the Federal Government to solve our major urban problems. They will also be participating in discussions with mayors of several of our largest cities, and with the Governor of a leading State.

By the end of the week these young community leaders will return to their hometowns with a plan of action for tackling the problems of urbanization which face their own cities and towns.

The U.S. Jaycees will be leading the private sector of our country in programs to deal with urban problems. This seminar will produce many imaginative ideas.

I urge my colleagues in this Congress to take heed to the voices of these young men of action. They are the leaders of tomorrow's America.

Mr. Speaker, under unanimous consent, I insert at this point the text of the creed of the U.S. Jaycees:

THE JAYCEE CREED

We believe:

That Faith in God gives meaning and purpose to human life;

That the brotherhood of men transcends the sovereignty of nations;

That economic justice can best be won by free men through free enterprise;

That government should be of laws, rather than of men;

That earth's great treasure lies in human personality;

And that service to humanity is the best work of life.

A Logical Way To Help the Small Taxpayer

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. ST. ONGE. Mr. Speaker, our citizens, probably more than any other peole, pay their taxes punctually and conscientiously. Individually they also have one of the world's heaviest tax burdens, and many pay more than their share of taxes. The average U.S. citizen may complain about taxes, nevertheless he continues to pay them regularly.

In reward for this dedication to underwriting the Nation's expenses, the Government provides its citizens with a monstrous tax code. This tax compendium is so incomprehensible to the average citizen that even the famed mathematician Albert Einstein was unable to fathom it, and a former Commissioner of Internal Revenue once described it as being "unbelievably complex."

The more affluent of our citizens and those best able to sustain the financial burden of taxation are in a position to hire the necessary legal and accounting talent to deal with the morass of deductions, exemptions, and preferences, and thus wring out every conceivable tax benefit for themselves.

The little fellow with a grievance, however, must face alone the unsmiling tax agent who is armed with the mighty weapon of the tax code. The average person is nervous and often frightened when confronting the vast bureaucracy, while recalling vague tales of criminal prosecution for tax violations. His reaction is to back down, give up, and pay any tax deficiencies, regardless of how inequitable he believes the decision to be. If he does have the fortitude to engage in tax court litigation the citizen knows that, even if successful, the odds are that whatever is awarded in his favor will be consumed by attorneys' and accountants' fees.

The Internal Revenue Service is the only area of our Government where the basic premise of Anglo-Saxon jurisprudence—that one is innocent until proven guilty—is apparently not fully applicable. Under the tax code, a deduction is subject to disallowance until it has been proved allowable. Our democracy, in order to retain its vitality and strength, cannot permit its citizens to be bullied by bureaucrats. What this bill aims to achieve, in part, is to reassert the foundations of our democracy, namely, that this is a government of laws and not men, that no citizen is ever at the mercy of an official, and that if an official of the Government exceeds his authority there must be effective remedies available to protect the citizen. This is the manner in which our tax system is supposed to function, but unfortunately few of our taxpayers believe that it does.

In fiscal year 1965, slightly more than 3 million tax returns, or about 5 percent of those filed, were subjected to audit by the Internal Revenue Service. Of these, deficiencies were found in 51 percent of the cases. The average deficiency was just below $700, and the average refund just over $100. Thus, the ordinary taxpayer finds it highly impractical to hire a lawyer or accountant since he would pay more money in fees than he would recover by winning the case.

The bill I am introducing today is a step toward giving the ordinary taxpayer some help. It would create for the first time a Small Tax Division within the Tax Court of the United States and it would authorize the court to appoint two small tax commissioners for each tax circuit. Any taxpayer who has been assessed a deficiency of $2,500 or less may appear before a small tax commissioner, with or without his attorney or accountant, and be assured of a fair and understanding hearing from a commissioner who is independent of the Internal Revenue Service.

Once the decision is made to go before the commissioner, neither the taxpayer nor the Tax Service can appeal. The Government may, however, petition the Tax Court for review of a question of law, but is liable for the taxpayer's court costs and legal fees.

I believe that a just, efficient, and inexpensive procedure for appeal from a tax audit would tend to make the agents of the Internal Revenue Service more conscious of their own responsibilities for the fair treatment of the taxpayer, both small and large. Such an inexpensive appeals system would do much to restore public confidence in our whole tax collecting structure. Those taxpayers who lost such appeal would be more likely to accept the small tax commissioner's judgment gracefully, with less suspicion of injustice. Tax agents under such pressure would be fair as opposed to the present tendency to be tough. If they were proven wrong, the Government would have to pay the costs. Thus the balance of bargaining power between taxpayer and agent during the initial audit would be established.

The intricate tax code and the bureaucracy that administers it will probably remain unchanged, however, it is hoped that passage of this bill will provide the taxpayer with an efficient, sympathetic, and just hearing when he believes the tax laws have treated him unfairly. I believe this to be one of those rare measures that is so eminently fair and logical and fills such an obvious need that it should appeal immediately to all objective men, regardless of party affiliation or political philosophy. I therefore commend its early passage to my colleagues.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. MESKILL. Mr. Speaker, World War I was a great tragedy for many countries, but it also broke the chains which had held numerous nationality groups in check in Eastern and Central Europe for centuries, where they were suffering under alien regimes in their homelands. As a result of that war, many of these nationality groups regained their freedom and proclaimed their national independence. The Ukrainian independence was one happy consequence of that war.

Since the mid-17th century, the Ukraine had been submerged and almost lost in the czarist Russian empire. During all that time, the Russians did their utmost to blot out and eradicate the Ukrainian national traits, and make them Russians. But their efforts were of no avail, for these indomitable Ukrainians clung tenaciously to their national traditions and ideals. Toward the end of the First World War, when the Russian Czar was overthrown by the Revolution of 1917, the Ukrainians felt free and their leaders proclaimed their independence. This was done on January 22, 1918, and the Ukrainian National Republic came into existence.

Unhappily the newborn state was under severe handicaps at the very beginning of its life. It was weak and in dire need of help. But there was no one to extend it. The war-torn country was in ruins, and the fertile Ukraine was a wasteland. Most of its inhabitants were uprooted from their homes, and the normal course of life sadly disrupted. Thus the Government of the Republic was faced with insuperable difficulties, and even more serious was the threat from the Communist government in the Kremlin. Before the Ukrainian Government had any chance to bring some order out of the existing chaos, the country was attacked by the Red army and overrun in early 1920. The Ukrainian National Republic was brutally extinguished and the country was absorbed into the Soviet Union.

Since then the Ukrainians have suffered much under the Soviet regime, much more than their forebears had suffered under the czars. For decades the country was effectively sealed off from the outside world, and it was almost impossible to know the sad lot of the Ukrainian people. We know that they survived the Soviet Union's iron age somehow, though many millions lost their lives. Today their lot is reported to be somewhat better, but they still fight for their freedom and independence. On the observance of their independence day I wish them fortitude, patience, and ultimate success in their struggle for national freedom and self-government.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. LANGEN. Mr. Speaker, as we hear more and more of a detente with Communist Russia, and a more relaxed atmosphere with that nation, it is good to remember on occasion that millions of people are still being enslaved by that godless government.

This coming Sunday, January 22, is a date that should remind us that Russian sweet talk may be just that, talk. Their actions, however, continue to speak louder than their words.

We have but to look at the history of the Ukrainian people to understand this fact. On January 22, 1918, the Ukrainian Central Rada issued a solemn Act of Restoration of the Ukraine as a sovereign nation, called the Ukrainian National Republic. This act broke a long and oppressive bond between Russia and the Ukraine, thus giving full freedom to the 45 million Ukrainian people.

The newly established Ukrainian state was recognized by a number of governments, including the Russian Federated Soviet Socialist Republic. Despite the fact that the Moscow government recognized and pledged to respect the independence of Ukraine, it soon attacked this young state by military aggression and subversion, a pattern that was to be repeated time and again throughout much of Europe and Asia.

After almost 4 years of bloody war, Ukraine, deprived of all military, economic and diplomatic aid from the outside, fell to the forces of Soviet Russia, losing its western parts to Poland, Czechoslovakia and Rumania.

Losing their short-lived freedom, the Ukrainian people were subjected to harsh and inhuman treatment and persecution. Millions of them died of starvation as a result of manmade famine because they resisted collectivization of their farms. Ukrainian youth were forced to leave for work in the remote areas of the Soviet Union. The churches were destroyed and their clergymen deported and executed.

For sometime now news has been reaching these shores that a new wave of persecution has hit Ukraine, striking at the heart of the Ukrainian nation, its youth and intellectual leadership.

Being deprived of freedom and suffering great losses, the Ukrainian people never surrendered nor have given up the hope of liberation. Through a series of heroic, and bloody uprisings, and a steady resistance through underground warfare they demonstrated their undying love for freedom.

This Sunday, Ukrainians throughout the world will observe their greatest holiday, the anniversary of that country's independence. Unfortunately, those in the Ukraine, under Soviet control, will only observe it in secrecy.

I am happy to join with Ukrainians living in the free world, on this day, to speak for their kinsmen behind the Iron Curtain. And may we in this Congress remember the Ukrainians, and other oppressed peoples of the world before heralding a new era of Soviet understanding. The bear may be smiling, but his heavy paw still rests firmly on millions of freedom-loving people of the world.

Needed: A Watchdog

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. LIPSCOMB. Mr. Speaker, an editorial in the January 9, 1967, issue of Technology Week, discussing administration performance in the area of defense and aerospace affairs includes the statement:

> If there was ever a time in history for a watchdog Congress, it is now. The Administration is embarked on strange courses in some critical areas and no course at all in others.

Although it touches upon only a few of the myriad of items which are an integral part of our defense and space posture, the editorial correctly points out the extraordinary responsibilities of this Congress.

In properly discharging its responsibilities this Congress must take steps to assure itself that the defense policies and projected programs of America adequately take into account the defense needs that the capabilities of our adversaries indicate will be required in the future.

For this reason, I have introduced a resolution in the 90th Congress, House Joint Resolution 2, calling for the establishment of a blue ribbon commission which will conduct an independent and objective evaluation of the projected defense posture of the United States. The blue ribbon commission would greatly assist the Congress to discharge its awesome responsibility in providing for the defense of our Nation. Companion resolutions, House Joint Resolution 3 and House Joint Resolution 4, have been introduced by Mr. LAIRD and Mr. MINSHALL.

I commend to your reading the editorial entitled "Needed: A Watchdog," and respectfully solicit the interest and support of the entire membership of the House for Joint Resolution 2.

"Doublespeak" Among the Giant Redwoods

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. COHELAN. Mr. Speaker, some Members who read Paul Friggens' attack on proposals for a Redwood National Park in the December issue of Reader's Digest may have been left with the impression that such a park is not needed.

In reality, nothing could be farther from the truth. Mr. Friggens, unfortunately, has presented only a minority point of view—that of the lumber industry—and Reader's Digest, so far at least, has neglected to present the case that is so strongly felt by conservationists and concerned citizens across our land.

As a matter of setting the record straight, Mr. Speaker, I am calling to our colleagues' attention an excellent article by Mr. Harold Gilliam, which appeared in the San Francisco Sunday Examiner and Chronicle on December 11. Mr. Gilliam's thoughtful rebuttal of many "misunderstood" points should be must reading for all who are concerned with giving the redwoods a fair hearing.

The article follows:

"DOUBLESPEAK" AMONG THE GIANT REDWOODS

(By Harold Gilliam)

The December issue of the Reader's Digest contains an attack on California's proposed Redwood National Park written from the point of view of the lumber industry. It is entirely proper, of course, that this opinion be expressed, but it is surprising, in view of the magazine's previous conservation record, that the antipark viewpoint is the only one presented.

Some arguments in favor of the park are given by author Paul Friggens evidently only for the purpose of quoting with approval someone on the other side who says that they are false. In the author's terminology, those who favor the park are "promoters", conjuring visions of fast-talking sharpies in derbies and checkered suits. Those who oppose it are "experts," presumably infallible by definition.

(There are two principal Redwood National Park proposals before Congress; one is the Administration bill sponsored by Senator Thomas Kuchel, for a 45,000-acre park principally in Del Norte County, containing about 8000 acres of virgin redwoods. The other bill, sponsored by East Bay Congressman Jeffrey Cohelan and others, embodies a Sierra Club plan for a 90,000-acre park on Redwood Creek in Humboldt County, with about 30,000 acres of virgin forest.)

SHAKY EVIDENCE

The Reader's Digest article contains very little factual evidence and most of what does appear is extremely shaky. For example:

"... The park would ... lock up thousands of acres of old-growth trees which the timber industry maintains are critical to its operations. . ."

"Lock up" is a lumberman's term. From the standpoint of the park-going public, a more accurate term would be "open up."

Dr. John Zivnuska, Dean of the U.S. School of Forestry, has estimated that the original National Park Service plan (somewhat larger than the present Administration proposal) would reduce North Coast logging operations by 1½ to 2 per cent. It is difficult to understand how curtailments of this magnitude would be a death blow to the industry.

". . . The park would . . . destroy at least 1000 jobs."

A report by the consulting firm of Arthur D. Little indicates that the park will ultimately create many more jobs than would be available without it. Temporary hardship cases can be alleviated by government action. Furthermore, employment in the logging industry is steadily declining, and it would be disastrous for the redwood region to remain on a single-industry economy.

The park "would permanently reduce the tax base . . ."

Under the bills now in Congress, tax losses to the counties would be offset by Federal payments for at least five years, when new tourist-based industries, according to the Arthur D. Little report, will create a much larger tax base, as has occurred around other national parks.

MATTER OF TAXES

The tax base would be permanently reduced not by the creation of a national park but the continued logging of the highly taxed primeval forest.

"By locking up these big trees in parks, and protecting them, we could be sealing the redwood's doom!"

In the support of this peculiar statement, the article quotes Dr. Edward C. Stone of the U.C. forestry department as saying that fire and floods in the past have kept fir and oak from taking over the redwood habitat and that the work of fire and flood must now be done by active forest management, possibly including controlled burns.

The answer to this one is obvious: If such management is necessary, it can be done in a park, whereas the giant trees outside the parks are certainly doomed by the loggers.

I can only regard the author's statement as an example of Orwellean "Doublespeak!" He seems to be saying that to protect a redwood is to doom it, and to log a redwood is to save it.

" 'Redwood is not a vanishing species,' says John Miles, consulting forester. . . . The emotional 'last redwoods' myth should be laid to rest."

If they're talking about the young trees raised by the lumber companies as a crop on tree farms, it may be quite true that redwood as a species is not vanishing. But that's not what all the shouting is about.

FALLEN GIANTS

"The Last Redwoods," is the title of a Sierra Club book deploring the continuing destruction of old-growth redwoods in the virgin forests, trees that were standing long before white men arrived.

It is no myth that these trees are vanishing. Anyone who drives the Redwood Highway can see the fallen giants stacked in the lumber yards or moving down the road, one colossal section of a log to a truck, diameters higher than a man can reach. I would regard any emotion stirred by this sight as quite legitimate.

"Of the real giants . . . an estimated 25 per cent . . . are protected in a string of 28 state redwood parks."

The state redwood parks are not protected from freeways, which now slice through two of the four major parks north of San Francisco and threaten the two others. Nor are the parks protected from the kinds of floods that have swept down Bull Creek from logged-over lands and destroyed hundreds of ancient trees in the Rockefeller Forest at Humboldt Redwoods State Park.

Only a major national park embracing large watershed areas can provide the necessary protection.

"The present parks with appropriate additions are sufficient to preserve adequate samples of the best redwood groves. . . ."

VISITS NUMBER 4.5 MILLION

"Adequate" for what? Adequacy can only be measured by reference to use, present and future. Friggens does not think the parks are used much. He drove along the Redwood Highway and "found traffic amazingly light." One reason, he speculated, is that although the groves are nice in ideal weather, "more often they are dark, gloomy, even menacing."

How many people share Friggens' view that the redwoods are "meancing" may be estimated by looking at the attendance figures.

Last year (not counting "drive throughs") there were 4.5 million visits to the state redwood groves, a number greater than the combined annual attendance at Yellowstone, Yosemite and Sequoia National Parks.

By way of comparison, the total area of all the redwood parks is only about 100,000 acres—one-fourth the size of Sequoia, one-eighth the size of Yosemite, one twenty-second the size of Yellowstone.

If attendance in the state parks continues to increase at the present rate, within two decades there will be 20 million people pouring into the groves, flooding the campgrounds, trampling the ferns and soil, threatening the lives of the trees, destroying totally the serene atmosphere that is as vital a part of the redwood experience as is silence in a cathedral.

WILLING TO PAY

Opportunity for that experience can only be preserved for future generations by the creation of the largest possible national park, saving a major share of the virgin groves now in the hands of the loggers. For the sake of our great-grandchildren, and their descendants, we should be willing to pay whatever price is necessary.

For at least 26 million of the Reader's Digest's 27 million buyers the Frigens article will be the only exposure they have to the Redwood National Park proposal. It seems unfortunate that they will not have the opportunity to learn about the case for the park—unless the magazine's editors somehow become convinced that their readers should also hear the other side.

The Late Honorable John E. Fogarty

SPEECH

OF

HON. WILBUR D. MILLS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. MILLS. Mr. Speaker, I was deeply saddened and shocked to receive word of the passing of our beloved and esteemed colleague, the Honorable JOHN E. FOGARTY.

I was privileged to serve with JOHN FOGARTY in the House for 26 years. He was a conscientious Member of this body and will be remembered for his countless contributions to the fields of education, health, and welfare which have been such a help to hundreds of thousands of citizens of this country.

I know of no Member who took a greater interest in medical research, or in developing programs to advance the cause of medical research. I know of no Member who was more interested in aiding our older people, or our disabled. I know of no one who had a larger compassion for the unfortunate or the retarded or disabled. He has helped build a public and private health service in which this Nation can take enormous pride.

He was a man of courage, conviction, and integrity, and he will be sorely missed by his constituency, his State, and the Nation. His devoted service to the people he represented will always be remembered.

I have lost a valued friend and colleague. I extend to his family my sincerest condolences. His monument is already built in the many fields of human endeavor to which he contributed so much of himself and his energy.

John Drake Palmer, North Carolina: Courageous Voice for Flue-Cured Tobacco

EXTENSION OF REMARKS

OF

HON. HORACE R. KORNEGAY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. KORNEGAY. Mr. Speaker, the Progressive Farmer, one of this Nation's most outstanding farm publications, recently selected a truly outstanding man as North Carolina's Man of the Year, 1966, in Agriculture.

The Progressive Farmer selected a genuine friend of the farmer for this award and a genuine friend of mine. I would like to have published in the RECORD this tribute to Mr. John D. Palmer.

The article follows:

JOHN DRAKE PALMER, NORTH CAROLINA: COURAGEOUS VOICE FOR FLUE-CURED TOBACCO

Every Tarheel farmer knows what tobacco means to North Carolina. Coming to be almost as well known is what John Drake Palmer means to tobacco.

Soon after accepting the position as president of Tobacco Associates Sept. 1, 1964, succeeding the late J. B. Hutson, Palmer pitched headlong into efforts to get acreage-poundage controls on flue-cured tobacco. He served as chairman of both the legislative committee, which steered thorugh Congress a bill allowing for acreage-poundage controls, and the referendum committee, whose efforts resulted in three-to-one grower approval of the legislation.

Results of acreage-poundage are a matter of record. Less than 71.5 million pounds of the '65 flue-cured crop went to Stabilization Corporation under Government price-support loans, compared to 285 million pounds the year before and 277 million in '63. From the current crop (1966), indications are that less than 70 million pounds will go to Stabilization.

Government-held loan stocks of flue-cured tobacco have been reduced a third, from the alltime high of 958 million pounds in 1964 (nearly 80% of a year's normal usage) to just over 625 million pounds. At the time this was happening, average prices on leaf were increasing from 58.5 cents on the '64 crop to 67 cents in '66.

When asked about the future, Palmer refers to himself as "an eternal optimist." While exports of our tobacco have held their own over the years, we have not enjoyed the proportionate increase that the quality of our leaf deserves, in Palmer's opinion. As head of Tobacco Associates, he is directing efforts in market expansion, primarily in three directions: 1) Brand promotion of cigarettes using high proportions of American flue-cured leaf in foreign countries;

2) favorable trade relations and import duties for American tobacco in European common market countries; and 3) opening up sales outlets in Eastern Communist countries now "off limits" to our leaf.

About business with Communist countries, Palmer says: "Trade is one of the few channels available to us for constructive contacts with nations with whom we find frequent hostility. . . .

"I think there can be no question but that tobacco would top the list of completely nonstrategic goods. It has only one purpose: to provide pleasure, relaxation, and solace; and in the process of doing so, only harmless ashes remain."

Books could be written about John Palmer, his activities, and his philosophies. In a state (North Carolina) where nearly two-thirds of the nation's flue-cured tobacco is grown and where nearly half its billion-dollar-plus annual farm income comes from tobacco, his worth is immeasurable.

Death of Hon. John E. Fogarty

SPEECH

OF

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. JONES of Alabama. Mr. Speaker, the untimely death of Representative John E. Fogarty is a deep personal loss to those of us who knew him so well as one of the truly great humanitarians in this House.

As colleagues, we will miss his hard work, his straightforward honesty, and his valued advice and counsel. We quickly learned to depend on John Fogarty for strength and wisdom in turning back the obstinate plagues which have incapacitated and crippled mankind and taken the very life from poor and rich alike.

John Fogarty's dedicated work to end the suffering from illness and disease, to make our world more livable, and to advance the cause of mankind everywhere is an everlasting monument to his greatness.

All the people of this Nation have benefited from his relentless efforts in combating these plagues. The intensity of his work in seeking cures to the basic health problems was no doubt a factor in his untimely passing.

In returning John Fogarty to the Congress every 2 years since 1940, the people of Rhode Island acknowledged the value of his work as their representative. His interest in the greater development of his region was well recognized. His work in behalf of the young, the poor, and the less fortunate is legend.

Lesser men would have been content to rest on their laurels after fewer accomplishments than those achieved for all mankind by John Fogarty. But he was not content as long as any task remained to be completed.

We will miss his powerful voice, his dedicated work, and his warm companionship. Our loss will be shared by all the people of this Nation.

My heartfelt sympathy goes out to his family at this time of their great grief.

The Need for More and Better Safety Equipment on All Vessels

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. DULSKI. Mr. Speaker, the sinking of the *Morrell* ore carrier in Lake Michigan last fall, with a loss of 28 lives, was another serious tragedy that should further focus attention on the need for more and better safety equipment on all vessels. I intend to sponsor legislation in the near future which would provide for greatly improved safety standards and more modern equipment on these ships.

Under leave to extend my remarks, I wish to include the following article which appeared in the January 1967 issue of Steel Labor, the monthly publication of the United Steelworkers of America:

"Morrell" Disaster Highlights Need of Safety Probe of Lake Conditions

The sinking of the ore carrier Daniel J. Morrell in Lake Huron on Nov. 29 was "a most unfortunate tragedy and a needless waste of human life," Joseph P. Molony, vice president of the United Steelworkers of America, asserted last month.

Nineteen of the 28 persons carried to their death in the sinking were members of USWA Local 5000, Cleveland. The tragedy occurred near Harbor Beach, Mich.

Vice President Molony extended to the friends and families of the victims the deepest sympathy of the USWA and at the same time pledged an increased union effort to obtain more and better safety equipment on ships that sail the Great Lakes.

Mr. Molony's comments followed a month-long investigation of the disaster by District 4 Director Matthew Armstrong. The USWA statement said that the union would seek the enactment of remedial legislation by the 90th Congress "so that in the future, seamen will have readily available adequate and modern life-saving equipment."

Mr. Armstrong said the union will seek "an immediate public hearing" in the next session of Congress for an upgrading of legal safety requirements.

"The present archaic safety requirements give the seamen of the Great Lakes less than a 50-50 chance of survival in the event of a ship disaster," the statement said.

The union's investigation indicated that the loss of life in the sinking "can be attributed in our opinion directly to the lack of adequate and modern lifesaving equipment." He said the equipment aboard the ship provided only normal protection "whereas maximum protection should have been required."

In seeking immediate remedial federal legislation, the United Steelworkers proposed the following sofety program for consideration and passage by the Congress:

1—Immediate replacement of old and outdated life jackets.

2—That each vessel plying the Great Lakes be equipped immediately with the auxiliary form of power in the forward compartment in the event the ship's primary source is damaged or impaired. (Events indicate that the loss of life in the Morrell disaster could have been reduced if the ship had carried an auxiliary source of power for the ship to shore telephone.)

3—The immediate installation of life rafts which must contain at least the following: (a) Self-inflated covers to protect seamen from the elements; (b) emergency automatic radio equipment; (c) adequate and positive launch equipment for life rafts and (d) necessary supplies for survival.

4—That the U. S. Coast Guard be conferred immediate authority to hold all ships in port pending more favorable weather.

5—The immediate enactment and positive implementation of rigid safety programs and inspections.

6—The immediate formation of a committee composed of labor, management and government to investigate and recommend to the Congress reasonable, necessary amendments, additions or rejections of the present laws.

7—That the present rules and procedures relative to marine investigations conducted by the Coast Guard be reviewed as to their adequacy and purpose.

Wanted: Space Age Government—A Tribute to Bradford Morse

EXTENSION OF REMARKS

OF

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. CLEVELAND. Mr. Speaker, last week with numerous colleagues, I introduced a bill for the establishment of a Commission on Public Management to explore the potential application of systems management techniques to the administration of public policy problems.

I was pleased to note an editorial in the Washington Star explore many of the salient reasons for establishing such a Commission and to praise the constructive work of the able gentleman from Massachusetts [Mr. Morse], the father of this important and significant proposal.

The potential for this landmark legislation is truly meaningful. The perceptive editorial comment of the Star, to which I have referred, follows:

Wanted: Space-Age Government

Amid the uproar as the 90th Congress opened for business was a little-noticed bill introduced by Representative F. Bradford Morse of Massachusetts. We will hear of this measure again. For it not only has the backing of 40 other Representatives and 10 Senators, but it proposes a remarkable idea: Applying private management techniques of the space age to our creaking government machinery.

The bill would create a National Commission on Public Management. Members, appointed by the President, would study and recommend ways in which sophisticated tools of industry, such as computers and systems analysis, would be used to solve public problems.

There already is precedent for such action at the state level. New York State, for example, is developing a computer-based intelligence system for law enforcement. California, aided by the Ford Foundation, has farmed out contracts to aerospace firms to study how the state can best solve problems in transportation, waste disposal, crime and information control.

The point of all this is that while the problems of urban life have been mounting and increasingly thrust upon the federal government, the techniques of dealing with them have not. Welfare, for example, is a maze of federal, state and local jurisdictions. Flood control is supposedly the domain of the Corps of Engineers, yet what happens 200 miles upstream in forest cutting and planting has a direct effect on floods—and comes under the purview of other government agencies.

Mr. Morse and his colleagues are to be commended for stepping back and viewing the problem in a new perspective. Congress should open hearings soon on this broad-gauge proposal. The richest, most powerful nation in the world should make sure it is availing itself of the best management tools available.

The Late Honorable John E. Fogarty

SPEECH

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mrs. BOLTON. Mr. Speaker, this House and particularly the Appropriations Committee will deeply miss the presence of John Fogarty.

Congressman Fogarty, during his distinguished career, exemplified the best qualities of a public servant. He was dedicated to providing his district and State with representative leadership in the Congress. He was unswervingly loyal to our Nation.

As chairman of the House Appropriations Subcommittee on Health, Education, and Welfare, he awoke the Nation to the need for new programs to help ease pain and suffering. I have worked with him many times on legislation to provide more nurses and on other health matters and always found him to be earnest, diligent, and effective in helping to find solutions to our many problems in this field.

The National Institutes of Health will ever be a monument to his love of people, his desire to ease human suffering, and his ability to help create institutions and programs that give rather than take from man.

It has been a privilege to know John Fogarty, to work with him and to have served with him in this House. I know that everyone who has known him feels richer by reason of that experience.

To his wife, daughter, and family I extend my own deep and sincere sympathy in their great loss and would remind them in the words so beautifully translated from the Sanskrit by Sir Edwin Arnold:

BAJGAVADGITA (SONG CELESTIAL)

Never the spirit was born; the spirit shall cease to be never;
Never was time when it was not; End and Beginning are dreams!
Birthless and deathless and changeless remaineth the spirit for ever;
Death hath not touched it at all, dead though the house of it seems.

Nay, but as one who layeth
His worn-out robes away,
And taking new one, sayeth,
"These will I wear today!"
So putteth by the spirit
Lightly its robe of flesh,
And passeth to inherit
A residence afresh.

Introduction of Disaster Relief Act of 1967

EXTENSION OF REMARKS

OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. ROUSH. Mr. Speaker, I am again before the House in an effort to expand the aid presently available to disaster victims. Near the end of the last session, the House passed an amended version of the Disaster Relief Act of 1966 which I had introduced.

It was the Palm Sunday tornado disaster in 1965 which devastated many areas in Indiana and other parts of the Midwest that provided the impetus for this comprehensive disaster legislation. Within my district, the entire town of Russiaville, Ind., was leveled to the ground. The citizens of this town chose not to abandon its barren site, but instead, they decided to begin the painfully, slow process of rebuilding the town. The need for Federal aid was obvious, but approval of the town's first application for a sewage and water facilities construction grant from the Farmer's Home Administration did not come until nearly a year and a half after the disaster had occurred. The Farmer's Home Administration tried its utmost to expedite the application, but even under the emergency situation, the processing of the application had to follow the normal channels.

The Disaster Relief Act passed last session is a beginning toward alleviating such costly delay in the laborious rebuilding process. The Disaster Relief Act of 1967 which I am introducing today and which has already been introduced by Indiana's distinguished Senators Birch Bayh, and Vance Hartke contains some measures not included in the bill passed by the 89th Congress. Due to the lateness of the committee's consideration of this bill, these aspects of the bill were not able to be fully explored. I have every hope that they will be carefully considered early in this session as a necessary addition to the existing relief for disaster victims.

To give the Members an idea of the expanded provisions of this new disaster bill, I would like to call your attention to the section on Federal loan adjustments. The 1966 Disaster Act authorizes readjustment of loans for extended periods at minimum interest rates for owners of property severely damaged, but this new section of the 1967 act would specifically prevent the denial of loans on the grounds that private financing was available even though at higher rates. Other sections of the 1967 act which were deleted from the 1966 Disaster Act and which have been reinstated are grants to States for assistance to homeowners and businesses, shelter for disaster victims, assistance to farmers in major disaster areas, and highway assistance.

I urge the members of the Public Works Committee to give this bill priority consideration in view of the fact that disasters are seasonable tragedies, and we are just now entering into the most severe stages of the winter months. Our job in providing relief to those suffering from the effects of a disaster should not be considered finished with the Disaster Relief Act of 1966. Relief should be immediately available to all those affected by a disaster, and I feel that this 1967 Disaster Relief Act will attempt to comprehensively cover both the public and private sectors.

The Gift of Insight

EXTENSION OF REMARKS

OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. QUILLEN. Mr. Speaker, the Bristol Virginia-Tennessean last week presented an editorial that I think my colleagues and the readers of the Record will agree is most apropos, and under unanimous consent, I include it at this point in the Record:

GIFT OF INSIGHT IS SORELY NEEDED

"Oh wad some power the giftie gie us
To see oursel's as others see us!
It wad frae monie a blunder free us,
And foolish notion."

So wrote poet Robert Burns. But while he was wishing, he should have wished for a companion gift that would be equally as useful in guiding the behavior of men—the ability to see others as they see themselves.

Such a gift is needed more than ever in this day when misunderstanding and mistrust between nations could lead to the downfall of civilization. It could help save us not only from many a blunder and foolish notion but from the ultimate irrationality of mutual destruction which any one of a number of blunders could result in.

Russia, for reasons not yet clear, has embarked on a new phase of the arms race, which had seemingly reached a stable plateau, by planning to develop and deploy a system of antimissile missiles as well as increasing its armory of offensive missiles.

This has led one editorialist to warn that the present 3-to-1 missile ratio in our favor is in serious jeopardy.

Yet if we try to see the Russians as they see themselves, we can understand that a 3-to-1 missile inferiority must be as unacceptable to them as it would be to us.

We, of course, have good reasons to believe that this ratio is the minimum required for the safeguarding of the non-Communist world. If the Russians in turn had the gift of insight, they would realize this and join us in working toward a lowering, not a new elevation, of the scales on the balance of terror.

The gift could change, the complexion of the Vietnam struggle. If the foe could see us as we see ourselves and begin to believe that we are not dedicated to his destruction but sincerely desire a peace in which the interests of all Vietnamese will be protected, he might accept the fact that the best way to get us to stop our bombing and withdraw our troops is via the conference table, not the jungle ambush.

But the gift, alas, has been denied us and men go on seeing what they want to see. The blunders and foolish notions multiply, making still valid another thought of Burns': "Man's inhumanity to man makes countless thousand mourn."

Past Commander in Chief House of USWV Is 85

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include an article by Paul Davis, in a recent issue of the St. Petersburg, Fla., Independent, that notes the 85th birthday of the young man with whom I went from Benton Harbor, Mich., to Santiago de Cuba in the war with Spain. My friend and comrade, Archie House, had just turned 16 and I became 16 on April 28, some weeks after my enlistment.

The article by Mr. Davis states that House and I were probably the youngest American soldiers in the Spanish-American War. As I recall there was another member of Company I, 33d Michigan, who was exactly 2 weeks younger, his birthday being in June. After the siege of Santiago he reenlisted and went to the Philippines, where he was killed in action, at 16 a veteran of two overseas campaigns and killed at the threshold of his 17th year.

Mr. Davis' article follows:

Youngest Vet of 1898 Is 85

(By Paul Davis)

The Spanish fleet was bottled up in the harbor of Santiago de Cuba. The time was the summer of 1898. The Spaniards, trapped and frustrated, lobbed five inch shells into the Cuban hills above and around Santiago. One of them fell in the midst of Co. I, 33rd Michigan Volunteer Infantry, decapitating one soldier, piercing the body of another, then exploding and wounding other Americans.

It was the first heavy fire experienced by the company, which had landed June 27 at Siboney, Cuba.

A young American soldier, wearing the campaign uniform of the day, and lugging a heavy Springfield rifle, was among those who came through that action without a scratch.

He was Archie J. House, then 16, who had connived cunningly to get into the war in Cuba though two years under enlistment age.

MARKS BIRTHDAY

House, former national commander-in-chief of the United Spanish War Veterans, will celebrate his 85th birthday Monday. Sunday Mrs. House has arranged open house for her husband at their home, 5236 Queen St. N., for invited guests. Hours will be from 3 to 6 p.m.

The veteran, who appears 20 years younger than his real age, according to friends, was one of the youngest to go to Cuba in the war of '98.

U.S. Rep. Barratt O'Hara, D-Ill., who hails from Chicago, also a member of Co. I was another teen-ager in the ranks. And he was three months younger than House.

So far as known they were the youngest soldiers in the Cuban expedition.

House was 81, when in 1963 he was elected and installed national commander of the USWV at Lansing, Mich.

He traveled 40,000 miles by air that year visiting encampments and camps in all parts of the country. And he has visited many since that year.

People who meet him remark, "how come one of your youthful years is commander of this organization."

The former USWV chieftain told this reporter of the war craze that swept this nation in the days following sinking of the Battleship Maine.

Every young man with the spirit of adventure rushed off and enlisted. House, an orphan, with a guardian, was attending school in Benton Harbor, Mich.

JOINED UP

All his friends were joining up, he knew he must go, too. The recruiting station looked with favor at his request to join, but said he must have his guardian's consent.

He knew he could get it. But there was a problem. The man lived miles away. Telephones were scarce those days. And he had to report next morning to go away to camp.

House said he just signed his guardian's name to the paper, presented it next day, and was on the way.

Later he wrote the man, received his blessings, and that was that.

There was training in this country and finally the Michigan outfit went aboard ship at Newport News, Va.

"There was great secrecy about the operation. Our destination was secret."

Once ashore on the palm studded shores of Cuba, House chuckled, some of the glamor of soldiering rubbed off. Uniforms were for temperate climes. Longjohn underwear was issued. The men sweat under the hot Cuban sun. There were bugs, mosquitoes, heavy rifles, and ammunition belts that bogged you down.

FLEET DESTROYED

July 3 Spanish Admiral Cervera made a dash for it. Admiral William T. Sampson and Commodore Winnfield Schley moved in. The Spanish fleet was destroyed, piling up in the beach.

Co. I men up there in the hills, had a ringside seat to this great spectacle.

"There was excitement that day," said House.

Being national commander of the Spanish War Veterans brought many honors to House.

He was one of 23 special guests at the Veterans' Day services Nov. 11, 1963, when President Kennedy laid a wreath on the Tomb of the Unknown Soldier at Arlington Cemetery. These guests occupied a speakers' stand with the President.

Earlier Mr. and Mrs. House visited at the White House and met the President, who showed them the offices, the gardens, and chatted for a half hour. Old friend Congressman O'Hara arranged this meeting, and was there too.

House returned to the White House later, with servicemen and military leaders, after President Johnson became president.

The local man, is a former department commander of Michigan Department, USWV, and an honorary member of Gen. Leonard L. Camp Post, No. 8, this city.

Ranks of the boys of '98 are thinning. There were an estimated 20,000 living when House was top leader. The forces that invaded Cuba numbered 400,000.

House has one regret. President Kennedy invited him to come to Tampa for his appearance there, only a short time ahead of his fateful visit to Dallas, Tex.

"I was unwell that day and gave up the idea of going. When I heard the news of his assassination I deeply wished I had gone. He was a great man."

The Late Honorable John E. Fogarty

SPEECH

OF

HON. FRANK A. STUBBLEFIELD

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. STUBBLEFIELD. Mr. Speaker, the sudden passing of John E. Fogarty, of Rhode Island, has taken one of the stalwarts from the House and we shall all be much poorer for it.

John Fogarty was a dedicated and conscientious legislator whose interest in the health and welfare of people throughout the Nation was translated into action. He will be long remembered for his effective work as chairman of the subcommittee that appropriated funds for the Department of Health, Education, and Welfare.

John Fogarty was a patriotic citizen, a devout Democrat, and a man of reason and integrity. He enjoyed the friendship and respect of his colleagues throughout the Congress and while we shall greatly miss his presence, the results of his work in terms of a richer and better life for countless people will stand as a monument to him in his district, State, and Nation.

To his entire family I extend deep and sincere sympathy.

A Severe Blow

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. SIKES. Mr. Speaker, I have repeatedly expressed my serious concern about the unjustifiable decision of the U.S. Supreme Court to kill Florida's legislative apportionment plan. This inexcusable action simply compounds confusion in a great State which has been plagued time after time by such unwarranted actions by the land's Highest Court. The Pensacola Journal of Tuesday, January 10, contains a carefully written and studious analysis of this serious problem. I insert it to be reprinted in the Congressional Record.

A Severe Blow

The decision of the U.S. Supreme Court to kill Florida's present legislative apportionment plan is a severe blow.

Even taking it for granted that the court's somewhat-strained "one-man, one-vote" rule is legally correct, the court really strains at a gnat in striking down the present formula—the fourth brought forth by a harassed legislature since 1962.

It is conceivable that even the present formula does not provide that there are exactly as many persons in one legislative district as in another—in fact, it is certain the apportionment is not so exact—but the plan nevertheless is a commendable effort in this direction.

It is a plan which has so modified the legislature that the long-standing strangle hold of the little counties over the big ones was broken, something of an achievement in itself.

Moreover, it is the plan under which the present legislature, now facing myriad problems within the state, was elected; and the ruling now casts doubt upon the standing of at least some of the members, perhaps upon the legislature as a whole.

The high court, in throwing out this plan, has as well, seriously retarded sincere efforts of the state to apportion itself by proposing in a new constitution a plan for re-apportionment every 10 years, based upon legal requirements which must be interpreted by the Florida Supreme Court. According to the proposed document, if the legislature itself fails to meet the legal requirements—whether the U.S. Supreme Court then is requiring "one-man, one-vote" apportionment or some other standard—then the Florida court will do the reapportioning itself.

And, ironically, the apportionment which provided for the present Florida legislative setup almost certainly would have made it easier for an apportionment which even more closely approached the "one-man, one-vote" principle, simply because it is a more representative legislature than the previous one.

Yet the high court has arbitrarily decided that the formula is not valid, though once again the court has refused to say what is valid.

The principle under which the court acted was expressed when it called more than two years ago for election districts based on "as nearly of equal population as is practicable."

The state thinks that the present formula is as equal as was practicable at the time it was passed.

Justice John M. Harlan, in dissenting from the majority opinion of the court, made this point: "(It) seems to me to stand on its head the usual rule governing this court's approach to the validity of legislative enactments, state as well as federal, which is, of course, that they come to us with a strong presumption of regularity and constitutionality."

Since no definite guidelines, on an exact mathematical basis, were laid down as to what is "practicable" and what is not, it would seem that a state's sincere effort to work out a solution would at least receive an "A" for effort from the court and that the formula should have been allowed to stand for the time being at least.

Particularly is this true when the legislature gives every evidence, as it has, of going forward with plans which would call for periodic reapportionment on as nearly a legal basis as can be determined.

But for this court to continually cast aside efforts to reapportion, without laying down exact guidelines, places an undue burden on the state.

And it is ironic that this is the same court which has refused to hear a petition from several states seeking a change in the presidential electoral system so it, too, will be based upon the "one-man, one-vote" principle, and which so far has done nothing about the fact that the upper house of the U.S. Congress itself is far removed from any such principle, with two Senators being elected from each state regardless of population.

We suppose that the state will survive this latest unwarranted blow from the super Supreme Court, and eventually will get back on the main track.

In the meantime, however, it is just another headache to face in a state which desires to get on with settling of its own internal affairs in the speediest manner possible.

On the Death of a Hero of American Public Health

SPEECH

OF

HON. WILLIAM R. ANDERSON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. ANDERSON of Tennessee. Mr. Speaker, it is ironic and somehow tragic that we save our finest tributes to men and reserve our praises for their qualities and accomplishments until their death. Mankind has always been at a loss for an adequate response to the passage of men of heroic stature. Thus we find ourselves today for certainly one such man was the late JOHN FOGARTY, so recently and vigorously of this House.

Here was a man vibrantly alive. I first heard of JOHN FOGARTY many years ago; I read of a tough, Irish bricklayer and labor leader who had come to the Congress from Rhode Island, full of youth and fire and a passion for truth. When I came to the 89th Congress, I knew him as a man unrivaled in the history of this Nation as a true champion of public health and medical research. In the interim JOHN FOGARTY had compiled a record of driving excellence and mature vision through 12 Congresses and 24 years. It was my great honor to serve with him in the 89th Congress. He will not be forgotten.

The President's Personal Touch

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MACHEN. Mr. Speaker, yesterday President Johnson bestowed a great honor on Mr. and Mrs. John Arata, constituents of mine who live in La Plata, Md. The President invited the Arata family to visit with him in the White House as a result of a letter Mr. Arata wrote the President in support of his state of the Union remarks about Vietnam.

Mr. and Mrs. Arata have a son, Lance Cpl. George J. Arata, who is serving with our troops in Vietnam. He is typical of the hundreds of thousands of Americans serving democracy and their country in strange lands. I believe that President Johnson has done well to honor the Arata family as one which is typical of most American families who feel the same way about our involvement in Vietnam—they may not like the idea of sending their sons to far-away places to fight in a war which is different from any other we have fought in, but they do support their President and his position on our involvement in Vietnam.

These millions of families may not be as vocal as the dissenters we see and hear so much about, but they do take the time to write their views to the President, and to their Congressmen. I am very pleased that President Johnson has selected the John Arata family of La Plata for a personal visit with him in the White House. I request that the article from the Baltimore Sun be printed in the RECORD.

The article follows:

CITIZEN CALLS ON PRESIDENT—MARYLANDER'S NOTE LED TO PERSONAL VISIT

WASHINGTON, January 18.—John Arata, who describes himself as "just an ordinary citizen of these United States and very proud to be one," called on the President at the White House today.

Arata is a motel manager from Waldorf, Md., whose 19-year-old son, George, is a lance corporal with the 3d Battalion, 4th Marines in Vietnam.

Late in the evening nine days ago, he sat down and wrote to President Johnson:

"Through the medium of television I just had the pleasure and honor of listening and viewing your State-of-the-Union address to the members of Congress.

SOMEWHERE IN VIETNAM

"Every President in history has been criticized on one point or another, as you no doubt realize, but may God bless you on your program and recommendations.

"I have a son in the Marine Corps, at present somewhere in Vietnam. I am proud he is there and he is proud to be there to support the American policy.

"Guiding this nation and trying to help other nations must be a thankless task and in my small way I would like to offer one vote of confidence. I am sure there are many millions of Americans who feel the same as I."

He signed it, "most respectfully," and mailed it.

WHITE HOUSE ON THE LINE

Arata had written to another President once—to President Kennedy. That time, he received an answer from a member of the White House staff. He may have expected the same thing, but certainly no more, when he wrote to Mr. Johnson. "I didn't do it for the publicity," he says.

But yesterday afternoon, his telephone rang at the Martha Washington Motel, about 20 miles southeast of the Capital. It was a White House staff member again.

He invited Mr. and Mrs. Arata to come to the White House today.

Mr. Johnson, who daily hears a great deal about Americans who disagree with his program and recommendations and disagree strongly with American policy in Vietnam, obviously was impressed by Arata's letter.

The Marylander arrived at about mid-day, and spent fifteen minutes with the President, Mr. Johnson took the couple into the cabinet room, where the heads of departments were assembling, and introduced them around the table.

SENDING PHOTO TO SON

He told them the letter "gave him a lot of encouragement," Arata related later.

Mr. Johnson escorted his visitors out into the West Lobby, where a flock of photographers recorded their departure. The President shook hands with the Aratas and thanked them for coming.

They seemed dazed by the experience. Arata could not recall all the President had said.

He headed back to Waldorf clutching an envelope of what he called "personal mementos" from Mr. Johnson. The President also had promised him a copy of their photograph together, to be sent to Lance Cpl. George J. Arata, in the communications section of H & S Company, 3d Battalion, 4th Marines, somewhere in Vietnam.

John E. Fogarty

SPEECH

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mrs. KELLY. Mr. Speaker, I join my colleagues in the House of Representatives in paying tribute to our late colleague, the Honorable JOHN E. FOGARTY. His death is a great loss not only to his colleagues and to the people in the State of Rhode Island but to our country. He served his constituents and his country so well he earned the respect and admiration of us all.

JOHN FOGARTY worked earnestly in behalf of cancer research and for the mentally retarded and his efforts were well recognized by all who knew him. He deserved the many honors he received. As chairman of the Appropriations Subcommittee of the House Committee on Health, Education, and Welfare he helped to initiate legislation which has made the National Institutes of Health one of the most outstanding medical research centers in the world.

JOHN FOGARTY's love for the House of Representatives and his loyalty to his constitutents was so great that when he was given the opportunity to run for the U.S. Senate he decided to continue to represent the Second District in Rhode Island. His leadership, his great integrity and personal courage will surely be missed by those who considered him a valued friend.

I am very proud to have had the honor to have served with JOHN FOGARTY, and to have called him a true friend. At this time, I extend my sympathy to his wife, to his family and to all those who loved him.

Southern Rhodesia: The Time for Action

EXTENSION OF REMARKS

OF

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. BINGHAM. Mr. Speaker, the Smith regime in Rhodesia is "fundamentally immoral" and "based on violence and force, because it does not enjoy the consent of the governed," this is the conclusion of a prominent lay Catholic who is one of the leading experts on Africa, Dr. Thomas Patrick Melady.

Dr. Melady, who has received honorary degrees of doctor of laws from Villanova University, Xavier University of Louisiana, and Manhattan College, and who has written a number of books on Africa, is currently president of the Africa Service Institute, adjunct associate professor of African history at Fordham University and the permanent representative of Pax Romana to the United Nations.

I commend to my colleagues the following article by Dr. Melady which appeared in the "Catholic World" for January 1967:

SOUTHERN RHODESIA: THE TIME FOR ACTION

(By Thomas Patrick Melady)

Moral principle and national interest coincide in dictating a strong stand against the racist government of Ian Smith

November 11, 1966, was the first anniversary of the Unilateral Declaration of Independence of Southern Rhodesia from Great Britain. The initial shock that swept the Western world after the November 11, 1965, action was followed by optimistic predictions, coming mostly from London, that the rebellion would be ended within a few months. There were fiery speeches, threats of sanctions, and talk of internal violence within Rhodesia. All of these have indeed had their effect, but after a year the rebels still rule.

The rebels of Ian Smith have ruthlessly cracked down on all possible sources of internal trouble, including the press and the multi-racial University College in Salisbury. Aided by South Africa and Portugal, they have withstood the British sanctions. Now, they are busy proving themselves stable and firmly entrenched; their hope is that however distasteful they may be to the world, they (like the Soviet Union at a similar stage) will eventually be reluctantly accepted into the world community. In short, they want for now *de facto* recognition, with the belief that *de jure* will be just around the corner.

This possibility should shock the West into action before it is too late. For the Rhodesian issue is not a rebellion against a colonial power, comparable to the American War of Independence. It is, rather, a rebellion against all the moral precepts for which and by which the West purports to stand.

The history of Rhodesia is tarnished with this rebellion against moral precepts. Cecil Rhodes and his company acquired control over the territory through a shabby deal—the Rudd Concession—whereby King Lobengula was swindled of his lands. Since then, the settlers have had to resort to force of arms to crush African opposition, at first tribal but later nationalist, to their rule. Further, successive governments gave the lie to Rhodes' political motto of "equal rights for every civilized man south of the Zambesi." Whereas for Rhodes a civilized man was "a man whether white or black who has sufficient education to write his name, has some property or works—in fact is not a loafer." The settler governments in practice loaded the dice against the African population—the settlers, enjoying more rights and privileges, quite out of proportion to their population figures. This means that man to man (one human being against another), the settler is by far better off than his African compatriot, supposedly because of his higher standard of civilization. A few figures will show the differences. Land ownership, which is a crucial political issue in Rhodesia, stood as follows in 1960: 39 million acres for 2,800,000 Africans and 48 million for 219,000 Europeans. This division has given rise to land hunger and overcrowding in the Reserve areas specially set aside for Africans. Referring to the iniquitous distribution of land, Bishop Lamont of Umtali said in his famous Pastoral Instruction of 1959 to his diocese:

"Can you in conscience blame the African, if eking out a tenuous existence from poor soil in an overcrowded Reserve, he is swayed by subversive propaganda, when close beside him there lie hundreds of thousands of acres of fertile soil which he may not cultivate nor occupy nor graze, because although it lies unused and unattended, it belongs to some individual or a group of individuals who perhaps do not even live in the country, but who hold the land in the hope of profit from speculation?"

The action of Mr. Smith is a bare-faced attempt to establish another racist government in Africa. It is a government resulting from a plot to give indefinite control of the country's political and economic power to less than five percent of the country's population—the whites. It is a strike against Pope Paul VI's Christmas message of December 1964, when he gave a ringing indictment of racism:

". . . which separates and opposes the different branches constituting the great human family, resulting in pride, mistrust, exclusivism, discrimination and sometimes even oppression, thus ruining the mutual respect and due esteem which ought to turn the diverse ethnical groups into a peaceful concert of brotherly peoples."

These moral precepts were drummed into and largely accepted by the Africans educated in Europe, the United States and at home. It is these very precepts that are now on trial in the Rhodesian issue. It is also on them that the people of Africa base their case against Smith—as, indeed, against all the forces of racial repression in southern Africa.

But, the supporters of Smith argue, there is repression in Africa, Asia, the Soviet Union, etc.; and the United States tries to coexist with these regimes; so why, they ask, pick on Rhodesia? These same supporters will normally add that the present Rhodesian government would be a trusted ally against Communism in an otherwise turbulent continent. Does refusing to accept the Rhodesian regime mean that we are engaging in a double standard?

Far from it. First of all from a political point of view, it is in our national interest to win friends in Africa—at any rate not to make unnecessary enemies. All the Western nations' efforts up to now, however well motivated, have not toppled the rebel regime in Salisbury. To the people of Africa, this effort has appeared reluctant, halfhearted and flabby; thus it is not going to win the West friends in Africa.

But through Rhodesia we can win friends, for this case provides the West with an opportunity combining political interest with moral right—a rare opportunity in politics. As stated above, it is in our interest to act. But more important, it is morally right that we do so. The people of Africa and Asia have assumed their place in the councils of nations and, therefore, can no longer be subjected to the norms of an immoral era in which they had no say. This means that in Rhodesia the supremacy of privilege masquerading as merit, of race professing to be partnership or multi-racialism, has to be ended. And the sooner the better.

The act of the Smith regime last November, 1965, was *per se* immoral. But worse yet was the fact that this act was performed by a government based on a fundamentally immoral, unjust premise. The Rhodesian Front Administration is based on violence and force because it does not enjoy the consent of the governed.

Even the so-called indaba of 1964, consisting of chiefs speically picked to support UDI (Unilateral Declaration of Independence), did not represent African opinion. Government-paid agents can hardly be expected to act contrray to the wishes of their masters—hence the chiefs supported UDI. Moreover, in a society changing to modern life, the traditional elite do not represent the new age. Like their colonial masters, they tend to have a stake in preserving the *status quo*. Nationalist opinion was not heard.

Moreover, the political system has an unjust economic base. The land, the trades and the professions are in the hands of the privileged, white few. The Land Apportionment Act, the Land Husbandry Act, the Industrial Conciliation and Pass Laws—all these prop the rule of the privileged minority. This minority is a racial one; this is the crux of the matter! Whereas in the United States, and indeed in most parts of the world, efforts are being made to uproot the cancer of racial superiority, in Southern Rhodesia it is being entrenched.

White Rhodesians, like South Africans, boast that under their rule, Africans enjoy a higher standard of living, more health services and primary education than in any other part of the continent. This is paternalism—a major source of the African grievance. Furthermore, the so-called higher standard for Africans is negligible when compared with what a white child gets in Rhodesia. This is the crucial point of the comparison: people in the same country.

The trouble with this paternalism is that it talks of doing things *for* the Africans, rather than *with* them. This is the test of any political system: that the rulers and the ruled work together, their wills and interests being identical, and no one group regarding

itself as a guardian divinely appointed to act for another group.

Rhodesia is not a remote issue. It has significant political and moral implications for the West, especially Great Britain, which has always claimed to be the responsible power, and the United States. Strong action now by the West against this grossly indecent conduct is morally the right course of action. Furthermore, if this action does not come soon, the initiative may come from one or several of the Communist states who shrewdly realize that Rhodesia may well be the bridge leading to the control of southern Africa with its strategic and economic importance. They note that liberation of Africa, now almost complete, has stopped in southern Africa where the colonialist and racist regimes of Salazar, Smith and Vorster have teamed up in an alliance for a last-ditch stand for minority, white supremacy against majority rule which now exists in the rest of the continent.

Western values are on trial in southern Africa. The end of time and distance has made all the nations of the world next-door neighbors. While it was always morally wrong, domination by one racial minority of another racial majority is now a clear and present danger to political tranquility. The racist government in Salisbury, in addition to being an affront to Judaic-Christian beliefs, is pregnant with factors that could explode into a racial conflict which would bring bloodshed to Rhodesia and endanger race relations in the rest of Central and East Africa.

The future of race relations in Africa, and indeed in the rest of the world, are related to the Southern Rhodesian situation. For this reason, the illegal seizure of power by the Rhodesian National Front group is a matter of international concern.

It might be difficult for some to distinguish between immediate, short-term gains and long-term interests. An immediate gain for the United Kingdom and the United States could be the avoidance of the responsibilities involved in assuming the duty of assuring that the illegal government does not continue.

But does the West want to assume responsibility for allowing the cancer of apartheid to continue indefinitely in Southern Rhodesia? In the opinion of this observer, such action—clearly wrong from a moral point of view—would in the long run seriously jeopardize the credibility of the West in dealing with the other southern African issues that will soon face the world.

We need, rather, to develop greater confidence between the Black African leaders and the leaders of the West so that together the serious moral problems facing mankind in southern Africa can be faced.

For these reasons immediate action by the West on the side of what is morally right is also in the long-range, best, political interests of the West. What an unusual opportunity—to do what is clearly right morally and what is in our own long-range, best, political interests!

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective departments or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

A Sensible Reclamation Approach

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1967

Mr. SCOTT. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an editorial published in the Canton, Ohio, Repository of January 14, 1967, which comments on S. 217, the Mined Lands Conservation Act of 1967, introduced by the distinguished senior Senator from Ohio [Mr. Lausche] and several other Senators, including myself.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Sensible Reclamation Approach

The bill introduced by Ohio's Sen. Frank J. Lausche is a sensible approach to strip mining reclamation.

The measure before the U.S. Senate proposed broad federal controls and financial assistance.

Sen. Lausche is qualified to sponsor the Mined Lands Conservation Act jointly with Sen. Stephen M. Young of Ohio and Sen. Hugh Scott of Pennsylvania.

Sen. Lausche has been a long-time adversary of irresponsible stirp mining procedures, has studied the problem extensively and submitted previous bills.

A 1965 measure required a report from the Department to the Interior on surface and strip mining. An interim report June 30 indicated the federal government has responsibility to cooperate with states in formulating strip mine laws and to assist in reclaiming pre-state law spoil banks.

It has been argued in the past that mining operators in some states cannot carry through a sound reclamation procedure because the cost would place them at an unfair price advantage with their competitors.

It also has been argued that regulations should be a state matter and federal intervention would be nothing short of meddling.

The proposed Mined Lands Conservation Act shoots holes in these opposition balloons.

First, once federal controls were established, they would apply in all states without state laws or where they are too weak to be effective.

States that have sufficiently strong laws will administer them as they have in the past.

Secondly, with all operators required to meet the same standards, no competitive advantage will be won by any.

The proposal even includes a clause to insure fairness of the eventual federal regulations.

The national advisory committee that would recommend final federal standards is to include coal mine owners and operators to safeguard against standards so stringent as to be unfair.

The Melting Pot

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. CHAMBERLAIN. Mr. Speaker, of the many issues covered by President Johnson in his state of the Union message, one over which there is broad agreement and concern throughout the country is that of the problem of crime. A veteran reporter, of the Ingham County News, recently devoted his column, on January 18, 1967, to this question. His article provides a clear and informed expression of the need for action in this field. I am pleased to make Mr. Palmer's views available to my colleagues:

The Melting Pot

(By Hayden Palmer)

President Johnson in his State of the Union message to the 90th Congress last week touched on many issues.

One of particular note today was that pertaining to the present crime wave that is sweeping America and what steps he hopes to take to combat it.

The President said he will recommend to the Congress the Safe Streets and Crime Control act of 1967.

"It will enable us to assist those states and cities that try to make their streets and homes safer, their police forces better, their corrections systems more effective and their courts more effective," the President said.

"This is not a war that Washington can win alone. Our policemen must be better trained, better paid and better supported by the local citizens they try to serve and protect."

He spoke of the growing public apathy toward crime and of the public's lack of respect for and cooperation with law enforcement officers, who, after all, are about the only protectors the public has in an emergency.

These men, whether they be city policemen, sheriff's officers, state policemen, highway patrol officers or employes of private police organizations are due every cooperation from those they serve—the public.

But the public goes blithely along ignoring crimes that occur within their vision, even, without lifting a finger to aid the officer because, as they say, they "don't want to become involved."

The President, with the help of Congress wants to set up a program which will bring about better training for law enforcement officers, better equipment with which to fight crime and police academies throughout the land to instruct police officers and then graduate them with all the knowledge possible in the matter of fighting crime.

Within the past 2 weeks this area has had a taste of what the most dastardly of crimes—murder—really is.

There is the case of an Eaton county deputy sheriff and a gasoline station attendant being gunned to death by a pair of Negro holdup men just across the Ingham county line in Eaton county.

Only a few days later a druggest and his son in the little community of Hamburg in Livingston county, were visited by 2 holdup men who shot and killed the father and critically wounded the son. Both of these cases represented senseless killing, none offered and resistance to the gun wielders. They merely shot citizens down in cold blood without any reason.

Mass killings, brutal killings all have become a part of American life which the public appears to forget almost as soon as they happen.

Here are some statistics on crime in the United States which may startle you:

During 1965, more than 5,600 murders, 14,700 aggravated assaults, with a gun and 68,400 armed robberies were reported in America. Robberies, burglaries, larcenies and auto thefts accounted for the loss of property valued at more than $1 billion.

According to the Uniform Crime Report issued by the Federal Bureau of Investigation, more than 2,780,000 serious crimes were reported in 1965. The figures represented an increase of 6 percent over 1964.

The national crime rate continued to rise during the first 6 months of 1966 with an 8 percent increase in the number of crimes committed between January and June 1966 over the number of crimes committed in the same period of 1965.

The 1966 figures show the sharpest increase—11 percent—in crimes committed in suburban areas. The incidence of crime in rural areas rose 7 percent, cities with populations of 100,000 or more recorded a 6 percent increase.

Nowhere is the law abiding citizen safe from the criminal element. I hope the Congress will heed President Johnson's appeal for action against the outlaws in America and the public will give their full support to any movement to stop this wanton killing, robbery and other destructive acts of these outlaws.

All you—the public—has to protect you is the man who wears the badge of a law enforcement officer. Respect him and cooperate with him. You may need him badly some day.

Congress "Three R's" Favored by Mundt

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1967

Mr. HRUSKA. Mr. President, the need for the new, 90th Congress to review, revise, and retrench much of the legislation of the preceding 89th Congress is gaining support from all parts of the Nation and from both sides of the aisle in the Senate. In that connection, I invite the attention of the Senate to an editorial published in a recent issue of the Aberdeen American News of Aberdeen, S. Dak., and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS "THREE R'S" FAVORED BY MUNDT

Senate Majority Leader Mike Mansfield of Montana has the support of an influential, high-ranking Republican senator on his proposal to have committee chairmen concentrate on the review and reexamination of legislative actions taken by recent Congresses.

He is South Dakota's Sen. Karl Mundt, the fifth ranking Republican member of the 90th Congress.

In supporting a statement by the Democratic leader, Mundt said: "Recent Congresses have in some instances substituted speed-of-action for soundness-of-consent and they have made many departures from what normally have been considered the functions of the central government during nearly 200 years of legislative history in this country. Sen. Mansfield does well and advises properly when he urges his Democratic colleagues who hold all of the committee chairmanships to go slow on enacting new spending sprees and to go strong on what on what one might call the "Three R's" challenging the new Congress—the need for review, revision and retrenchment."

Mundt said one quick step which we should take in moving in the direction of demonstrating a sincere attempt to reduce expenditures, slow down inflation and get on with winning the war in Vietnam would be for the leadership to call up for action and press for approval the recommendations made in the closing days of the last Congress by the Joint Senate-House Committee on the Organization of Congress.

"In our recommendations (Mundt is ranking GOP member of that committee) we require and greatly strengthen and expand the responsibilities of all standing committees to follow through on the results of legislation approved by them," Mundt said. "We start by eliminating the term "over-sight" to describe these committee functions since too frequently the word was taken at face value and responsibilities have been largely overlooked."

The Mundt committee recommendations also called for the appointment of a review specialist for each legislative committee whose job it is to follow-through on post-congressional development; check on any waste, corruption, or general inefficiency; make recommendations for revisions or amendments and each committee is mandated to make an annual public report to Congress on the work of its review specialist and the supervisory activities of the committee.

"I sincerely hope this recommendation and other Congress-strengthening recommendations of our Joint Committee will come before both houses of Congress for approval during the opening month of the new session," Mundt said.

It is encouraging that bi-partisan endeavors for more responsible action by Congress are getting attention at the start of this important session.

No Time To Relax Our Vigilance

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. DERWINSKI. Mr. Speaker, this week the other body will complete hearings on a consular convention with the U.S.S.R. and the apostles of coexistence will appear in full force. I feel that a column by Copley International Press Columnist Dumitru Danielopol merits special attention at this time. I ask leave to insert his remarks in the RECORD at this point:

DUMITRU DANIELOPOL COMMENTS: NO TIME TO RELAX OUR VIGILANCE

WASHINGTON.—Have the Russians really changed?

"Hatred for imperialists, the worst enemies of the Soviet state and its fellow socialist countries, must occupy a prominent place in our propaganda."

That's a quote from a recent issue of Voyennie Znaniya (Military Science) devoted to Soviet civilian para-military training.

But Sen. Joseph S. Clark, D-Pa., says "the steam has gone out of the Russian ambitions."

The senator has returned from a trip to Europe and the Middle East. (His stops included Paris, Moscow and Warsaw.)

The Kremlin is having trouble with Red China, he said, and they are ready for a detente with the United States. He called for an "accommodation" with Moscow and said Germany, not Russia, poses the biggest problem in Europe.

The senator urges the disarmament of Western Germany, the withdrawal of U.S. troops from Europe and a halt to the bombings in Vietnam.

What this adds up to is what the Russians have wanted for years. Western Europe would be left completely at their mercy.

Sen. Clark seems to have adopted at least part of the "neo-isolationism" theory that was recently denounced by Sen. Thomas Dodd, D-Conn.

Clark's estimate of the Soviets also is in direct contradiction to the findings of Foy D. Kohler, former ambassador to Moscow who is now deputy undersecretary of state.

The Kremlin is more interested in weakening Western unity than in finding any accommodation with the United States, Kohler says.

That Sen. Clark, who calls himself a "dove," should come back with scuh views is hardly surprising.

". . . there is no legislative body in the world as allergic to working for peace as the Congress of the United States," he told the White House Conference on International Cooperation last year.

". . . we talk a good peace game, but when it comes to legislating or appropriating we still worship the ghost of Sen. Joseph McCarthy and his Holy War against Godless Communism," he said.

How widespread are such views?

It would be highly dangerous if Sen. Clark's estimate about Soviet intentions is shared in other Washington circles, including the White House.

The President's new policy of "peaceful engagement," which he unfolded in his Oct. 7 speech, has at least raised the possibility.

Mr. Johnson talked of "winds of change which are blowing in Eastern Europe." He advocated stepped-up trade with the Communists, guaranteed commercial credits and called for a unification of Europe.

He implied that one no longer has to fear Soviet ambitions in Europe.

Hard facts refute such theories. Sen. Dodd calls them "make-believe" theories.

Every overture made by the United States toward the USSR, Dodd points out, has been answered with "new provocations and stepped-up campaigns of subversion in various parts of the world."

Russia has pledged $800 million worth of war aid to North Vietnam, augmented by another $200 million from its East European bloc.

It has shipped arms to Syria, Egypt and Iraq to inflame the situation in the Middle East and incite terrorism.

It has provided most of the funds and the top leadership for the progaganda and subversion apparatus set up at the Tri-Continental Conference in Havana last January.

It recently supplied Hanoi with 100 new MIG jet fighters, more than doubling the size of North Vietnam's air force.

Is this the time to relax our vigilance and lower our defenses?

Bureaucratic System for So-Called War on Poverty

EXTENSION OF REMARKS

OF

HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1967

Mr. GRIFFIN. Mr. President, since the so-called war on poverty was first declared, fears have been expressed that the bureaucratic system established under the legislation would eventually frustrate the best intentions of many who seek conscientiously at the local level to help the poor.

That such fears were not without foundation is apparent from an account by a community action program director published in the December 1966 issue of the Michigan Economic Opportunity Office Newsletter. I ask unanimous consent that the article, written by Mr. Elrie Chrite, of Washtenaw County, Mich., be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S HAPPENING IN CAP OFFICES THESE DAYS—OR, PAPER, PAPER, WHO'S GOT THE PAPER?

(By Elrie Chrite)

For some time now, I have been thinking that the Office of Economic Opportunity seems determined to help Congress and its legion of other critics achieve an early "demise" of the lately stricken anti-poverty program. As a CAP director, I've been fascinated, almost hypnotized, by what appears to be suicidal tendencies in the Community Action Program's Federal administration.

When I started in this program over a year ago, it was unbelievably sound in concept and application. Local communities were supposed to identify a need, find their own unique solution to the problem, and then submit a work plan and budget to OEO. If it made sense, you got the money. The organization was free wheeling and swinging. It placed a premium on local responsibility and uniqueness. The major emphasis was on a dialog with the poor. It encouraged creativity and even some radical departures when measured against the old way of doing things.

Now, we receive in amazing quantities "guidelines," CAP memos, publicity campaigns, "packaged" program-year requirements, unwanted sets of recordings by tired academicians discussing Headstart (which must have cost a mint!), certificates signed by Lady Bird, posters, a new computerized reporting system—after you've finally figured out the old one, senseless and expensive conferences, and, finally, the *coup de grace:* an evaluation and monitoring system received (unsolicited) from the Regional Office, entitled, *"Manual of Performance Benchmarks by C.A.P. Component Type, A Guide to the Community Action Agency for Reporting Requirements on Fiscal Year '66 Components,"* containing two hundred eighty-seven pages and weighing in at one pound, thirteen ounces.

I know that mistakes will be made in a program as large and as difficult as this one. I know that the Federal administrators want to help with technical assistance and cut down on criticism by making things more "predictable" out here in the boondocks. But beware, OEO, or, at least, *be* aware that every new policy decision to correct an administrative problem in two, three, or ten communities; every regulation sent out to satisfy Congressman Snort because he doesn't like this or that bureaucratically structures this program.

The Community Action Program must, by definition, be unencumbered if it is expected to be-revitalize and challenge other helping programs already encrusted and atrophied by bureaucratic weight.

The thing is even catching. A few months ago, CAP Directors of Michigan met in Lansing, and you know what we did? We voted to consider forming an organization with bylaws, officers, possibly incorporate—"the whole bit," as they say. If this goes through, it will only be a matter of time before *we* request funds from somebody to pay a director to run the CAP Directors' organization, and the poor would have to watch out for one more group of "professionals."

I am afraid that the more "direction" we get from Washington, the less thinking we will need or be able to do ourselves. For example, take that somewhat obese evaluation and monitoring system devised by someone, somewhere in the mysterious world of OEO. A CAP director will spend a lot of his time gathering and organizing information to fit in the hundreds of little boxes, provided, and few will have the inclination or energy to come up with an idea of his own.

The CAP director is the link with the community. The burden should be upon him to come up with sound programing and evaluation procedures. Such a climate nurtures the spirit and practice of innovation. Really ingenious solutions to help the poor can only be found in this way.

Federal administrators must resist the ever-increasing temptation from within and fight the pressures from without, which call for a more "structured," "unified," or "orderly" program. Flexibility and independence are as vital to the health of this program as money if it is to survive as originally conceived.

Right now, the anti-poverty program is a pretty sick patient. I just hope OEO doesn't smother it to death with paper.

Dana O. McGaugh

EXTENSION OF REMARKS
OF
HON. DON EDWARDS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. EDWARDS of California. Mr. Speaker, last December 7, I, along with many other residents of the Ninth California District, was shocked and upset to learn of the sudden death of Mr. Dana O. McGaugh.

Dana was one of the most vital forces and intent individuals of the Amador-Livermore Valley. As editor of the Livermore Independent, Dana built this small weekly from its inception to a tri-weekly journal of great influence in the valley.

The son of a minister, Dana McGaugh began his career as a reporter for the Arizona Republic in 1949 and worked for 47 newspapers, from coast to coast, before coming to the Independent in 1963. Wherever he went, he and his papers received distinction. In 1957, while editor of the Santa Clara Journal, Dana was cited for fair and impartial coverage of civic activities by the Santa Clara City Council. He was honored with an award for general excellence from the National Editorial Association when he was editor of the San Jacinto Register. The San Leandro Morning News, under Dana's guidance received four awards for excellence in 1962—more than any other California newspaper that year. Dana's reporting was of the same high quality as his editorials. Evidence of this is his superb on-the-spot coverage of a 1948 train-bus collision in Ontario, Calif.—for which he received an AP award.

Dana's greatness—and his inestimable value to his community—can be traced to hard work and devotion to that which he considered the highest principle: truth and the right of the public to know. He conceived his role as that of a "watchdog"—to oversee the activities of public officials and the spending of public funds and to inform the public when something was amiss. In November 1966, he wrote:

> We believe that the majority of the public joins us in rejecting the Hamiltonian philosophy of a kept press in favor of the Jeffersonian principle that if it were necessary to choose between a government without newspapers or newspapers without government, the latter choice would be in the best interests of the general welfare.

Concurrent with this philosophy, Dana demanded —and personally exhibited— honesty and integrity. He is further believed that "the surest way to obtain poor government is through public apathy" and a constant goal was increased interest and involvement in local politics.

His editorials were sometimes favorable, sometimes critical; but always they were just and well-founded. His cause was a great one and his loss, indeed, is a public loss. At this point I would like to insert in the CONGRESSIONAL RECORD these words from the Independent which speak so aptly of Dana McGaugh:

A PUBLIC LOSS

> During this age of technology when the human being seems meager beside the magnificance of machines and acquisitions, a true concern for people is a diminishing rarity among men in positions of public responsibility. This rarity was diminished much more Wednesday night when Dana O. McGaugh died. Dana, editor of the Independent, guided his paper and his life with the primary principle that people are more important than things.
>
> Dana regarded the paper itself as a living human organism, shaped not by government nor by any special interest but by the people who read it. It was an ideal he pursued religiously, to the discomfort of many an official, and much to the benefit of the newspaper reader.
>
> Dana believed a newspaper should be honest rather than objective. This means a paper should take sides but it must print every facet of the issue so the reader has a clear complete picture. Editorial praise and criticism should be based not on a man's politics but on what the man has done for the public good. Dana's editorials and his Junius column lauded and roasted people and organizations of every political stripe.
>
> Dana O. McGaugh was a bantam rooster of a man with a fiery temperament and a voice, when raised, that could almost scorch the plaster off the walls. Pity those who excited his wrath. But at the same time, because of his concern for people, he had a heart of compassion and generosity and he was a gathering point for all kinds of people in trouble—fellow newspapermen out of work, people in need of money, persons in need of comfort or counsel during a crisis; they all came to Dana when they felt the need for a human being's helping hand.
>
> The loss of Dana O. McGaugh is a public loss and we know the public will join us, not in mourning him because he wouldn't find that fitting, but in paying him a toast over a spirited glass.

> SIR: I was shocked and saddened to learn of the death of your editor, Dana McGaugh.
>
> Dana had been a friend of the Parks Job Corps Center since Litton Industries people first came to the Valley in January of 1965. He was the first person to come out publicly for Job Corps, and when the Center opened he appointed himself as a "watchdog" over all our activities. If we were doing something wrong, he let us know about it. He also gave us a pat on the back when he thought we deserved it. The result was objective, fair coverage of our operations.
>
> I write this from Washington, where we are negotiating a new contract for the Center. As we do so, we are aware that Dana McGaugh perhaps deserves more credit than anyone else for our being at Parks in the first place.
>
> A surprisingly large number of staff members and corpsmen knew him personally. All of us will miss him.
>
> S. S. USLAN,
> *Director, Parks Job Corps Center.*

> SIR: On behalf of the Laboratory, I wish to express my sincere sympathy to you and the members of your staff over your recent loss.

Dana's contributions to our community were well known to many of us and will long be remembered. He will be greatly missed, both as a concerned citizen and as a dedicated newspaperman.

Sincerely,

MICHAEL M. MAY,
Director, LRL, Livermore.

SIR: When I think of Dana McGaugh, I think of Lincoln Stephens and a congressman named Baker and a newspaperman named Bolton Hall. I think of a list of questions asked of the high and mighty from the floor of Congress January 11, 1905.

1. What legislatures do you own?
2. What is the average of the combined salaries of your president and your office boys?
3. Why did the grand jury fail to indict you?
4. What time is your president allowed for lunch, and has the advance in the price of beef impoverished him?
5. How many persons have you run over, ruined, or otherwise killed during the year? Why?
6. Who is your judge?
7. Do you pay him for the job or by the year? Of what church is he a member?
8. State all sums paid during the last year for false witnesses.
9. Are your contributions to both political parties dictated by love for mankind or by business considerations?
10. What shall it profit a man "if he gain the whole world and lose his own soul"?
11. How much of the total consumption do you control, and why can't you tell?
12. Do you believe in socialism or in anarchy?
13. How were the books lost?
14. Why don't your directors know anything about the business?
15. Where do you expect to go when you die?

TOM LUCE.

LIVERMORE.

SIR: In the passing of Dana McGaugh the people of our valley have lost a great crusader in the field of human dignity—a man dedicated to the principles of democracy, ever present when public servants tended to forget that they were only that and caused them to think again for the benefit of everyone.

As an individual somewhat new to public service I can say that in decisions where one considers what is right or what is possible or even what is convenient, there was also some consideration for the complexion Dana would see it in when he sat down to write his report.

In this sense he was the conscience of the valley leadership, with a powerful message which will remain with us even though Dana McGaugh has completed his stewardship and put down his sword and pen.

JAMES NELSON.

SIR: Dana McGaugh is dead. Fiesty, tiny, unwashed, magnificent Dana O. McGaugh.

He loved people.

He was a furious, shy, beleagured, violent man. He belonged to we the people. If God exists Dana will meet up with Him and if that be the case I hope that Dana is not too hard on Him.

NANCY STRATTON.

SIR: We regret the death of Dana McGaugh.

He defended us when we needed him. He attacked us when we deserved it.

He was a true friend.

BYRON ATHAN.

Advice to a New Member of Congress

EXTENSION OF REMARKS
OF

HON. CHARLES E. WIGGINS

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. WIGGINS. Mr. Speaker, only a few days have passed since my election to the Congress. During this brief period, it has been my lot to have been the beneficiary of advice and counsel from all sides concerning my proper conduct as a Member of this House.

In my opinion, no one has more succinctly voiced the charge and mission of a new Member of Congress than a friend and constituent from my district in California, Mr. Bailey Kerr, in a recent letter addressed to me.

Believing that all new Members, and perhaps my senior colleagues as well, will find Mr. Kerr's comments worthy of thoughtful consideration, I am pleased to insert his message in the CONGRESSIONAL RECORD:

WHITTIER, CALIF.

Hon. CHARLES E. WIGGINS,
1523 Longworth House Office Building,
Washington, D.C.

DEAR CHUCK: Thank you for your letter of appreciation for my efforts in your successful campaign.

You say you want me to call on you when you can be of assistance. My initial reaction was to tell you that I wanted nothing special from you; that I supported you because I honestly believed you were the best candidate for the office; and that your election was, in itself, sufficient recompense for my meager labors in your behalf. I am a citizen—it is the duty and responsibility of a citizen to work for better government by, among other things, supporting good candidates—ergo, I have only done my duty and am entitled to no reward.

But when I thought about it some more, Chuck, I realized that, at heart, I really want a great many things from you. I realize that you are only human and I won't feel upset if you don't completely fulfill my desires. However, I shall be sorely disappointed if you fail the test in many of them.

My overwhelming desire is for your own personal integrity. You will, no doubt, be subjected to countless temptations. There is no apprehension whatever in my mind that you will ever do anything outrightly dishonest—my evaluation of you could not be that far wrong! What I'm concerned about are the insidious temptations you will face, which conquer so many of our elected representatives, to compromise your principles for the sake of political expediency. There will be times, I'm sure, when the hard choice must be made whether to follow the politically attractive course or to stand up and be counted for what you believe to be *right*. You must give some thought to reelection, of course, but I wonder sometimes if a legislator wouldn't fare better with his constituents by saying "Look, I represent all the people in my district. It is not possible to poll them on every legislative problem I am called on to face. Therefore, I study the issues and I vote on them according to the dictates of my conscience and my judgment. Here is how I voted on such-and-such issues, and here are my reasons. I hope you agree with me, but I'm sure some of you don't. Whether you do or you don't, I'd like to hear from you." This approach hasn't been overused, and it might just work to your advantage.

Many legislators seem to think that the more bills they author the more they accomplish. I am inclined to believe that the main fault of most legislatures is passing too many laws rather than too few. I won't be upset with you if you present a bill only when there is an obvious and compelling need for it. You might give some thought to repealing some of the useless laws already on the books.

I'd like an understanding with you as to whose money you will be spending or authorizing to be spent, as a member of the Congress. The idea seems to have become prevalent, among representatives and their constituents, that "government funds" are in some miraculous manner derived from a mysterious and limitless source removed from and unrestricted by the harsh and inflexible rules of economies which govern the financial affairs of individual and corporate taxpayers.

The same vague and irresponsible ideas seem to be in vogue as to the consequences of government indebtedness. Some apologists for this kind of thinking mumble, "No matter, we owe it to ourselves." In any event, the debt, of gigantic dimensions, keeps growing, and I have the terrible feeling that the only way I can escape paying my share of it, plus interest, is by dying and passing the burden on to my children and grandchildren. That is not the sort of legacy which will gladden the hearts of heirs and beneficiaries. In spite of these alarming conditions, there are today voices of "experts" calling for grandiose, long-range projects to cost hundreds of billions of dollars. These self-anointed "experts" justify their profligacy with other people's money by comparing the cost of their schemes with the national income and the gross national product. Until the income of the government exceeds its expenditures and the surplus is used to reduce the national debt, it will be difficult to convince me that further liens on the future are desirable, or that statistics on income and production are germane to the argument. I suggest that you begin your attack on this problem by insisting that deficit spending is not, in the long run, a panacea for all the ills which afflict mankind. Your first step might be to scorn use of the term "government funds" and insist on the phrase "taxpayers' money", which it damn well is, as we both know.

I hope you can avoid involvement in the ideological warfare between the "conservatives" and the "liberals", and the numerous subdivisions therof. My observation of those who indulge in this form of semantical nonsense is that they are more concerned with maintaining an "image" than they are in performing rational acts. To be perfectly frank, I must confess a philosophical list toward what I would term a cautiously progressive stance. To admit this posture invites instant attack by the more extreme members of both factions.

If I were asked to chart a philosophical course for you as a legislator, I would recommend that you adhere to those principles which experience has demonstrated to be sound and workable, and that you avoid like the plague the theory that a new idea is automatically good merely because it is new. The Founding Fathers, in hammering out the basic concepts of our form of government, were acutely aware of the bitter lessons of history. They strove mightily to provide safeguards to prevent the abuses and tyrannies which had characterized most governments down through the ages. They approached their appointed task with humility and with a deep sence of reliance on the Almighty. Sometimes I am inclined to think that humility and faith in God have been forgotten by too many of us or, at the best, only dimly remembered. The great documents of civilization, embodying the "distilled wisdom of the ages", are still valid in spite of the vast expansion of technological discovery and knowledge. Among these I include the Ten Commandments, the Sermon on the Mount, and the Constitution of the United States. I am proud to reaffirm my belief in the continuing cogency of the ideas contained in these great documents. I hope you are of the same mind.

I recognize, Chuck, that I am giving you a large order. You may not agree with many of the ideas I have thrown at you. Even if you agree with all of them, there is a limit to what you can accomplish. No man can achieve perfection, but in striving for it he can improve his performance. I shall be praying for you—I recommend that you do some praying, too. No matter what happens, I hope that you will continue to consider me as,

Your friend,

Bailey Kerr.

Two Columns of Interest by Arthur Hoppe

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. YOUNGER. Mr. Speaker, our good friend the columnist, Art Hoppe, is at it again with two columns which are quite interesting on the local scene. One column appeared in the San Francisco Chronicle on January 4, and the other on January 15.

The columns follow:

JUD JOAD SEES ACTION

(By Arthur Hoppe)

There appears growing doubt that we'll ever win the war. Not that war. The War on Poverty.

To help clarify the situation, I have another report from the front by that seasoned combat veteran, Mr. Jud Joad of Appalachia Corners. Mr. Joad has been fighting poverty, man and boy, for nigh on 60 years.

"I'm smack in the thick of it now for sure," Mr. Joad begins proudly. "I never did see so much action ever before.

"It all started when I marched down to volunteer. 'Maude,' I says to my wife, 'I got to do my duty. They're going to need us veterans. So keep a stiff upper lip and put a tallow candle in the window.'

"Well, I see the mayor and I tell him I may be getting a mite old but I want to do my bit.

" 'Jud,' says he, 'the one thing I want is maximum feasible participation by you poor folk in running this here war. As long as you run it the way I tell you to.'

" 'Mayor,' says I, 'I just aim to be a private in the ranks and follow orders like a good soldier should.'

" 'Jud,' he says patting me on the back, 'you're precisely the kind of poor folk I'm looking for.

"So he puts me on the local board and this young fellow comes down from Washington to make us a speech. 'Friends,' he says, 'poverty is dreadful. We want you to think about the problem, come up with a solution and we'll give you what you need to lick it.'

"Well, I think about the problem for several seconds. 'In may long experience,' I tells him, 'there's one thing alone, that can lick poverty.'

" 'What's that?' says he.

" 'Money,' says I.

" 'Good thinking,' says he.

" 'I could use about $50,' says I. 'Plus $2.98 for a new dress for my wife, Maude. If you don't think I'm being greedy.'

" 'Well,' says he, 'you folks draw up an appealing pilot project, conduct the proper feasibility surveys, submit the necessary forms and we'll see you get some. If we decide you need it.'

"That's when the action got hot. Since then, we fired our executive director three times, hired him back twice, filed 13 law suits, moved to impeach the mayor and one faction aims to recall the city council. I never knew war could be so exciting.

"To tell the truth, I ain't positive whether we're winning or losing, But we're sure putting up one whale of a battle.

"Course, like most women folk, Maude's none too happy about me being away most of the time, fighting in caucuses, meetings and rallies. She says I ought to be to home, hoeing the yams out back.

" 'Maude,' I keep telling her, 'you got to tighten your belt. After all, there's a war on.'

"But she's coming around. Just the other day, after hearing about one of our foot-stomping, fist-waving, ten-hour meetings, she said I sure was right about that."

ELBIE JAY HEADS 'EM OFF

(By Art Hoppe)

WASHINGTON.—Howdy there, folks. How y'all? Time for another tee-vee visit with the rootin'-tootin' Jay family—starring ol' Elbie Jay, a fellow of unbelievable honesty. Absolutely unbelievable.

As we join up with ol' Elbie today, he's havin' breakfast with his pretty wife, Birdie Bird.

Elbie: Bird, this is just about the most terrible, awful horrible toast I ever did eat.

Birdie Bird (pleased): I'm so glad you like it dear.

Elbie: There's only one thing that'll make it fit for human consumption. Pass the salt.

Birdie Bird: Blueberry or strawberry?

Elbie: Strawberry.

Birdie Bird (handing him the blueberry jam): I'm so glad you like the blueberry. I put it up myself.

Elbie: Thank you, Bird. I don't know why the country don't understand me the way you do.

Birdie Bird: There, there, dear. It hasn't lived with you as long as I have.

Elbie: A shame, isn't it? (frowning) I don't know why folks are in such a stew. I'm not a mite worried about Vee-Yet-Nam.

Birdie Bird (with a gasp): Oh, Elbie is it that bad?

Elbie (shaking his head somberly): Better.

Birdie Bird: But there must be something you could do.

Elbie: Well, I don't know, Bird. As I've said time and again for the past three years, I'm sure not going to escalate this here war.

Birdie Bird (noding thoughtfully): Well, yes, I guess you could do that. But do you think more escalation would do any good?

Elbie: On the other hand I'm going to go right on striving as hard as I can for peace. Because in my heart the hope of peace is burning bright.

Birdie Bird (patting his hand): There now, don't be so pessimistic. Something will turn up.

Elbie: I can't just cut and run.

Birdie Bird (brightening): Yes, that's so. You could withdraw. That would solve it.

Elbie: Not that I care a whit what folks would think of me.

Birdie Bird (sadly): Yes. I guess you're right, dear. You're down so low in the polls already. And the Republicans would really light into you. But what can you do?

Elbie (squaring his shoulders): There's only one thing to do in a spot like this, Bird. I'm going to tell folks the plain, unvarnished truth.

Birdie Bird (sighing): I guess you know best, dear. But I do wish you could think of a new approach.

Well, tune in again, folks. And meantime, as you mosey down the windin' trail of life, remember what Elbie's ol' Grandaddy use to say:

"There ain't nothin' worth more than an honest reputation. It's well worth lyin' and cheatin' for."

Commodity Report: Records Show "Inflation" Last Year Was More Imaginary Than Real

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. ALBERT. Mr. Speaker, I include with my remarks an interesting and informative article from the Journal of Commerce Newsletter for January 4, 1967. I am sure this will be of great interest to the Congress and the country. The article follows:

COMMODITY REPORT: RECORDS SHOW "INFLATION" LAST YEAR WAS MORE IMAGINARY THAN REAL

Now that 1966 has passed into history, it is rather interesting to look over the trend of prices.

A year ago, it may be remembered, there was much clamor for a substantial income tax increase to cool down the economy and check inflation.

We didn't get the income tax increase. And, we didn't get much inflation. This latter is contrary to the general impression going the rounds that the inflationary kettle all but boiled over last year.

Actually, the records show, the heat under the general commodity price structure was lowered quite a bit last year.

From December, 1965, to December, 1966, the Bureau of Labor Statistics wholesale commodity price index rose from 104.1 (average 1957–59 equals 100) to 105.7, an increase of 1.5 per cent.

In the previous 12-month period, from December, 1964, to December, 1965, the BLS index rose from 100.7 to 104.1, an increase of 3.4 per cent.

The rise during 1966 was less than one half that during 1965. In August last year, the BLS index worked up to a record high of 106.8 before it leveled off and then began to ease. But, even at the August rate, the rise was less than in 1965:

WHOLESALE AND RETAIL

Most consumers, of course, don't buy much of anything at wholesale.

According to the BLS consumer price index, more generally known as the cost-of-living index, prices of commodities at retail were 2.7 per cent higher in December, 1956, than in December, 1965.

This evaluation involved a little estimating of the probable trend from November to December of last year, but can't be far off.

During the previous 12-month period, from December 1964, to December, 1964, to December, 1965, retail commodity prices rose by 1.6 per cent.

The larger rise hurt, of course. However, judging by the amount of noise created thereby, one might have thought that retail prices rose by leaps and bounds during 1966.

Prices of meats and vegetables did do a little skyrocketing during the first half of the year, but these uptrends were reversed later.

The higher prices for meats and for fruits and vegetables were primarily the result of supply considerations, completely unrelated to the general business picture.

The real villain last year was the sharp rise in the cost of consumer "services," up about 5 per cent from December, 1965, to December, 1966. And, the adoption of Medicare was an important factor in the acceleration of service costs.

During the previous 12-month period, the rise in service costs was 2.7 per cent.

THE TURTLE

The turtle, it often is said, never gets anywhere without sticking his neck out.

The imponderables are so great that venturing an opinion on where prices are likely to be by the end of this year borders closely on the foolhardy.

However, it is assumed that weather conditions for crops this year will be normal or reasonably so, it sort of looks as if the rise in commodity prices—both wholesale and retail—from December, 1966, to December, 1967, will be no larger than that from December, 1965, to December 1966.

And, the rise may be smaller. If Washington should put through an income tax increase, wholesale prices might even be down.

J. R. W.

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. WIDNALL. Mr. Speaker, it is important that we who are fortunately endowed with freedom each year remind ourselves of the great number of fellowmen throughout the world who do not enjoy the fruits of liberty that we have so abundantly been granted.

Yesterday marked the 49th anniversary of the day that the Ukrainian Republic was established as an independent nation. The Ukrainian people's independence did not long endure. In 1920 they became the first to be engulfed in the brutal tide of Communist conquest.

We shall not forget that the citizens of the Ukraine still yearn for freedom and their right of self-determination.

Therefore, it is fitting that we pause to reflect on the heroic struggle that these people are waging in their own manner to resist Communist domination. We again express our hope that at a future day these people will be able to exercise their love for freedom and respect for the inherent dignity of man. In doing so, I am sure that we are in some small measure helping to sustain and encourage the spirit of freedom among the Ukrainian people as well as the people of all other captive nations.

Worthy Project

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. BROYHILL of Virginia. Mr. Speaker, I wish to call your attention to a most worthy project which is being undertaken in my district as a public service by a group of friends of the Navy. It is the program to build residences for the widows of officers of the Navy, Marine Corps, and Coast Guard, many of whom have come upon hard times.

I feel that the public spirited work that these trustees and officers of the Navy, Marine, Coast Guard Residence Foundation are doing is so important that I want to read their names into the RECORD. They are:

Mr. William C. Allen, President.

Rear Adm. P. V. Mercer, USN (Ret), Vice-President.

Vice Adm. John Sylvester, USN (Ret), Treasurer.

Captain Will J. Davis, USN (Ret), Secretary.

Maj. Gen. Chester R. Allen, USMC (Ret).

Colonel Barbara Bishop, USMC.

Captain V. M. Bulshefski, NC, USN.

Rear Adm. Frederick Harlfinger II, USN.

Rear Adm. Alexander Husband, CEC, USN.

Mrs. Virginia Weldon Kelly.

Captain James W. Kincaid, USCG.

Mrs. K. S. Masterson.

Rear Adm. H. Lamont Pugh, MC, USN (Ret).

Admiral Arthur W. Radford, USN (Ret).

Mrs. Horacio Rivero.

Brig. Gen. Donn J. Robertson, USMC.

Mrs. R. F. Skylstead.

Rear Adm. Bernard M. Strean, USN.

Mrs. Frank Virden.

Just recently the foundation trustees, realizing the large requirement for domiciliary care for these service widows, passed unanimously a resolution which I will also read into the RECORD as follows:

The following is a transcript of a resolution passed unanimously by the Board of Trustees of the Navy Marine Coast Guard Residence Foundation at the monthly meeting held September 7, 1966:

Whereas, the Foundation, which grew from a project sponsored by the Washington area chapter of the Naval Officers' Wives' Club primarily to provide Residences for next of kin of Retired Officer Personnel according to their needs, and

Whereas, it was determined that the first or pilot project would be located in the Washington, D.C. area and

Whereas, it would appear to be the best interest of all to clarify the intention and goal of all the many people directly and indirectly concerned.

Now therefore, it should be clearly understood by all that it is the goal and plan of the Foundation to build, sponsor, aid or otherwise assist in bringing residences into being wherever needed throughout the country, as provided in the Certificate of Incorporation of the Foundation which authorizes the corporation:

(a) To provide elderly persons according to need on a non-profit and charitable basis with housing facilities and services specialty designed to meet the physical, social and psychological needs of the aged, and contribute to their health, security, happiness and usefulness in longer living. The Corporation shall be operated exclusively for charitable purposes and no part of its net earnings shall inure to the benefit of any officer, member or employee of the Corporation, or to the benefit of any individual; and no officer, member or employee of the Corporation and no individual shall receive or be entitled to receive any pecuniary profit from the operation of the Corporation except reasonable compensation for services.

(b) To construct, operate, maintain and improve, and to buy, own, sell, convey, assign, mortgage or lease any real estate and any personal property necessary or incident to the provision of housing for the elderly.

(c) To enter into a kind of activity, and to perform and carry out contracts of any kind necessary to, or in connection with, or incidental to the accomplishment of any one or more of the nonprofit and charitable purposes of the Corporation.

Safety and the Automobile

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. CHAMBERLAIN. Mr. Speaker, as a result of the action taken last session the Federal Government, as we all know, has entered yet another field of concern, that of automative safety. Many Members of Congress therefore, I believe, will find of interest the 1967 winter issue of Ward's Quarterly, an authoritative voice of the automotive world, which devoted a special feature to safety and the automobile. Whether the new Federal controls and regulation will produce the desired result depends, of course, on a number of factors as Mr. Robert B. Powers, editor and publisher of Ward's Quarterly points out in making a strong case for the need of a vigorous program for driver education and vehicle inspection. I am pleased to make this editorial available to my colleagues:

[From Ward's Quarterly, vol. 2, No. 4]

SAFETY AND THE AUTOMOBILE

Safety has been a major concern of the automotive industry since July 8, 1892 when Charles E. Duryea successfully road-tested his first automobile.

In this issue you will find step by step, year by year, how the auto makers relentlessly have worked to make their vehicles safer and better.

The federal safety program the industry is obliged to accept is to a large extent an acceleration of what the auto makers already had on the planning boards or were ready to introduce in future models, without the extra burden of millions of dollars in speed-up costs.

In the safety speed-up program the federal government also has a great responsibility. Little reduction in traffic injuries and fatalities will result unless a vigorous program for driver education and vehicle inspection (now in the hands of the states, more than half of which refuse to pass such needed legislation) becomes a state-federal law.

If the federal government can withhold funds for urban renewal, highway construction, farm crop payments unless its rules and regulations are complied with there should be no hesitancy in withholding federal funds from states whose balky legislators refuse to pass needed driver training and vehicle inspection laws.

Unless this is done the new auto safety standards that are certain to increase the price of cars to the public may prove a costly hoax.

Fifty per cent of highway accidents and fatalities are known to be caused by drunk drivers. Will merely producing a "safer" vehicle appreciably reduce these appalling fatalities?

A motor vehicle that can go 10 miles or 100 miles per hour at the choice of the driver behind the wheel will always be dangerous when its designed use is abused.

A carving knife, like the modern motor vehicle, is safe and useful when properly used. But in the hands of a Jack the Ripper, it becomes a killer.

One Year Late

EXTENSION OF REMARKS

OF

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. SKUBITZ. Mr. Speaker, "a time of testing for our Nation" is how President Johnson prefaced his state of the Union address. I assumed that the President threw out the results of the last nationwide test—the one administered on November 8, 1966. The results of this past election surely indicated that President Johnson's teachings over the last 3 years were not effective. The President, however, instead of reexamining his methods or his material, has indicated that he will reteach it all at the expense of each of us who contributes to the Federal moneybag.

I am not alone in my assessment of this recent message. I call the attention of my colleagues to the following Kansas editorials which I believe indicate the reaction which is representative of a great number of citizens in the Fifth District of our State. Mr. Clyde Reed, editor of the Parsons Sun, titled his remarks of January 11, "One Year Late." Emerson Linn, Jr., aptly describes his reaction in the Iola Register under the byline, "Guns, Butter, and Taxes." I commend these editorial comments to the attention of my colleagues:

[From the Parsons (Kans.) Sun, Jan. 11, 1967]

ONE YEAR LATE

The Strange Case of Lyndon B. Johnson came into full focus Tuesday night in his state of the union message.

Strange because here is a man of political talent whose feel and timing continue to elude him, and they are qualities essential to the success of any and all in public life.

The content of Mr. Johnson's message would have better been delivered a year ago. Then the need for a federal tax increase was most apparent; now it's a 50-50 case at best, and possibly not even that in view of the softening economy.

The President spoke, too, as if an election had not been held in the meantime—an election in which his party took a drubbing and the Johnson program emerged as even a bigger loser.

The election was clearly a call for a slowdown in domestic haste, a desire to examine and digest rather than to plunge ahead willy-nilly with enactment of new federal activity.

But one hardly would have guessed that in listening to the President, weighing his words carefully, as he addressed Congress and the nation at the start of a new year and a new session.

Mr. Johnson did admit there had been a few mistakes in administering programs previously enacted, but hastened to assure that these had been corrected or would be corrected.

There is not much for Congress to do about these programs, in other words, except to appropriate more money to keep them going. The administration will take care of the rest.

That isn't the way Congress read the election returns, including the leaders of the President's own party. Sen. MANSFIELD, the majority leader of the Senate, not long ago called for thorough study and re-examination of the great society before new legislation is put on the books. Republicans have even sharper thoughts and they are around in far greater number than a year ago in the House.

Mr. Johnson's message, in short, missed the mood and temper of the country as well as being a year late on most points. The job of a President, to be sure, is to lead. But a leader must gage the sentiment of his followers correctly or he is likely to find himself alone at the head of the parade. Lyndon Johnson is close to finding himself in that lonely position, and isn't an enviable one for him—or, for that matter, for the country.

[From the Iola (Kans.) Register, Jan. 11, 1967]

GUNS, BUTTER, AND TAXES

It was a guns and butter speech. Lots of gun. Lots of butter. To go with it, a small tax increase and a large deficit.

President Johnson is, as he said last night, determined to press forward on all of the battle fronts this nation is engaged in—in the wars against poverty, against pollution of water and air at home and the threats to freedom abroad.

The tax increase he proposed will fall far short of meeting the increased demands for billions which his program will require. Still, it came as a surprise. Signs as the nation backs hesitantly into 1967 point to slow-downs in every industry but government.

Economists all agree that last spring was time for a tax increase—but that any damper on the economy now might trigger a recession. Last night these fears were repeated in post-talk comments by observers.

President Johnson apparently feels that massive (20%) increases for those on Social Security, expanded domestic spending and the money pumped into the economy by the war in Vietnam will more than offset the deflating effect of an income and corporation tax boost which will cost the average Kansas family less than $25 a year.

Congress applauded him politely where the script called for applause, but the President's State of the Union address was not calculated to arouse emotions. It was a sober review of what had been done and the enormous and baffling tasks which still lie ahead of us.

He spoke well. His approach was not boastful but it was determined. If he shares any of the doubts his critics have expressed concerning the wisdom of our course at home or abroad, the fact was kept well hidden.

There was, it is worth mentioning, no sign of fatigue in the man. He looked and acted as though he had completely recovered from his bouts with illness.

There were some disappointments in the President's speech to me. While he quite rightly called for state and local governments to reorganize themselves so they could meet the complex needs of modern society more efficiently, he held no hope out for a return of federal income tax to the states to aid in this reform.

Support for reserving a portion of the federal tax for state use has been growing for several years. Johnson missed an opportunity to make the program his own last night.

Instead he offered more and more grants in aid—a method of local financing with federal funds which keeps control of the purse strings in Washington and discourages the strengthening of local government which he purports to encourage.

An even greater disappointment was the bull-headed determination he showed to expand domestic expenditures even while forecasting that the war in Vietnam will make greater and greater demands on our money, our manpower and our patience for a year, two years or more.

This double demand on the taxpayers and, it might be added, on the leadership of our country, is surely an error.

Perhaps he is depending on a more conservative congress to do his domestic pruning for him.

One of the most interesting suggestions made was the proposal to combine the departments of commerce and labor into a single department of business and labor.

While this may lead to nothing but ending duplication of effort in many statistic gathering enterprises—which is reason enough for a merger—it could also have a beneficial psychological impact.

After all, business and labor are one and the same thing. Separation between the two leads to false conflicts which damage the entire nation—a fact that is likely to provoke new anti-strike legislation this session.

Perhaps if the government recognized the common goals that both management and labor must seek if prosperity is to be maintained and broadened—instead of encouraging the two to oppose each other in all things—we could make real progress in this troubled area.

Looking at the President's talk as a political document, we find it no retreat from the positions which Johnson and his party held last November when they lost 47 house seats and the Republicans made spectacular gains in the state capitals across the land.

If the Great Society in 1966 was beginning to crumble in the eyes of John Q. Public, it became even shakier last night. Planned deficits for the remaining years of Johnson's first elected term are now certain. Big government will deliberately add several more layers between now and 1968. Taxes, if Congress adopts the President's suggestion, are going up. No end is in sight for the war in Vietnam.

These are the factors which gave the GOP new life in November. They will all still be with us in 1968.

Mr. Walt Horan

SPEECH

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. ADAIR. Mr. Speaker, I join my colleagues in the sentiments they have expressed at the loss of our friend and former colleague Mr. Walt Horan. Those of us who have served with him knew him to be a dedicated public servant, a hard worker, and one motivated with a high sense of responsibility. He was truly a great and dedicated American, and his passing leaves a great void. Mrs. Adair and I join with all the others who have extended sympathy to his wife Sally and their fine family.

Hon. John E. Fogarty

SPEECH

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. WIDNALL. Mr. Speaker, I want to add my voice to the many who have already paid tribute to a remarkable public servant, our beloved colleague, JOHN E. FOGARTY. I had the opportunity to know JOHN FOGARTY and to work with him in 17 of his 26 years in Congress, as he built a well-earned respect and affection among his colleagues, and an equally well-earned reputation as "Mr. Public Health" within the Nation.

In looking back over that period of time, I can think of no one among us who developed his talents and interests, who matured in his insight into the fields that were his particular responsibility, as he did. Rev. Joseph L. Lennon, O.P., dean of Providence College, put it simply and succinctly in his eulogy of JOHN FOGARTY when he said: "He grew with his job."

And it would be well to add that JOHN FOGARTY was a major factor in the growth of his job and his responsibilities as chairman and member of the House Appropriations Subcommittee on Labor, and Health, Education, and Welfare. His efforts in the health and aging fields have earned him a secure place in the ranks of those public servants to whom we in America, and indeed people throughout the world, will be ever grateful and indebted. The striking thing is that so many of the research or other federally assisted programs he originated grew from his own observation and sincere interest in the plight of others. He was able to become concerned about heart disease, mental retardation among children, multiple sclerosis, medical personnel, shortages, cancer research, the aging. And he translated that concern into positive programs that will be a tribute to his work for generations to come.

The final and most rewarding tribute, however, comes from the people he knew and loved best, the people of his district. I had the sad but privileged duty of being a member of the official congressional delegation to his funeral. You needed only to talk with those who knew him, and see the assemblage of persons from all walks of life, of all ages there in Providence to know how sorely he will be missed by the people of Rhode Island. His country and his colleagues will miss him deeply too.

My heartfelt sympathy is extended to his wife and family.

The President and the Arts

EXTENSION OF REMARKS

OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. O'HARA of Michigan. Mr. Speaker, while much has properly been said of the social and economic gains of the last few years, it is also timely—as the Washington Post reminds us—to examine the relationship of the White House to the arts.

Richard L. Coe, the Post's drama critic, declares that the 2 years since President Johnson took the oath of his first full term have witnessed more White House attention and action for the arts than any similar period during any previous administration.

Mr. Coe lists a number of achievements of the past 2 years, ranging from direct assistance to resident professional theaters to the creation of arts councils in the States to dovetail local and Federal activity.

I include Mr. Coe's article at this point in the RECORD:

[From the Washington Post, Jan. 15, 1967]

JOHNSON ADMINISTRATION SETTING RECORD FOR CULTURAL ACTIVITY

(By Richard L. Coe)

With January 20 bringing the Johnson Administration to mid-term, it is a time again to look at the White House's relationship to the arts.

Without any question whatever, the two years since President Johnson took the oath on the Capitol steps have brought more White House attention and action for the arts than any period during any Administration since the Presidency began.

Creation of the Arts Council and progress on the Capital's bitterly needed homes for the performing arts, both guided by Roger L. Stevens, the President's consultant on the acts, are unparalleled steps. The Smithsonian's various divisions have never enjoyed such Administration support and other Government departments have been uncommonly lively. Although not encouragingly expanded, the cultural exchange programs have continued at a time when rising costs have lessened the stretch of a dollar.

To anyone who has observed this at close range and looks back on the record, there are some fascinating conclusions.

For instance, ten years ago, even six years ago, these present actions of the Federal Government in the arts would have been considered the wildest daydreaming.

Two men on Capitol Hill who have done the most to pave the way in these fields are still there, Sen. J. William Fulbright and Rep. Frank Thompson Jr. There have been, of course, many others but even these others probably would admit that in the Senate it has been Fulbright and in the House Thompson.

For all of what the art world may have thought about President Eisenhower, it was in his Administrations that the cultural exchange programs and what has become the Kennedy Center had their beginnings. It was also under Eisenhower's "Goals for Americans" that the idea of an American Acts Council had its first White House stamp. The General never has received his due for his actions in these fields.

Ironically, the brief Kennedy years produced the least results. What they did produce was atmosphere and acceptance, matters that cannot be weighed but which have incalculable value.

Commenting on this inaction on the second anniversary of President Kennedy's inaugural, I pointed to the flagging progress on the center, the same cultural exchange budget of the Eisenhower years and the lack of action on the Arts Council plan. President Kennedy dashed off a handwritten note to me, commenting; "Cheer up. It will be done."

President Kennedy's known concern, however, has produced posthumous effects: the preservation of Lafayette Square and the re-naming and financing of the Kennedy Center.

There are a good many misconceptions about the latter, culminating in the nicely egghead crack that America is exhibiting an Edifice Complex.

This may be witty but it's also abysmally ignorant. Drama, music and dance cannot be performed without buildings to hold audiences and performers. It's as simple as that.

This Nation, especially this Capital, has not had enough such buildings. They have been torn down by such private interests as realty firms or parking lot owners. Without these buildings we cannot have these arts, which is why city, county, state and federal forces—and the private foundations created through their tax structures—have been trying to supply them.

Without these buildings we also lose some other matters, a good example of which is the fact that since our Downtown Progress, Inc., was started, it has lost some 10,000 theater seats and soon will lose, at the corner of 13th and F, a couple of thousand more. The people who used to sit in those seats once patronized the nearby restaurants and stores.

Since appointment of the Arts Council members in the spring of 1965, it has taken decisive, considered actions.

Its spending has been limited to only $6.5 million for varied Federal programs and another $2 million to assist duly created state art agencies.

Accenting the Nation as a whole and not the theater capital—as such a program must—the Council assigned:

Nearly $700,000 of direct assistance to resident professional theaters to improve their acting companies;

About $1.3 million to study and put into action the establishment of an American Film Institute under a matching-fund program to be raised this winter;

An emergency grant of $350,000 to save the immediate future of Ballet Theater (which has done much for our cultural exchange program);

$141,000 to finance the first American tour in 15 years for the Martha Graham Company.

Another $103,000 for individual grants to leading choreographers.

An initial grant of $400,000 made possible creation of a Master Chamber Orchestra under the direction of Alexander Schneider.

To establish an American Laboratory Theater to "create new forms and concepts for the American theater," $300,000 was granted to Jerome Robbins, one of our leading stage directors.

With the cooperation of the U.S. Office of Education, two Laboratory Theaters for Education—their budgets over half a million each—have been established in Providence, R.I., and New Orleans, La. These have been set up with the collaboration of the local school systems.

Under conditions laid down by the Arts Council legislation, 49 states (Alaska excepted) have now created their own arts councils to dovetail grass-roots activities with whatever Washington can offer.

These are by no means all the achievements of the two years since President Johnson's Inauguration Day, but the facts do prove that no preceding Administration has come close to this record.

VISTA Serves the Navajos

EXTENSION OF REMARKS

OF

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. UDALL. Mr. Speaker, I would like to call the attention of my distinguished colleagues to a fine report about antipoverty success on the Navajo Reservation. I refer to a column by Marvin Alisky which appeared on January 7, in the Christian Science Monitor, and which describes the progress being made in helping Navajos to help themselves at the Rough Rock School on their reservation.

This community schoool benefits from a coordinated community action and VISTA effort, and has won the enthusiastic acclaim of the Navajo people. It is another example of local victory in the war on poverty.

The article follows:

VISTA SERVES THE NAVAJOS

(By Marvin Alisky)

ROUGH ROCK, ARIZ.—First full-time school to serve a community on an Indian reservation, the Navajo Rough Rock School in northeastern Arizona recently celebrated its first six months of operation.

Launched with a federal grant and some VISTA (Volunteers in Service to America) teachers, the Rough Rock School serves as the prototype of such projects envisioned on the Hopi, Papago, Pima, Apache, and other Indian reservations in the United States.

"This is truly a community school, serving Navajos from kindergarten age to adults," says Thomas R. Reno, deputy director of the school.

For the 90 families living at Rough Rock the school means their one genuine link to the outside world, for the town lies 20 miles from any paved road or modern transportation.

Rough Rock buildings and grounds cost $13 million. The Bureau of Indian affairs of the Department of the Interior helped, but the main efforts came through a private, nonprofit group, DINE, Inc.

DINE in Navajo means "The people," which is what the tribe calls itself. The initials also form an English acronym for "Demonstration in Navajo Education."

The director of the Rough Rock School, Dr. Robert A. Roessel Jr., is a professor of education on leave from Arizona State University, where he directs the Indian Education Bureau at the Tempe campus near Phoenix. His wife, Ruth, is a Navajo.

Dr. Roessel and Mr. Reno, a former community development worker for the Peace Corps in Iran, planned the curriculum with Allen Yazzie, chairman of the Navajo Tribal Education Committee.

The Rough Rock project began with a grant of $214,000 from the Office of Economic Opportunity. Then the private corporation and the tribal council and the Bureau of Indian Affairs jointly worked toward state and federal support for funds and vocational advice.

The major source of income for Rough Rock is cattle and sheep grazing. So adult classes in modern animal husbandry seemed logical as a catalytic agent for upgrading the local economy.

Literacy classes for adults plus regular high school subjects for former dropouts utilize classrooms late afternoons and evenings.

On weekends, the school buildings become a community center, offering movies, dances, athletic events, and conferences.

Weekday mornings, young Navajos are taught English as a second language. The method stresses understanding of word relationships rather than the mere memorization of "foreign" words as found at many other reservation schools.

The enrollment of school-age Navajos now totals 240, giving the Rough Rock School one of the best records among all reservation schools for attracting school-age children into classes and keeping them there.

Remedial reading, speech and hearing therapy, guidance and counseling, and a physical education program help keep dropouts to a handful.

Perhaps the most significant activity of the Rough Rock School consists of "cultural identification" courses, designed to instill in young Navajos a pride in their cultural heritage.

Indians from the reservation who go on to higher education in Anglo-oriented high schools and colleges will do better it is hoped, if during their formative period in their reservation elementary school they appreciate clearly their own cultural past.

A. W. Henry, speech specialist at Rough Rock, explains: "We develop mental concepts in both languages. If a student can't yet express a subtle idea in English, then he or she is free to tell such thoughts in Navajo."

Thus Rough Rock is avoiding a mistake made in public schools in some predominantly Mexican-American communities. In certain south Phoenix schools, for example, young Mexican-Americans used to be forbidden to speak anything but English at school. Instead of hastening intellectual development, the rigid rule sometimes merely created emotional problems and slowed down academic growth in otherwise bright young minds, according to educational psychologists.

At Rough Rock, psychologists strongly recommended that scholarship be encouraged in both English and Navajo. Even durin gits first six months, the new school has shown that this approach yields rapid reading, stimulating classroom talk, sustained interest in mathematics, enthusiasm for scientific demonstrations and social poise.

Medicine men and tribal storytellers are brought into the classrooms to entertain youngsters with Navajo folklore. Such talks are tape recorded, translated into English, then made available in both languages for students to read.

VISTA teachers, such as Logan Sherman of Cold Spring Harbor, N.Y., and Sally Zink of Quincy, Mass., are conversing in Navajo after a few months.

And Mrs. Zink and Mr. Sherman also feel at home in the Navajo culture. In turn, they have taught young Indians, heretofore isolated from mainstream United States, many things about New England and other American regions.

Charles Zink, Sally's husband, signed himself and his wife for duty, hoping the assignment would be good training for his career as a social worker. He says: "This is the most fascinating area in our country. And education here is genuine, thorough, and worthwhile.

VISTA teachers get $200 a month, and only four free days off out of each 30. Many teachers spend their days off in Flagstaff, Ariz., or in Gallup, N.M. But a weekend on duty in Routh Rock can mean folk singing, dancing, and understanding based on person-to-person friendship.

Mr. Saul Rosen's Tribute to Dr. Peter Sammartino

EXTENSION OF REMARKS

OF

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. JOELSON. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD an address delivered by my distinguished constituent, Saul Rosen, on the occasion of the academic convocation at Fairleigh Dickinson on December 4, 1966. It is a tribute from one splendid and constructive human being to another possessing the same sterling qualities.

The address follows:

Dr. Sammartino, Members of the University Board of Trustees, Members of the Board of Fellows and President's Council of the Univeristy, learned Faculties of the University, Distinguished Guests, ladies and gentlemen, every time I have occasion to walk across the campus of this university, I give thanks that it was established and that 25 years ago a man of foresight helped it to come into being, nurtured it and guided its growth and development.

The reason why I am thankful that Fairleigh Dickinson University exists is apparent every day when I look at my morning paper. With each day that passes, human history becomes more and more a race between education and catastrophe.

Edmund Burke, the great English orator and statesman, once made the comment: "Education is the cheap defense of nations." I should like to add that American universities, among them Fairleigh Dickinson, stand in the same relation to the American educational system than West Point stands in relation to the basic training of the soldier. The elementary and high school systems give basic training and preparation for democratic living. But universities like Fairleigh Dickinson provide advanced training for leadership in a democracy.

Our young people do not receive higher education today because they are to be lawyers, doctors, scientists, teachers, or business and political leaders. They receive a higher education because they are the free young men and young women of a democracy and must know how to live in freedom.

One of the responsibilities of an institution of higher learning in a democracy is to raise the standards of taste of its time in art and in literature. In keeping with this obligation, as chairman of the Fine Arts Committee of the University, I would like to announce the establishment of the Fairleigh Dickinson University Art Museum. By the end of 1967 it will have acquired $1,000,000 worth of art works, truly an auspicious beginning!

And today we are unveiling a work by the Swedish artist, Carl Milles, which was recently presented to the university. The work of Milles is still rare and unique in this country.

The course of the university's 25 years growth and direction has been guided by a great individuual and a great university administrator. Skepticism has never founded empires, established principles, or changed the world's heart. The great doers in history have always been men of faith. Fairleigh Dickinson University has been led by such a man.

He is a scholar, author, and great educator. I have watched his career with deep interest and fascination. To be the president of a fine and growing university takes courage of a rare kind. Physical courage makes for great military captains; moral courage makes for great civilian councillors; but to constitute a great educator, both kinds of courage must be present in the same man. Both kinds of courage are to be found in Dr. Peter Sammartino, in whose honer we have gathered here this afternoon. We pay tribute to his twenty-five years of dedicated service and to his great vision which anticipated at the university's inception, its purpose and direction. And we pay tribute to the fine university that has developed under his leadership.

Louis W. Young: Distinguished New Britain

EXTENSION OF REMARKS

OF

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MESKILL. Mr. Speaker, New Britain, Conn., has lost an outstanding citizen and community leader in the passing of my close personal friend, Louis W. Young.

My distinguished constituent's contributions to his city and State will assure him a position of respect and esteem in the hearts of his neighbors.

In tribute to the memory of an outstanding American, I ask permission to reprint the following editorial from the New Britain Herald honoring Louis Young's lifetime of service to Connecticut:

LOUIS W. YOUNG

An acute businessman, an avid sportsman and a longtime leader in community affairs, Louis W. Young used his extensive abilities and opportunities to the fullest during his long productive life. A graduate of Harvard College, he joined The Stanley Works in 1909, being elected assistant treasurer in 1917, later becoming treasurer and chief financial officer in 1919, posts he held until his retirement in 1952.

Directorships he held in The Stanley Works, Stanley Works, Ltd., of Hamilton, Ontario, New Britain Bank and Trust Co., Allied Thermal Corp., Hart Realty Corp. of Oak Bluffs, Mass., and Manufacturers Mutual Fire Insurance Co. of Providence, R.I., attest to his business and financial acumen. Conscious of his duty to the community, he served as a member of the Board of Education and the Water Commission, as chairman of the distribution committee of the New Britain Foundation for Public Giving, as New Britain area chairman of the American Finnish Relief Fund of 1940 and as a director of the New Britain Fresh Air Camp.

He was an active golfer, fisherman and sailor, racing his boats in several areas on the New England coast. Despite the demands of his many activities, he also found time to cultivate strong interests in ship-model building and amateur photography. Many of these interests he retained after his retirement, when he took the opportunity to travel extensively around the world.

Although his contributions to community life were numerous and his responsibilities legion, Mr. Young remained a modest unassuming man. His record of service will stand as testimony to the role he played in New Britain's industrial and community affairs.

The 90th Congress

EXTENSION OF REMARKS

OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. QUILLEN. Mr. Speaker, as the 90th Congress is organized and as we begin to study the problems facing our Nation, a great deal of advice is being aimed our way.

I think we should hear it all, for, as representatives of the people, we must heed their urgings. Therefore, I insert in the RECORD two editorials from the Bristol, Tenn.,-Va., Herald Courier, which present its views of the tasks to be done by the first session of the 90th Congress and appraise the President's report to the Congress and the Nation:

CONGRESS MUSTN'T SPIN ITS WHEELS

The 90th Congress which convenes today apparently is going to get itself involved in a variety of issues, most of them controversial but not all of them important. This is nothing new for a Congress, but we submit that this particular group of lawmakers has more to do than waste its time and its energies on relative trifles.

If we read correctly, for instance, the Senate again will be called on to make a change in its rules on filibustering, with an eye toward easier cut-offs. This has been a perennial time consumer for the Senate and we would hope, at least this year, that the antifilibusterers would let the matter rest.

This Congress has two problems which ought to take precedence over all else: The war in Vietnam and domestic spending. Either one is costly enough to place a serious drain on the nation; the two together represent an intolerable burden.

Obviously, war spending cannot be cut. It has to be increased, unless President Johnson can do what he has not yet been able to do—end the fighting in Vietnam. The nation's resources should be keyed to this undertaking.

This means that domestic spending has to be reduced drastically. The "war on poverty," which isn't winning as many battles as are being won in Vietnam, can easily stand some major cost reductions through the elimination of programs which aren't doing whatever it is they're supposed to be doing; other programs can be reduced in scope. Some, such as Head Start, could, conversely, be upgraded and expanded.

If the proper steps are taken to drastically lower domestic spending in many areas, the war in Vietnam can be pressed without the tax increase we hear so much about. We believe this is exactly what the voters wanted when they cast their ballots for so many Republicans last November.

The point is, Congress isn't going to do the job as well as it should if it permits itself to become bogged down in a lot of issues which just as easily can be avoided altogether or, at least, set aside until another session.

This is not a time for Congress to be spinning its wheels. The voters have demanded some changes and they have every right to expect that those changes will be forthcoming.

PRESIDENT JOHNSON WASN'T LISTENING

It is obvious that President Johnson was not listening in November when the American people told him what they think of his policies at home and abroad.

They made it clear they want a retrenchment in the Great Society.

Instead, he offered us in his State of the Union Address:

A $270 million increase in anti-poverty spending.

A $400 million appropriation for the model cities program.

A 20 per cent increase in Social Security benefits (whatever happened to his economic guidelines?), financed by another increase in Social Security taxes.

An extension of Medicare benefits, also financed through Social Security and, still higher taxes.

A "safety in the streets" program which inevitably would put the federal government into police work at the local level, with Washington (that's us, too) paying 90 per cent of the cost.

A 6 per cent tax increase to pay for all these things, plus all those passed in the past 2–4 years, and the war in Vietnam.

The American people also told President Johnson in November that they are not satisfied with his conduct of the war in Vietnam. They want the struggle pursued as vigorously as is necessary to bring it to a speedy, victorious conclusion.

He labels this thought "inviting but dangerous." His promise is that the nation faces "more cost, more loss and more agony" for an indefinite period of time. And he wants us to face this cost, this loss, this agony while he proceeds to further strain the nation's economy with a welfare-state program which eventually could prove more disastrous to the United States than any war in which we might engage.

In his desire to be all things to all men and all nations, Mr. Johnson not only would continue all the questionable programs already instituted by the Great Society but extend them and even add more. It is sheer madness and ought to be treated as such.

Since the President was not listening in November, perhaps Congress was. Certainly the reaction of many members of the House and Senate indicates they did hear and understand.

We believe the war in Vietnam ought to be pressed to whatever limits are required to end it quickly. This is the nation's great task at this moment.

We believe the Great Society's "war on poverty" ought to be abolished, with the possible exception of the Headstart program, which thus far offers the only real hope in the struggle to break the cycle of poverty and ignorance.

We believe Congress ought to reject the President's request for $400 million to finance the model cities program.

We believe Congress ought to reject any extension of Medicare; indeed, the program should be tightened to provide benefits only to those who actually need them.

We believe Congress ought to reject, at this time, a 20 per cent increase in Social Security benefits. If inflation can be reduced by cutting domestic programs, this in itself would ease the strain on those receiving Social Security payments.

We believe Congress ought to reject the President's "safety in the streets" proposal. We have no need for legislation which conceivably could lead to a national police force patrolling our streets and our highways.

Having done all these things, and more, to reduce federal spending at home, Congress will be in a far better position to evaluate the President's request for a 6 per cent tax increase. Possibly some increase is required to prosecute the war, but no increase ought to be considered until Congress first has whittled domestic spending to minimum levels.

It is time the bulk of the American people received some attention from Congress. Obviously, they are not going to receive any from the President, who proved in his State of the Union address Tuesday night that he is not interested in what the people think.

Outstanding First District Teacher

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. SCHWENGEL. Mr. Speaker, in the First District of Iowa we are fortunate to have a group of excellent educators. Not only do we have fine colleges and universities, but we have excellent elementary and secondary school systems. All of them are staffed with dedicated teachers and administrators.

One of our excellent teachers, Donald Young, Mount Pleasant, Iowa, was recently named as one of the outstanding elementary math and science teachers in the United States.

Mr. Young is the curriculum coordinator for the Mount Pleasant community school system. He is an outstanding educator and I congratulate him for receiving this honor.

The following story appeared in the Mount Pleasant News on Saturday, January 14, 1967:

DONALD YOUNG AMONG OUTSTANDING U.S. TEACHERS

Donald Young, curriculum coordinator—Mt. Pleasant community school, has been named one of the outstanding elementary math and science teachers in the United States.

Grade Teacher, the professional magazine read by more than half the nation's elementary school teachers, surveyed school systems throughout the country in order to find exceptional teachers whose unusual efforts and success would inspire other teachers.

A special plaque from Grade Teacher has been presented to Mr. Young in recognition of his achievement. He also is honored in the magazine's January issue which spotlights some of the most interesting personal viewpoints and teaching techniques of the nation's top science and mathematics teachers.

"Mr. Young was selected because his techniques are representative of the best approaches to the teaching of telementary science and mathematics today," said Allen A. Raymond, publisher of Grade Teacher. "Our purpose in presenting these awards," he explained, "is to dramatize the teacher's crucial role in the center of the learning process of our elementary school children and to inspire other teachers to new efforts."

Trendex, Inc., a national research organization, started last September to survey school systems for Grade Teacher and to enlist the aid of administrators in selecting teachers of particular merit. No arbitrary number of "winners" was pre-determined. One hundred thirteen teachers from large and small school systems were eventually chosen.

In nominating Mr. Young for the Grade Teacher honor, Supt. Robert Formanek pointed out, "We are indeed fortunate to have a teacher of high quality serving in the position of Curriculum Coordinator. Mr. Young's highly successful teaching experience not only will lead toward the continued improvement of the curriculum, but will promote the kind of environment that inspires and encourages both teachers and students in classrooms throughout our school system."

As We See It

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. GATHINGS. Mr. Speaker, on January 16, Mr. Bonner McCollum, the editor and publisher of the Forrest City Times-Herald reprinted an editorial from the Arkansas Gazette of Little Rock with his own comments concerning the late Hubert Christopher and his wife, Mrs. Tommye Christopher, who succeeded her husband as county judge of St. Francis County, Ark.

It is an honor and a privilege to bring this editorial comment to the attention of the Members of the Congress; and it is my ardent hope that when this Congress has completed its work we shall also be worthy of such comment for practicing sensible management and frugality in Government operations.

AS WE SEE IT

(By Bonner McCollum)

We cannot remember during our adult lifetime having noted any favorable statewide publicity concerning the financial operations of St. Francis County government.

That is why we read with a great deal of pride an editorial in today's "Arkansas Gazette" commending Mrs. Tommye Christopher and her late husband, Hubert, for doing such an outstanding job in handling the county's finances during the past two years.

The editorial points out that when Mr. Christopher took office in January, 1965, he inherited a debt in the county treasury, just as all other county judges at Forrest City had found deficits on the books when they had taken office before him. The article goes on to point out that two years ago St. Francis County could not get credit. This shameful fact was a disgrace to our fine county, and those of us who knew it as fact were hopeful that Hubert Christopher would be the man who would restore our county's good name.

Fate, however, stepped in, and Hubert Christopher did not live to complete the job he began with such enthusiasm. Tommye Christopher was appointed to serve out his term. By continuing his policies, she managed to complete the task he set out to accomplish.

For the benefit of those of our readers who did not see the editorial in today's Gazette, we are reproducing it below. However, before doing so we should point out that our good Sheriff, Clarence Montgomery, has also run a "tight ship" in controlling the finances of this important county office during the past two years. His office, too, had a turnback for the county after all operating expenses had been paid.

We are happy to commend Mrs. Christopher and Sheriff Montgomery for their splendid accomplishments. We hope that our new county judge, W. B. "Sonny" Hamilton, will continue to operate the county's financial operation in the same efficient manner during his term in office.

The Gazette editorial captioned "A Judge's Model," appears below:

A JUDGE'S MODEL

In two year's time, Hubert and Tommye Christopher worked such a revolutionary change in the administration and finances of the St. Francis County government that the burden of their record can stand as a model for many other Arkansas county judges.

When Mr. Christopher took office as county judge in January, 1965, he inherited a debt in the county treasury, just as all other county judges at Forrest City had found deficits on the books when they had taken office before him. Two years ago the county could not get credit. Mr. Christopher died in February, 1966, but his wife, Tommye, appointed to complete his term, continued her husband's policies. When she left office this month, the county treasury had a $62,000 surplus. What happened over those two years? "We got to work on time and, there wasn't much playing around," says Mrs. Christopher in oversimplifying an explanation.

What Mr. and Mrs. Christopher did was simply run a common-sense, businesslike administration. They eliminated almost entirely the "favors" system from the county's road program and proved the principle that private use of public funds is not, to say the least, consistent with good government. (Perhaps their advances in this area will encourage their successor to take a final step and eliminate road favors altogether.) They took bids on supplies and did not hesitate to accept low bids from outside the county. They paid the county's bills on time and saw to it that there were no outstanding debts. While the $62,000 surplus was accumulating the Christophers were constructing 172 bridges, repairing 75 bridges, installing 82 culverts and placing 50.958 yards of gravel on county roads, in addition to many other substantial projects.

The principle of sound management proved by the Christophers' administration suggests the sort of platform that many in Pulaski County would like to see outlined by the candidates who will seek the office in the special election Governor Rockefeller has promised to call.

The Late Honorable John E. Fogarty

SPEECH

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. ULLMAN. Mr. Speaker, I join with the House and the Nation today to honor a friend and a colleague, the late JOHN E. FOGARTY, of Rhode Island.

JOHN FOGARTY had no enemies. His warmth and his friendship graced these Chambers for over a quarter century.

He brought to this membership a quiet respect and deep dedication to the principles of a free society.

As a ranking member of the Committee on Appropriations, he distinguished himself by his hard work and clear understanding of the needs of a growing nation. His experience, wisdom, and judgment will especially be missed by his colleagues on the Appropriations Committee.

I am grateful for the years of friendship and guidance which JOHN FOGARTY extended to me as a Member of this body.

I extend to the people of his district my sincere regrets on the untimely passing of a trusted public servant. And to his family, I extend my heartfelt condolences.

Some Answers on Rhodesia

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. ROSENTHAL. Mr. Speaker, there has been considerable discussion in the press these past several weeks over the extent to which the United States should support U.N. economic sanctions against Rhodesia. But most of the arguments raised in opposition to U.S. involvement have had little bearing on the realities of the situation.

The United States is legally, politically, and morally on the firmest ground in supporting U.N. sanctions against the illegal and rebellious regime of Ian Smith.

On January 19, the New York Times stated in an editorial its support of the administration's position.

I submit it for inclusion in the Record:

SOME ANSWERS ON RHODESIA

Barry Goldwater's successor in the Senate calls President Johnson's order invoking sanctions against Rhodesia "dictatorial, deceitful and dangerous." In the House a California Republican introduces a resolution to end the sanctions.

Such efforts by conservative elements in behalf of the white rebel regime in Salisbury were inevitable in the new Congress. The danger is that moderate forces will be sufficiently persuaded by specious political and legal arguments to join in this attempt to embarrass the Administration in its support of mandatory sanctions voted by the United Nations.

First of all, there can be no doubt that Mr. Johnson acted legally and properly in issuing the executive order barring trade with Rhodesia in the products listed in the United Nations resolution. The United Nations Participation Act of 1945 empowers the President to take action to enforce Security Council decisions made under Article 41 of the Charter, which deals with U.N. measures short of armed force.

But most critics argue that the Council action violates Paragraph 7, Article 2 of the Charter, which bars U.N. intervention "in matters which are essentially within the domestic jurisdiction of any state. . . ."

The short, pertinent answer is that Rhodesia is not a "state"" and has not been recognized as one by any government. South Africa and Portugal have befriended the white minority regime; neither has accorded it diplomatic recognition nor given legal sanction to its independence."

There is no U.N. "intervention" in the meaning of Paragraph 7 because the Council acted at the request of the legal authority, Britain. Moreover, that paragraph adds that the nonintervention principle "shall not prejudice the application of enforcement measures under Chapter VII" of the Charter, covering threats to the peace—a proviso the critics usually overlook.

Finally, critics say the white regime has only exercised the right of "self-determination, and in any event is not a "threat to the peace." But it is a bizarre act of self-determination when a regime representing 220,000 whites declares independence for a country of more than four million. And anyone who argues that this illegal act—aimed at perpetuating the rule of the 6 percent white minority over the 94 percent of African majority—is not a long-run threat to peace simply ignores the realities in southeast Africa.

There can be legitimate doubts about the effectiveness of the sanctions, but not reasonable doubt that the United States acted honorably and legally in supporting them at the United Nations. Ambassador Goldberg has answered the critics effectively and it is high time that the Administration and informed members of Congress made use of his arguments on Capitol Hill.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. HOWARD. Mr. Speaker, 49 years ago, on January 22, 1918, a land became free, and a magnificent people rejoiced that dreams harbored for hundreds of years had been realized. That land was the beautiful Ukraine, beloved homeland of more than 40 million people. Today we observe the anniversary of a glorious day in their history.

The independence celebrated so proudly on that January day proved fleeting, for the Ukraine was soon set upon from all directions by those covetous of her abundant natural resources and strategic geographic location. Germany and Austria-Hungary were among the first to invade, installing a puppet ruler to oversee the land. After defeat in the war, Germany and Austria-Hungary withdrew, leaving a power vacuum at once filled by France. Poland invaded in an attempt to annex Ukrainian land west of the Dneiper River. White Russians and Bolsheviks turned the lovely little land into a bloody battlefield. Finally, in November 1922, the Ukrainians witnessed the sad ending to a chapter in their heroic struggle for national independence. Only a few short years after their magnificent triumph, they were forced to bow to Russian tyranny.

Yet through all the dark years of foreign subjugation the Ukrainian people have carefully preserved their national heritage. They have never forgotten that wonderful yet fleeting moment of independence. They have never ceased to revere the words of the poet laureate of the Ukraine, Taras Shevchenko, who pled for a Ukrainian national leader to arise, who, as the American leader George Washington, would bring his people out of bondage:

> When will we receive our Washington,
> With a new and righteous law? *And receive him we will some day . . !*

We then may all take inspiration from the wonderful example of the Ukrainian people, who never flinch in the face of adversity, who triumph over hardship, and who have never lost their undying will to be free. On this, their independence day, we salute them and join with them in the prayer that they may soon realize their goal of freedom.

Pearl Harbor Commemoration Speech

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RHODES of Arizona. Mr. Speaker, although the 25th anniversary of Pearl Harbor was commemorated last December, I am pleased to include in the Congressional Record a speech given at that time by Mr. Richard Kleindienst of Phoenix, Ariz. Mr. Kleindienst is one of Arizona's leading citizens, and was formerly a candidate for Governor and Arizona Republican State chairman. Because it is an outstanding speech containing the truths upon which our way of life was built and only by which it can be continued, I feel it should be read by all who see the Record.

The speech follows:

Ladies and Gentlemen:

I am standing here to discuss a matter about which our newspapers, radios and television stations have been reminding us all day. I am sure that all of us have paused a few moments sometime during this day to reflect upon it.

Twenty-five years ago today, Japan attacked Pearl Harbor. The American Navy was nearly destroyed. Significantly for us, the battleship Arizona was sunk, taking 1,102 officers and men to their graves. Within hours after the attack, the United States was formally at war with Japan, Germany and Italy, and the lives of all of us were changed.

Pearl Harbor has a meaning for us today, and every day, when men aspire to be free. Let us pause for a brief moment to remind ourselves what that meaning might be.

America was settled, colonized, developed and made independent by a particular kind of person. He was the kind of person who had learned by bitter experience that freedom of thought, speech and action was to be cherished even at the risk, if necessary, of losing material security and comfort.

When we as a Nation have been willing to be that kind of a person, we have thrived and prospered; when we have ceased to be that kind of a person, we have floundered and we have had our Pearl Harbors.

Let us look at the record of history:

We listened once to the false hope of Chamberlain at Munich of "Peace In Our Time" and thereby invited the Nazi attack on Poland. We wanted to be isolated from the rest of the world so that we could preserve our material riches and as a result we came perilously close to losing them all in the second great war. Since December 7, 1941, we have witnessed event after event which determined, depending upon what we did, whether we extended our freedom or whether we imperilled our freedom.

At Yalta we compromised with freedom, and Eastern Europe became enslaved by Communist tyranny, but, by the Marshall Plan, France, Italy, Greece and Western Germany were saved. By our declared intent to withdraw, South Korea was invaded, but by our willingness to fight, it was saved. With an air lift, West Berlin continued to live, but by our inaction, the flickering light of freedom in Hungary was snuffed out.

Cubans live in slavery because we dared not offend their Communist masters, but the Dominicans are learning the art of freedom because we did dare to offend. At last, the question concerning South Viet Nam is not whether we can afford to win that war against tyranny, but, rather, can we afford not to?

I would suggest that Pearl Harbor should be a constant reminder of that which our recent history has taught us so well—and that is that the struggle for freedom is a continuing one and that its price is eternal vigilance.

Just as the lives of our fellow citizens were paid at Pearl Harbor, they are likewise being paid tonight in South East Asia. As we celebrate tonight one aspect of our continuing heritage as free men and women, we can do not less than acknowledge our debt to those Americans who have given their lives so that we might be free to meet here tonight. Can we also do any better than to call upon God, the Father of us all, for that courage and vision which we will require all our lives if we are to remain and continue to be a free people.

United States Has Moral Duty To Protect Israel

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. ROSENTHAL. Mr. Speaker, I have been deeply concerned over the recent outbreaks of hostilities on the Israeli-Syrian border, and several weeks ago voiced my concern to the Honorable Dean Rusk, Secretary of State, expressing my strong belief that it is in the national interest of the United States, as well as our moral duty, to support and protect Israel in the face of the aggression to which she is subjected daily.

The people of Israel wish only to live in peace, but instead they must be constantly alert to almost daily terrorist incursions which imperil their lives and their property. They are menaced by Arab States which incite and support these terrorists, and build arsenals in preparation for the day when they can destroy Israel.

We will never achieve a lasting peace in the Middle East unless we continue to impress the Arabs that their war against Israel is condemned by the international community. The one-sided United Nations resolution censuring Israel's reply to Arab murder and aggression will not bring that peace any nearer. We must continue to recognize and support Israel's existence, and we must also continue to do everything we can to influence the Arabs to negotiate a peace.

Hadassah, the Jewish women's organization, has proposed certain steps, with which I am in complete agreement, to stabilize the situation in the Middle East, and I am taking the liberty of setting forth at this point in the CONGRESSIONAL RECORD their statement:

STATEMENT OF POLICY, ADOPTED AT A REGULAR MONTHLY MEETING OF THE PARK-HILLS CHAPTER OF HADASSAH (QUEENS, NEW YORK CITY) ON JANARYY 3, 1967

We welcome the United States Government's commitment to strengthen Israel's defenses, to preserve Israel's sovereignty and to oppose aggression in the Near East.

But we note with deep concern the continuing Arab preparations for war against Israel, the intensification of guerilla terrorism directed against her people and the costly and dangerous escalation of the arms race.

Thus, we deplore the UN resolution of November 25 which censured Israel while ignoring the provocative Arab terrorism against her. We fear that this resolution, which was supported by our Government, has encouraged Arab aggressors to prepare for new, murderous assaults.

To meet the growing danger, we call for a stronger and more dynamic U.S. policy in the Near East in order to reverse the present drift towards war and to achieve an Arab-Israel peace.

1. We recomend that our Government now seek cooperation of the Soviet Union to bring about a relaxation of tensions in the area, specifically by an agreement to reduce the flow of arms and to create a climate which will foster direct negotiations between the Arab states and Israel. Pending such an agreement, we urge our Government to ensure maintenance of the arms balance in the region.

2. We urge a Congressional inquiry to study and recommend legislative and administrative measures to curb the efforts of the Arab states to boycott American business interests.

3. We reaffirm the conviction that the only logical solution of the Arab refugee problem is their resettlement in Arab lands. We submit that the United Nations should censure continuing efforts by Arab leaders to mobilize the refugees into an army to wage war against Israel. It is intolerable that UNRWA funds, contributed for refugee relief and rehabilitation, should be diverted to subsidize the Palestine Liberation Army, which is organized for the destruction of Israel.

4. We support continued economic aid for Israel and the Arab states, stressing assistance which will develop agriculture, water resources and the employment and settlement of refugees.

5. We believe that all outstanding issues between Israel and the Arab states can swiftly be resolved by direct negotiations and we urge our Government, in concert with other great powers, to summon the Arab states to the peace table with Israel. There is no effective alternative.

Hon. Walt Horan

SPEECH

OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. MARSH. Mr. Speaker, it was with sadness that I learned of the passing of Walter Horan, who for many years was the distinguished Representative of the Fifth Congressional District of the State of Washington. As other Members know, he was one of the most thoughtful and friendly people in the House. Not only was he a dedicated public servant, but he was a man of unusual ability and intellect.

There was a community of interest between his congressional district and my own, and Mr. Horan had a fond association with the Seventh Congressional District of Virginia. He was an orchardist, and I recall that one of the first times that I met him was when he attended the annual picnic of the late Senator Harry Byrd, where were invited the friends and associates of the apple industry of the former senior Senator from Virginia. Walt Horan was a regular and welcome guest at that annual occasion. I would like to thank the gentleman from Washington [Mr. PELLY] for this opportunity to pay tribute to this distinguished son of his State.

Across the River, Part I—The Star Documents a Civic Crisis

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, the Evening Star deserves our gratitude and respect for its excellent series last week, "Across the River," by Haynes Johnson, a Pulitzer Prize winning newspaperman with rare insight into the problems of human relations and our community. His five-part series documents the tragic breakdown of the social structure of a large section of the District of Columbia located east of the Anacostia River.

What is amazing to me is the spectrum of the breakdown: It spreads from the individual family unity to the breakdown in neighborhood unity. It is senseless that our citizens in this area are terrorized by youngsters; it is senseless that apparently there is no major effort underway now to combat the conditions that exist.

To arrest this breakdown—without even attempting to heal it—will require a monumental effort. But this effort is complicated greatly by the fact that this is the District of Columbia and government here is many times an exercise in futility because there are so many fingers in the governmental pie.

What I believe must be done—and it must have the leadership and the support of the House and Senate District Committees to get off the ground—is the formation of a task force with the power to cut bureaucratic redtape and to step on people's toes, if need be, to go into this area and attempt to restructure the community. This task force could muster many existing private and public resources.

No legislative action can rebuild the family unit, and no task force can bring a family unit into being. But a District task force which combines and coordinates many of the existing programs under a unified and strong leadership should be able to get something done.

Mr. Speaker, this series is must reading for every Member of Congress, not only because this city is our responsibility as much as or more than any city in the Nation, but because this city needs our help and needs it now. I highly recommend the following, the first of the series, which appeared in the Washington Evening Star on January 16, 1967:

Fear Has Found a Home East of the Anacostia

(By Haynes Johnson, Star staff writer)

(Last Dec. 7 a group of businessmen, white and Negro, came to The Star and asked for help. They were all from east of the Anacostia River and they were all, they said, being driven out of business by hoodlums who smashed their stores, intimidated their customers and terrorized their employes. They said they were fearful that law enforcement was breaking down and they saw the President's veto of the District Crime Bill several weeks earlier as the last straw for them. From that meeting developed this 5 part series reporting in depth on what is happening Across the River.)

Until a few months ago the supermarket at the corner of Kenilworth and Eastern Avenues, just inside the District of Columbia line in the Far Northeast, was doing a $5,000-a-week business. Now it is closed. The front windows have been bricked in; the side windows have been covered with plywood. Scrawled on the wood are the words, "And you better believe it because these are our men," and a list of names, each in a different hand—Nut, Hawk, Romie, Walter, Boo Boo, Mooney, Joe, Little Junior, Apple, Gary and Killer.

A few doors away is the area's only drug store. It, too has gone out of business. So have the meat market, the milk store, the delicatessen. Their fronts are plywood masks. Around the corner in front of a small, white-frame church, a misspelled sign declares;

"All that is good is undone by evil thoughts."

There are more than evil thoughts at work in this neighborhood. There is vandalism, lawlessness, anger, alienation, extortion, destruction for its own sake—and a pervasive fear."

A woman in a house near the church put it this way:

"You have a group here that all they're interested in is crime. They laughs at the police and tries to demoralize the community, rather than build it up. They knows when a stranger is in the area. They can detect him. And they even gives certain signals, certain light signals, at night when the police is coming."

Then she said, "If this going to be in the paper I going to be found dead somewhere."

Several miles away, on Wheeler Road, in the Far Southeast, plywood and bricks and wire mesh cover the windows of another group of stores. But these stores are still open; the merchants are simply trying to cut the costs of pilfering and broken glass.

This time a druggist speaks. "I have fears all the time," he says. "I have employes who have left me. I can't blame them." He closes now at 9 p.m. instead of 10, "and we're thinking of closing earlier."

Another merchant on the block was more emotional:

"We are afraid for our lives here. What I am trying to say is very important. There is no law and order in this city. There is a whole bunch of criminals out of hand here try to terrorize this community. It's getting worse and worse and worse."

Like many others interviewed for these articles, he added:

"Look, if my name is in the paper, it would be like committing suicide."

The first row of stores is in Kenilworth, the second is in Congress Heights. Aside from the bricks and boards and fear, these two sections of Washington have something else in common: They are both across the Anacostia River and out of sight. In effect, they are removed from the rest of the city. Their isolation is both psychological; their cumulative problems are probably the most severe in the city.

None of this is immediately apparent. A stranger coming to the area might notice boarded store fronts and broken windows, but he would also see middle class homes and the quiet streets inhabited by law-abiding citizens of both races who constitute by far the largest proportion of the population there.

Neither would a casual observer find the old familiar hallmarks of the American slum—the rat-infested tenements, the decaying buildings, the wide-open night places. Across the River, there is a new type of slum and a new kind of problem.

In other cities, problem areas are easily identifiable—Harlem in New York, Hough in Cleveland, Watts in Los Angeles. But Washington has no such handy labels. The area across the Anacostia covers about 16 square miles. Nobody knows just how many people live there. Estimates are unreliable because the area is growing at a faster rate than any other section of the city. There are at least 200,000 people there; there may be as many as 250,000. In any case, the area contains at least one quarter of Washington's population.

MAIN REASON: CHEAP LAND

The rapid growth is mainly due to cheap land. Cheap land is also responsible for a very fact about these articles: the area has nearly two-thirds of the public housing units in the District, serving perhaps 35,000 people, most of them young children and teenagers, and nearly all of them Negro.

For the same reason—cheap land—the area will continue to get the largest proportion of the new public housing units as well as the new private buildings for low-income tenants. That is the way the system works, and that system is not working well. Indeed, it has virtually broken down.

According to official crime statistics, the area is not the worst in Washington. But the statistics don't tell the full story. The incidence of serious criminal acts is increasing more rapidly than population.

The area is served by two of Washington's 14 police precincts—the 14th, in the Far Northeast, and the 11th in the Southeast. Six years ago, the 14th Precinct ranked 10th in the city in crime. Today, it is eighth. In the same period, the 11th Precinct has climbed from 11th place to nearly a tie for fifth.

More revealing are the percentage increases in serious crimes during the last three years. In the 14th Precinct, adult crime has risen 54 percent. Juvenile arrests for felonies shot up 80 percent in the same period.

In the 11th Precinct, the increases are even more dramatic: Adult crime, up 110 percent; juvenile felonies, up 135 percent; auto thefts, break-ins, lootings, all up, all rising. Another statistic underscores what is taking place: The two precincts rank first and second by an overwhelming margin in the number of false fire alarms.

MORE THAN COLD FIGURES

These are more than cold figures, to be totaled, filed and forgotten. They are proof that ignoring the problems across the river hasn't worked, that they are growing day by day. It is not coincidental that the two places where Washington came closest to race riots last summer were in the center of the areas to be examined in these articles.

Despite all this, the territory across the Anacostia is no huge lawless frontier inhabited only by the troublesome and the troublemaker. Nor is it one gigantic slum. The troublemakers represent a relative few out of the total population. But the problems that do exist are so great, so deeply seated, and so complex that they affect a far wider number and area. Like the smoke that constantly rises from the notorious Kenilworth dump, they cast a wide pall.

These problems are similar to those that may be found in any low-income area of any city. But in a special sense, Washington's failure in alleviating these problems has been particularly striking, for here, in the Nation's Capital, the government itself has contributed to the difficulties. This is especially true in the field of public housing.

For example, while the National Capital Housing Authority continues to talk about the long waiting lists of more than 5,000 families for public housing, in one such housing unit alone Across the River 109 out of 350 apartments are vacant. The windows now are boarded up and the entire development is as much a slum as any group of buildings on the South Side of Chicago or the West Side of New York.

"I'm so tired of complaining and complaining," said a woman who lives in one of those buildings. "What good does it do you? I complained about the broken windows. I do believe it got worse. I tell you, if things don't get better, I'm going to move. I can't stand it."

The fact is, though, she has no place to move. The housing authorities have told her, and others like her, that all transfers are "frozen."

"YOU JUST DON'T KNOW"

Another mother of several children in that same development lives with vacant apartments above and beneath her. "I wish somebody would move in so I wouldn't be so scared," she said. Then she told how her children were afraid to pass by the vacant apartments. "Sometimes the door is open, and then sometimes, you see, it's shut, and you just don't know who's in there."

A National Capital Housing Authority administrative aide, Robert A. Bailey, was talking about some of these problems the other night at a meeting of parents in one of the projects, Kenilworth Courts. Only seven parents out of 422 families in the project attended.

"It's an awful thing," Bailey told his sparse audience. "We cannot do anything in this community if the parents cannot control the children. There's so much damaging and vandalizing that it seems like people who don't care are in the majority, and I know that's not true, but it seems that way, and in the meantime the communitys' going down, down, down."

This is a typical comment in an endless round of accusations. Everyone can point to someone else who is to blame. The merchants blame the city for not providing enough police protection. The police blame the courts and the parents for failing to do their part. The parents blame the housing, the schools, the transportation. And everyone blames youth—who in turn blame society.

On one point, everyone will agree: There is a problem Across the River. A merchant was speaking for a large segment of those involved when he said:

"Can I do anything about it? No. So I shut my mouth. But there comes a time when everyone says you got to stand up. Well who stands up? I'll tell you this. They say this is the Model City and Mrs. Johnson plants those flowers downtown. Well, I'll say this: Let President and Mrs. Johnson come out here any time. Let them come out here without their Secret Service guards. Let them come out and see what Washington's really like.

"I'll tell you, some people may say that it's just our problem because we're way out here, but dont' kid yourself. We are the insurance for the downtown department stores and businesses. If you don't stop what's going on out here it'll spread right to downtown. I'll tell you, they'll take over the city."

PROTECTION

There are 287 Metropolitan policemen assigned to duty in the two Washington precincts located across the Anacostia River. That represents 55 more than in 1960.

Of that number, however, only a relatively small percentage actually do street patrol work.

Six patrol cars—half with two men, the others with one man each—are on the streets at all times in the Far Northeast 14th precinct. In the 11th, in the Far Southeast, four two-man and three one-man cars are on continuous duty.

Normally, the maximum number of foot patrolmen on duty at one time is 11 or 12 for an entire precinct. They walk beats from 4 p.m. to midnight. Another group relieves them from midnight to 8 a.m. Then the regular day-time shift begins.

In the 14th precinct, patrolmen still walk their beats alone. Only one beat in the 11th is patrolled by two men, and that double team operates only from 4 p.m. to midnight.

ABOUT THIS SERIES

The Star team that produced this series of articles was headed by Haynes Johnson. Other reporters were Kenneth Ikenberry, Betty James, Ronald Oberman, Philip Shandler and James Welsh. The photographer was Ken Heinen.

Tomorrow's article will deal with the troubles of merchants, Wednesday's with housing problems, Thursday's with schools and juvenile behaviour and Friday's with what is being done and what lies ahead.

Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. WILLIAM D. FORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. WILLIAM D. FORD. Mr. Speaker, yesterday marked the 49th anniversary of Ukrainian independence, which was proclaimed in 1918 in the tradition of our own American Revolution.

This precious independence was short lived. By 1920, the new nation had become one of the first victims of Soviet expansion, which had followed the Russian Bolshevik revolution of 1917.

Today, the 45 million Ukrainians constitute the largest minority group in the sprawling Soviet empire. These hardy people have been subjected to Soviet rule for 47 years, but have never lost the Ukrainian spirit of independence.

The Ukraine is the breadbasket of the Soviet Union. The leaders of Russia, czarist as well as Communist have recognized this fact, and this explains why Russia robbed Ukrainia of its national independence only 2 years after earning it.

The Ukraine is called a "republic," but it is a republic in name only. It is really a province of the Soviet Union.

Fortunately, neither the Kremlin tyrants, nor their minions in the Ukraine, have succeeded in extinguishing the spirit of freedom and of independence which all liberty-loving Ukrainians claim as their birthright.

As long as that noble spirit is kept alive; as long as the ideal of national freedom is cherished by the people of the Ukraine, no dictatorship or tyranny can rob the Ukrainians of their real freedom—the independence of their hearts and souls.

So long as they retain that ideal, they will continue their resistance to Soviet domination On the 49th anniversary of their independence day, I wish them patience and fortitude in their fight for freedom.

Labor and Business Merger

EXTENSION OF REMARKS
OF
HON. DONALD RUMSFELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. RUMSFELD. Mr. Speaker, the proposed merger of the Departments of Commerce and Labor, recommended by the President, will undoubtedly have its proponents and opponents in the Congress. There are issues involved in this plan which must be thoroughly discussed and evaluated. A Chicago Sun-Times editorial expresses support for the plan and points out the advantages to be gained through the consolidation of these two related Departments.

The editorial follows:

LABOR AND BUSINESS MERGER

President Johnson's proposal, in his State of the Union Message, that a new Cabinet department be created by combining the departments of commerce and labor would, in effect, be a remarriage. The Department of Labor grew out of the Department of Commerce, in 1913, when labor became strong enough politically to demand the status of a Cabinet department.

There are good reasons for this remarriage. Both departments are vitally concerned with the nation's economy and well-being. Both are concerned with a myriad of similar interests, such as the location of industry for good regional development, the training and retraining of workers, increased industrial safety, even the development of a workable foreign trade policy, to name only a few. Both departments are gatherers of a wealth of economic statistics and both have a deep interest in legislation affecting business and labor. Both departments, despite their mutual interests in the well-being of the nation's economy and its labor force, have often fought each other bitterly, with labor usually getting the best of the battle.

For the past 20 years neither department has had much influence in setting the economic policies of the nation. The President's Council of Economic Advisers, the Bureau of the Budget and the Treasury Department have dominated the field. Labor and Commerce should have a voice, and as a single agency there is a better chance they would.

The President's suggestion has been well received in both the departments concerned. The Cabinet officers in charge of each department are enthusiastic and say the merger would contribute not only to increased efficiency, but also would strengthen the free enterprise system and the national economy.

However, the business community, organized labor and Congress have not shown much initial favor for the creation of a new Department of Business and Labor. The concept should be given exhaustive study before it is condemned out of hand. There are advantages to be gained, not only for labor and business, but for the nation as a whole, not the least of which would be that under one department labor and business would likely find more common ground for agreement and be less likely to lobby against one another.

The Speakership

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1967

Mr. SIKES. Mr. Speaker, I would like to call to the attention of my colleagues the splendid editorial entitled, "The Speakership" which appeared in Roll Call, the newspaper of Capitol Hill, for January 19, 1967. I feel that the sentiments expressed in this editorial are those held by a great many House members, both Democrats and Republicans.

The editorial follows:

THE SPEAKERSHIP

The Speaker of the House of Representatives wields great power. He derives that power, in the American tradition, by the consent of the governed.

Because of the prestige and power he commands, he is courted by and pressured by segments of the American society, ranging from the Executive Department to newspapers to lobbyists to the man in the street.

The Speaker is subservient to no force other than the people of the United States. As Booth Mooney, a former aide to President Johnson, points out in his book, "Mr. Speaker," the Speaker is the elected representative of the people's representatives. In being named to the speakership, he may be said to have received, indirectly, a majority of the votes of all the people of the United States.

It came as a shock to Congress this Tuesday morning when the Washington Post boldly suggested in its lead editorial, that Speaker John McCormack should resign the post to which his peers had elected him time and again.

Old age, inadequate leadership and the implications of incompetence and disinterest seemed to be the reasons for the rash demand. The Speaker's "weakness in command" is contrasted with former Speakers such as Clay and Cannon.

The role of the Speaker has changed along with the times and the perfection of the democratic process. The House today would not tolerate the partisanship of a Clay nor the despotism of a Cannon.

Another former Speaker cited by the anonymous Post writer is Sam Rayburn, ironically enough, the man who popularized the phrase, "Let the House work its will."

The Post was disturbed because the Speaker allowed a majority of the House to vote away the 21-day rule, discipline Adam Clayton Powell, and did not prohibit conservative Rep. William Colmer's ascendancy to Chairman of the House Rules Committee.

Therefore, if we read the writings correctly, the Speaker should proclaim himself a failure and gracefully retire, turning over the reins to a stronger Speaker—one, who, would be more responsive to the Post's editorial policy.

The Post acknowledges the fact that Speaker McCormack performed well for the Administration while Democratic majorities were large, but adds that he does not seem able to pull victories out of the more closely-aligned membership at present.

It may be pointed out that things have changed in the past few years. The mood of the nation is constantly shifting, even though the Post editorial policy remains intransigient. A slew of rubber-stamp Congressmen were displaced by the electorate to which the Speaker is responsible. Naturally, with a diminishing of party strength, votes will be closer, with Representatives voting the dictates of their constituencies and not those of the District of Columbia's morning newspaper.

At any rate, there was little sympathy with the Post suggestion in the Congress of the United States and a good many members considered the editorial a presumptious affront.

McCormack, a healthy and alert 75 years old, is well liked and well respected. He is neither a weak-kneed Muhlenberg nor a power-mad Cannon. His reign as Speaker has been in the great tradition of his predecessors but marked by the print of a humble and fair-minded man.

To urge McCormack's ouster because he did not come across with votes for "the liberal cause" seems to suggest that somewhere in the Constitution it is deemed that the House must be "liberal."

Otherwise, it appears to be just one newspaper's pique because things didn't go the way they wanted it to.

Which probably points to the fact that some editorials contain more gall than thought.

Fino Renews Fight for Lower Social Security Age

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. FINO. Mr. Speaker, I am today reintroducing legislation to provide that full benefits under social security shall be paid to men at age 60 and to women at age 55. I hope the House will favor this important legislation.

I feel strongly that it would be a wise move to make social security benefits available to men at 60 and women at 55. Not only is such a move warranted by considerations of allowing our senior citizens to commence their leisure years at an earlier date, but it is suggested by technological evolution.

If we lower the retirement age, we will create new job opportunities for younger workers, decrease the hardships of unemployment for older workers, and modernize our system and its vital protection in a very important way. It is becoming clear that technological evolution is reducing the number of hours a day that the average worker must work so that the total work force may meet society's needs. Why should not the number of years be decreased as well, so that our workers may retire at an earlier age, to reap the fruits of their past labors? I strongly urge the Congress to make this possible.

Across the River, Part II—The Star Documents a Civic Crisis

EXTENSION OF REMARKS
OF
HON. HERVEY G. MACHEN
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, the second article in the excellent series, "Across the River," by Haynes Johnson, published last week in the Washington Evening Star, relates the daily terror and violence and senseless destruction and pilfering that has been causing businessmen in the area of the District east of Anacostia River to close up their shops.

The following article was published in the Star on Tuesday, January 17, 1967:

ACROSS THE RIVER, 2—THE MERCHANTS VERSUS THE YOUNG DESTROYERS

(By Haynes Johnson, Star staff writer)

A 9:15 o'clock on a Saturday night in November, George R. Johnson, an insurance man on his way to his home in Maryland, parked his car in front of a liquor store in the 1600 block of Kenilworth Ave. NE, not far from the Maryland line. He went inside, cashed a check, bought two cartons of cigarettes, and left.

"As I walked out there in front of the store were all kinds of kids," Johnson said later. "They all wanted money, 'Give me a nickel, give me a quarter, give me a dollar.' I said I wished I could give them some, but I couldn't.

"Then they started surrounding me, pulling at my clothes, grabbing for my wallet. They were pulling at my clothes like they were going to tear them off. They were kids from 3 feet to—well, I'm 5 feet 8—to taller than I am. They formed several rings around me, and so those on the outside ring started reaching their hands through the others. Grabbing at you. Pulling at you. But you can't see who's actually doing it, you understand.

"They hit me and beat me and knocked my glasses off. As I broke away and jumped in my car they started throwing stones as I drove off. I'll tell you, I was lucky to get away with my life. You can bet I'll never stop there again."

Johnson's experience, by no means unusual, helps explain why within a four-block area a number of merchants have closed up shop and others are threatening to close. Declining business, losses to thieves and vandals and an ever-present fear of physical harm combine to make conducting a business there less attractive every day.

The impact goes far beyond the merchants themselves. Everyone involved—most of all the people who live in the neighborhood—is paying a high price in the form of a breakdown of community services.

The smashing and pilfering of stores across the Anacostia is not a part of some criminal conspiracy. There are no organized mobs intimidating customers and then guaranteeing store owners protection for a price. Neither are there gangs, or gang leaders.

Instead, there is destruction for the sake of destruction, intimidation for the sake of intimidation, impromptu thefts and shakedowns casually planned, quickly executed.

And in most of the cases the offenders are children—children for whom trouble has become a way of life.

A visit to the Safeway store on Kenilworth Avenue in that section demonstrated one aspect of that problem. It was 2:30 p.m. on a Tuesday, and the assistant manager, Rudolph Daggett, a Negro, was on duty.

"Just wait around for half an hour and you'll see the problem," he said.

Shortly after 3 o'clock groups of children, ranging in ages from 6 to 16, began entering the store. Immediately, the manager started following them closely, telling them to move on if they stayed too long in the back of the store.

"They'll steal right in front of your eyes," Daggett said. "They'll even steal right in front of their mothers, and the mothers won't do a thing. And you know something else: They don't steal major food items; mostly they take cosmetics and candy.

"They want to prove to the other fellows that 'I can steal from Safeway and get away with it.' "

Now the Safeway store itself may go out of business, according to Russell Cool, the manager. "That is being considered at this time," he said.

Another merchant, commenting about the petty thefts, said:

"When they steal these things, it's because they want to sell them. They'll peddle this right up and down the street, everything from toothpaste to topcoats."

That group of stores in the Far Northeast lies in one of the areas studied for this series of articles. The other group of stores is on Wheeler Road in Congres Heights. Both are across the Anacostia River; both experience similar problems.

TWO TYPES OF TROUBLE

The problems of the merchants usually fall into two categories—vandalism, petty thievery and breakage by youngsters under 18, and more daring and potentially dangerous depredations by slightly older groups.

The experiences of a merchant in Congress Heights shows how the older groups work.

"They come in bunches of 10 or 11, like a football team," explained a liquor dealer. "They say, 'Give me a pint of gin.' So you give them a pint of gin. Then they say, 'Put it in a bag.' So you put it in a bag. Then they throw three cents on the counter and walk out.

"I know who they are, but what can you do? Do you call this law and order? Anarchy!"

The man who recounted that incident spoke in a whisper in the back of his store.

"They already know you're here," he said. "They know." Clearly he lives his life in fear.

The police know about such incidents, but can do little about them.

"We had one store owner call us after a bunch of kids walked into his place and starated grabbing merchandise," said Capt. Owen W. Davis, the Negro commander of the 11th Police Precinct. "From what he told us we had a pretty good idea of who the kids were. I told him he should keep an eye out for them and when he saw one of them to call us and we'd have him arrested.

"But this man was terrified. He wouldn't do it. What can we do? We have to rely on the citizens for help."

As the policeman pointed out, fear is a potent weapon across the Anacostia River.

"Suppose a group of kids walks into some store where they know they have a certain merchant scared," Capt. Davis said. "They just go around the place picking up bottles of whiskey. They don't use a gun; they may not even utter a single word that can be construed as a threat."

SENSELESS DESTRUCTION

Such pilfering is a problem, but a worse one is sheer, senseless destruction: Windows, doors, counters, broken time and again at night, sometimes even in broad daylight, by stones, sticks or B-B guns.

Take the experience of James Shortley, the manager of an AAMCO auto repair shop on Kenilworth Avenue.

He opened the shop a year ago in October, he said, after looking for weeks for the right place. He thought he had found it in Kenilworth. The area appeared quiet and, with the Anacostia Freeway nearby, he believed he would have a good business.

His problems began with break-ins during the first two months. Then the windows were broken out. Cars were stolen right from his parking lot. Others were stripped of batteries, tires, even motors, in daylight.

"We've got nothing but trouble here," Shortley said. "I was insured and they canceled everything—the whole shooting match. I had a new policy rewritten, but you can't get glass insurance out here; it isn't available. I've replaced all the windows out front twice. There are seven double windows, and now I've got wood in them, and they won't break that.

"God knows, I never imagined it would be this way when I started out here. And it's hard to live with, I'll tell you. For instance, when I go home for a long weekend I know something's going to happen. I just know it.

"It's been pretty rough these last couple of months, but it can't get any worse as far as I'm concerned."

Now Shortley has a vicious-sounding police dog in the shop all the time. At night, the dog roams the building unleashed. Shortley says the dog has helped to curb break-ins, but not thefts outside or smashed doors and signs.

MUTUAL ILL WILL

The merchants are not only fearful and frustrated; they are angry. It is not uncommon to hear talk of vigilante groups. Some store owners say they have purchased pistols and are prepared to use them.

In some areas the store owners have joined together to hire a private security guard to patrol their properties during the late afternoon and evening. A shopping center on Wheeler Road, in Far Southeast, has such a guard now, and while he appears to have had some success in curbing vandalism, his presence has heightened tensions.

The security guards wear blue uniforms, a badge, and sometimes a D.C. insignia, making it hard to distinguish them from regular police. But the residents know the difference, and they resent the guards even more than they resent metropolitan policemen. The guards reciprocate.

"These people are not human beings. They are animals," said a strapping Negro guard as he walked down the sidewalk on a Saturday night telling people to move on and clear the doorways.

What the people said about him cannot be printed.

The mutual ill will underscores the present state of community relations. In an area of low-income tenants, most of them Negro, tension between the merchants and customers is always a factor. That is especially true across the river.

On the surface, there seems no obvious racial pattern to the merchants' problems. Negro store owners suffer along with whites. Most of the owners, however, are white, and they are disliked the most by the Negroes of the area. It's an old attitude, and an old problem.

"The store owner is the guy who keeps them down," said one resident. "That's where they have to spend their money, and those are the people who have all the money."

MERCHANTS CRITICIZED

Another Negro, a poverty program employe working across the river, was sharply critical of the merchants.

"Maybe if the businessmen, with their knowledge and experience, used their intelligence to get better relations with the kids and the community instead of knocking them, maybe then we could solve these problems. I think the businessmen are too negative. If the businessmen would have a conference on how to improve this community instead of saying they're all no damn good, maybe we could do something.

"Sure, the kids are throwing things. Sure, there are lots with an attitude of, 'Well, I'll either steal something or throw a brick through here.'

"But the businessmen, their answer to all these problems of 'Negro violence' is they're no damn good. You would get the impression that no white kid is bad. There are many bad white kids. But it's easy to hide them behind the black children. This has been going on so long it's useless to talk about it.

"They have white kids that ride the bus to Chevy Chase and raise as much hell as Negroes going to the Far Northeast, but there's the power structure bit, the society bit, again. And so they say, 'They're just being kids and letting off steam where the Negro is being violent.' Many young Negroes are aware that they are blamed for what white kids do.

"If maybe these businesmen would give these kids a job at $1.25 an hour, maybe they wouldn't have this problem. There must be some place where they can find these people a job. I'm sure if they were employing more Negroes in their stores they wouldn't have to worry about stealing or breaking.

"I think the Negro kid of today, I don't care how bad he is, if you can convince him that you are concerned, that you care about him, that he has a chance, he won't let you down. The businessman, in his place in society, has a chance to save some of them. You know, it's not the kids' fault that they're poor any more than it's his fault that he's rich."

RESIDENTS LOSE

The eventual losers are the residents of the troubled areas, those who can least afford it. Merchants close their stores and leave when they can't take any more; the poor remain, living in an area deprived of community services.

That is what has happened on Kenilworth Avenue where the drug store, grocery store, meat market, delicatessen have closed, and the Safeway supermarket, the only remaining large store, closes early at night.

"I've got to wait until 9 the next morning or get on a bus and ride all the way down to H Street for a loaf of bread," said Mrs. Ernestine Watson, a 35-year-old mother of four who lives in the Kenilworth Courts public housing project there. "We need a drugstore and a five and dime store."

Others echo her complaint.

"I think it's really bad here because everyone needs a drugstore in case the kids get sick," said a man. "You got to walk so far to a store and there is bad transportation."

"Why, we can't even get a Bandaid out here," said a mother of five. "My finger hurts and you can't get a Bandaid."

Still another mother said:

"When the kids get sick you can't go running way over to Minnesota Avenue for a little aspirin."

One of the most poignant expressions of what is happening across the river came from Yates B. McCorkle, a former star college football player, later a semipro, and now the man in charge of the D.C. Recreation Department's Youth Center at Kenilworth Courts.

"I was going to the Safeway during the Christmas vacation to ask for a donation to the youth center," McCorkle said, "and as I got down there I saw a workman putting in new window panes. They had been broken out the night before. And I just couldn't go inside and ask that man for a donation. I just kept on walking by."

A MERCHANT TELLS WHAT IT'S LIKE

Raymond W. Branch, 52, opened his carry-out shop, the Bar-20, in the 1500 block of Kenilworth Avenue NE in 1958. For a while, he prospered; then he began to experience trouble. He tells here, in a partial transcript of a tape-recorded interview, what has happened to his business since then:

"I had a lot of adult business, but now mostly I have kids' business. Due to the harassing, I would call it, which people didn't want to be harassed, we just lost that type of business.

"You started with trouble like teenagers hanging around. The next thing was when customers come, and if they left an item, when they got back it's gone. If anybody said anything to the kids it was always; you know, a big confusion. So consequently, the customers just don't come back any more. The teen-agers would threaten them if they didn't like what the customers were saying to them.
